This was formerly a section of the Hedjaz Railway (Damascus to Medina) for Muslim pilgrims to Medina and Mecca. It crosses the Syrian border and enters Jordanian territory south of Dera'a, and runs for approximately 366 km to Naqb Ishtar, passing through Zarka, Amman, Qatrana and Ma'an. Some 844 km of the line, from Ma'an to Medina in Saudi Arabia, were abandoned for over sixty years. Reconstruction of the Medina line, begun in 1965, was scheduled to be completed in 1971 at a cost of £15m., divided equally between Jordan, Saudi Arabia and Syria. However, the reconstruction work was suspended at the request of the Arab states concerned, pending further studies on costs. The line between Ma'an and Saudi Arabia (114 km) is now completed, as well as 15 km in Saudi Arabia as far as Halet Ammar Station. A new 115-km extension to Aqaba (owned by the Aqaba Railway Corporation (see above) was opened in 1975. In 1987 a study conducted by Dorsch Consult (Federal Republic of Germany) into the feasibility of reconstructing the Hedjaz Railway to high international specifications to connect Saudi Arabia, Jordan and Syria, concluded that the reopening of the Hedjaz line would be viable only if it were to be connected with European rail networks.

ROADS

Amman is linked by road with all parts of the kingdom and with neighbouring countries. All cities and most towns are connected by a two-lane paved road system. In addition, several thousand km of tracks make all villages accessible to motor transport. In 1996, the latest inventory showed the East Bank of Jordan to have an estimated 2,940 km of main roads, 1,970 km of secondary roads (both types asphalted) and 1,740 km of other roads.

Joint Land Transport Co: Amman; joint venture of Govts of Jordan and Iraq; operates about 750 trucks.

Jordanian-Syrian Land Transport Co: POB 20686, Amman; tel. (6) 5661134; telex 21384; fax (6) 5669645; f. 1976; transports goods between ports in Jordan and Syria; Chair. and Gen. Man. HAMDI AL-HABASHNEH.

SHIPPING

The port of Aqaba is Jordan's only outlet to the sea and has more than 20 modern and specialized berths, and one container terminal (540 m in length). The port has 299,000 sq m of storage area, and is used for Jordan's international trade and regional transit trade (mainly with Iraq). There is a ferry link between Aqaba and the Egyptian port of Nuweibeh.

The Ports Corporation: POB 115, Aqaba 77110; tel. (3) 2014040; fax (3) 2016204; e-mail ports@amra.nic.gov.jo; Dir-Gen. MUHAMMAD DALABIEH.

Arab Bridge Maritime Co: Aqaba; f. 1987; joint venture by Egypt, Iraq and Jordan to improve economic co-operation; an extension of the company that established a ferry link between Aqaba and the Egyptian port of Nuweibeh in 1985; Chair. Eng. KHALID SALEH AMAR; Dir-Gen. TAWFIQ GRACE AWADALLA

Arrow Trans Shipping SA: POB 926567, Amman; tel. (6) 692620; fax (6) 693324.

Assaf Shipping Co SA: POB 2637, Irbid 21110; tel. (2) 279117; e-mail ism@go.com.jo.

T. Gargour & Fils: POB 419, 4th Floor, Da'ssan Commercial Centre, Wasfi at-Tal St, Amman; tel. (6) 5524142; telex 21213; fax (6) 5530512; e-mail tgf@tgf.com.jo; f. 1928; shipping agents and owners; Chair. JOHN GARGOUR.

Hijezi & Ghosheh Co: POB 183292, Amman; tel. (6) 386166.

Jordan National Shipping Lines Co Ltd: POB 5406, Nasir Ben Jameel St, Wadi Saqra, Amman 11183; tel. (6) 5511500; telex 21730; fax (6) 5515119; e-mail JNL@nets.com.jo; POB 657, Aqaba; tel. (3) 2018738; telex 62276; fax (3) 318738; 75% govt-owned; service from Antwerp, Bremen and Tilbury to Aqaba; daily passenger ferry service to Egypt; land transportation to destinations in Iraq and elsewhere in the region; Chair. Dr FOTI KHAMIS; Gen. Man. Y. ET-TAL.

Amin Kawar & Sons Co W.L.L.: POB 222, 24 Abd al-Hamid Sharaf St, Shmeisani, Amman 11118; tel. (6) 5603703; telex 21212; fax (6) 5672170; e-mail aks@nets.com.jo; chartering and shipping agents; Chair. TAWFIQ A. KAWAR; Gen. Man. GHASSOUB F. KAWAR; Liner Man. JAMIL SAID.

Al-Mansour Marine Transportation and Trading Co: POB 960359, Amman; tel. (6) 697958; fax (6) 702352.

Orient Shipping Co Ltd: POB 207, Amman 11118; tel. (6) 5641695; telex 21552; fax (6) 5651567.

Petra Navigation and International Trading Co Ltd: POB 8362, White Star Bldg, King Hussein St, Amman 11121; tel. (6) 5607021; telex 21755; fax (6) 5601362; e-mail petranav@jo.com; general cargo, ro/ro and passenger ferries; Chair. ALI H. ARMOUSH; Gen. Man. G. BACONI.

Salam International Transport and Trading Co: King Hussein St, Abdali, Amman 11121; tel. (6) 5607021.

Syrian-Jordanian Shipping Co: POB 148, rue Port Said, Latakia, Syria; tel. (41) 471635; telex 451002; fax (41) 470250; Chair. OSMAN LEBBADI.

PIPELINES

Two oil pipelines cross Jordan. The former Iraq Petroleum Co pipeline, carrying petroleum from the oilfields in Iraq to Haifa, has not operated since 1967. The 1,717-km (1,067-mile) pipeline, known as the Trans-Arabian Pipeline (Tapline), carries petroleum from the oilfields of Dhahran in Saudi Arabia to Sidon on the Mediterranean seaboard in Lebanon. Tapline traverses Jordan for a distance of 177 km (110 miles) and has frequently been cut by hostile action. Tapline stopped pumping to Syria and Lebanon at the end of 1983, when it was first due to close. It was later scheduled to close in 1985, but in September 1984 Jordan renewed an agreement to receive Saudi Arabian crude oil through Tapline. The agreement can be cancelled by either party at two years' notice.

CIVIL AVIATION

There are international airports at Amman and Aqaba. The Queen Alia International Airport at Zizya, 40 km south of Amman, was opened in 1983.

Civil Aviation Authority: POB 7547, Amman; tel. (6) 4892282; fax (6) 4891653; e-mail caa@amra.nic.gov.jo; f. 1950; Dir-Gen. Capt. JIHAD IRSHAID.

Royal Jordanian Airline: Head Office: POB 302, Housing Bank Commercial Centre, Shmeisani, Amman 11118; tel. (6) 5667618; telex 21501; fax (6) 5660787; internet http://www.rja.com.jo; f. 1963; govt-owned; scheduled and charter services to Middle East, North Africa, Europe, USA and Far East; Chair. WALID ASFOUR; Pres. and CEO NADER DAHABI.

Arab Wings Co Ltd: POB 341018, Amman; tel. (6) 4891994; telex 21608; fax (6) 4893902; f. 1975; subsidiary of Royal Jordanian; executive jet charter service, air ambulances, priority cargo; Man. Dir AHED QUNTAR.

Royal Wings Co Ltd: POB 314018, Amman 1134; tel. (6) 4875206; fax (6) 4875656; f. 1995; subsidiary of Royal Jordanian; operates scheduled and charter regional and domestic services; Pres. and Gen. Man. AHED QUNTAR.

Tourism

The ancient cities of Jerash and Petra, and Jordan's proximity to biblical sites, have encouraged tourism. In the late 1990s the development of Jordan's Dead Sea coast was under way; owing to the Sea's mineral-rich waters, the growth of curative tourism is anticipated. In 1996 there were an estimated 1.1m. tourists. Income from tourism in 1996 was US $743.6m.

Ministry of Tourism and Antiquities: Ministry of Tourism, POB 224, Amman; tel. (6) 4642311; telex 21741; fax (6) 4648465; f. 1952; Minister of Tourism and Antiquities AQEL BELTAJI; Sec.-Gen. Ministry of Tourism MUHAMMAD AFFASH AL-ADWAN.

Defence

Commander-in-Chief of the Armed Forces: Maj.-Gen. FATHI ABU TALIB.

Assistant Commander-in-Chief of the Armed Forces: Brig. TAYSEER ZAROUR.

Chairman of Joint Chiefs of Staff: Gen. MUHAMMAD YOUSUF AL-MALKAWI.

Commander of the Royal Jordanian Air Force: Lt-Gen. IHSAN HAMID SHURDUM

Chief of the General Staff: Lt-Gen. ABDEL HADI AL-MAJAH.

Defence Budget (1998): JD 390m.

Military Service: conscription, two years authorized.

Total Armed Forces (August 1998): (estimated) 103,980: army 90,000; navy (estimated) 480; air force 13,500. Reserves 35,000 (army 30,000).

Paramilitary Forces: (estimated) 30,000 (10,000 Public Security Force, 20,000 Civil Militia).

Education

The Ministry of Education adopted the principle of decentralization from the beginning of 1980. It divided the East Bank into 18 districts, called Offices of Education, distributed over five Directorates of Education, each one run by a Director-General who is in charge of implementing educational policies and procedures in his own area. The Ministry of Education's Central Office is still responsible for all major educational decisions related to planning curricula, projects and examinations.

Education in Jordan is provided by public and private sectors. In 1982/83, 70.6% of school enrolment was provided by the Ministry of Education, 1% by other governmental agencies (such as the Ministries of Defence, Health, Labour and Islamic Affairs), 9.9% by the private sector and 15.9% by UNRWA, which offers educational facilities and services for Palestinian refugees in collaboration with UNESCO. The University of Jordan, Yarmouk University and Mo'ata University provided 2.6% of total school enrolment. In 1985/86 there were 3,205 schools in the East Bank, attended by 894,695 pupils and staffed by 37,516 teachers.

Primary education is free and compulsory. It starts at the age of six years and lasts for 10 years. The preparatory cycle is followed by a two-year secondary cycle, which is divided into three types: general, vocational and comprehensive school. At the end of this cycle students who pass the General Secondary Examination are entitled to continue their higher education by enrolling either in the universities of Jordan (at Amman, Irbid and Mo'ata) or in Community Colleges—or in foreign universities and colleges. In 1991 a total of 36,668 students were enrolled at Jordan's universities. In 1986 Yarmouk University, at Irbid, was divided into two separate institutions to create the University of Science and Technology. An open university, Al-Quds University, opened in October 1988.

Community Colleges, of two-year post-secondary duration, include 12 colleges controlled by the Ministry, 22 colleges controlled by the private sector and supervised by the Ministry, and seven other colleges controlled by other governmental agencies such as the Ministries of Health and Social Development, the armed forces, the Department of Statistics and the Central Bank of Jordan.

Education was allocated a total of JD 215m. (US $620m.) under the 1986–90 Development Plan. Budgetary expenditure on education by the central Government in 1995 was JD 227.8m. (15.5% of total spending).

The Ministry of Education, in accordance with law No. 16 of 1964, provides textbooks free of charge for the compulsory cycle, and at cost price for the secondary cycle.

In 1989 a 10-year programme to reform the state education system was announced. The programme, which was to be implemented in three phases (1989–92, 1993–95 and 1996–98), aimed to revise curricula; to produce new textbooks and teaching aids; to train 4,000 new primary school teachers, 1,500 new secondary school teachers and 360 new school principals and supervisors; and to construct 420 schools.

In 1995/96 there were 51,721 teachers and 1,074,877 pupils at primary level. At secondary level (including both general and vocational education) in 1995/96 there were 10,921 teachers and 176,123 pupils. There were 4,821 teachers and 99,020 students in higher education in 1995/96. There are 10 universities in Jordan.

KUWAIT

Physical and Social Geography

Kuwait lies at the head of the Persian (Arabian) Gulf, bordering Iraq and Saudi Arabia. The area of the State of Kuwait is 17,818 sq km (6,880 sq miles), including the Kuwaiti share of the Neutral or Partitioned Zone (see below) but without taking into account the increase in territory resulting from the adjustment to the border with Iraq that came into effect in January 1993.

Although, for some time, the Gulf was thought to extend much further north, geological evidence suggests that the coastline has remained broadly at its present position, while the immense masses of silt brought down by the Tigris and Euphrates cause irregular downwarping at the head of the Gulf. Local variation in the coastline is therefore likely, with possible changes since ancient times. The development of Kuwait (which means 'little fortress') owed much to its zone of slightly higher, firmer ground (giving access from the Gulf inland to Iraq) and to its reasonably good and sheltered harbour, away from nearby sandbanks and coral reefs.

The territory of Kuwait is mainly flat desert with a few oases. An annual rainfall of 1 cm–37 cm, falls almost entirely between November and April, and there is a spring 'flush' of grass. Summer shade temperature may reach 49°C (120°F), although in January, the coldest month, temperatures range between -2.8°C and 28.3°C (27°F–85°F), with a rare frost. There is little inland drinking water, and supplies are largely distilled from sea water, and brought by pipeline from the Shatt al-Arab waterway, which runs into the Gulf.

According to census results, the population of Kuwait increased from 206,473 in February 1957 to 1,357,952 by April 1980 and to 1,697,301 by April 1985. Based on the results of the 1985 census, the population was estimated to be 2,062,275 at mid-1990. It was estimated that in 1991, following the war to end the Iraqi occupation, the population had declined to only 1.2m., mainly as a result of the departure of a large proportion of the former non-Kuwaiti residents, who had previously formed a majority of the inhabitants (see below). Provisional census results for April 1995 indicated a total population of 1,575,983, including 655,820 Kuwaiti nationals. By mid-1998 the population had increased to 1,866,104, according to official estimates. During 1963–70 the average annual increase in Kuwait's population was 10%, the highest growth rate recorded in any independent country. The average annual increase in 1970–80 was 6.3%, although in 1985–90 the rate of growth slowed to 4.0% per year, and the population actually declined by 4.8% per year during 1990–96. During 1980–97, according to the World Bank, the average annual rate of growth of the population had slowed to 1.6%.

Much of Kuwait's previous population growth had been the result of immigration, although the country also had one of the highest natural increase rates in the world. The birth rate for the Kuwaiti population alone exceeded 50 per 1,000 each year in 1973–76. Between 1957 and 1983 the non-Kuwaiti population grew from less than 93,000 (45% of the total) to about 870,000 (57.4%), most of them from other Arab states. At the 1995 census the non-Kuwaiti population, based on the definition of citizenship then in use, represented 58.4% of the total. In 1994 there were 38,868 recorded births (24.0 per 1,000 inhabitants) and only 3,464 deaths (2.1 per 1,000). In 1995 females comprised only 42% of the country's population, including non-Kuwaitis.

According to the provisional results of the 1995 census, Kuwait City, the capital and principal harbour, had a population of 28,859 (compared with 44,335 in 1985 and 60,525 in 1980), although the largest town was Salmiya, with 130,215 inhabitants. Other sizeable localities were Jaleeb ash-Shuyukh (population 102,178) and Hawalli (population 82,238).

Apart from the distinction between Kuwaiti citizens and immigrants, Kuwaiti nationals can be divided into six groups. These groups reflect the tribal origins of Kuwaiti society. The first tribe of settlers, the Anaiza (led by the Sabah family) and later settlers, including the Bahar, Hamad and Babtain families, originated in the Nejd (central Arabia). Another group, the Kenaat (including the Mutawa family and its offshoot, the Saleh), came to Kuwait from Iraq, and remain distinct from the Nejdi families. There are also a few large families of Persian (Iranian) origin, including the Behbanis. The remaining citizens may be described as 'new Kuwaitis'; a few are former Palestinians, although most are bedouin who have been granted second-class citizenship. The majority of the Kuwaitis (including the ruling family) are Sunni Muslims, but most of the Persian families belong to the Shi'a sect. They, together with other Persians, comprise an estimated 150,000 (or one-quarter) of all Kuwaiti citizens. About 30% of the total population are thought to be Shi'ites.

Immediately to the south of Kuwait, along the Gulf, is a Neutral or Partitioned Zone of 5,700 sq km (2,200 sq miles), which is divided between Kuwait and Saudi Arabia. Each country administers its own half as an integral part of the state. However, the oil wealth of the whole Zone remains undivided and production from the onshore concessions in the Neutral/Partitioned Zone is normally shared equally between the two states.

History

Revised for this edition by KAMIL MAHDI

The establishment of the present city of Kuwait is usually dated from the beginning of the 18th century, when a number of families of the Anaiza tribe migrated from the interior to the Arabian shore of the Gulf. The foundation of the present Sabah ruling dynasty dates from about 1756, when the settlers of Kuwait decided to appoint a sheikh to administer their affairs, provide them with security and represent them in their dealings with the Ottoman Government. The town prospered and in 1765 it was estimated to contain some 10,000 inhabitants possessing 800 vessels and engaged in trading, fishing and pearling.

Between 1775 and 1779, during the Persian occupation of Basra, the East India Company moved the southern terminal of its overland mail route to Aleppo from Basra to Kuwait, and much of the trade of Basra was diverted to Kuwait. Such a shift was repeated again in 1793 and in 1821–22, and many merchant families migrated from Basra to Kuwait. At around the same time Kuwait was repeatedly threatened by raids from the Wahhabis, fanatical tribesmen from central Arabia, and the need for protection led to closer contacts with the East India Company, which had a depot in the town. Conflict between British and Arab fleets over control of the sea trade caused a decline in prosperity during the early years of the 19th century, but trade later expanded again under British ascendancy. The growth of production in the region and the expansion of trade in the second half of the century brought renewed prosperity.

Kuwaitis were mindful of the need to maintain good relations with the Turks. Although not under direct Turkish administration, the Sheikh of Kuwait recognized a general Ottoman suzerainty over the area by the payment of tribute and Sheikh Abdullah bin Sabah al-Jabir (1866–92) accepted the title of

Qa'immaqam (district governer) under the Turkish Vali (Governor) of Basra in 1871. His successor, Sheikh Mubarak 'the Great', feared that the Turks would occupy Kuwait, and in 1899, in return for British protection, he signed an agreement with the British not to cede, mortgage or otherwise dispose of parts of his territories to anyone except the British Government, nor to enter into any other relationship with a foreign government without British consent.

The reign of Sheikh Mubarak, from 1896 to 1915, was notable for the development of Kuwait from a sheikhdom of undefined status to an autonomous state. In 1904 a British political agent was appointed, and in 1909 Great Britain and Turkey discussed proposals which, although never ratified because of the outbreak of the First World War, in practice secured the autonomy of Kuwait.

Sheikh Mubarak's second son, Sheikh Salim, who succeeded to the sheikhdom in 1917, supported the Turks in the First World War, thus incurring a blockade of Kuwait. Sheikh Salim was succeeded in 1921 by his nephew, Sheikh Ahmad al-Jabir. Kuwait prospered under his rule, and by 1937 the population had risen to about 75,000. Sheikh Ahmad laid the foundation of Kuwait's great petroleum industry. After considerable prospecting, he granted a joint concession in 1934 to the Gulf Oil Corpn of the USA and the Anglo-Persian Oil Co of Great Britain, which formed the Kuwait Oil Co Ltd. Deep drilling started in 1936, and was just beginning to show promising results when the Second World War began in 1939. The oil wells were plugged in 1942 and drilling was suspended until the end of the war.

After the war the petroleum industry in Kuwait was revived on an extensive scale (see Economy) and within a few years the town of Kuwait had developed from an old-fashioned dhow port to a thriving modern city, supported by the revenues of the petroleum industry. In 1950 Sheikh Ahmad died and was succeeded by Sheikh Abdullah as-Salim. His policy was to use the petroleum revenues substantially for the welfare of his people, and in 1951 he inaugurated a programme of public works and educational and medical developments which transformed Kuwait into an organized and well-equipped country.

THE MODERN STATE

Kuwait has gradually built up what are probably the most comprehensive welfare services in the world, and for the most part free of charge, at least to native Kuwaitis. Education is completely free in Kuwait, and, despite the introduction of health charges in 1984, the country's health service is considered to be of a very high standard. A heavily subsidized housing programme has provided accommodation for many residents who satisfy the country's generous criteria of 'poverty'.

The 1899 agreement, which had given the United Kingdom responsibility for the conduct of Kuwait's foreign policy, was terminated in 1961; Kuwait became a fully independent state on 19 June. The ruling Sheikh took the title of Amir, and Kuwait was admitted to the League of Arab States (Arab League—see p. 264).

Shortly after attaining independence, Kuwait was threatened by an Iraqi claim to sovereignty over the territory. In response to a request from the Amir for assistance British troops landed in Kuwait. The Arab League met in July and agreed that an Arab League Force should be provided to replace the British troops as a guarantor of Kuwait's independence. This force, composed of contingents from Saudi Arabia, Jordan, the United Arab Republic (UAR) and Sudan, arrived in Kuwait in September 1961. The UAR contingent was withdrawn in December 1961, and those of Jordan, Saudi Arabia and Sudan before the end of February 1963. On 14 May 1963 Kuwait became the 111th member of the United Nations.

In December 1961, for the first time in Kuwait's history, an election was held to choose 20 members of the Constituent Assembly (the other members being ministers). This Assembly drafted a new Constitution under which a National Assembly of 50 members was elected in January 1963, and the first session was held, with Sheikh Sabah as-Salim as-Sabah, brother of the Amir and heir apparent, as the Prime Minister of a new Council of Ministers.

In October 1963 the new Iraqi Government announced its decision to recognize Kuwait's complete independence, in an attempt to dispel the tense atmosphere between the two countries. Kuwait was thought to have made a substantial grant to Iraq at this juncture.

In January 1965 a constitutional crisis, reflecting the friction between the ruling house and the National Assembly, resulted in the formation of a strengthened Council of Ministers under the heir apparent, Sheikh Sabah as-Salim as-Sabah. On 24 November 1965 Sheikh Abdullah died and was succeeded by Sheikh Sabah. His post as Prime Minister was assumed by another member of the ruling family, Sheikh Jaber al-Ahmad, who became heir apparent in May 1966.

Although Kuwait had played a neutral role in inter-Arab conflicts during 1966 and 1967, it declared its support for the Arab countries in the Six-Day War with Israel in June 1967, and joined in the oil embargo imposed against the USA and the United Kingdom. However, the cease-fire had been announced before any Kuwaitis entered the conflict. The Government donated KD 25m. to the Arab war effort. At the Khartoum Conference in September 1967 Kuwait joined Saudi Arabia and Libya in offering financial aid to the UAR and Jordan, to help their economies to recover from the 1967 war. The Kuwaiti share of this amounted to KD 55m. annually.

In 1968 it was announced that the agreement of June 1961—whereby Britain had undertaken to give military assistance to Kuwait if asked to do so by its ruler—would terminate by 1971. This followed an earlier announcement that Britain would withdraw all troops from the Gulf region by the end of 1971. At this time, Kuwait continually solicited support for the formation of a federation of Bahrain, Qatar and the Trucial States, but it failed to convince the first two states to join what eventually became the United Arab Emirates (UAE).

Following the Six-Day War, Kuwait ceased to be a target of radical Arab criticism, largely because of its financial support for the countries affected by war, and for the Palestinian guerrilla movements. A factor in this assistance was the large Palestinian community, totalling more than 350,000, in Kuwait; many of the most able and educated Palestinians had made a career in the country. Financial aid to Jordan, on the other hand, was suspended in September 1970, following the armed conflict between the Jordanian Government and Palestinian guerrilla forces.

During the 1960s the Kuwaiti leadership's policies led to extensive redistribution of income, through the use of oil revenues in public expenditure and through the land compensation scheme. At the same time, however, there was popular discontent about corruption and inefficiency in public services and the manipulation of the press and the National Assembly.

In response to public opinion, the ruling family permitted the assembly elections of January 1971 to be held on the basis of a free vote, although women, illiterates and all non-Kuwaitis were excluded. There was a lively election campaign, with 184 candidates contesting the 50 seats, despite the absence of political parties, which were still illegal. Several members and supporters of the Arab Nationalist Movement, founded in the 1950s by Dr George Habash (now leader of the Popular Front for the Liberation of Palestine), were elected. This radical group, led by Dr Ahmad al-Khatib, was generally regarded as the principal opposition to the Government.

After the 1971 elections the Crown Prince was reappointed Prime Minister and formed a new Council of Ministers. The representation of the ruling family was reduced from five to three and, for the first time, the Council of Ministers included two ministers drawn from the elected members of the National Assembly.

In August 1976 the Amir suspended the National Assembly on the grounds that, amongst other things, it had been delaying legislation. A committee was ordered to be formed to review the Constitution.

On 31 December 1977 the Amir (Sheikh Sabah) died and was succeeded by his cousin, the Crown Prince, Sheikh Jaber al-Ahmad as-Sabah. The new heir apparent was Sheikh Saad al-Abdullah as-Salim as-Sabah, who became Prime Minister as well as Crown Prince. Both the Amir and the Prime Minister publicly reaffirmed the Government's intention to reconvene the National Assembly and to restore democratic government by August 1980. In response to increasing public pressure, a 50-member committee was established in early 1980 to consider constitutional amendments and a revised form of legislature.

Following its recommendations, an Amiri decree provided for the election of a new assembly before the end of February 1981. Despite the uncertainty generated by the Iran–Iraq War, the election campaign proceeded, with 448 candidates contesting the 50 seats. The franchise was limited to 90,000 'first-class' Kuwaiti citizens, and of these fewer than half (or about 3% of the population) registered to vote. A moderate assembly was returned, containing 23 conservative tribal leaders, sympathetic to the ruling sheikhs, and 13 young technocrats. The radical Arab nationalists, the fiercest opposition to the Government in the previous Assembly, failed to win any seats, while the Shi'a minority's representation was reduced to four seats. However, five Islamic fundamentalists of the Sunni sect were elected. The Crown Prince was subsequently reappointed Prime Minister and formed a new 15-member Council of Ministers in which the ruling family retained the major posts. There were seven new ministers, including the only member of the Council of Ministers to have been elected to the new Assembly, and the finance and planning ministries were merged.

Of all the Gulf states, Kuwait has been the most vulnerable to regional disruption. In March 1973 Iraqi troops and tanks occupied a Kuwaiti outpost at Samtah, on the border with Iraq. Iraq later withdrew its troops, but a source of potential dispute remained over Iraq's territorial claim on Bubiyan Island. Following the crisis in 1973, Kuwait allocated larger sums for the expansion of its armed forces and established its own navy. Legislation to introduce conscription was approved in 1975.

During the Arab–Israeli war of October 1973 Kuwaiti forces stationed along the Suez Canal were involved in fighting, and Kuwait contributed considerable financial aid, totalling KD 100m., to other Arab states. While the war was still in progress, Kuwait called for a meeting of the Organization of Arab Petroleum Exporting Countries (OAPEC—see p. 268) to draw up a common Arab policy for the use of oil as a weapon to put pressure on Western countries, particularly the USA, to force an Israeli withdrawal from occupied Arab territory. Kuwait also joined other Gulf states in announcing a unilateral increase of 70% in the posted price of crude petroleum (the reference price used for tax and royalty purposes) from 1 November 1973. The OAPEC meeting took place in Kuwait, where the organization's 10 member states decided to reduce petroleum production by at least 5% progressively each month. Kuwait also imposed a total embargo on petroleum shipments to the USA and, later, to the Netherlands.

In November oil ministers from the Arab states also agreed on an extra 5% reduction in output, which effectively led to an overall drop in supply of 25% compared with September levels, to be followed by further reductions. Later in November the Arab group in the Organization of the Petroleum Exporting Countries (OPEC—see p. 272) agreed on the next 5% cut for December, but exempted countries of the European Community (EC, now European Union—EU—see p. 259) except the Netherlands.

At the next OAPEC meeting, held in Kuwait in December, an additional 5% cut, without exemptions, was agreed for January 1974. A second December meeting, also in Kuwait, partly reversed earlier decisions to reduce oil production. Just before this, the Gulf states belonging to OPEC had agreed on a further sharp increase in the posted price of oil, effective from 1 January 1974.

Kuwait played a leading part in all these moves and made considerable reductions in national oil output. Monthly production (in million metric tons) fell from 13.4 in September 1973 to 12.0 in October and 9.8 in November. There was later a reversal in this trend and monthly output was more than 10m. tons in the first half of 1974.

Following the January conclusion of a disengagement agreement between Egypt and Israel and the consequent improvement in Arab relations with the USA, seven of the Arab oil-producing states (including Kuwait) agreed in March to lift the embargo on supplies to the USA. In July 1974 the Arab countries also lifted the oil embargo on the Netherlands. None the less, Kuwait's policy of conserving petroleum reserves, and the fall in the world demand, meant that production fell from a peak of 3.3m. barrels per day (b/d) in 1972 to an average of below 1m. b/d in 1981. Since then, OPEC agreements have imposed a maximum quota on every member country's production (see Economy).

Until 1973 Kuwait's financial support for the leading Palestinian organizations had protected the country from active involvement in the guerrilla struggle. However, the activities of extremist groups resulted in embarrassing incidents for the Government. In September 1973 Arab gunmen occupied the Saudi Arabian embassy in Paris and later flew to Kuwait with five hostages. The gunmen surrendered to the Kuwaiti authorities, who later handed them over to the Palestine Liberation Organization (PLO), which had condemned the incident.

At the Baghdad Arab summit in November 1978 Kuwait pressed for unanimity among the Arab nations in condemning the Egypt-Israeli peace agreement and supported the use of sanctions against Egypt. The Kuwaiti ambassador was recalled from Cairo and all aid, except for specific development projects, was withdrawn. Anxious to preserve Arab unity, Kuwait mediated successfully in the conflict between the Yemen Arab Republic and the People's Democratic Republic of Yemen in 1979, eventually bringing about a cease-fire, and was instrumental in resolving a political crisis in the UAE in the same year. In the war between Iran and Iraq, which began in September 1980, Kuwait supported Iraq, allowing access to its strategic ports, and, with Saudi Arabia, exporting up to 310,000 b/d (250,000 b/d from the Neutral Zone and the remainder from Saudi Arabia), on Iraq's behalf, and providing generous financial aid, which by the end of 1983 was thought to have reached US $30,000m. (donated by both Kuwait and Saudi Arabia). Relations with Iran were, however, maintained. In May 1981 Kuwait, with Saudi Arabia, the UAE, Qatar, Oman and Bahrain, founded the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC—see p. 255). By encouraging economic and social integration, it was hoped that the GCC would increase the security of the small oil-producing states of the Gulf.

Events at the end of 1983 and in early 1984 highlighted Kuwait's vulnerability to attack, and increased concern for the country's security. In December 1983 six bombs exploded in Kuwait City, killing five people and wounding 61. The principal targets were the French and US embassies, but a power station and an airport were also bombed. Responsibility was claimed by the al-Jihad al-Islami (Islamic Holy War) organization, a group of militant Shi'ite Muslims with widely acknowledged connections in Iran. The potential threat of domestic agitation by the country's own fundamentalist Shi'ites was coupled with the authorities' suspicion that the attacks were directed by Iran in retaliation for Kuwaiti support of Iraq in the Iran–Iraq War. As a result of the bombings, more than 600 Iranian workers were deported from Kuwait in early 1984.

In May 1984 two Kuwaiti and several Saudi Arabian tankers were bombed in a series of attacks by unidentified aircraft on shipping in the Gulf. Although both Iran and Iraq were known to have been firing at shipping, Iran was blamed for the attacks on Kuwaiti tankers. The bombings were seen as a warning to Kuwait to reduce its aid to Iraq and to put pressure on Iraq to desist from attacking tankers carrying Iranian oil. The GCC withdrew offers to mediate in the Iran–Iraq War and condemned Iran. Much concern arose as to whether the GCC countries could defend themselves unaided, and at the GCC summit conference in November 1984 the member states agreed to form a joint military force, capable of rapid deployment and aimed at combating any spread of the Iran–Iraq War.

Kuwait's attempts to mediate in the Iran–Iraq War in 1984 were hampered by Iran's increasing suspicion about the outcome of outstanding border disputes between Iraq and Kuwait. Iran believed that Kuwait was about to transfer three strategically important islands (Bubiyan, Warba and Failaka) to Iraq. In January 1985, however, Kuwait announced plans to build its own military bases on Bubiyan and Warba, and two months later Bubiyan was declared an out-of-bounds war zone. Kuwaiti forces were put on alert in February 1986, when Iranian forces crossed the Shatt al-Arab waterway and captured the Iraqi port of Faw, near Kuwait's north-eastern border. Iran pledged that Kuwait would not become embroiled in its war with Iraq provided that it maintained its military neutrality.

In May 1985 an Iraqi member of the banned ad-Dawa al-Islamiya (the Call of Islam) organization attempted to assassinate the Amir of Kuwait by driving a car-bomb into a royal procession. The attack resulted in appeals for even greater

security measures in Kuwait, and the Government responded by agreeing to introduce appropriate legislation and by temporarily suspending the issue of entry visas and residence permits. In July the National Assembly unanimously approved legislation to impose the death penalty for terrorist acts which result in loss of life, and the Government announced plans to establish popular security committees in all districts. In June 1986 four simultaneous explosions occurred at Kuwait's main oil export refinery at Mina al-Ahmadi. A hitherto unknown organization, calling itself the 'Arab Revolutionaries Group', later claimed responsibility for the attacks, which had been intended to force Kuwait to reduce its petroleum output.

In 1985 and 1986 almost 27,000 expatriates, many of whom were Iranian, were deported, and concern over the security of the country continued. In June 1987 six Kuwaiti Shi'a Muslims were sentenced to death for their part in sabotaging oil installations and plotting against the Government. There were further explosions in May and July.

The Council of Ministers submitted its resignation to the Amir in July 1986, following 15 months of increasing confrontation with the National Assembly. The Amir subsequently issued a decree accepting the Council's resignation, dissolving the National Assembly and suspending some articles of the Constitution. Crown Prince Sheikh Saad al-Abdullah as-Salim as-Sabah was immediately reappointed to the post of Prime Minister and charged with the task of nominating a new government, which would be given greater powers of censorship, including the right to close down newspapers for up to two years. Ten days later the Amir named a 22-member Council of Ministers, which included seven new ministers and three new portfolios.

Between October 1986 and April 1987 Iranian forces attacked merchant ships sailing to or from Kuwait and seized cargoes, as a punishment for loading petroleum sold on Iraq's behalf and for the use of Kuwait's ports for Iraqi imports. In an attempt to deter Iranian attacks in the Gulf, Kuwait re-registered most of its fleet of oil tankers under the flags of the USA, Liberia, the USSR and the United Kingdom. Kuwait received help from the USA and Saudi Arabia in clearing mines from the channel leading to its main oil-loading facilities at Mina al-Ahmadi. On 24 July the *Bridgeton,* the first tanker to be re-registered by the USA, struck a mine in the Gulf, 30 km from Farsi Island, while under US naval escort to Mina al-Ahmadi. The US naval force in the Gulf was ill-equipped for minesweeping operations, and in August France and the United Kingdom, having initially refused a request for assistance to clear the shipping lanes, sent minesweeping vessels to the Gulf. These were followed in September by vessels from the Netherlands, Belgium and Italy.

Six Iranian diplomats were expelled from Kuwait in September 1987, following Iranian attacks on Kuwaiti installations. Kuwait's main offshore oil-loading terminal, at Sea Island, was closed between October and December, after an Iranian missile attack in which three workers were injured. In November Kuwait resumed full diplomatic relations with Egypt, following a decision taken by the Arab League that permitted member states to restore relations with Egypt at their own discretion. The GCC held a summit meeting in December 1987, when the six member states urged the UN Security Council to enforce its Resolution 598, which ordered a cease-fire to be observed in the Iran–Iraq War, and approved a pact to increase security co-operation between the member states.

Two Kuwaiti soldiers were wounded in March 1988 as Iranian and Kuwaiti armed forces clashed for the first time during the eight-year Iran–Iraq War, when three Iranian gunboats attacked Bubiyan island, situated 25 km from the southern coast of Iraq. In the following month an Iranian missile landed at al-Wafra oilfield, 80 km south of Kuwait City. The launching of the missile was believed to represent an Iranian warning to Kuwait for allegedly permitting Iraqi armed forces to use Bubiyan island in an attempt to recapture the Iranian-occupied Faw peninsula.

In April 1988 a Kuwaiti airliner was hijacked over the Arabian Sea by a group believed to belong to pro-Iranian Shi'ite Muslim organizations in Lebanon. The hijackers demanded the release of 17 Shi'ite Muslims who were imprisoned in Kuwait. Two hostages were killed during the 15-day hijack, which ended when the Algerian Government negotiated the release of the hostages and the safe passage of the hijackers to an unknown destination in the Middle East.

The cease-fire in the Iran–Iraq War in August 1988 brought stability to the region and a revival of economic growth in Kuwait. Relations between Kuwait and Iran improved, despite Kuwait's support for Iraq in the war, and in April 1989 the Prime Minister, Saad al-Abdullah as-Salim as-Sabah, announced that relations with Iran were 'moving towards stability and normalization'. Co-operation with Iraq appeared to increase, despite the continuing dispute over Bubiyan island. In domestic affairs, concern about Iranian influence over the Shi'ite minority (about 30% of the population) led to severe measures to curb subversion. In June 1989 a Kuwaiti court sentenced 22 people, accused of plotting to overthrow the royal family, to prison terms of up to 15 years. A programme of 'Kuwaitization' was vigorously pursued; the aim was to achieve a majority of Kuwaitis in the population by 2000. The programme was most successful in the public sector, where 90% of Kuwaiti workers were employed, but the private sector continued to be dominated by expatriates, who formed 60% of the population.

In December 1989 a number of former members of the National Assembly campaigned for its re-establishment. In mid-January 1990 the Amir appealed for political dialogue, and in March the Prime Minister declared that he would welcome the restoration of an elected legislature. On 10 June 62% of the electorate voted at a general election for 50 members of a new National Council. The Council was to be an interim body and its members were to hold office for four years. It comprised 75 members, of whom 25 were appointed by the Amir.

Following the election, the Kuwaiti Government resigned. On 13 June 1990 the Amir reappointed the Crown Prince, Sheikh Saad al-Abdullah as-Salim as-Sabah, as Prime Minister. Sheikh Ali al-Khalifa as-Sabah became Minister of Finance, and Rashed Salim al-Ameeri became Minister of Oil. On 23 June a government reshuffle resulted in 10 new appointments to the Council of Ministers. Only three ministers not belonging to the as-Sabah family retained their posts, while the new members of the Council were technocrats with no previous experience of government. The Council was believed to have been reshuffled in an attempt to satisfy domestic demands for new government policies. However, the fact that the as-Sabah family retained the majority of important positions in the Government, and that restoration of the National Assembly did not seem a realistic prospect, undermined the attempt to placate critics of the Government. In late June it was announced that five ministers from the reshuffled Council of Ministers had been appointed by the Amir to the National Council, the first session of which was held on 9 July.

IRAQ'S INVASION OF KUWAIT: THE GULF CRISIS

In July 1990 President Saddam Hussain of Iraq publicly criticized unspecified states for exceeding the petroleum production quotas that had been established by OPEC in May in order to increase prices. He accused Kuwait of having 'stolen' $2,400m.-worth of Iraqi oil reserves from a well in disputed territory. The Iraqi Minister of Foreign Affairs, Tareq Aziz, declared that Kuwait should not only cancel Iraq's war debt, but also compensate it for losses of revenue incurred during the war with Iran, and as a result of Kuwait's overproduction of oil, to which he attributed a decline in prices. Later in July Iraq began to deploy armed forces on the Kuwait-Iraq border, immediately before a meeting of the OPEC ministerial council in Geneva, Switzerland. At the meeting the minimum reference price for petroleum was increased, as Iraq had demanded. On 31 July representatives of Kuwait and Iraq conferred in Jeddah, Saudi Arabia, in an attempt to resolve the dispute, but the negotiations collapsed.

On 2 August 1990 Iraq invaded Kuwait with 100,000 troops (compared with Kuwait's total military strength of about 20,000). The Iraqi Government claimed that its forces entered Kuwait at the invitation of insurgents who had overthrown the Kuwaiti Government, but there was no evidence to verify this. The Amir and other members of the Government escaped to Saudi Arabia, along with many Kuwaiti citizens. The immediate response of the UN Security Council to the invasion of Kuwait was to adopt a series of resolutions which condemned the invasion, demanded the immediate and unconditional withdrawal of Iraqi forces from Kuwait, and appealed for a

negotiated settlement of the conflict. A trade embargo was also imposed on Iraq and Kuwait. Immediately after the invasion, the USA and the members of the EC 'froze' all Kuwaiti assets to prevent an Iraqi-imposed regime from transferring them back to Kuwait.

On 7 August 1990, at the request of the Saudi Arabian Government, President Bush of the USA ordered the deployment of US troops and aircraft in Saudi Arabia, which were to secure the country's borders with Kuwait in the event of an Iraqi attack. The British and other European Governments, together with some members of the Arab League, agreed to provide military support for the US forces (see chapter on Iraq). On 8 August the Iraqi Government announced the formal annexation of Kuwait, and ordered the closure of foreign diplomatic missions there. On 28 August most of Kuwait was officially declared to be the 19th governorate of Iraq, while a northern strip was incorporated into the Basra governorate. Successive diplomatic efforts to achieve a peaceful solution to the crisis in the Gulf region proved futile. Attempts to pursue a diplomatic solution were complicated by the detention of Western citizens resident in Kuwait and Iraq. At the end of August, however, Iraq announced that foreign women and children were free to leave Iraq and Kuwait. By early December all hostages had been released.

Following the Iraqi invasion, there were widespread reports that Iraqi forces were plundering Kuwait City, looting goods from shops and warehouses, and searching for Kuwaiti resistance fighters and Westerners in hiding. Iraqi troops, in an attempt to subjugate the population of Kuwait, reportedly burned houses and tortured or summarily executed persons suspected of opposing the occupation forces. Many installations were dismantled and removed to Iraq. By early October an estimated 430,000 Iraqi troops had been deployed in southern Iraq and Kuwait. There was evidence of attempts to alter the demographic character of Kuwait, by settling Iraqis and Palestinians in the country, and by forcing Kuwaiti citizens to assume Iraqi citizenship. The population was estimated to have decreased from approximately 2m., prior to the invasion, to about 700,000, of whom Kuwaitis constituted an estimated 300,000 and Palestinians 200,000, while the remainder comprised other Arab expatriate workers and Asians.

In early October 1990 a conference was held in Jeddah, Saudi Arabia, where the exiled Crown Prince and Prime Minister of Kuwait, Sheikh Saad al-Abdullah as-Salim as-Sabah, addressed approximately 1,000 Kuwaiti citizens, including 'opposition' members of the dissolved National Assembly. He agreed to establish committees to advise the Government on political, social and financial matters, and pledged that, after the liberation of Kuwait, the country's constitution and legislature would be restored, and that free elections would be held. This was seen as a necessary concession in order to maintain national unity, particularly given the emerging divide between Kuwait's wealthier citizens, most of whom were now living in exile, and those who remained in Kuwait.

In late November 1990 the UN Security Council adopted a resolution which authorized the multinational force, stationed in Saudi Arabia and the Gulf region, to use 'all necessary means' to liberate Kuwait. Iraq was allowed until 15 January 1991 to begin to implement the 10 resolutions that had so far been adopted, including that stipulating unconditional withdrawal from Kuwait. Upon the expiry of this period, it was implied, military force would be employed against Iraq in order to remove its troops from Kuwait. In the interim, various unsuccessful diplomatic attempts were made, by the UN Secretary-General and numerous Governments, to avert a military confrontation between the multinational and Iraqi forces. On 17 January 1991 the UN-backed, US-led multinational force launched its military campaign to liberate Kuwait by an intensive aerial bombardment of Iraq, with the aim of disabling that country's economic and military infrastructure. Soviet attempts to mediate were deemed unacceptable by the USA and its allies, as they proposed that a cease-fire should be declared before Iraq began to withdraw from Kuwait. On 24 February the US-led ground forces entered Kuwait, encountering little effective Iraqi opposition. Within three days the Iraqi Government had agreed to accept all the resolutions of the UN Security Council concerning Kuwait, and on 28 February the US Government announced a suspension of military operations. In March the UN Security Council set out the terms for a permanent cease-fire. These included the release of all allied prisoners of war and of Kuwaitis who had been detained as potential hostages. They also required Iraq to repeal all laws and decrees concerning the annexation of Kuwait. Iraq promptly announced its compliance with these conditions. Another resolution, adopted in April, provided for the establishment of a demilitarized zone, supervised by the UN Iraq-Kuwait Observer Mission (UNIKOM, see p. 230), between the two countries. The UNIKOM mandate was subsequently renewed at six-monthly intervals.

In mid-January 1991 a conference in Jeddah, Saudi Arabia, was attended by members of the Kuwaiti Government-in-exile, including the Prime Minister, and opposition delegates. Islamic and Arab nationalist groups had collaborated in forming a 'National Constitutional Front' and demanded an immediate return of parliamentary and press freedom, while the more radical elements in the movement demanded the resignation of the as-Sabah family from all important positions in the Government, and the establishment of a constitutional monarchy. In February, despite the expression of discontent among the exiled Kuwaiti community, the Kuwaiti Government-in-exile excluded the possibility of early elections after Kuwait had been liberated, on the grounds that the need to rebuild and repopulate the country took precedence. The opposition parties were further frustrated by the stated aim of the UN resolutions to reinstate Kuwait's 'legitimate' Government prior to the invasion by Iraq, namely the as-Sabah family. In late February, immediately after the liberation of Kuwait, the Amir decreed that martial law would be enforced in Kuwait for the subsequent three months. The decree was contested by some members of Kuwait's opposition-in-exile, who expressed the need for the legislature to reconvene before any such decision could be made. In early March the opposition groups in exile made public their intention to form a coalition against the Government of the as-Sabah family. In the same month, the Amir announced the formation of a committee to administer martial law and to supervise the state's security internally and abroad. The committee's domestic objectives were to identify people who had collaborated with Iraq, to prevent the formation of 'vigilante' groups, and to identify civilians brought by the Iraqi authorities to settle in the emirate. On 4 March the Prime Minister and other members of the exiled Government returned to the emirate, followed by the Amir 10 days later. The country was in a condition of instability because of the structural and environmental damage caused by the war, and also owing to the emigration or exile of most of the non-national workforce. Bitter resentment was felt by the Kuwaiti people against members of the Palestinian community who were suspected of having collaborated with Iraq; human rights groups documented the use of torture against suspected collaborators by the Kuwaiti security forces. Later in March the Government announced that elections would take place within six to 12 months, following the return of Kuwaiti exiles and the compilation of a new electoral roll. The Government also declared its intention to reduce the number of foreign workers in Kuwait. On 20 March the Council of Ministers resigned, apparently in response to public discontent at the Government's failure to restore supplies of electricity, water and food. On 20 April 1991 the formation of a new Council of Ministers by the Crown Prince was announced. Although several technocrats were appointed to important positions within the Council (in charge of the economic portfolios), the major portfolios—foreign affairs, defence and the interior—were all retained by members of the as-Sabah family. Members of illegal opposition groups immediately denounced the new Council of Ministers as 'unrepresentative'.

In May 1991 it was reported that 900 people were under investigation in connection with crimes committed during the Iraqi occupation. In late May a human rights organization, Amnesty International, alleged that trials were being conducted in Kuwait without the provision of adequate defence counsel, and that, in some cases, torture had been used in order to extract confessions from defendants. In the same month, the Prime Minister admitted that the abduction and torture of non-Kuwaiti nationals resident in Kuwait was taking place. He promised that the matter would be investigated.

In June 1991 the Amir formally decreed that elections to a new National Assembly would be held in October 1992, and he ordered the National Council (which had been elected in a provisional capacity in June 1990) to reconvene on 9 July 1991 in order to prepare for the elections. However, the announcement failed to satisfy the illegal opposition groups, whose members continued to demand the immediate introduction of democracy into Kuwait, and an end to the dominance of the as-Sabah family.

It was reported in June 1991 that 29 of a total of 200 defendants in trials for alleged collaboration during the occupation of Kuwait had been sentenced to death. The sentences were condemned by international human rights organizations as having resulted from the abuse of the judicial system. On 26 June, however, the Government repealed martial law and quashed all of the death sentences which had been imposed in recent trials. Subsequent trials of those accused of collaboration were to be referred to civilian courts.

In late June 1991, with British and US armed forces expected to leave Kuwait in July and September respectively, the Minister of Defence announced that an agreement had been reached for their replacement by a united Arab force, to comprise contingents from the GCC states, Egypt and Syria. In September, however, it was announced that US armed forces would remain in the country for several more months, owing to the slow progress made in rebuilding the Kuwaiti security forces.

In July 1991 it was estimated that the Kuwaiti population had declined to about 600,000 since August 1990. The Palestinian population, which had totalled an estimated 400,000 prior to the Iraqi invasion, was estimated to have declined to 150,000. International human rights organizations produced a report critical of the continued deportation of non-Kuwaiti nationals, citing the Fourth Geneva Convention which prohibits such action against civilians who are justified in fearing persecution for their political or religious beliefs.

THE AFTERMATH OF THE GULF CRISIS

In August 1991 Kuwait protested against the alleged landing of 80 Iraqi troops on Bubiyan island and appealed for further international safeguards. The Government also ordered that the trials of all detainees should be completed within six months and that courts of appeal be established, following international criticism of recent war trials. Further Palestinians were airlifted to Jordan (bringing the total to 3,000 by mid-August), as part of a policy of limiting non-Kuwaitis to less than 50% of the population.

On 19 September 1991 the Kuwaiti Minister of Defence signed a 10-year defence pact with the USA. The agreement included provisions for the stockpiling of US military equipment in Kuwait, the use of Kuwaiti ports by US troops, and joint training exercises. US companies were awarded lucrative contracts to 'rebuild' Kuwait. The Amir made visits to Saudi Arabia, Oman, the UAE, Qatar, Egypt and Syria in order to discuss defensive and economic co-operation. In October he visited the USA, the United Kingdom and France, where he expressed his country's gratitude and proposed closer defence ties. The Government protested at Iraq's lack of co-operation with the UN Iraq-Kuwait Boundary Demarcation Commission and at its failure to release prisoners. According to estimates, only 80,000 Palestinians (less than 25% of the pre-war total) were still resident in Kuwait, and there was continuing international criticism of official sanctions and aggression against Palestinians, especially those suspected of collaboration.

In January 1992 the Government finally revoked its pre-publication censorship of written (but not broadcast) media. However, it retained the right to close publications responsible for 'objectionable' articles. The following month was the deadline for registration for the October elections to the National Assembly. Only 'first-class' Kuwaiti male citizens, who numbered about 81,400 (just under 15% of the adult population), were eligible to vote. The Minister of Justice and Legal Affairs excluded the possibility of foreign observers monitoring the elections. On 11 February Kuwait signed a defence pact (similar to that with the USA) with the United Kingdom. A defence pact with France was signed in August. On 16 April the UN Iraq-Kuwait Boundary Demarcation Commission adjudged that the border should be set 570m to the north of its present position. This had the effect of awarding part of the port of Umm Qasr and several of the Rumaila oilwells to Kuwait. Iraq rejected the validity of this decision.

The first half of 1992 was characterized by an unprecedented breakdown of law and order in Kuwait, with regular shootings and other incidents of violence. Many of these were directed against expatriate communities, especially the Palestinians. On 25 June there was a bomb attack on the home of Sheikh Mubarak Sabah an-Nasser, a member of the ruling family. One man was killed in the incident, which was the culmination of two months of violence. There were widespread allegations that the Government was using the shootings, and the fear of further Iraqi aggression, as a pretext to restrict the press and opposition meetings.

In August 1992, after the Iraqi Government had refused to allow inspections of weapons facilities by the UN (as stipulated by the 1991 cease-fire agreement), the US Government deployed missiles in Kuwait, and some 7,500 US troops participated in a military exercise in the emirate. At the end of the month, the UN Security Council adopted a resolution guaranteeing the new land frontier between Kuwait and Iraq. Demarcation was to take place before the end of the year, and the new border was to come into force on 15 January 1993. In the week leading up to this deadline, however, Iraqi forces made several incursions into disputed territory, during which they recovered armaments left behind at the end of the Gulf War. At the same time, as US aircraft led air attacks on Iraq, more than 1,000 US troops were dispatched to Kuwait. Following the deadline for enforcement of the border, Iraqi operatives began to dismantle installations on what was now Kuwaiti territory. Nevertheless, the US Government deployed further missiles in Kuwait, and in early February the UN Security Council agreed to strengthen UNIKOM by approving the dispatch of an initial 750-strong multinational contingent of armed troops (in addition to the existing unarmed personnel in the force) to patrol the Kuwaiti border with Iraq. In the same month Kuwait and Russia signed a memorandum of understanding, which, in the following month, led to a defence pact between the two countries.

In March 1993 the UN Iraq-Kuwait Boundary Demarcation Commission announced that it had completed demarcation of the maritime border between the two countries along the median line of the Khor Abdullah waterway. In May Kuwait announced that construction was to begin of a trench, to be protected by mines and a wall of sand, along the entire length of the land border. Allegations by Kuwait of Iraqi violations of the border intensified during the second half of 1993, and there were reports of exchanges of fire in the border region. In mid-November it was reported that some 300 Iraqi civilians had crossed the border in the Umm Qasr region to protest against the digging of the trench, while Iraqi troops were reported to have attacked a border post. These incursions coincided with the beginning of the evacuation, under UN supervision, of Iraqi nationals and property from the Kuwaiti side of the new border. In November a 775-strong armed UNIKOM reinforcement was deployed in northern Kuwait, with authorization (under specific circumstances) to use its weapons to assist the unarmed force already in the demilitarized zone.

In September 1994 the UN Security Council agreed to extend the international sanctions against Iraq for a further period. On 6 October the leader of the UN's Special Commission on Iraq (responsible for inspecting the country's weapons) announced that a system for monitoring Iraqi defence industries was ready to begin operating. On the same day, however, there were reports of a large movement of Iraqi forces towards the border with Kuwait, apparently to draw attention to Iraq's demands for swift action to ease UN sanctions (not due to be considered by the Security Council until mid-November). Over the next few days, the accumulation of Iraqi military units in the border area amounted to some 70,000 troops and 700 tanks. In response to the apparent threat, Kuwait dispatched some 20,000 troops to the border region. The USA sent reinforcements (including combat aircraft and warships) to Kuwait and other parts of the Gulf region, to support the 12,000 US troops already stationed there. France and the United Kingdom deployed naval vessels, and some 1,200 British troops were dispatched to support the US military presence. On 10 October, as the first unit of additional US forces arrived in Kuwait, Iraq announced that

it would withdraw its troops northward from their positions near the Kuwaiti border. On 13 October, as a result of mediation by the Russian Minister of Foreign Affairs, the Iraqi Government reportedly offered to comply with the Security Council's demands to recognize the UN-demarcated border with Kuwait and to acknowledge Kuwait's sovereignty. In return, the Russian Government agreed to urge the relaxation of the UN sanctions against Iraq. On 15 October the Security Council demanded that Iraq grant unconditional recognition to Kuwait and that all the Iraqi forces recently transferred to southern Iraq be redeployed to their original positions. Later in the month the USA (in a statement also signed by the United Kingdom and several GCC states) indicated that 'appropriate action' would be taken if Iraq deployed its forces south of latitude 32°N (the boundary of the southern air-exclusion zone in force since August 1992), and in late October 1994, during a visit to Kuwait, the US President, Bill Clinton, reiterated his country's commitment to the defence of Kuwait. On 10 November Iraq officially recognized Kuwait's sovereignty, territorial integrity and political independence, as well as its UN-defined borders. Although the declaration was welcomed by the Kuwaiti authorities, they continued to demand the release of all Kuwaiti citizens detained in Iraq and appealed for international sanctions against Iraq to be maintained until that country had complied with all pertinent UN resolutions. In mid-August 1995 the Kuwaiti Minister of Defence announced that events in Iraq were being closely monitored and that Kuwait's armed forces had been placed on alert following the defections from Iraq of the former Minister of Industry and Minerals, his brother and their wives (daughters of the Iraqi leader, Saddam Hussain), which threatened to destabilize the Iraqi regime. Joint Kuwaiti-US military exercises in the Gulf began in that month.

In mid-1993 it was announced that Kuwait was willing to restore relations with Arab states that had supported Iraq during the Gulf crisis, with the exception of Jordan and the leadership of the PLO. Despite the lack of progress towards a wider Gulf-Arab defence force, ministers responsible for defence in the GCC countries, meeting in Abu Dhabi (UAE) in November, agreed on the need to strengthen and extend the capabilities of the Peninsula Shield Force (the GCC's Saudi-based rapid deployment force). In the same month Kuwait signed a defence co-operation agreement with Russia, and in December the two countries participated in joint naval exercises in the Gulf. By the end of the year most of the US and British troops that had been stationed in the Gulf region in October had been withdrawn. Pre-positioned heavy equipment and aircraft remained in the region, together with the multinational forces present prior to the October incident.

In September 1996 the Kuwaiti Government agreed to the deployment, in Kuwait, of US military aircraft and troops in support of a US initiative to force the withdrawal of Iraqi armed forces from the Kurdish 'safe haven' in northern Iraq. However, this initiative attracted little regional support, and the threat of further retaliatory US attacks on Iraqi targets (a missile attack on targets in southern Iraq had been launched from aircraft based in Guam in early September) receded later in the month when Iraq announced that it would cease targeting allied aircraft enforcing the air exclusion zones.

The UN commission responsible for considering claims for compensation arising from the 1990–91 Gulf crisis approved the first disbursements in May 1994. The rate of disbursements increased rapidly following the implementation in December 1996 of UN Security Council Resolution 986 (the 'oil-for-food' arrangement), and by July 1999 some US $3,000m. had been paid to individual claimants, most of whom were expatriates who had been living in Iraq and Kuwait at the time of the conflict. The more controversial corporate and government claims, mostly concerning Kuwaitis, had yet to be considered, but, with the total claimed amounting to more than $80,000m., it was likely to be a continuing source of tension and controversy in the region. In July 1998 Iraq protested at the reported sale by Kuwait of five Iraqi oil tankers stranded in Kuwaiti ports since the cease-fire in 1991. Iraq threatened legal action, although Kuwait claimed that it had been awarded the tankers by the compensation commission.

The Kuwait National Committee for Missing People and Prisoners of War claimed in 1994 that 625 Kuwaiti nationals were still in detention, or missing, in Iraq, and the fate of missing persons remains a major obstacle to any future normalization of relations between the two countries. Since mid-1996 Iraqi and Kuwaiti officials have held meetings in the mutual border area to discuss the fate of those not accounted for. The meetings have been conducted in closed sessions under the auspices of the International Committee of the Red Cross (ICRC), and have been attended by international observers. Although Iraq stated that it was holding no Kuwaiti nationals, in late 1997 Kuwait claimed to be in possession of documentation, given to the ICRC by Iraq, relating to 126 Kuwaiti prisoners of war. In July 1998 delegations from both countries met in Geneva, Switzerland, for 'highly confidential' discussions on this issue. Iraq withdrew from a subsequent meeting scheduled for January 1999, following Kuwait's support for renewed US-British bombardment of Iraq in December 1998. The Iraqi Government has demanded that the whereabouts of some 1,000 Iraqi citizens, allegedly missing in Kuwait since 1991, should also be included in any negotiations on this issue.

Notwithstanding these difficult negotiations, relations between Iraq and Kuwait have demonstrated no discernible improvement. During early 1997 several allegations of attacks on shipping were made by both countries, and in July Kuwaiti pressure resulted in Iraq's exclusion from the Pan-Arab Games. Kuwait has continued to urge the GCC states to maintain an uncompromising stance towards Iraq, and to continue fully to enforce UN sanctions imposed against Iraq. At a meeting of GCC foreign ministers in Riyadh, Saudi Arabia, in June 1998, extreme concern was expressed at a statement made by the Vice-Chairman of Iraq's Revolutionary Command Council which dismissed the terms of the UN resolution (844) which had demarcated the boundary betwen Iraq and Kuwait, following the 1990–91 crisis in the Persian (Arabian) Gulf.

From late October 1997 Kuwait expressed its support for the UN Security Council's resolution threatening punitive actions should Iraq continue to obstruct the work of weapons inspectors of the UN Special Commission (UNSCOM). Although the Kuwaiti Government made repeated declarations of support for a diplomatic solution to the rapid escalation of hostilities between the UNSCOM inspectors and the Iraqi authorities during 1998, and indicated that Kuwait would not be used as a base for a US-led attack on Iraq to enforce the UNSCOM mandate, US and British air strikes against strategic Iraqi installations were launched for this purpose from the Gulf in late 1998 and early 1999 with full logistical support from Kuwait, prompting renewed expressions of hostility towards Kuwait from the Iraqi Government. (During the first half of 1998 there had been a discernable shift in Kuwaiti foreign policy. The First Deputy Prime Minister and Minister of Foreign Affairs declared that Kuwait no longer opposed Iraqi participation in Arab summit meetings and in May the Kuwaiti Red Crescent offered to send humanitarian supplies to Iraq.)

Relations between Kuwait and Jordan (which had been severely strained since Jordan's adoption of a pro-Iraqi stance during the 1990–91 Gulf crisis) began to improve in early 1996, although in December 1995 Sheikh Sabah al-Ahmad al-Jaber as-Sabah, who favoured *rapprochement* with Jordan, had resigned as First Deputy Prime Minister and Minister of Foreign Affairs, in protest at the reluctance of the Crown Prince and the Prime Minister to seek a restoration of good relations; Sheikh Sabah subsequently withdrew his resignation. In early 1997 Kuwait pardoned 10 Jordanian prisoners as part of a wider amnesty and a further group of Jordanian prisoners (many of whom had been imprisoned on charges of collaboration with the occupying Iraqi authorities, following the return of the Kuwaiti Government in 1991) was released in April 1998. Ministerial visits, which had not been undertaken since before the crisis in the Gulf, were made by the Jordanian Minister of Planning and the Kuwaiti Deputy Prime Minister and Minister of State for Cabinet Affairs in June 1998 and January 1999, respectively, and in March 1999 the Jordanian embassy in Kuwait, which had been closed in 1990, was reopened.

In 1997 Kuwait, in keeping with Arab League policy, condemned Israel's decision to construct a Jewish settlement in a disputed area of East Jerusalem, and in 1998 a visit to Kuwait by the Hamas leader, Sheikh Ahmad Yassin, provoked the consternation of the USA.

Following the Amir's attendance at the Organization of the Islamic Conference (OIC) summit meeting in Teheran in November 1997, several Iranian ministers visited Kuwait, and proposals for joint naval exercises with Iran were made, indicating a significant improvement in relations with that country.

THE ELECTIONS OF 1992 AND 1999

A total of 280 candidates, many of them affiliated to one of several quasi-political organizations, contested elections to the new National Assembly on 5 October 1992. The franchise was restricted to about 81,400 male citizens, and groups of women staged protests against their exclusion from the political process. Anti-Government candidates, in particular representatives of Islamic groups, secured 31 of the Assembly's 50 seats, and several of those elected had been members of the legislature dissolved in 1986. The Prime Minister submitted the resignation of his Government, and in the following week named a new administration. The revised Council of Ministers included six members of the new National Assembly. Among these was Ali Ahmad al-Baghli, the new Minister of Oil and a critic of the economic policy of the previous Government; members of the Assembly were also given responsibility for education, Islamic affairs and justice. The ruling family, however, retained control of the important defence, foreign affairs and interior portfolios.

In December 1992 the National Assembly voted to set up a commission of inquiry into the circumstances surrounding the 1990 invasion and Kuwait's preparedness for it. In January 1993, in an attempt to curb financial corruption, the Assembly adopted a law that all state companies and investment organizations must produce accounts for the auditor-general, who must pass them on to a commission of members of the Assembly. The law also provided for harsher penalties for those who misused public funds. In February a delegation of members of the Assembly travelled to London to investigate allegations that millions of dollars had been embezzled via the Kuwait Investment Office (KIO) in London. In March the Assembly voted to rescind a law of secrecy, which had been regarded as a legal mechanism to facilitate corruption. In the same month there were reports of criticism from members of the Assembly after the Government estimated defence spending for 1992/93 at $6,200m. Moreover, in July a report of the National Assembly's finance and economy commission was highly critical of the Government's management of overseas investments and its failure to ensure the accountability of officials. In mid-August the Prime Minister submitted a proposal to the National Assembly, according to which future budgets would contain, for the first time, details of purchases of defence equipment. In January 1994 the National Assembly abrogated an earlier decree demanding that, in the case of legal proceedings, government ministers be tried by a special court. In the same month Sheikh Ali al-Khalifah as-Sabah, a former Minister of Finance and of Oil, and Abd al-Fatr al-Bader, a former chairman of the company, were among five people brought to trial in connection with alleged embezzlement from the Kuwait Oil Tanker Co; hearings were subsequently adjourned, and legal proceedings continued into 1996. (Meanwhile, in November 1995 a criminal court had ruled that the trial of the former would be held in a special court for cases involving ministers, in spite of the National Assembly's earlier ruling.) In July 1996 three of the four former executives to be tried by the criminal court were found guilty of corruption, and received prison sentences of between 15 and 40 years. In addition, they were ordered to repay the embezzled funds, together with fines totalling more than US $100m. The fourth defendant, a British national, was acquitted. The charges against the former oil and finance minister were later withdrawn—it was ruled that the correct proceedings had not been followed to bring the case to trial.

On 9 April 1994 the Government resigned, and in the following week a new administration was named. The revised Council of Ministers included five new members, the Ministers of Defence and of the Interior exchanged portfolios, and a new Minister of Oil was appointed. It was subsequently announced that the new Government would persevere with economic reforms, including privatization.

Relations between the Government and the National Assembly became increasingly strained during late 1994 and early 1995, not least because of the discord which existed between the Crown Prince and Prime Minister, Sheikh Saad al-Abdullah as-Salim as-Sabah, and the Speaker of the National Assembly, Ahmad Abd al-Aziz as-Saadun, who appealed for a government composed only of elected members. A potential constitutional crisis developed in early 1995 with regard to the interpretation of Article 71 of the Constitution. Article 71 regulates the Amir's power to rule by decree during parliamentary recesses or when the Assembly is dissolved for new elections: the National Assembly is obliged to endorse all such legislation when it reconvenes. The Assembly argued that the Article did not apply to the 1976–81 or 1986–92 periods, when the Assembly was closed unconstitutionally by the Amir. Following these periods, a political agreement was reached with the Amir, whereby the Assembly would review the Amiri decrees, rejecting, approving or amending the legislation accordingly. In February 1995, however, the Constitutional Court had overruled the National Assembly's rejection of a 1986 decree which allowed the Government to close down newspapers; in the following month the Government exercised its right to do so, temporarily suspending publication of a newspaper, *Al-Anbaa*. In April the Government referred Article 71 to the Constitutional Court for interpretation in the light of the ruling on press censorship. If the Court ruled in the Government's favour, the authority of the Assembly would effectively be threatened, as the Amir could force through controversial legislation by dissolving and subsequently reconvening the Assembly. The Assembly protested by suspending consideration of more than 200 Amiri decrees until late May, when the Government withdrew its request for the interpretation of the Article.

In April 1995 the report of a parliamentary inquiry into state purchases of weapons alleged widespread waste and corruption in defence expenditure, and urged the Government to instigate judicial proceedings against those said to be involved. In the following month the report of the parliamentary commission of inquiry into the circumstances surrounding the 1990 invasion revealed profound negligence on the part of government and military officials, who had apparently ignored warnings of an imminent invasion. The report was critical of the flight of members of the royal family and the Council of Ministers immediately after the invasion, effectively depriving the country of political leadership and military organization.

In June 1995 the National Assembly approved legislation designed to increase the electorate by amending the 1959 nationality law to allow sons of naturalized Kuwaitis to vote. In July the Assembly approved a bill reducing the minimum period after which naturalized Kuwaitis become eligible to vote from 30 years to 20 years. In July 1996 the Ministry of the Interior announced that a recorded total electorate of 107,169 was enfranchised to vote in elections to the National Assembly, on 7 October 1996. Pro-Government candidates were the most successful at the elections, securing an estimated 19 of the 50 legislative seats. A number of small demonstrations, organized and attended by women in support of demands for female enfranchisement, were reported in the days preceding the poll. Following the elections, Sheikh Saad al-Abdullah as-Salim as-Sabah was reappointed Prime Minister. On 15 October, he announced the composition of the Council of Ministers, which included four new members. The new legislature convened on 20 October.

In May 1997 a new political grouping, the National Democratic Rally (NDR), was formed, prompting debate on the legalization of political parties. The NDR, described as a secular and liberal group, was soon reported to have attracted 2,000 supporters and was distinguished by its status as the only political grouping to have a woman among its leaders. On 6 June, an assassination attempt was made on Abdullah an-Nibari, an opposition member of the National Assembly, and a former Chairman of the Committee for the Protection of Public Funds. Police charged five men with the offence (three Kuwaitis and two Iranians) one of whom was discovered to be related to the Minister of Finance, Nasir ar-Rodhan, and had earlier been named by an-Nibari as an official involved in embezzlement. Answering suggestions that he should resign, ar-Rodhan insisted that he had possessed no knowledge of the attack and was therefore under no obligation to stand down. In November an incendiary bomb attack on an-Nibari's office destroyed the building but resulted in no casualties. There was widespread

belief that a conspiracy linked to state corruption lay behind the attacks on an-Nibari, and these suspicions exacerbated tensions between the Government and the National Assembly. Later that month, ar-Rodhan was reported to have tendered his resignation, although the Prime Minister apparently asked him to remain in office. In December three of the suspects detained in connection with the June assassination attempt were sentenced to life imprisonment; a fourth was awarded a 10-year prison sentence, while a fifth suspect was acquitted.

Further tension between the Government and the National Assembly became apparent in early 1998, when a motion expressing 'no confidence' in the Minister of Information, Sa'ud Nasir as-Sabah, was brought before the legislature, following his decision to allow allegedly anti-Islamic publications to be displayed at the 1997 Kuwait Book Fair. On 15 March, however, two days before the vote was scheduled to take place in the National Assembly, the Council of Ministers resigned. The Crown Prince again formed a new Government. Sa'ud Nasir as-Sabah was transferred to the Ministry of Oil, while Nasir ar-Rodhan retained the post of Deputy Prime Minister and became Minister of State for Cabinet Affairs. It was widely considered that such a reallocation had frustrated the opposition's desire to question certain ministers over their earlier decisions. Four new appointments were also made, including Sheikh Ali Salim as-Sabah as Minister of Finance and Communications, bringing to six the number of members of the ruling family in the Council of Ministers. The sensitive portfolios of defence, foreign affairs and the interior were unchanged.

The National Assembly continued to monitor closely defence contracts (including a missile contract with British Aerospace), and other matters concerning public funds, including the alleged loss of KD 300m. in stock options speculation by the Public Institution for Social Security. In May 1998 the National Assembly approved a bill requiring public officials to declare their finances in order to aid transparency and to facilitate moves to counter corruption. In June 1998 there was evidence that the authorities were seeking to further restrict the freedom of the press. The Government brought legal proceedings against the independent newspaper, *Al-Qabas*, accusing the paper of religious defamation; the paper was closed for one week, and its Editor-in-Chief received a six-month prison sentence. In mid-June meetings involving the Speaker of the National Assembly, the Amir and the Government, appeared to have averted an imminent confrontation over the cross-examination of the Interior Minister on matters relating to crime and the narcotics trade, although underlying problems remained unresolved.

Meanwhile, significant areas of dissent have persisted between the Crown Prince and the First Deputy Prime Minister and Minister of Foreign Affairs, who acted as Prime Minister for seven months in 1997 during the Crown Prince's absence for medical treatment. Attempts to further enfranchise the population met with very limited success. While a legal and legislative committee of the National Assembly approved draft legislation providing for the lowering of the minimum voting age from 21 to 18 in May 1997, the law has yet to be endorsed by the Amir or the National Assembly. In early 1998 the same legal and legislative committee rejected draft legislation providing for the enfranchisement of women.

A collapse in world petroleum prices during 1998 did not result in a radical alteration of economic policy, but it did prompt persistent demands for reform. However, a lack of cohesion and of resolve within the ranks of the Government and the opposition reduced the likelihood of the introduction of any unpopular measures. In July the Government introduced amendments to legislation enacted in 1993 (and previously amended in 1995) regarding repayment of debts arising from the collapse of the Souk al-Manakh in 1982. Many members of the Majlis regarded new arrangements for the discharge of liabilities to be unduly favourable to debtors, many of whom were members of the ruling family, and boycotted an initial vote before reluctantly approving the amendments in early August 1998. The budget for the new financial year (which had begun on 1 July) was finally approved by the Majlis shortly afterwards. Rumours in late October that Nasir ar-Rodhan had resigned were denied by the authorities, and renewed tensions between the Government and the Majlis appeared to be the cause of the Amir's postponement of a scheduled visit to the USA. However, ar-Rodhan's resignation was accepted by the Council of Ministers in early November. Abd al-Aziz ad-Dakhil, hitherto Minister of Commerce and Industry, replaced ar-Rodhan in late December; Hisham al-Otaibi, formerly President of the Kuwait Stock Exchange, was appointed Minister of Commerce and Industry. In that month the Government formulated an economic reform plan in order to address the growing budget deficit. However, many of the economic reform proposals were eventually rejected by the Majlis in February 1999. In March Kuwait, together with other OPEC members, agreed a further substantial reduction in petroleum production levels (an OPEC agreement to reduce output had been concluded in June 1998); world petroleum prices made a subsequent recovery which eased budgetary pressure in the short term although economic reform remained a long-term objective of the Government. Kuwait also came under increased pressure to allow international participation in the petroleum sector, and was willing to concede to international involvement in the provision of technical expertise, but not to foreign ownership of reserves.

In April 1999 further confrontation between the Majlis and the Government, arising from widespread consternation over errors that had appeared in copies of the Koran printed and distributed by the Ministry of Justice, Awqaf (Religious Endowments) and Islamic Affairs, prompted the Amir to dissolve the Majlis. Legislative elections were conducted on 3 July at which Government supporters gained only 12 of the 50 seats in the Majlis (compared with 18 in 1996), behind Islamist candidates with 20 seats and liberals with 14 seats. Independent candidates secured the remaining four seats. The composition of a new Council of Ministers, selected and headed by the Crown Prince, was announced on 13 July. Members of the ruling family retained control of the most important portfolios (including Sheikh Sabah al-Ahmad al-Jaber as-Sabah who remained Deputy Prime Minister and Minister of Foreign Affairs) although a number of new, liberal members were also appointed (most notably to the finance portfolio), seemingly improving the chances of securing approval for the economic reform programme. Several portfolios were merged while a new post of Minister of State for Foreign Affairs was created. Jasem al-Kharafi was elected as the new Speaker of the Majlis on 17 July.

During the two-month legislative interval, the Government had introduced substantial legislation through Amiri decrees that had now to be approved by the new Majlis. Among the most important new measures was the extension of the franchise to women, beginning in 2003, when women would also be eligible for public office for the first time. Some 60 decrees were issued in total, including legislation to accelerate privatization and to open up the economy to foreign investment. Other laws awaiting Majlis approval include those providing for reductions in subsidies and social spending, and measures to rationalize the labour market. The Government considers the new legislation to be crucial to the successful diversification of the economy, enhancement of the private sector and reform of the labour market.

Economy

ALAN J. DAY (based on an original essay by P. T. H. UNWIN)

Revised for this edition by the Editor

Kuwait is a relatively small, arid country with a severe climate. Fresh water is scarce, and agriculture limited. However, the discovery of extremely rich deposits of petroleum transformed the economy and gave the country a high level of material prosperity. Kuwait's population increased from approximately 200,000 in 1957 to 1,697,301 in 1985, of whom only 40% were Kuwaiti nationals; the remainder were non-Kuwaitis, mainly immigrant workers and their families. At mid-1990 the population was estimated to be 2,062,275, of whom 1,473,054 were non-Kuwaiti nationals (based on the definition of citizenship in use in 1992). Twelve months later the estimated population had fallen to 1.2m., but census results for April 1995 indicated a total population of 1,575,983, of whom 655,820 were Kuwaiti nationals. By mid-1998 the population had increased to 1,866,104, according to official estimates. The population increase also intensified demands on the infrastructure of the country; for example, total water consumption in Kuwait increased from 255m. gallons in 1954 to 40,306m. gallons in 1987. In August 1987 the Government initiated a five-year plan to reduce the number of expatriates in the Kuwaiti workforce. Taking advantage of the displacement caused by the Iraqi invasion, the Government subsequently announced its intention to restrict the level of non-Kuwaiti residents to less than 50% of the pre-crisis total. In pursuit of this policy, the Government attracted censure for its use of deportation and the treatment of expatriate groups, especially Palestinians, within the country. In March 1994 it was officially reported that a total of 34,000 persons had been deported from Kuwait since June 1991. In 1993 it was reported that non-Kuwaiti workers were being encouraged to leave the emirate on the expiry of their contracts and that unskilled workers would no longer be allowed to invite their families to join them unless they were earning a fixed minimum monthly salary.

Kuwait's level of gross national product (GNP) per head was the third highest in the world in 1980 and 1981, exceeded only by that of Qatar and the United Arab Emirates (UAE). According to estimates by the World Bank, Kuwait's GNP was US $33,150m. (equivalent to $24,160 per head) in 1980 and $30,600m. ($20,900 per head) in 1981 (at 1979–81 prices). By 1986 Kuwait ranked fourth (behind Bermuda, Switzerland and the USA), with a GNP of $29,472m. ($16,600 per head, at average 1984–86 prices). Kuwait's GNP (at current prices), which had been KD 8,206.7m. in 1994, increased to KD 9,337.3m. in 1995 and KD 10,749.1m. in 1996. Kuwait's gross domestic product (GDP) fluctuated over the period 1980–89, falling by 0.7% per year. More severe contractions in 1990 and 1991 were brought about by the disruption of the Iraqi invasion. However, GDP has since recovered, rising to KD 7,374.7m. in in 1994, KD 7,942.3m. in 1995 and KD 9,277.1m. in 1996. The strong growth in GDP in 1996 reflected a significant increase in the value of output from the oil sector caused by higher oil prices. According to IMF figures, GDP in 1997 amounted to KD 9,212m.

After 1972 (the year of Kuwait's peak petroleum production of 1,201.6m. barrels), output of petroleum fluctuated, rising from 760.8m. barrels in 1975 to 911.2m. barrels in 1979, accounting for 4.5% of the world's oil output, and falling to 607m. barrels in 1980, 3% of world oil output. The oil glut and the implementation of OPEC quota allocations led to lower prices and fluctuating production after 1982. In common with most OPEC members, Kuwait tended to exceed its petroleum production quota.

In August 1990 Kuwait's OPEC production quota was fixed at 1.5m. b/d, but, owing to the invasion by Iraq, output averaged 1.065m. b/d for that year. In the aftermath of the Gulf crisis, Kuwait argued persistently within OPEC for a rise in the production ceiling and an increase in the country's quota, in order to offset losses and to finance reconstruction.

Following the liberation of Kuwait from the Iraqi occupation in February 1991, it was estimated that some 800 of the country's 950 oil wells had been damaged, some 600 having been set alight by Iraqi troops shortly before their retreat. The rehabilitation of the petroleum sector became the Government's highest economic priority. By June 1991 about 140 of the burning wells had been 'capped', and by late July onshore production of crude petroleum had resumed at a level of 115,000 b/d, while offshore production from fields in the Neutral/Partitioned Zone was estimated at 70,000 b/d. Exports of petroleum had also resumed by late July.

By the end of 1991 total production had reached 500,000 b/d and was increasing at a monthly rate of 100,000 b/d. By mid-1992 production had exceeded 1m. b/d, and was projected to reach 1.5m. by 1993 and 2m. thereafter. In June 1993 a meeting of OPEC oil ministers was obliged to exempt Kuwait from an agreement on production quotas, effectively allowing Kuwait to increase production to 2m. b/d in the third quarter of that year. In September, at the following OPEC meeting, this allocation was confirmed for a further period of six months. Kuwait, however, rejected suggestions that it was seriously jeopardizing its reserves by forcing such a rapid rise in output. At the same time, the major work of repairing Kuwait's infrastructure had been completed. In 1997 current capacity was 2.4m. b/d and was expected to rise to 3m. b/d by 2000. In November 1997 Kuwait's OPEC quota increased to 2.19m. b/d although in March 1998, as a result of declining world prices, and in conjunction with other major petroleum producers, petroleum output was reduced by 125,000 b/d. Further cuts were made in July 1998, and in March 1999 Kuwait agreed to reduce production, in conjunction with other OPEC members, by 144,000 b/d, to 1,836,000 b/d, from 1 April.

In 1998 Kuwait's proven recoverable reserves of petroleum were 96,500m. barrels, representing about 9.2% of world reserves. Income from Kuwait's petroleum sales has been channelled mainly to five areas: industrial diversification, the development of substantial social service provision, the creation of the Reserve Fund for Future Generations (RFFG), overseas investment, and aid to poorer countries through the Kuwait Fund for Arab Economic Development (KFAED).

The immediate costs of the military operation to liberate Kuwait (about US $22,000m.) and of rebuilding the country's infrastructure (some $20,000m.) were, in large part, met by liquidating about one-half of Kuwait's overseas investment portfolio (including about one-half of the RFFG) and by external borrowing totalling $5,500m. In 1994 it was reported that the Kuwaiti economy had fully recovered from the effects of the Gulf crisis and rebuilding, and that the Government did not envisage further international borrowing. Economic growth in 1994 was primarily attributable to a recovery in the non-petroleum sector. However, Kuwait's contribution to the cost of the international military response to Iraqi troop movements in October 1994 increased spending obligations for 1994/95 by an estimated $500m. Earlier in the year the Government had announced its intention to eliminate the budget deficit by 2000. Proposals to reduce the deficit included an increase in customs fees, the imposition of a direct tax on commercial and industrial profits, the reform of the welfare system, the gradual withdrawal of subsidies on public services, the ending of protectionism, and the expansion of the privatization programme, anticipated to include the sale of the telecommunications, power and water industries, although in 1998 the National Assembly failed to endorse a law for the privatization of the communications sector. Plans to continue the privatization programme through the divestment of public utilities remained under the consideration of the Majlis in early 1999, as did proposals for a programme of economic reform designed to lower the level of state subsidies and to increase revenues. The Government was also seeking to further foreign investment in the economy, including the limited

participation of foreign companies in the petroleum sector. In August 1999 it was announced that the price of petrol and cooking gas was to be increased, by as much as 50%. This was the first price increase for these commodities since 1975.

PETROLEUM

In 1938 the Kuwait Oil Co (KOC), operated jointly by the Anglo-Persian Oil Co (subsequently the British Petroleum Co PLC—BP) and the Gulf Oil Corpn, discovered a large oilfield at Burgan, about 40 km south of the town of Kuwait. The onset of the Second World War delayed development until 1945. In 1948, however, 6m. metric tons of crude petroleum were produced, although the main impetus to development was the Abadan affair in 1951, which effectively denied Iranian production to the rest of the world for three years. By 1956 Kuwait's annual production had increased to 54m. tons, and was then the largest in the Middle East. Further fields were discovered, notably at Raudhatain, north of Kuwait, and annual production had reached over 148m. tons by 1972. To handle this vast production, a huge tanker port was constructed at Mina al-Ahmadi, not far from the Burgan field. From a terminal about 15 km off shore, the port can now handle the largest tankers. Kuwait was the first Arab petroleum-producing nation to achieve complete control of its own output, buying out Gulf Oil and BP in March 1975 for approximately £32m.

Kuwait was also the first OPEC state to restrict petroleum production for reasons of conservation. Until December 1976, when Kuwait (together with 10 other OPEC countries) decided to raise petroleum prices by 10% (compared with a 5% increase by Saudi Arabia and the UAE), the country was generally regarded as moderate with regard to oil pricing. Subsequently Kuwait became increasingly 'hawkish', and during 1979 and 1980 the country was one of the first to set still higher prices every time that Saudi Arabia raised its prices in an attempt to achieve some kind of parity within OPEC.

The petroleum industry was reorganized in 1980, when the Kuwait Petroleum Corpn (KPC) was established to co-ordinate the four companies involved: the KOC, the Kuwait National Petroleum Co (KNPC), the Petrochemical Industries Co (PIC), and the Kuwait Oil Tanker Co (KOTC). This led to the centralization of oil sales and improved Kuwait's market competitiveness. In the early 1990s KPC was the twelfth largest petroleum company in the world. In addition to its oil refineries in Kuwait, it owns refineries abroad (in the Netherlands, Denmark and Italy). The sale of KPC stocks of oil was vital in supporting the Kuwaiti community in exile during the Iraqi occupation. In 1990/91 KPC's budgeted profits were KD 177.5m. Profits totalled KD 410m. in 1993/94 and increased to KD 729m. in 1994/95, largely owing to increased oil prices.

The KOC is currently developing capacity in the north and west of the country with the aim of boosting crude production capacity to 3.5m. b/d by 2005. The construction of gathering centres 27 and 28 in the Minagish and Umm Gudair fields, at a cost of nearly US $400m., is expected to raise the production capacity of the fields from 110,000 b/d to 500,000 b/d. Also, in July 1997, KOC awarded contracts for two enhanced oil recovery (EOR) projects at the Raudhatain field, costing an estimated $200m. each, which will increase production at the field by 250,000 b/d.

There are three oil refineries in Kuwait: one at Mina al-Ahmadi, built in 1946; one at Mina Abdullah, built in 1958; and one at Shuaiba, completed in 1969. Expansion of Mina al-Ahmadi was completed in 1986, and a programme of modernization at Mina Abdullah, costing US $2,100m., was completed in 1989. This project increased the refinery's capacity to 200,000 b/d, and raised total capacity in Kuwait to 670,000 b/d, mainly in high-quality products for export. Plans by KPC subsidiaries to expand and upgrade production prior to the Iraqi invasion were subsequently revised, but the Government remained committed to increasing Kuwait's petroleum assets as part of its reconstruction and development strategy. The Mina al-Ahmadi refinery had resumed operations by June 1991, but the Mina Abdullah and Shuaiba refineries were reported to be more seriously damaged. By May 1992 local refining capacity had exceeded 300,000 b/d, although this was still less than one-half of the pre-invasion level. However, by early 1995 the refineries at Mina al-Ahmadi, Mina Abdullah and Shuaiba were producing at a rate of 400,000 b/d, 245,000 b/d and 155,000 b/d respectively, and in February 1997 the KNPC announced that total refining capacity had risen to 895,000 b/d. In 1996 the KNPC invited bids for work on a series of contracts to increase the capacity of steam systems at the three refineries, and awarded a contract for the design and construction of an acid gas removal plant at Mina al-Ahmadi. It is also pursuing an ongoing programme to upgrade and expand export facilities at Shuaiba and Mina al-Ahmadi.

A further development in Kuwait's petroleum industry has been the expansion of downstream interests overseas. In 1981 the Kuwait Foreign Petroleum Exploration Co (KUFPEC) was established as a subsidiary of KPC. Later that year, it purchased a 22.5% interest in a 22,000-sq km concession in Morocco. KPC purchased the Santa Fe International Corpn, allowing the country to secure wider rights and facilities in exploration, and to develop downstream facilities. Through KUFPEC and Santa Fe, Kuwait now has interests in concessions in Australia, China, Egypt, Oman, the North Sea and the USA.

Since 1981, Kuwait has been expanding facilities for the distribution, marketing and retail of its refined products. During the 1980s KPC acquired a network of petrol stations in Europe, which had been owned previously by Gulf Oil, Elf and Golden Eagle Petroleum. Kuwait Petroleum International (KPI), a subsidiary of KPC, was established at the end of 1983 to manage the newly-acquired distribution outlets (see Oil in the Middle East and North Africa, p. 137). In 1986 KPC adopted a new trade name, Q8, for its petroleum products distributed in Europe, and by March 1987 KPI owned a total of 4,800 petrol stations in Europe. KPC's downstream overseas expansion programme continued during the Iraqi occupation. In 1991 an agreement was signed with KPC to provide Hungary with 17 Q8 petrol stations. This agreement was in accordance with KPC's plans to expand its East European and Far Eastern operations. By mid-1995 KPI was marketing more than 400,000 b/d in Western Europe through a total of 6,400 Q8 petrol stations. Kuwait continued to pursue a policy of developing foreign refinery projects in the form of joint ventures, particularly in India, Pakistan and Thailand. In mid-1995 KPC and the Indian Oil Corpn agreed a joint venture to establish a refinery in the Indian state of Orissa, at a cost of US $2,600m. In July 1997 it was reported that a feasibility study for the project had been completed. The proposed refinery is expected to process about 184,000 b/d.

NATURAL GAS

In November 1976 the Amir inaugurated the KOC's Gas Project. This involves the construction of extensive facilities to make use of the gas associated with the output of crude petroleum for the production of liquefied natural gas (LNG) and such derivatives as propane and butane. A three-train plant for the production of liquefied petroleum gas (LPG), together with a gas-gathering system (which came into operation in 1979), collects the gas, which is produced together with petroleum, at well-heads, removes LPG components and natural gasoline, then treats and distributes them to fuel users and to pressure-maintenance facilities.

The plant, built at a cost of over US $1,000m., has a capacity of 2.2m. metric tons of LPG per year (60% propane, 40% butane) at a crude oil production rate of 1.5m. b/d. It was originally designed to take crude oil production of 3m. b/d. However, Kuwait's production of gas is limited by the absence of any known reserves independent of petroleum. Owing to the association of gas with petroleum, much of the gas produced is flared to facilitate oil production, or reinjected, to maximize the production of petroleum by maintaining pressure in the reservoir. From the early 1980s the LPG plant was forced to operate substantially below capacity, exporting 1.05m. metric tons of products in 1982/83 (compared with 1.7m. tons per year previously). In 1985 one in three of the trains at the plant was operating at a level below capacity.

Other projects which suffered as a result of decreased production of gas included the expansion of an ammonia and urea plant, where the annual capacity had been increased to about 900,000 tons of ammonia and various by-products. The lack of feedstock, however, meant that in early 1984 the plant was operating at about 50% of capacity, and certain lines had been

suspended. At the end of 1998 Kuwait's reserves of gas were estimated to be 1,490,000m. cu m (1.0% of world reserves). Gas production in 1998 totalled 9,300m. cu m.

OTHER INDUSTRIES

Although oil-related activities still contribute the overwhelming proportion of Kuwait's total industrial output, the Government has tried to foster other industries in order to diversify the economy and to provide alternative sources of employment. Petroleum's share of GDP fell from 61% in 1977 and almost 70% in 1980 to around 50% in 1983, and has since remained at roughly the same level. Between 1974 and 1984 the manufacturing sector in Kuwait registered an average annual rate of growth of 6.4%, although it subsequently suffered a decline as the downturn in the economy became more pronounced in the mid-1980s. In 1997 provisional figures showed that manufacturing contributed an estimated 13.1% of Kuwait's GDP. The major branch of manufacturing has been the production of building materials and related projects such as aluminium extrusion. Fertilizer manufacturers have a substantial production capacity, mainly in the form of urea and ammonia products. The profitability of these products has, however, proved difficult to maintain because of technical problems and a weak market. In addition, in 1986 the European Community (EC, now European Union—EU) imposed an 11% tariff on imports of urea from Kuwait after it had exceeded its duty-free allocation. The construction of a 150,000-ton capacity salt plant in Shuaiba, and a chlorine plant with an annual capacity of 27,000 tons, was approved in 1985. The expansion of Kuwait's petrochemicals industry gathered momentum in the mid-1990s, beginning with a US $2,000m. petrochemicals complex at Shuaiba, which commenced operations in mid-1997. The contract for the development of the complex was given to Equate, a joint venture between PIC and Union Carbide of the USA. The plant will have an annual production capacity of 650,000 tons of ethylene, 450,000 tons of polyethylene and 350,000 tons of ethylene glycol. A $1,200m. project-financing agreement between a consortium of international, regional and local banks was signed in September 1996. PIC's plans for a new aromatics plant alongside the Shuaiba complex are currently under consideration.

Unlike its neighbours, Kuwait has hesitated to undertake heavy industrial projects, fearing both for their viability and the excess of foreign labour which they involve. It has favoured, instead, joint projects with Bahrain, Saudi Arabia and other Gulf countries. At the end of 1982 a joint venture was established between PIC and the Tunisian state-owned Maghrebia Chemical Industries to build a 1,000 tons-per-day diammonium phosphate fertilizer plant in Kuwait, at a cost of KD 16m. Towards the end of 1987, KPC also agreed to take a majority shareholding in Bahrain's ailing Iron and Steel Co (see chapter on Bahrain). In early 1989 PIC announced a joint venture, with Union Carbide, for the production of polypropylene. In July 1996 the local Kuwait Industries Co applied for a licence from the Commerce and Industry Ministry to establish a 900,000 tons-per-year alumina factory to supply producers in the UAE and Bahrain. In the following November the Finance Ministry approved the business plan proposed by the US company, Raytheon Corpn, to build a 230,000 tons-per-year aluminium smelter with foreign and local partners. Both projects are estimated to cost about $1,000m.

The construction industry is considerable, owing to the vast amount of infrastructural development since the early 1970s. During the 1970s major projects were carried out by foreign contractors, but in February 1981 the National Housing Authority (NHA) announced that 80% of future housing contracts would be awarded to local firms. Between 1974 and 1989 the NHA recorded 27,000 housing units built. In other sectors of construction, however, foreign companies continued to predominate. An indication of Kuwait's heavy reliance on foreign labour is the 2.4-km bridge from Subahiya to Bubiyan island, completed in 1982 by Chinese migrant workers. The economic recession of the mid-1980s damaged the construction industry considerably, and the collapse of petroleum prices in 1986 exacerbated the situation. In 1988, however, there was a distinct recovery, particularly in the private residential sector, where expansion was stimulated by the availability of cheap bank credits, as well as the completion of highway improvements in suburban Kuwait. In 1989 work began on the Amiri Diwan, a government facility which was to cost an estimated KD 65m.–80m. and was completed in 1992. In the aftermath of the Iraqi occupation, the Kuwaiti Government worked with the international construction companies with which it was familiar, in particular US companies, in order to rebuild Kuwait's infrastructure, and in the mid-1990s work that had been traditionally undertaken by the public sector was increasingly allocated to the private sector. In mid-1994 the Government approved the construction of three new cities, at Subahiya, Doha and Khiran, in order to alleviate the state's housing shortage. The cities were to be built by private-sector companies, and were scheduled for completion in 1998. The biggest concentration of construction work currently in progress is at the new campus for Kuwait University at Shuwaikh, while the most advanced build-operate-transfer (BOT) project is the development of Kuwait City waterfront by Kuwait's National Real Estate Co (NREC). Designs for a prestigious new headquarters for the Kuwait Petroleum Co (KPC) are under consideration, and a number of new public buildings are at various stages of construction.

Many of the smaller industrial projects have been promoted by the Industrial Bank of Kuwait (IBK), founded in 1973, which is 49% government-owned. By 1984, however, four leading commercial banks had combined with IBK to form a more specific concern, the Industrial Investment Company (IIC), to make new investments. During 1985 the Government took a further step in assisting local industry when it announced the introduction of protectionist trade measures for local industries which satisfy three criteria. Such industries should meet at least 40% of domestic requirements; should have a substantial added value and should contribute to national income; and the consumer should not be affected by any inflationary results of tariff protection.

In accordance with its aim of diversifying the economy, Kuwait has entered the international hotel industry at an accelerated rate. In 1988 Kuwait began to consolidate its assets by collecting them under one group, namely the Kuwait Hotels Co (KHC). The company was founded in 1962, soon after independence, and its main objectives were to assume control of all hotel management duties, and to take charge of all financial holdings. KHC was to concentrate initially on Kuwait and other Arab countries, before venturing into the wider international market. Substantial staff-training will be a determining factor of the Government's intention to have all Kuwait-owned hotels managed by KHC in the next 10–15 years.

In mid-1996 the NREC was appointed to manage Kuwait's first free-trade zone, to be established at the port of Shuwaikh. Activities will be limited to transhipment initially, but will be expanded later to include light manufacturing. The establishment of the free-trade zone was approved by the Government in May 1998.

PUBLIC UTILITIES AND TRANSPORT

All of the industrial developments referred to above, and the demographic growth associated with the necessary immigration, have required great increases in power generation. (The annual increase in power demand is estimated at some 7%.) The increasingly harsh economic climate led the Government to introduce higher electricity rates in April 1986. This was the first increase since 1966 and meant that consumers would pay 27% of actual power costs, compared with their previous payment of about 6%. By the end of 1987 the five power stations, at Shuwaikh, Shuaiba North, Shuaiba South, Doha East and Doha West, had a total installed capacity of 5,230 MW. A sixth power station, with an installed capacity of 2,511 MW, came into full production at az-Zour South in 1988. In mid-1990 the Ministry of Electricity and Water decided to provide desalination units for the Subahiya thermal power station. Two 6m.-gallons-per-day units are required for the 2,400-MW station. Subahiya's first unit began operation in 1992. Substantial damage to Kuwait's power stations was reported as a result of the Iraqi occupation; az-Zour South was the least damaged power station. By mid-1993 installed generating capacity remained 30% below the pre-invasion level of 7,100 MW, although Shuaiba North was the only station not to have resumed operations. In mid-1995 Cogelex Alsthom of France finalized a contract with the Ministry

of Communications, Electricity and Water to supply and install an electricity substation at the Shuaiba petrochemical complex. Germany's AEG and Switzerland-based Asea Brown Boveri were contracted to supply and install a further three substations, representing the first phase of the expansion of Kuwait's grid following a series of contracts aimed primarily at repairing damage sustained during the Iraqi invasion. Installed capacity in Kuwait in 1996 totalled 6,898 MW. Plans to rebuild the Shuaiba North power station were abandoned in mid-1996, in favour of a proposal to construct a new 2,400-MW thermal power plant at az-Zour. Tenders for construction of the plant were to be invited exclusively from US contractors. The project will also include a water desalination plant with a capacity of 48m. gallons per day. A new station is under construction at Subahiya; the station will increase Kuwait's total installed capacity to 9,280 MW and is due for completion by 1999. In 1999 the az-Zour power plant project was suspended, owing to budgetary restrictions, and at that time it was estimated that a new power station would be required by 2003 if power consumption continued to grow at the present rate of 7%–9% per year.

Increased water demands have been met by the distillation plants at Shuwaikh, Shuaiba North, Shuaiba South, Doha East and Doha West, which, in 1986, gave Kuwait a total installed capacity of 35,286m. gallons per year. The rapid increase in water demand was reflected in the rise in average daily water consumption, from 3.8m. gallons in 1960, to 18.2m. gallons in 1970, 64.1m. gallons in 1980, 130.3m. gallons in 1990, and 184.3m. gallons in 1996. Traditionally, Kuwait had concentrated on distillation methods for obtaining fresh water, but at the end of 1984 the Doha reverse osmosis plant was inaugurated, with an annual capacity of 220m. gallons. The pumping of fresh water from underground aquifers declined from 700m. gallons in 1970 to 126m. gallons in 1980, and to 14m. gallons in 1990, and ceased in 1991, following damage caused by the Iraqi invasion which has yet to be repaired. The pumping of brackish water, however, increased from 11,319m. gallons in 1980 to 21,366m. gallons in 1989. By 1991, however, following the Iraqi invasion, production had decreased to 2,787m. gallons. By 1996, however, annual production had recovered to 22,010m. gallons. The fresh water and brackish water systems are piped through separate networks, and the latter is used primarily for blending with distilled water, for irrigation, watering livestock, construction and in the household. Oil released into the Persian (Arabian) Gulf by Iraq caused considerable damage to Kuwait's desalination facilities.

A new international airport was opened in 1980, and there is a national airline with an international service, Kuwait Airways Corpn (KAC). In 1990 KAC owned 19 aircraft, flying to 41 destinations. KAC lost two-thirds of its fleet during the Iraqi occupation, and six KAC airliners were held by Iran (until the end of July 1992), which demanded reparation for their upkeep. The airport infrastructure was also seriously damaged, but by 1993 the refurbished airport was operating normally. A major programme of aircraft replacement and fleet expansion began in 1992. By 1997 KAC owned 23 aircraft and served 47 destinations. It was anticipated that KAC would be privatized by 2000.

The Kuwait Oil Tanker Co (KOTC) was fully nationalized in 1979. The oil ministry then started to include the use of Kuwaiti tankers in the terms of sale of its crude petroleum. In early 1990 KOTC commissioned the Republic of Korea to supply a third 280,000-dwt very large crude carrier (VLCC) by 1992. Similarly, the company finalized a contract with Japan for the supply of two liquefied gas carriers, each with a capacity of 78,000 cu m, under a plan to enlarge its fleet of 28 oil tankers and 6 gas carriers, in order to enhance its position in the world tanker market. Kuwait's two main container ports are at Shuwaikh and Shuaiba. Despite the devastation caused by the Iraqi forces during their occupation of Kuwait, the Shuaiba port resumed operations in March 1991. The 1990–95 Ports Public Authority programme contained plans to expand both ports. At the end of 1997 Kuwait's merchant fleet numbered 202 vessels, with a total displacement of 1,983,980 gross registered tons. The total included 23 oil tankers (displacement 1,313,275 grt). In January 1997 KOTC awarded a US $610m. contract to South Korea's Hyundai Heavy Industries to build two 309,000-ton oil tankers.

In recent years telecommunications have become increasingly important in Kuwait. At the end of 1996 Kuwait had 500,000 fixed telephone lines. It also has an extensive mobile network. As part of its ongoing programme to upgrade the country's fixed line system, the communications ministry awarded a contract in July 1997 to Germany's Siemens to install 100,000 new telephone lines at five exchanges at Surra, Qurain, Sulaibikhat, Salwa and Old Salmiya. Earlier, in 1994, Sweden's Ericsson won two contracts to upgrade 15 local exchanges, and in February 1996 the UK's GPT was contracted to install 40,000 lines.

AGRICULTURE AND FISHERIES

Owing to the scarcity of water in Kuwait, little grain is produced, and, as a result, most of the country's food has to be imported. In 1997 provisional figures showed that agriculture contributed less than 1% of Kuwait's GDP. The principal agricultural crops are tomatoes, melons, onions and cucumbers.

A five-year development plan for agriculture, initiated in 1982, was intended to increase the area under vegetables to 3,500 ha by 1986, raising overall vegetable production from 42,000 tons in 1981—supplying 24% of vegetable requirements—to 98,000 tons. Experiments with hydroponics gave Kuwait the confidence to set these optimistic targets, and the Public Authority for Agriculture and Fish Resources agreed to continue to subsidize agricultural products during 1986 and 1987. A considerable amount was also invested in the development of methods of using treated effluent for irrigation purposes.

The Government also encouraged animal husbandry, the main activity of the bedouin before the development of the oilfields. Subsidies were introduced in 1983 to assist farmers using artesian wells and greenhouses, and for the owners of small fishing boats. The Government also owned a 36-ha experimental farm. In the private sector the poultry and dairy industries expanded, as has the cultivation of dates, production of which totalled 1,000 tons in 1997. In 1997 milk production was estimated at 38,000 tons and there were an estimated 22,000 cattle, 320,000 sheep, 75,000 goats and 22m. poultry in Kuwait. Kuwait also invested in livestock overseas, but it still needed to import considerable numbers. In 1989 plans were announced to develop self-sufficiency in food production by expanding irrigated farms and agricultural facilities in the north of Kuwait.

Fishing, particularly of prawns and shrimps, is also widely practised. Four fishing companies were amalgamated into Kuwait United Fisheries in 1972. A 20-year plan to develop the industry, at an estimated cost of US $1m., was announced in 1987, when local production was sufficient to satisfy only 25% of domestic demand. The total catch in 1996 was 8,163 tons, compared with 8,616 tons in 1995 and 7,752 tons in 1994.

FOREIGN TRADE AND BALANCE OF PAYMENTS

Kuwait's foreign trade is dominated by exports of crude petroleum and petroleum products, which generally account for over 90% of the value of export earnings each year. According to the IMF, total export earnings in 1990, the year of the Iraqi invasion, were reduced to KD 2,031.4m. (of which petroleum accounted for KD 1,842.0m.), from KD3,378.0m. in 1989, and in 1991 the total slumped to KD 309.4m. Kuwait was liberated from Iraqi occupation at the end of February in that year, but the country's petroleum-production facilities were severely damaged, and it was not possible to resume exports at pre-war levels. In 1992, however, export revenue recovered to KD 1,931.1m., with the petroleum sector providing KD 1,824.9m. (94.5% of the total). By 1995 total export earnings had increased to KD 3,814.4m., of which petroleum accounted for KD 3,597.1m. (94.3% of the total). In 1996 export revenues increased again (by 16.6%), to KD 4,448.0m., of which petroleum exports accounted for KD 4,221.3m. (94.9% of the total) although export revenues declined again in 1997, to KD 4,314.3m. of which petroleum exports accounted for KD 4,085.4m. (94.7% of the total).

The total value of imports reached KD 1,849.4m. in 1989. According to the IMF, Kuwait's imports fell to KD 1,145.7m. in 1990, but rose to KD 1,353.3m. in 1991 and to KD 2,129.2m. in 1992. Imports declined to KD 1,988.2m. in 1994. However, imports recovered slightly in 1995, to KD 2,323.1m., and in 1996 reached KD 2,507.2m. before declining to KD 2,501.6m. in 1997. The most important commodity group in Kuwait's imports

is usually machinery and transport equipment (which accounted for 38.6% of total imports in 1997), followed by basic manufactures (20.1% in 1997). In 1997 Kuwait's main source of imports was Japan, which supplied 13.8% of total imports. The USA, Germany, Saudi Arabia, the United Kingdom and Italy are also important suppliers. Details concerning the destination of Kuwait's petroleum exports are not available for recent years. In 1997 the main customers for the country's non-petroleum exports (totalling KD 228.9m.) included Saudi Arabia (which took 17.6% of the total), the UAE (15.3%) and India (15.0%).

The current account surplus on the balance of payments was US $4,602m. in 1988, increasing to $9,136m. in 1989. The surplus declined to $3,886m. in 1990, when trade was disrupted by the Iraqi invasion and occupation. In 1991 Kuwait paid huge amounts to the countries that contributed to ending the occupation, resulting in a current deficit of $26,478m. By 1994 there was a surplus on the current accout of $3,227m. which increased to $5,016m. in 1995, $7,107m. in 1996 and $7,935m. in 1997. In 1998, however, largely owing to the decline in international petroleum prices, the surplus on the current account decreased to $2,940m. The rise in 1988 was a result of increased income from investments, although the sharp decline in world petroleum prices caused a reduction in the visible trade surplus to $1,709m. in that year (from $3,284m. in 1987). The trade surplus rose to $4,987m. in 1989, but was reduced to $3,179m. in 1990. In 1991 Kuwait registered a visible trade deficit of $3,993m. By 1994 a trade surplus, of $4,669m., was recorded. The surplus increased to $5,579m. in 1995 and to $6,997m. in 1996, declining to $6,534m. in 1997 and to $2,254m. in 1998.

BANKING AND FINANCE

In 1979 the Central Bank of Kuwait imposed tighter controls on the banking sector and demanded a significant reduction in overdrafts. Despite this, the banking sector continued to flourish in the early 1980s, with a 20% rise in total assets during 1982. However, the collapse of the Souk al-Manakh in 1982 (see below), the uncertainties caused by the Iran–Iraq War, and the problems associated with the falling price of oil led to severe difficulties for Kuwait's banking sector in the mid-1980s. In 1983 the banks' total assets rose by only 9.3%, and the decline in the commercial banking sector also led to the introduction of a two-tier exchange rate between April and August 1984. The foreign exchange market was effectively closed in June, when the Central Bank halted sales of US dollars, except for genuine commercial transactions.

In 1985 the banks faced a burgeoning debt crisis. Court cases involving bank debtors rose from 169 in 1981 to 437 in 1984, and in May 1985 bad debts held by commercial banks amounted to approximately KD 2,200m. (US $7,200m.). At the end of 1984 the Central Bank asked for full documentation on all commercial bank loans in excess of KD 250,000. By the end of 1985 its survey of the country's financial institutions revealed that, as of 11 September 1985, Kuwait's banks had gross claims against foreign banks totalling KD 1,534m. ($5,192m.), a sum which exceeded their corresponding obligations by KD 93m. The survey also revealed that Kuwait's banks had lent a total of KD 275.9m. to their own directors. At the end of 1985 three banks recorded zero net profits, and the National Bank of Kuwait (NBK—the country's largest bank) was the only bank to record an increase (of 11.1%) in net profits over the previous year's figure. The dissolution of the National Assembly was widely regarded as providing an opportunity for seeking a solution to the debt crisis, and a series of measures, approved by the Council of Ministers in August 1986, facilitated a 'rescue programme' whereby debtors should repay as much as they could afford, and the Government would pay the remainder of the debt. In 1989 the majority of the commercial banks in Kuwait remained dependent on this scheme for debt-restructuring. A range of other radical changes in the policy of the Central Bank were made between 1987 and 1989, promoting the further revival of the banking sector.

Following the Iraqi invasion of Kuwait, all Kuwaiti bank deposits were frozen, paralysing the operations of the country's banks. The Bank of England allowed individuals and organizations from Kuwait to operate in Britain, but all of the banks had to seek permission from the Bank of England to pay out Kuwait-controlled assets. The NBK was instrumental in efforts to resume operations. With the support of the Kuwait Investment Office (see Investment, below), it was able to free most of its blocked accounts, and to restore its liquidity position, by quickly selling US $2,000m. of its loan portfolio at little or no discount. The NBK played a central role in stabilizing the position of the other Kuwaiti banks. By early 1991 the Commercial Bank of Kuwait, the Al-Ahli Bank, the Industrial Bank of Kuwait (IBK), the Gulf Bank, the Kuwait Real Estate Bank (KREB), the Bank of Kuwait and the Middle East and Burgan Bank had resumed operations outside Kuwait and Iraq, as had Kuwait's main investment banks, the Kuwaiti Investment Co (KIC), the Kuwaiti Foreign Trading, Contracting and Investing Co (KFTCIC) and the Kuwait International Investment Co (KIIC).

Following the liberation of Kuwait, the Kuwaiti banks resumed domestic operations, but NBK was the only bank able to participate in the reconstruction process. The Government encouraged rationalization and the merger of some of the numerous domestic banks. By mid-1996, however, little progress had been made in this direction, and the proposed merger of the IBK and the KREB was reported to have been suspended. In March 1991 some branches of banks began to reopen, mainly to distribute the Government's cash grant to Kuwaiti citizens who had remained in the country during the occupation. Depositors were initially limited to cash withdrawals of US $14,000 per month until the end of June. By August all currency restrictions had been removed. In April 1991 an Amiri decree instructed the banks to cancel debts totalling $4,900m., and so cleared the debts of 180,000 people. As a result, many local bad debts that had been incurred in the stock market crisis of the mid-1980s were cancelled. On 20 May 1992 it was announced that the Government was to buy the entire domestic loan portfolio of the domestic banking system, covering credits to residents worth $20,400m. In the first half of 1993 there was intense debate between the Government and the National Assembly over the terms under which the loans should be repaid. As long as the issue remained unresolved, Kuwaiti banks were unwilling to approve loans, and investment outside the petroleum industry was very limited. In August 1993 the National Assembly approved legislation requiring debtors to register their preferred method of repayment by March 1994; debtors could either settle their accounts by September 1995 in exchange for debt forgiveness of up to 46%, or pay over a period of 12 years with no debt forgiveness. Even though the majority of debtors opted to repay their debts by September 1995, the rate of repayment was slow and the Government came under increasing pressure to extend the repayment period as any rapid liquidation of assets could undermine the economy. In June 1995 the Council of Ministers reviewed a draft law proposing significant amendments to the difficult debts law, which would allow debtors several more years in which to make their repayments. The National Assembly initially opposed the amendments, as it was feared that the extension of the terms of repayment would benefit politically powerful debtors, including members of the royal family, at the expense of the economy. In August, however, preliminary approval was granted to a bill which would ease repayment terms. Hopes for the success of the latest repayment programme were encouraged by the high proportion (77%) of obligations repaid on 6 April 1996, the first of five annual payment instalments.

CAPITAL MARKET

A significant capital market has been developed in Kuwait through the activities of the leading investment companies and the IBK, and with the encouragement of the Government. An active bond market developed after 1973, mostly for international borrowers from the Third World and Eastern Europe. The Central Bank then closed the new issue market in November 1979 as part of its efforts to boost liquidity in Kuwait's money market, but by July 1981 the Kuwaiti dinar international bond market had reopened. Despite the issue of a number of new bonds, the market was to close again in September 1982. It reopened in June 1983 with a KD 5m. floating rate note bond for the United Bank of Kuwait's subsidiary, UBK Finance, and there followed a KD 14m. two-tranche bond offer for KFTCIC in November. However, following the collapse of the stock

market (see below), the bond market also lost its appeal, and in 1985 and 1986 only solitary domestic bonds were issued. In the last quarter of 1987 and the first quarter of 1988 the Government issued a series of bonds and treasury bills, in an attempt to finance the budget deficit. During 1987 the Central Bank's total assets fell by 31%, to KD 1,458.7m., mainly as a result of a decline in foreign deposits, which decreased by 44%, to KD 681.8m., by the end of the year.

In 1952 Kuwait had established what was, prior to the Iraqi invasion of August 1990, the world's twelfth largest stock exchange. The amount of capital holders seeking investment outlets in Kuwait, and the innate entrepreneurial spirit of locals, generally pushed the prices of shares far above their real value. In April 1978, in an attempt to stem this unhealthy trend, the Government sanctioned the reduction in nominal value of shares to one dinar, a move which resulted in a split of share values to 10%–13% of their current value, which broadened the base of the market.

Alongside the official market, an unofficial stock market, the Souk al-Manakh, also developed. After 1978 many Kuwaitis had invested in Iraq, and, as a result of the Iran–Iraq War, a severe cash-flow crisis emerged in Kuwait. In 1982 the liquidity shortage which this caused was particularly severe for the Souk al-Manakh. The unofficial market had been based on the use of post-dated cheques and the hope of continuously rising share prices. Then in September 1982 the system collapsed, as smaller creditors prematurely presented their post-dated cheques (perfectly legal under Kuwaiti law) at a time when many dealers were unable to pay. The collapse of the Souk al-Manakh initiated a major crisis in Kuwait's financial system, the impact of which lasted for several years.

Government measures to alleviate the crisis involved the immediate formation of the Kuwait Clearing Co, to register and process all cheques involved, and the establishment of a KD 500m. fund to protect, and pay, the smaller debtors whose investors were bankrupt. In August 1983 the Government urged the settlement of debts at the market price at the time of transaction, and set a maximum premium of 25% on post-dated cheques. Disagreement over the handling of the crisis led to the resignation of the Minister of Finance, Abd al-Latif Yousuf al-Hamad. In October the Government appointed an arbitration panel to revalue the debts of the 17 leading dealers in the Souk al-Manakh. These accounted for about $78,000m., or 82% of the estimated total of outstanding debts at the time of the crisis, and the dealers' assets were valued at between 20% and 30% of their liabilities. Since then, a new investment company has been established, with a capital of KD 300m. (in which the Government has a 40% share), to convert the debtors' non-liquid assets into payment for the creditors. In April 1984 the Council of Ministers announced further financial measures to resolve the crisis, including the division of assets into three categories. Bonds to repay creditors were issued in July, and, of the 254 people referred to the receivership, 88 were declared bankrupt, three restored their solvency and 163 reached agreements with their creditors.

In August 1984 the official stock exchange moved to new premises, and its permanent floor officially opened in April 1985. The Souk al-Manakh stock market was closed on 1 November 1984, and trading in shares was restricted to the official stock exchange and to a parallel market which it operated. To avoid a repetition of the Souk al-Manakh crisis, measures were introduced to limit the activities of brokers on the official market. Before being allowed on the floor, brokers had to pay a registration fee and provide a guarantee for KD 1m., while a percentage of brokers' commissions had to be paid to the exchange. By mid-January 1985 creditors who had been owed money by Souk al-Manakh defaulters had received cash and bonds totalling KD 759m., accounting for about three-quarters of the net debts. At the end of 1987, however, 17% of the debts resulting from the collapse of the Souk al-Manakh remained outstanding.

The Government bore the brunt of the crisis and was forced to inject large sums into the banking system to restore liquidity. At the end of November 1985, the Minister of Finance and Economy made the following recommendations: 33 companies should be dissolved; a number of the remaining 47 companies should be merged; from March 1986 the KIC was to purchase the companies that closed, on behalf of the Government; and companies registered in the Gulf that fell outside the jurisdiction of Kuwait were urged to comply with the Government's recommendations. These measures appeared to be necessary, owing to the fact that 24 of the 36 companies that had closed, and were under consideration for purchase by the Government, had incurred losses exceeding 50% of the paid-up capital invested in them. It was estimated that by mid-1986 this scheme had cost the Government approximately KD 121m. In May 1989 it was reported that stock market activity was disappointing, and measures to deregulate the stock market to some extent were to be introduced before the end of the year in the hope that a reduction in restrictions would encourage investors. Also in May it was announced that the Souk al-Manakh stock exchange was to be re-opened in June, to allow trading in companies that had failed to meet the minimum capital requirements of the official stock exchange.

In May 1988 the Government permitted citizens of all GCC members states to purchase shares on the Kuwait stock exchange. (Previously only Kuwaiti citizens had been permitted to do so.) Then, in 1992, the exchange was opened to international firms for the first time. In 1995 the exchange became the most active share market in the Arab world. Strong corporate earnings, excess liquidity and the privatization policy launched by the Kuwait Investment Authority (KIA) have maintained the buoyancy of the stock market, and in June 1997 it was reported that the average market price of shares had increased by some 30% since the start of the year. The privatization programme began in mid-1994, and by early 1997 the KIA had sold KD 653m. worth of shares. In January 1997 it was announced that a further KD 1,000m. worth of shares were available for sale at current prices. By early 1999 the stock market was in decline as a result of the regional economic downturn, the absence of reforms to reduce the budget deficit and poor company results for 1998. A minor recovery was registered in March 1999 and this was expected to be sustained by a proposal to allow foreign investment in Kuwaiti companies and the predicted stabilization of oil prices following production cuts in April. In 1998 legislation was passed further rescheduling debts owed as a result of the collapse of the Souk al-Manakh in 1982.

PUBLIC FINANCE

The cumulative costs of the Gulf conflict (1990–91) to the Kuwaiti Government inevitably increased its budget deficits. By the end of July 1991 the cost to Kuwait of paying the expenses of Kuwaitis living abroad during the Iraqi occupation, and of financing 'Operation Desert Storm', had increased to US $22,000m., which had been drawn from its reserves, with further expenditure expected. A further $6,000m.–$7,000m. was spent after liberation on stabilization measures, such as the cancellation of personal debts and cash grants to nationals who remained in Kuwait during the Iraqi occupation. The Kuwaiti Government stated that it had no intention of making large-scale sales of investments to create revenue, but it was nevertheless reported in mid-1993 that the value of Kuwait's overseas investments had more than halved in the previous three years (see also Investment). At the end of 1991 a $5,500m. international loan to Kuwait was announced, as well as export credit facilities worth the same amount with the USA, Japan, the UK, the Netherlands and France. Kuwait began repayments on the international loan in 1996.

In 1992/93 the budget deficit stood at KD 1,572.6m. In March 1994 the finance and economy committee of the National Assembly approved KD 3,500m. in extraordinary defence spending over the 12 years from 1992 to 2004. At the same time an increase in the budget deficit was forecast, although much of this was accounted for by the inclusion in the budget for the first time of allocations for arms procurement. The 1995/96 budget envisaged expenditure at KD 4,230m. and revenues at KD 2,910m., although higher petroleum revenue and lower state spending resulted in a much smaller deficit (KD 539m.) than forecast. The budget for 1997/98 put expenditure at KD 4,378m. and revenues at KD 3,105m., although the deficit out-turn was again far lower than predicted (at KD 754m.). Estimates for 1998/99 envisaged revenues of KD 2,444m., expenditure of KD 4,362m. and a budget deficit of KD 1,918m., although actual

revenues appeared likely to be less than estimated owing to declining petroleum prices; in June 1998 several government departments were asked to make reductions in their budgets for 1998/99. Although a target of balancing the budget by 2000 had been announced in 1995, the draft budget for 1999/2000, with revenue of KD 2,224m. and expenditure of KD 4,250m., predicted an increased budget deficit of KD 2,026m. In early 1999 Government attempts to introduce a financial and economic reform package were rejected by the National Assembly, which requested more specific details of proposed measures to increase non-oil revenues. However, the only such measure likely to be implemented in 1999 was the introduction of compulsory health insurance for non-Kuwaiti residents.

INVESTMENT

Kuwait's main priority for spending its income from petroleum has been the development of its own economy and the provision, through the investment of surplus funds, of an income for its citizens in the future when the oil-wells have run dry. In the mid-1970s, in addition to the general reserve, the Government established a Reserve Fund for Future Generations (RFFG), to which at least 10% of total revenue must be added annually, by law, and which was not intended to be used until 2001. The value of the RFFG was estimated at KD 14,000m. before the world-wide collapse of prices on stock markets in October 1987.

Kuwait had a budget surplus for some years before 1973 and therefore developed an investment strategy considerably earlier than other petroleum-producing countries did. This strategy was implemented when Kuwait established the Kuwait Investment Office (KIO) in the 1950s, with the aim of providing for its future generations by investing part of the Government's share of profits from the country's petroleum industry. The KIO in London (which was formally merged with its parent, the KIA, in March 1993) handled much of the nation's investment in Europe and elsewhere. In 1979 the KIO also started to buy small interests in leading Japanese electronics companies. Many of Kuwait's investments are in the USA, and involve almost every one of the 500 leading US companies. Kuwait also has some major real estate projects there. Exceptions to Kuwait's traditional preference for small shares in foreign companies included its outright purchase of the St Martin's Property Corpn of the UK, and its purchase of substantial holdings in Daimler-Benz of Germany, the USA's Korf Industries and a Canadian copper-molybdenum mine.

Investment income from abroad increased to US $8,074m. in 1986, overtaking income from petroleum for the first time. In 1987 the KIO acquired further considerable shareholdings in Europe: in particular, it acquired a major stake in BP (now BP Amoco), and by August 1988 had obtained 21.68% of BP's total shares. In October 1988, after a report by the Monopolies and Mergers Commission in Britain, the KIO was forced to reduce its interest in BP to 9.9%. This disposal produced a profit of $700m. for the KIO, as the BP management raised its buy-back price for the shares in response to hostile bids from rival oil companies. (A further 3% stake in BP was sold by the KIA in May 1997 for about $2,000m.) By October 1987 the KIO had accumulated investments in Spain with a value of $2,400m., and, as a result of its acquisition of 37% of Torras Hostench, it established itself as a major force in Spain's chemicals industry; it also acquired 35% of Explosivos Rio Tinto (ERT) and further shares in several Spanish media groups.

In 1993 the dealings of the KIO were the subject of an inquiry by a commission comprising members of the new National Assembly. It was alleged that officials of the KIO had lost US $5,000m. in Spain since 1986, of which some $1,000m. had been embezzled through the collapsed Grupo Torras company. In mid-1993 it was reported that legal proceedings were being prepared against former KIO officials in the United Kingdom and Spain. In July a report of the National Assembly's finance and economy commission was critical of the Government for failing to ensure the accountability of KIO officials. A series of legislative measures in 1993 attempted to ensure greater accountability from state investment organizations and to increase penalties for the misuse of public funds. In 1999 a court in the United Kingdom found three former senior managers of the KIO guilty, *in absentia*, of embezzling some $500m. from Grupo Torras.

Kuwaiti private investment is substantial. It is predominantly in real estate and high-yielding equities. Although this investment is concentrated in the USA, Europe and Japan, Kuwaitis have shown an interest in investment in other non-Arab countries in Asia, Africa and South America, as well as in the Arab world.

From August 1990 until July 1991, Kuwait's sole sources of income were earnings from its international financial investments and profits from Kuwait Petroleum International, which operates Kuwaiti petroleum companies in Europe and Asia. It was estimated that Kuwait's international investments in August 1990 were worth as much as US $100,000m., comprising the RFFG and the State General Reserve. The rate of return on these investments was estimated at 5% per year. Although the Kuwaiti Government refused to disclose any details concerning the sale of assets to fund its activities during the 1990–91 Gulf crisis, it was estimated in mid-1993 that the value of Kuwait's overseas investments had more than halved since August 1990. Following the liberation of Kuwait, the Government indicated that it did not envisage the sale of large-scale investments, especially of important strategic assets such as its interests in Daimler-Benz, Hoechst, Metallgesellschaft, Hogg Robinson, HSBC UK and BP Amoco. In mid-1994 Kuwait submitted a claim of almost $41,000m. to the UN Compensation Committee for losses incurred by the KIA during the Iraqi invasion. The claim was part of a total of $94,800m. worth of compensation claims made by Kuwait by the end of June 1994, with further submissions expected. Income from overseas investments increased by almost 30%, to $5,153m., in 1995.

After its own development, Kuwait's next priority is that of the rest of the Arab and Islamic world, and then of the Third World in general. It pioneered foreign aid in the Arab world, setting up the Kuwait Fund for Arab Economic Development (KFAED) in 1961. Kuwait later raised the KFAED's capital considerably, and extended operations to Africa and Asia. Its capital in 1998 was KD 2,000m. The country also helped set up the Arab Fund for Economic and Social Development in Kuwait, and it is a member of various Arab, Islamic and OPEC aid organizations, notably the Islamic Development Bank, the Arab Bank for Economic Development in Africa (BADEA) and the OPEC Fund for International Development. It has also contributed to IMF and World Bank facilities.

Kuwait's total foreign aid, which was substantially more than that given on projected aid by the KFAED, ranged between about 8% and 15% of GNP during the second half of the 1970s. However, Kuwait's official contribution to development assistance declined over the period 1984–87, and Kuwaiti foreign aid further decreased in the post-liberation period of reconstruction. Overall, between 1962 and June 1998 it was estimated that the KFAED disbursed 536 loans, valued at KD 2,768.7m. Annual disbursements had increased from KD 69.7m. in 1987/88 to KD 141.3m. in 1997/98.

Directory

The Constitution

The principal provisions of the Constitution, promulgated on 16 November 1962, are set out below. On 29 August 1976 the Amir suspended four articles of the Constitution dealing with the National Assembly, the Majlis al-Umma. On 24 August 1980 the Amir issued a decree ordering the establishment of an elected legislature before the end of February 1981. The new Majlis was elected on 23 February 1981, and fresh legislative elections followed on 20 February 1985. The Majlis was dissolved by Amiri decree in July 1986, and some sections of the Constitution, including the stipulation that new elections should be held within two months of dissolving the legislature (see below), were suspended. A new Majlis was elected on 5 October and convened on 20 October 1992.

SOVEREIGNTY

Kuwait is an independent sovereign Arab State; its sovereignty may not be surrendered, and no part of its territory may be relinquished. Offensive war is prohibited by the Constitution.

Succession as Amir is restricted to heirs of the late MUBARAK AS-SABAH, and an Heir Apparent must be appointed within one year of the accession of a new Amir.

EXECUTIVE AUTHORITY

Executive power is vested in the Amir, who exercises it through the Council of Ministers. The Amir will appoint the Prime Minister 'after the traditional consultations', and will appoint and dismiss ministers on the recommendation of the Prime Minister. Ministers need not be members of the Majlis al-Umma, although all ministers who are not members of parliament assume membership *ex officio* in the legislature for the duration of office. The Amir also formulates laws, which shall not be effective unless published in the *Official Gazette*. The Amir establishes public institutions. All decrees issued in these respects shall be conveyed to the Majlis. No law is issued unless it is approved by the Majlis.

LEGISLATURE

A National Assembly, the Majlis al-Umma, of 50 members will be elected for a four-year term by all natural-born Kuwaiti males over

the age of 21 years, except servicemen and police, who may not vote. Candidates for election must possess the franchise, be over 30 years of age and literate. The Majlis will convene for at least eight months in any year, and new elections shall be held within two months of the last dissolution of the outgoing legislature.

Restrictions on the commercial activities of ministers include an injunction forbidding them to sell property to the Government.

The Amir may ask for reconsideration of a bill that has been approved by the Majlis and sent to him for ratification, but the bill would automatically become law if it were subsequently adopted by a two-thirds' majority at the next sitting, or by a simple majority at a subsequent sitting. The Amir may declare martial law, but only with the approval of the legislature.

The Majlis may adopt a vote of 'no confidence' in a minister, in which case the minister must resign. Such a vote is not permissible in the case of the Prime Minister, but the legislature may approach the Amir on the matter, and the Amir shall then either dismiss the Prime Minister or dissolve the Majlis.

CIVIL SERVICE

Entry to the civil service is confined to Kuwaiti citizens.

PUBLIC LIBERTIES

Kuwaitis are equal before the law in prestige, rights and duties. Individual freedom is guaranteed. No one shall be seized, arrested or exiled except within the rules of law.

No punishment shall be administered except for an act or abstaining from an act considered a crime in accordance with a law applicable at the time of committing it, and no penalty shall be imposed more severe than that which could have been imposed at the time of committing the crime.

Freedom of opinion is guaranteed to everyone, and each has the right to express himself through speech, writing or other means within the limits of the law.

The press is free within the limits of the law, and it should not be suppressed except in accordance with the dictates of law.

Freedom of performing religious rites is protected by the State according to prevailing customs, provided it does not violate the public order and morality.

Trade unions will be permitted and property must be respected. An owner is not banned from managing his property except within the boundaries of law. No property should be taken from anyone, except within the prerogatives of law, unless a just compensation be given.

Houses may not be entered, except in cases provided by law. Every Kuwaiti has freedom of movement and choice of place of residence within the state. This right shall not be controlled except in cases stipulated by law.

Every person has the right to education and freedom to choose his type of work. Freedom to form peaceful societies is guaranteed within the limits of law.

The Government

HEAD OF STATE

Amir of Kuwait: His Highness Sheikh Jaber al-Ahmad as-Sabah (acceded 31 December 1977).

COUNCIL OF MINISTERS
(September 1999)

Crown Prince and Prime Minister: Sheikh Saad al-Abdullah as-Salim as-Sabah.

First Deputy Prime Minister and Minister of Foreign Affairs: Sheikh Sabah al-Ahmad al-Jaber as-Sabah.

Deputy Prime Minister, Minister of Defence: Sheikh Salim Sabah as-Salim as-Sabah.

Deputy Prime Minister, Minister of State for Cabinet Affairs and Minister of State for National Assembly Affairs: Muhammad Dhaifallah Sharar.

Minister of Finance and Communications: Sheikh Ahmad Abdullah al-Ahmad as-Sabah.

Minister of Justice: Saad Jasem Yousuf al-Hashil.

Minister of Information: Dr Saad Muhammad bin Tefiah al-Ajmi.

Minister of Oil: Sheikh Sa'ud Nasir as-Sa'ud as-Sabah.

Minister of State for Foreign Affairs: Sulayman Majed ash-Shahin.

Minister of Electricity and Water, Awqaf (Religious Endowments) and Islamic Affairs and Minister of State for Housing Affairs: Dr Adil Khalid as-Sabih.

Minister of Commerce and Industry and Labour and Social Affairs: Abd al-Wahab Muhammad al-Wazzan.

Minister of Public Works: Eid Hathal Sa'ud ar-Rushaidi.

Minister of Planning and Minister of State for Administrative Development Affairs: Dr Muhammad Butayhan ad-Duwayhis.

Minister of Health: Muhammad Ahmad al-Jarallah.

Minister of the Interior: Sheikh Muhammad Khalid al-Hamad as-Sabah.

Minister of Education and Higher Education: Yousuf Hamad al-Ibrahim.

PROVINCIAL GOVERNORS

Al-Ahmadi: Ali Jaber al-Ahmad as-Sabah.

Farwaniya: Ibrahim Jasem al-Mudhaf.

Hawalli: Daud Musaed as-Salih.

Legislature

MAJLIS AL-UMMA
(National Assembly)

Speaker: Jasem al-Kharafi.

Elections to the 50-seat Majlis took place on 3 July 1999. According to preliminary reports, 20 seats were secured by Islamist candidates, 14 were won by liberals, 12 were won by pro-Government candidates and four were won by independents.

Political Organizations

Political parties are not permitted in Kuwait. However, several quasi-political organizations are in existence. Among those that have been represented in the Majlis since 1992 are:

Islamic Constitutional Movement: Sunni Muslim; moderate.

Kuwait Democratic Forum: secular; liberal.

Salafeen: Sunni Muslim.

National Democratic Rally (NDR): f. 1997; secular; liberal; Sec.-Gen. Dr Ahmad Bishara.

National Islamic Coalition: Shi'a Muslim.

Constitutional Group: supported by merchants.

Judicial System

SPECIAL JUDICIARY

Constitutional Court: Comprises five judges. Interprets the provisions of the Constitution; considers disputes regarding the constitutionality of legislation, decrees and rules; has jurisdiction in challenges relating to the election of members, or eligibility for election, to the Majlis al-Umma.

ORDINARY JUDICIARY

Court of Cassation: Comprises five judges. Is competent to consider the legality of verdicts of the Court of Appeal and State Security Court. Chief Justice: MUHAMMAD YOUSUF AR-RIFA'I.

Court of Appeal: Comprises three judges. Considers verdicts of the Court of First Instance. Chief Justice: RASHED AL-HAMMAD.

Court of First Instance: Comprises the following divisions: Civil and Commercial (one judge), Personal Status Affairs (one judge), Lease (three judges), Labour (one judge), Crime (three judges), Administrative Disputes (three judges), Appeal (three judges), Challenged Misdemeanours (three judges). Chief Justice: MUHAMMAD AS-SAKHOBY.

Summary Courts: Each governorate has a Summary Court, comprising one or more divisions. The courts have jurisdiction in the following areas: Civil and Commercial, Urgent Cases, Lease, Misdemeanours. The verdict in each case is delivered by one judge.

There is also a **Traffic Court**, with one presiding judge.

Attorney-General: MUHAMMAD ABD AL-HAIH AL-BANNAIY.

Advocate-General: HAMED AL-UTHMAN.

Religion

ISLAM

The Kuwaiti inhabitants are mainly Muslims of the Sunni and Shi'a sects. The Shi'ites comprise about 30% of the total.

CHRISTIANITY

The Roman Catholic Church

Latin Rite

For ecclesiastical purposes, Kuwait forms an Apostolic Vicariate. At 31 December 1997 there were an estimated 151,000 adherents in the country.

Vicar Apostolic: Mgr FRANCIS ADEODATUS MICALLEF (Titular Bishop of Tinisa in Proconsulari), Bishop's House, POB 266, 13003 Safat, Kuwait City; tel. 2434637; fax 2409981.

Melkite Rite

The Greek-Melkite Patriarch of Antioch is resident in Damascus, Syria. The Patriarchal Vicariate (now Exarchate) of Kuwait had an estimated 4,500 adherents at 31 December 1997.

Exarch Patriarchal: Archimandrite BASILIOS KANAKRY, Vicariat Patriarcal Melkite, POB 1205, Salmiya; tel. 5733633.

Syrian Rite

The Syrian Catholic Patriarch of Antioch is resident in Beirut, Lebanon. The Patriarchal Exarchate of Iraq and Kuwait, with an estimated 1,200 adherents at 31 December 1997, is based in Basra, Iraq.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Kuwait forms part of the diocese of Cyprus and the Gulf. The Anglican congregation in Kuwait is entirely expatriate. The Bishop in Cyprus and the Gulf is resident in Cyprus, while the Archdeacon in the Gulf is resident in the United Arab Emirates.

Other Christian Churches

National Evangelical Church in Kuwait: Rev. NABIL ATTALLAH, pastor of the Arabic-language congregation; Rev. JERRY A. ZANDSTRA, senior pastor of the English-speaking congregation; POB 80, 13001 Safat, Kuwait City; tel. 2407195; fax 2431087; e-mail elc@ncc.moc.kw; internet http://home.tct.net; an independent Protestant Church founded by the Reformed Church in America; services in Arabic, English, Korean, Malayalam and other Indian languages; combined weekly congregation of some 20,000.

The Armenian, Greek, Coptic and Syrian Orthodox Churches are also represented in Kuwait.

The Press

Freedom of the press and publishing is guaranteed in the Constitution, although press censorship was in force between mid-1986 and early 1992 (when journalists adopted a voluntary code of practice); in February 1995 a ruling by the Constitutional Court effectively endorsed the Government's right to suspend publication of newspapers (see section on History). The Government provides financial support to newspapers and magazines.

UTILITIES

In 1998 there were plans to create regulatory bodies for each of Kuwait's utilities, with a view to facilitating their privatization.

Ministry of Electricity and Water, Awqaf (Religious Endowments) and Islamic Affairs and Ministry for Housing Affairs (see Ministries, above): provides subsidized services throughout Kuwait.

MAJOR COMPANIES

Kirby Building Systems Kuwait: POB 23933, 13100 Safat, Mina Abdullah Industrial Area, Kuwait City; tel. 4734439; fax 4734538; f. 1976; pre-engineered steel buildings and accessories for industrial and commercial use; an affiliate of Alghanim Industries; Vice-Pres. MARWAN KARADSHEH.

Kuwait Aluminium Co KSC: POB 5335, 13054 Safat, ar-Rai Industrial Area, Plot 1636, St No. 13, Kuwait City; tel. 4734600; telex 23025; fax 4734419; f. 1968; sales about KD 1.5m.; cap. p.u. KD 4m.; design, manufacture, erection and maintenance of aluminium and glass works for construction industry; Chair. NASSER NAKI; 190 employees.

Kuwait Cement Co KSC: POB 20581, 13066 Safat, Safat New Exhibition Bldg, 1st Floor, as-Sour St, Salhiya, Kuwait City; tel. 2414033; telex 22205; fax 2432956; f. 1968; 34.6% govt-owned; manufacture and marketing of cement; cap. p.u. KD 25.6m.; Chair. ABD AL-MOHSIN ABD AL-AZIZ AR-RASHID; 525 employees.

Kuwait Food and Beverage Co WLL: POB 22528, 13086 Safat, Kuwait City; tel. 4818862; canned food, soft drinks, juices, mineral water; Chair. MUHAMMAD RADWAN LUTHFI.

Kuwait Food Co (Americana) SAK: POB 5087, 13051 Safat, Safat Shuwaikh and Sabhan Industrial Area, Kuwait City; tel. 4815900; telex 22125; fax 4839337; f. 1963; cap. p.u. KD 11.3m.; chain of restaurants, meat industry, bakery plant for oriental sweets and English cakes; Man. MOATAZ AL-ALFI; 2,000 employees.

Kuwait Metal Pipe Industries Co KSC: POB 3416, 13035 Safat, Kuwait City; tel. 4675622; fax 4675897; f. 1966; sales KD 10.8m. (1982); 16.6% govt-owned; manufacture of various pipes, tanks and coatings; cap. p.u. KD 15.2m.; Chair. AHMAD YOUSUF M. AR-ROUDAN.

Kuwait Pharmaceutical Industrial Co (KPICO): POB 5846, 13059 Safat, Sabhan Industrial Area 4, Kuwait City; tel. 4748011; telex 23091; fax 4714150; f. 1980; cap. KD 10m. (1987); began production in 1987; owned 34.9% by the govt, 25% by ACDIMA (Arab Co for Drug Industries and Medical Appliances), 20% by GIC (Gulf Investment Corporation) and 20.1% by private shareholders; cap. p.u. KD 5.5m.; Man. Dir SULAYMAN S. ATH-THERBAN.

Kuwait Prefabricated Building Co SAK: POB 5132, 13052 Safat, Kuwait City; tel. 4733055; telex 22201; fax 4749908; f. 1964; sales KD 18.5m. (1982); cap. p.u. KD 6m.; design and manufacture of pre-cast structures, pre-stressed hollowcore slabs, claddings, beams, welded wire mesh, terrazzo tiles, structural steel items; hot dip galvanization; Chair. ABDULLAH ABD AL-AZIZ OBAIDAN; 1,446 employees.

Kuwaiti Danish Dairy Co WLL: POB 835, 13009 Safat, Sabhan Industrial Area 1, St 104, Kuwait City; tel. 4717911; telex 23054; fax 4747029; dairy products, ice cream, fruit juices and tomato paste; Chair. and Gen. Man. EZZAT MUHAMMAD JAAFAR.

Packaging and Plastic Industries Co: POB 1148, 15462 Dasman, Kuwait City; tel. 2435841; fax 2435839; f. 1974; production of polypropylene woven bags for packaging fertilizers, polyethylene agricultural sheets, co-extruded flexible film packaging; Chair. Dr ABD AL-AZIZ SULTAN AL-ESSA; 200 employees.

United Fisheries of Kuwait KSC: POB 22044, 13081 Safat, Kuwait City; tel. 2445021; fax 2447970; f. 1972; sales KD 3.4m. (1995); cap. KD 7m.; production, export and import of frozen fish and shrimps; Chair. and Man. Dir FAISAL M. BIN SABT; 500 employees.

TRADE UNIONS

General Confederation of Kuwaiti Workers: POB 5185, Safat, 13052 Kuwait City; tel. 5616053; fax 5627159; f. 1968; central authority to which all trade unions are affiliated.

KOC Workers Union: Kuwait City; f. 1964; Chair. HAMAD SAWYAN.

Federation of Petroleum and Petrochemical Workers: Kuwait City; f. 1965; Chair. JASEM ABD AL-WAHAB AT-TOURA.

Transport

RAILWAYS

There are no railways in Kuwait.

ROADS

Roads in the towns are metalled, and the most important are motorways or dual carriageways. There are metalled roads linking Kuwait City to Ahmadi, Mina al-Ahmadi and other centres of population in Kuwait, and to the Iraqi and Saudi Arabian borders, amounting to a total road network of 4,273 km in 1989 (280 km of motorways, 1,232 km of other major roads and 2,761 km of secondary roads).

Kuwait Public Transport Co SAK (KPTC): POB 375, 13004 Safat, Murghab, Safat Sq, Kuwait City; tel. 2469420; telex 22246; fax 2401265; f. 1962; state-owned; provides internal bus service; regular service to Mecca, Saudi Arabia; Chair. and Man. Dir MAHMOUD ABD AL-KALEQ AN-NOURI.

SHIPPING

Kuwait has three commercial seaports. The largest, Shuwaikh, situated about 3 km from Kuwait City, was built in 1960. By 1987 it comprised 21 deep-water berths, with a total length of 4 km, three shallow-water berths and three basins for small craft, each with a depth of 3.35m. In 1988 3.6m. metric tons of cargo were imported and 133,185 tons were exported through the port. A total of 1,189 vessels passed through Shuwaikh in 1988.

Shuaiba Commercial Port, 56 km south of Kuwait City, was built in 1967 to facilitate the import of primary materials and heavy equipment, necessary for the construction of the Shuaiba Industrial Area. By 1987 the port comprised a total of 20 berths, plus two docks for small wooden boats. Four of the berths constitute a station for unloading containers. Shuaiba handled a total of 3,457,871 metric tons of dry cargo, barge cargo and containers in 1988.

Doha, the smallest port, was equipped in 1981 to receive small coastal ships carrying light goods between the Gulf states. It has 20 small berths, each 100 m long. Doha handled a total of 20,283 metric tons of dry cargo, barge cargo and containers in 1988.

The oil port at Mina al-Ahmadi, 40 km south of Kuwait City, is capable of handling the largest oil tankers afloat, and the loading

of over 2m. barrels of oil per day. By 1987 the port comprised 12 tanker berths, one bitumen-carrier berth, two LPG export berths and bunkering facilities.

At 31 December 1997 Kuwait's merchant fleet numbered 202 vessels, with a total displacement of 1,983,980 grt.

Arab Maritime Petroleum Transport Co (AMPTC): POB 22525, 13086 Safat, OAPEC Bldg, Shuwaikh, Airport St, Kuwait City; tel. 4844500; fax 4842996; e-mail amptc@ncc.moc.kw; f. 1973; 7 tankers and 4 LPG carriers; sponsored by OAPEC and financed by Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the UAE; Chair. Dr RAMADAN AS-SANUSSI BELHAG (Libya); Gen. Man. SULAYMAN I. AL-BASSAM.

Kuwait Maritime Transport Co KSC: POB 25344, 13086 Safat, Nafisi and Khatrash Bldg, Jaber al-Mubarak St, Kuwait City; tel. 2449974; telex 23481; fax 2420513; f. 1981; Chair. FOUAD M. T. AL-GHANIM.

Kuwait Oil Tanker Co SAK (KOTC): POB 810, 13009 Safat, as-Salhia Commercial Complex, Blocks 3, 5, 7 and 9, Kuwait City; tel. 2455455; telex 44755; fax 2445907; f. 1957; state-owned; operates 4 crude oil tankers, 20 product tankers and 6 LPG vessels; sole tanker agents for Mina al-Ahmadi, Shuaiba and Mina Abdullah and agents for other ports; LPG filling and distribution; Chair. and Man. Dir ABDULLAH AR-ROUMI.

Kuwait Ports Authority: POB 3874, 13039 Safat, Kuwait City; tel. 4812774; telex 22740; fax 4819714; f. 1977; there are plans to expand the ports to handle the increased cargo traffic projected for the 1990s; Dir-Gen. ABD AR-RAHMAN AN-NAIBARI.

Kuwait Shipbuilding and Repairyard Co SAK (KSRC): POB 21998, 13080 Safat, Kuwait City; tel. 4830308; fax 4815947; ship repairs and engineering services, underwater services, maintenance of refineries, power stations and storage tanks; maintains floating dock for vessels up to 35,000 dwt; synchrolift for vessels up to 5,000 dwt with transfer yard; five repair jetties up to 550 m in length and floating workshop for vessels lying at anchor; Chair. and Man. Dir MUSA J. MARAFI; Commercial Man. BILL PURDIE.

United Arab Shipping Co SAG (UASC): POB 3636, 13037 Safat, Shuwaikh, Airport Rd, Kuwait City; tel. 4843150; telex 22176; fax 4845388; f. 1976; national shipping company of six Arabian Gulf countries; services between Europe, Far East, Mediterranean ports, Japan and east coast of USA and South America, and ports of participant states on Persian (Arabian) Gulf and Red Sea; 55 vessels; subsidiary cos: Kuwait Shipping Agencies, Arab Transport Co (Aratrans), United Arab Chartering Ltd (United Kingdom), Middle East Container Repair Co (Dubai), Arabian Chemicals Carriers (Saudi Arabia), United Arab Agencies Inc. (USA) and United Arab Shipping Agencies Co (Saudi Arabia); Pres. and CEO ABDULLAH MAHDI AL-MAHDI.

CIVIL AVIATION

Kuwait International Airport opened in 1980, and is designed to receive up to 5.0m. passengers per year; in 1998 3.70m. arrivals and departures were recorded.

Directorate-General of Civil Aviation: POB 17, 13001 Safat, Kuwait City; tel. 4335599; telex 31945; fax 4713504; e-mail aviation@kuwait.net; internet http://www.kuwait.net/~aviation; Dir-Gen. YACOUB Y. AS-SAQER.

Kuwait Airways Corpn (KAC): POB 394, Kuwait International Airport, 13004 Safat; tel. 4345555; telex 23036; fax 4314726; f. 1954; services to the Arabian peninsula, Asia, Africa and Europe; Chair. AHMAD AL-MISHARI; Dir-Gen. AHMAD AZ-ZABIN.

Tourism

Department of Tourism: Ministry of Information, POB 193, 13002 Safat, as-Sour St, Kuwait City; tel. 2463400; fax 2464460.

Touristic Enterprises Co (TEC): POB 23310, 13094 Safat, Kuwait City; tel. 5652775; telex 22801; fax 5657594; f. 1976; 92% state-owned; manages 23 tourist facilities; Chair. BADER AL-BAHAR; Vice-Chair. YACOUB AR-RUSHAID.

Defence

In August 1998 the armed forces numbered an estimated 15,300, including 11,000 in the army, 2,500 in the air force, and 1,800 in the navy. Paramilitary forces include a National Guard of 5,000, and a coastguard. The defence budget for 1998 was KD 1,200m. In August 1992 an Amiri decree authorized the Government to withdraw KD 3,500m. from state reserves to cover potential expenditure on defence over the following 12 years. There is a period of military service lasting two years (one year for university students), compulsory since March 1979.

Chief of Staff of Armed Forces: Gen. ALI AL-MOUMEN.

Education

In recent years a comprehensive system of kindergarten, primary, intermediate and secondary schools has been developed, and compulsory education for children between 6 and 14 years of age was introduced in 1966–67. However, many children spend two years prior to this in a kindergarten, and go on to complete their general education at the age of 18 years. It is government policy to provide free education to all Kuwaiti children from kindergarten stage to the University. In 1996/97 a total of 251,234 pupils attended 446 government schools (178 primary, 158 intermediate and 110 secondary). In that year a total of 116,469 pupils attended 291 private schools. Education was allocated KD 375m. in the Government's 1996/97 budget, or 10.9% of total expenditure.

Primary education lasts four years, after which the pupils move on to an intermediate school for another four years. Secondary education, which is optional and lasts four more years, is given mainly in general schools. There are also commercial institutes, a Faculty of Technological Studies, a health institute, religious institutes (with intermediate and secondary stages) and 11 institutes for handicapped children. In 1996 enrolment at primary schools was equivalent to 75% of children in the relevant age-group (males 76%; females 74%), while at secondary schools the rate was equivalent to 65% of children in the relevant age-group (males 65%, females 65%).

Two-year courses at post-secondary teacher training institutes provide teachers for kindergartens and primary schools and the University provides for intermediate and secondary schools. The number of graduates is not enough to meet all the teaching staff requirements and so the Ministry of Education meets this shortage by recruiting teachers from other Arab countries.

Scholarships are granted to students to pursue courses which are not offered by Kuwait University. Such scholarships are mainly used to study in Egypt, Lebanon, the UK and the USA. There were also pupils from Arab, African and Asian states studying in Kuwait schools on Kuwait Government scholarships. Kuwait University has about 15,500 students, and also provides scholarships for a number of Arab, Asian and African students. In May 1996 the National Assembly approved a draft law to regulate students' behaviour, dress and activities, with regard to observance of the teachings of *Shari'a* (Islamic) law, and to eradicate coeducational classes at Kuwait University over a five-year period. In 1989 a national library was being built, at an estimated cost of KD 4m. Following the Iraqi occupation of Kuwait, and the country's subsequent liberation, it was reported that 300 schools and colleges were in need of repair.

Between 1969 and 1985, 60,000 men and women graduated from the country's centres for illiteracy eradication and adult education, which in 1986 totalled 105, catering for 32,000 students. In 1995 the average rate of adult illiteracy was estimated by UNESCO at 21.4% (males 17.8%; females 25.1%).

LEBANON

Physical and Social Geography

W. B. FISHER

The creation, after 1918, of the modern state of Lebanon, first under French mandatory rule and then as an independent territory, was designed to recognize the nationalist aspirations of a number of Christian groups that had lived for many centuries under Muslim rule along the coast of the eastern Mediterranean and in the hills immediately adjacent. At least as early as the 16th century AD there had been particularist Christian feeling that ultimately resulted in the granting of autonomy, though not independence, to Christians living in the territory of 'Mount Lebanon', which geographically was the hill region immediately inland and extending some 30 km–45 km north and south of Beirut. The territory of Mount Lebanon was later expanded, owing to French interest, into the much larger area of 'Greater Lebanon' with frontiers running along the crest of the Anti-Lebanon mountains, and reaching the sea some miles north of Tripoli to form the boundary with Syria. In the south there is a frontier with Israel, running inland from the promontory of Ras an-Naqoura to the head of the Jordan Valley. In drawing the frontiers so as to give a measure of geographical unity to the new state, which now occupies an area of 10,452 sq km (4,036 sq miles), large non-Christian elements of Muslims and Druzes were included, so that at the present day the Christians of Lebanon form less than one-half of the total population.

PHYSICAL FEATURES

Structurally, Lebanon consists of an enormous simple upfold of rocks that runs parallel to the coast. There is, first, a very narrow and broken flat coastal strip—hardly a true plain—then the land rises steeply to a series of imposing crests and ridges. The highest crest of all is Qurnet as-Sauda, just over 3,000 m high, lying south-east of Tripoli; Mount Sannin, north-east of Beirut, is over 2,700 m. A few miles east of the summits there is a precipitous drop along a sharp line to a broad, trough-like valley, known as the Beka'a (Biqa), about 16 km wide and some 110 km–130 km long. The eastern side of the Beka'a is formed by the Anti-Lebanon mountains, which rise to 2,800 m, and their southern continuation, the Hermon Range, of about the same height. The floor of the Beka'a valley, though much below the level of the surrounding mountain ranges, lies in places at 1,000 m above sea-level, with a low divide in the region of Baalbek. Two rivers rise in the Beka'a—the Orontes, which flows northwards into Syria and the Gharb depression, ultimately reaching the Mediterranean through the Turkish territory of Antioch; and the Litani (Leontes) river. This latter river flows southwards, and then, at a short distance from the Israeli frontier, makes a sudden bend westwards and plunges through the Lebanon mountains by a deep gorge.

There exists in Lebanon an unusual feature of geological structure which is not present in either of the adjacent regions of Syria and Israel. This is the occurrence of a layer of non-porous rocks within the upfold forming the Lebanon mountains; and, because of this layer, water is forced to the surface in considerable quantities, producing large springs at the unusually high level of 1,200 m–1,500 m. Some of the springs have a flow of several thousand cu ft per second and emerge as small rivers; hence the western flanks of the Lebanon mountains, unlike those nearby in Syria and Israel, are relatively well watered and cultivation is possible up to a height of 1,200 m or 1,500 m.

With its great contrasts of relief, and the configuration of the main ranges, which lie across the path of the prevailing westerly winds, there is a wide variety in climatic conditions. The coastal lowlands are moderately hot in summer, and warm in winter, with complete absence of frost. But only 10 km or so away in the hills there is a heavy winter snowfall, and the higher hills are covered from December to May, giving the unusual vista for the Middle East of snow-clad peaks. From this the name Lebanon (*laban*—Aramaic for 'white') is said to originate. The Beka'a has a moderately cold winter with some frost and snow, and a distinctly hot summer, as it is shut off from the tempering effect of the sea.

Rainfall is generally abundant but it decreases rapidly towards the east, so that the Beka'a and Anti-Lebanon are definitely drier than the west. On the coast, between 750 mm and 1,000 mm (30 ins to 40 ins) fall annually, with up to 1,250 mm (50 ins) in the mountains; but only 380 mm (15 ins) in the Beka'a. As almost all of this annual total falls between October and April (there are three months of complete aridity each summer), rain is extremely heavy while it lasts, and storms of surprising intensity sometimes occur. Another remarkable feature is the extremely high humidity of the coastal region during summer, when no rain falls.

ECONOMIC LIFE

The occurrence of high mountains near the sea, and the relatively abundant supplies of spring water, had a significant influence on economic development within Lebanon. Owing to the successive levels of terrain, an unusually wide range of crops can be grown, from bananas and pineapples on the hot, damp coastlands, olives, vines and figs on the lowest foothills, cereals, apricots and peaches on the middle slopes, to apples and potatoes on the highest levels. These last are the aristocrats of the Lebanese markets, since they are rarest, and, with the growing market in the oilfield areas of Arabia and the Persian (Arabian) Gulf, they are sold for the highest price. Export of fruit is therefore an important item. In addition, abundant natural water led to the development of pinewoods and evergreen groves, which add greatly to the already considerable scenic beauty of the western hill country. Prior to the prolonged civil conflict in Lebanon (see History), there was an important tourist trade in the small hill villages, some of which have casinos, luxury hotels and cinemas. The greatest activity was during the summer months, when wealthy Middle Easterners and others arrived; but there was a smaller winter sports season, when skiing was pursued.

In addition, the geographical situation of Lebanon, as a 'façade' to the inland territories of Syria, Jordan, and even northern Iraq and southern Turkey, enabled the Lebanese ports to act as the commercial outlet for a very wide region. The importance of Beirut as a commercial centre was due in large part to the fact that Lebanon was a free market. More than one-half of the volume of Lebanon's former trade was transit traffic, and Lebanon used to handle most of the trade of Jordan. Byblos claims to be the oldest port in the world; Tyre and Sidon were for long world-famous, and the latter was reviving as the Mediterranean terminal of the Tapline (Trans-Arabian Pipeline) from Saudi Arabia until the Lebanese branch of the pipeline was closed at the end of 1983. Another ancient centre, Tripoli, was also a terminal of the pipeline from Iraq. Beirut is now, however, the leading town of the country, and contains more than one-half of the total population, including many displaced persons. Although local resources are not in general very great (there are no minerals or important raw materials in Lebanon), the city in normal times lived by commercial activity on a surprising scale, developed by the ingenuity and opportunism of its merchant class.

Beirut, of recent years, came to serve as a financial and holiday centre for the less attractive but oil-rich parts of the Middle East. Transfer of financial credit from the Middle East to Zürich, Paris, London, New York and Tokyo; a trade in gold and diamonds; and some connection with the narcotics trade of the Middle East—all these gave the city a very special function. Whether the traditional economic basis of the country—extreme individualism and 'laissez-faire' for entrepreneurs—can revive is uncertain, but strenuous efforts began in 1977 to bring about reconstruction and redevelopment, assisted by loans from outside. During 1980 a large contribution of 'front-line aid' was made by Arab League states, and this showed signs of producing significant economic recovery. However, the abrupt intensification of military activity in 1981–82, the effects of the subsequent Israeli invasion and the prolonged sectarian conflict negated these hopes. Production declined because of damage and disruption; the south was virtually disconnected from the remainder of the Lebanese state until Israeli forces withdrew to just inside the border in June 1985; such was the extent of factional division within the country that, in the early years of the recent civil conflict, the Government's authority was barely felt outside Beirut; by the late 1980s, if not before, even the capital had effectively lapsed into anarchy; the impossibility of controlling customs and tax collection caused a substantial reduction in government income.

RACE AND LANGUAGE

It is difficult to summarize the racial affinities of the Lebanese people. The western lowlands have an extremely mixed population possibly describable only as 'Levantine'. Basically Mediterranean, there are many other elements, including remarkably fair individuals—Arabs with blonde hair and grey eyes, who are possibly descendants of the Crusaders. The remaining parts of the country show a more decided tendency, with darker colouring and more pronounced facial features. In addition, small refugee groups, who came to the more inaccessible mountain zones in order to escape persecution, often have a different racial ancestry, so that parts of Lebanon form a mosaic of highly varying racial and cultural elements. Almost all Middle Eastern countries are represented racially within Lebanon.

Arabic is current throughout the whole country, but owing to the high level of education (probably the highest in any Middle Eastern country) and to the considerable volume of temporary emigration, English, French and even Spanish are widely understood. French is probably still the leading European language (though English is tending to replace it) and some of the higher schools and one university teach basically in this language. In addition, Aramaic is used by some religious sects, but only for ritual—there are no Aramaic speaking villages as in Syria.

History

Revised for this edition by YOUSSEF CHOUEIRI

ANCIENT AND MEDIEVAL HISTORY

In the ancient world Lebanon was important for its pine, fir and cedarwood, much coveted by neighbouring powers, and during the long period of Egyptian, Assyrian, Persian and Seleucid rule the exploitation of the forests of Lebanon was normally a royal privilege. The area was also mined for its iron and copper in the time of the Ptolemies and the Romans. Gradually Lebanon came to have a distinct history of its own, for the mountainous character of the region prevented any complete subjugation to outside authority. It is probable that the Arab conquest of Syria did not include the 'Mountain', to which fled all those who were opposed to the Arab domination. The Caliph Mu'awiya (661–80) made some effort to assert a greater control, but the resistance of the native Aramaean Christians was reinforced by the arrival of the Mardaites from the fastnesses of the Taurus and the Amanus. These Christian nomads, led by Byzantine officers, made determined advances into Lebanon late in the seventh century, and seem to have united with the Maronite Christians who were later to become a Uniate Church of the Roman communion and to have a predominant role in the history of Lebanon. The Caliph Abd al-Malik (685–705) paid tribute to Byzantium in return for a withdrawal of most of the Mardaite forces; but it is clear that the 'Mountain' had begun to assume its historic function of providing a sure refuge for racial and religious minorities.

Lebanon maintained its Christian character until the ninth century when, among other elements, the Arab tribe of Tanukh established a principality in the region of al-Gharb, near Beirut, acting as a counterpoise to the Maronites of northern Lebanon and as a bulwark against Byzantine threats from the sea. Gradually, Islam and, more slowly still, the Arabic language penetrated the 'Mountain' where, however, Syriac lingered on in the Maronite districts until the 17th century (it is still spoken in three villages of the Anti-Lebanon). In the ninth and 10th centuries Muslim sects began to establish themselves in the 'Mountain' as, for example, the Shi'a, known in Lebanon under the name of Mitwali, and, in the 11th century, the Druze, which won a firm hold in southern Lebanon.

The Crusaders established in this area the County of Tripolis and the lordships of Gibelet and Batron, which enjoyed considerable support from the Christian population of northern Lebanon and were protected by a network of fortresses, the most famous being Hisn al-Akrad (Crac des Chevaliers). In the Mamluk period the rulers of Lebanon, by continued political manoeuvring, maintained for themselves a considerable degree of autonomy. The Tanukhid amirs, after a long period in which they had matched the Crusaders against the Islamic amirates, had eventually taken the Mamluk side. In northern Lebanon the Maronites, under their bishop, maintained contact with the Italian republics and also with the Roman Curia. Less fortunate were the Druzes and the Mitwali who, in the last years of the 13th century, took advantage of the Mamluk preoccupation with the Mongol threat from Persia and began a protracted revolt which led to widespread devastation in central Lebanon.

THE OTTOMAN PERIOD

In the 16th century the Turcoman family of Assaf and, after them, the Banu Saifa rose to prominence in the area from Beirut to the north of Tripoli; while in the south the Druze house of Ma'an supplanted the Tanukhid amirs. After the conquest of 1516–17 the Ottoman Sultan Selim I had confirmed the amirs of Lebanon in their privileges and had imposed only a small tribute; yet not infrequently there was open conflict with the Ottomans, as in 1584–85 when, after an attack on a convoy bearing the tribute from Egypt to Constantinople, the Sultan Murad III sent a punitive expedition to ravage the lands of the Banu Saifa and of the Druzes.

The power of the House of Ma'an now reached its zenith in the person of Fakhr ad-Din II (1586–1635), who by means of bribery, intrigue, foreign alliance and open force, set out to establish an independent power over the whole of Lebanon and parts of Palestine to the south. To this end he entered into close relations with the Grand Duke of Tuscany, negotiating in 1608 a commercial agreement that incorporated a secret military clause directed against the Sultan. In 1613 a naval and military expedition sent from the Porte (the Ottoman administration in Constantinople) compelled Fakhr ad-Din to seek refuge with his Tuscan ally. He returned in 1618, and within a few years had restored his power to become virtual ruler from Aleppo to the borders of Egypt. The Sultan, heavily engaged in repressing revolt in Anatolia, and in waging a long struggle with Persia, could do no more than recognize the *fait accompli*. Fakhr ad-Din embarked on an ambitious programme of development for Lebanon. He sought to equip a standing army with arms imported from Tuscany. Italian engineers and agricultural experts were employed to promote a better cultivation of the

land and to increase production of silk and olives. The Christian peasantry were encouraged to move from northern to southern Lebanon. Beirut and Sidon flourished as a result of the favour he showed to commerce, and religious missions from Europe (Capuchins, Jesuits, Carmelites) were allowed to settle throughout Syria—a development of great importance for France, which strove to assert a 'protectorate' over all the Catholic and other Christian elements in the Ottoman Empire. However, the ambitions of Fakhr ad-Din were doomed to failure, as by 1632 the Sultan Murad IV assumed effective control at Constantinople. The Pasha of Damascus, supported by a naval squadron, began a campaign to end the independent power of Lebanon, and in 1635 Fakhr ad-Din was executed at Constantinople.

In 1697 the Ma'an family became extinct and was succeeded by the House of Shihab, which maintained its predominance until 1840. In the course of the 18th century, the Shihab amirs gradually consolidated their position against the other factions of the 'Mountain' and for a while recovered control of Beirut. While normally the Shihab took care to remain on good terms with the Turkish pashas of Tripoli, Sidon and Damascus, the pashas themselves strove to exercise an indirect control by fomenting the family rivalries and religious differences that marked the course of Lebanese politics. With the advent of Bashir II (1788–1840) the House of Shihab attained the height of its influence. Not until the death of Ahmad Jazzar, Pasha of Acre (1804), was he free to develop his power, which he maintained by the traditional methods of setting one pasha against the other, and by bribing the officials of the Porte whenever it seemed expedient. In 1810 he helped the Ottomans to repel an invasion by the Wahhabi power of Arabia; but in 1831 he sided openly with Muhammad Ali of Egypt, when that ruler invaded Syria. Holding Lebanon as the vassal of Egypt, he was compelled, however, to apply to the 'Mountain' the unpopular policy imposed by Ibrahim Pasha, the son of Muhammad Ali, with the result that a revolt broke out, which, after the Egyptian withdrawal of 1840, led to his exile. The age of the Lebanese amirs was now at an end: the Ottomans assumed control of the 'Mountain', appointing two Kaimakams to rule there, one Druze and the other Maronite, under the supervision of the pashas of Sidon and Beirut.

The period of direct Ottoman rule saw the rapid growth between the Druzes and the Maronites of a mistrust already visible during the time of the Egyptian dominance, and now fostered by the Ottomans as the only means of maintaining their influence over Lebanon. As a result of social and economic discontent, due to the slow disintegration of the old feudal system which had existed in Lebanon since the Middle Ages, the Maronite peasantry revolted in 1858 and destroyed the feudal privileges of the Maronite aristocracy, thus facilitating the creation of a system of independent smallholdings. The Druze aristocracy, fearing the consequences of a similar discontent among their own Maronite peasantry, made a series of attacks on the Maronites of northern Lebanon, who, owing to their own dissensions, could offer no effective resistance. The dubious attitude of the Turkish pashas, in the face of these massacres of 1860, led to French intervention, and in 1864 to the promulgation of an organic statute for Lebanon, which was now to become an autonomous province under a non-Lebanese Ottoman Christian governor, appointed by the Sultan and approved by the Great Powers. He was to be aided by an elected administrative council and a locally recruited police force. The statute also abolished legal feudalism in the area, thus consolidating the position won by the Maronite peasantry in 1858. The period from 1864 to 1914 was one of increasing prosperity, especially among the Christian elements, who also played an important role in the revival of Arab literature and Arab national feeling during the last years of the 19th century.

THE FRENCH MANDATE

Lebanon's privileged status ended when the Turks entered the war of 1914–18; by 1918 the coastal areas of Lebanon were occupied by British and French forces. In September 1920 the French created the State of Greater Lebanon—which included not only the former autonomous province but also Tripoli, Sidon, Tyre and Beirut, some of which had in earlier times been under the control of the amirs of Lebanon. A Constitution, devised in 1926, proved unworkable and was suspended in 1932, from which time the President of the Republic carried on the administration. The President was, by convention, a Christian, while the Prime Minister was a Muslim, and both worked towards the achievement of a careful balance between the various religious communities of the new state. Lebanon was not unaffected by the growth of the nationalist movement in Syria, some sections of which demanded the reduction of Lebanon to its pre-war limits and even the abolition of its existence as a separate state. These demands found some support amongst the Sunni Muslims of the areas added to Lebanon proper in 1920, with the result that the Syrian revolt of 1925–26 spread to parts of southern Lebanon. The Maronite Christians, on the whole, supported the idea of a separate Lebanon, but were not united in their attitude towards France on the one hand, and the Arab states on the other. The Franco-Lebanese Treaty of 1936 differed little from that which France negotiated at the same time with Syria, the chief difference being that the military convention gave France wider military powers in Lebanon than in Syria. A reformed Constitution was promulgated in 1937; but the French refusal to ratify the treaty in 1938, and the advent of war prolonged a situation which, if outwardly calm, concealed a considerable discontent beneath the surface. In November 1941 the Free French Commander, General Catroux, formally proclaimed Lebanon a sovereign independent state. In September 1943 a new Parliament with a strong nationalist majority soon came into conflict with the French authorities over the transfer of the administrative services. When, in November 1943, the Lebanese Government approved legislation removing from the Constitution all provisions considered to be inconsistent with the independence of Lebanon, the French delegate-general arrested the President and suspended the Constitution. The other Arab states, together with the United Kingdom and the USA, supported the Lebanese demands, and in 1944 France began to transfer to Lebanese control all important public services, save for the Troupes spéciales (local units under French command), whose transfer the French authorities at first made conditional on the signing of a Franco-Lebanese Treaty. But in 1945 the Troupes spéciales were handed over to Lebanon without such conditions, and an agreement between France and the Lebanese Government in 1946 provided for the withdrawal of French troops.

ECONOMIC DIFFICULTIES

Like the other Arab states, Lebanon was at war with the new State of Israel from May 1948; but negotiated an armistice in March 1949. Just as in Syria the failure of the Arab arms had led eventually to the *coup d'état* of March 1949, so in Lebanon the widespread disillusionment of Arab nationalist hopes prepared the ground for a conspiracy against the Government. This conspiracy was easily suppressed in June 1949 and its leader, Antun Sa'ade, was executed.

The Lebanese Government encountered considerable economic and financial difficulties soon after the end of the 1939–45 war. When, in January 1948, France devalued the franc (to which both the Lebanese and the Syrian currencies were linked) Lebanon, economically weaker than Syria, felt obliged to sign a new agreement with France (February 1948). Syria refused to do so and began a long and complex dispute with Lebanon over the precise nature of the economic and financial arrangements which were to exist between the two states. In March 1950 the Lebanese Government refused a Syrian demand for full economic and financial union. The severance of economic relations which now ensued did not end until the signing, in February 1952, of an agreement for the division of royalties due from oil companies, and for the status, for customs purposes, of agricultural and industrial products passing between the two states.

In September 1952 Lebanon experienced a severe crisis in its internal affairs. Political and economic unrest brought about the fall of the Government and the resignation of President al-Khouri, who had held office since 1943. Charges of corruption were made against the President. During his long tenure of power he had indeed used all the arts of political influence and manoeuvre in order to impose a real degree of unity on a state where the divergent interests of Maronites, Sunni and Shi'a Muslims, Druzes and other religious communities underlined

the need for firm and coherent rule. To an even greater degree, however, the crisis was due to causes of an economic order. Lebanon had attained its independence in the period of war-time prosperity. The end of the war meant a progressive diminution of foreign expenditure in Lebanon, and the gradual disappearance of war shortages which had favoured Lebanese trade. The devaluation of the French franc, the unsuccessful war with Israel, and above all the economic rupture with Syria (the chief source of agricultural goods and principal customers for Lebanese industrial products) gave rise to further difficulties. By 1952 there was much discontent arising from the high cost of living and from considerable unemployment, and it was a loose coalition of all the elements of opposition, both political and economic, which brought about the fall of the al-Khouri regime.

CONSTITUTIONAL REFORM

Camille Chamoun became the new President of the republic. His administration, with the Amir Khalid Chehab as Prime Minister, pledged reforms including changes in the electoral laws, the enfranchisement of women, revision of the press laws and the reorganization of justice. Elections in July 1953 led to the formation of a 44-member chamber of deputies composed on a sectarian basis according to the electoral law of 1952.

Since the foundation of the republic, all seats in the Chamber of Deputies had been distributed among the various religious communities in proportion to their numerical strength. The chamber was thus intended as an institution reflecting the religious and social structure of the state, and was capable of harmonious function provided that the electoral system which maintained a delicate balance between the communities suffered no violent and prejudicial change. At the same time the Chamber contained a strong 'feudal' element—the tribal and religious leaders who, with their trusted retainers, formed powerful groups within the chamber and were often criticized as being 'anti-national' in their aims and methods. To end or at least weaken this 'feudalization' of Lebanese political life, without, however, impairing the equilibrium between the Muslim and Christian communities, had long been the purpose of those who advocated a reasonable and well-considered policy of reform. The law of 1952 created 33 electoral districts (during the previous life of the republic the number had been, as a rule, five) and allotted to 11 of them two seats, and to the remainder one seat each. Of the total of 44 seats, the Maronites were now to receive 13, the Sunni Muslims nine, the Shi'a Muslims eight, the Greek Orthodox Christians five, the Druzes three, the Greek-Melkite Catholics three, the Armenian Catholics two, and the other confessions (Protestant, Jewish, Nestorian, etc.) one seat.

FOREIGN RELATIONS 1953–56

In the period 1953–56 financial and economic relations with Syria remained on a provisional basis much the same as that which had prevailed since 1950, with earlier short-term arrangements being renewed as the need arose. Discussions with Syria in November 1953 over problems of currency, loan policy, banks and exchange difficulties made no effective progress. The Lebanese Government was more successful, however, in its efforts to promote internal development. It was announced in August 1955 that the World Bank had granted to Lebanon a loan of US $27m. for the Litani river scheme, which was expected to more than double the electric power available within the republic and also to irrigate a large area in the coastal region. A number of commercial treaties at this time bore witness to the growing penetration of the Eastern bloc into Arab lands.

THE EISENHOWER DOCTRINE

A state of emergency was declared in Lebanon during the Sinai-Suez crisis at the end of October 1956. The Chamber of Deputies announced its support for Egypt, but Lebanon did not break off diplomatic relations with the United Kingdom and France. In November there were disturbances, however, at Tripoli and Beirut against the attitude of the Government. The 'Eisenhower Doctrine', a new programme, announced in January 1957, of US economic and military aid intended as a means of ensuring an anti-Soviet front in the Middle East, evoked a favourable response in Lebanese official circles. Some of the political groups in Lebanon protested against this pro-Western alignment, asserting that it could not fail to isolate Lebanon from the other Arab states (which had declined to accept the terms of the Doctrine) and thus impair Arab solidarity. None the less, in April the Government obtained from the Chamber of Deputies a vote expressing confidence in its policies. Military equipment granted under the Doctrine began to reach Beirut in June.

The problem of electoral reform had been under consideration in Lebanon in the course of 1956. The main proposal now to be given effect was that the number of seats in the Chamber of Deputies should be raised from 44 to 66. As election time drew near in the summer of 1957, riots in Beirut compelled the Government to call out troops for the maintenance of order. According to reports at this time more than 100 communists were arrested for their part in the disturbances. The tense electoral campaign of June 1957 resulted in a marked triumph for the Government: a first estimate suggested that it might count on the adherence of some three-quarters of the deputies in the new chamber. Of the total of 66 seats, the Maronites now received 20, the Sunni Muslims 14, the Shi'a Muslims 12, the Greek Orthodox Christians seven, the Druzes four, the Greek-Melkite Catholics four, the Orthodox Armenians three, the Armenian Catholics one, and the other religious minorities also one seat.

It became clear that unrest, especially among those elements of the population which opposed the pro-Western policies of the Lebanese Government and favoured an alignment with Egypt and Syria, had not been quelled when further incidents (bombings and assassinations) occurred in November 1957. The Government, in its desire to halt these subversive activities, now imposed a close control over all Palestinian refugees in Lebanon. Indeed, after renewed outbreaks of violence in December, the northern area of Lebanon was declared to be a military sector.

The Lebanese Government stated in March 1958 that it would not join the United Arab Republic (UAR) of Egypt and Syria; the Arab Federation of Iraq and Jordan, or indeed any association that might limit its own independence and sovereignty. Large sections of the Muslim population, both in the north (at Tripoli) and in the south (at Tyre and Sidon), were inclined to be pro-Arab rather than pro-Lebanese in sentiment—a mood greatly stimulated by the emergence of the new UAR and by the propaganda emitted from Cairo and Damascus for the return to Syria of those predominantly Muslim areas that had been joined to the old Lebanon in the time of the French mandate. There was conflict, too, between those who, although reluctant to see Lebanon lose its separate political existence, were none the less strongly opposed to the pro-Western attitude of the Lebanese Government and those who, fearing the possible absorption of Lebanon into the framework of a larger Arab state, felt themselves bound to support fully the policies of the Beirut regime. The danger was real that these complex tensions might escalate in the form of a 'confessional' conflict between Muslims and Christians, in which, if not the continued independence, then at least the entire political orientation of Lebanon would be at stake.

THE CRISIS OF 1958

A reorganization of the Government, carried out in March 1958 and designed to remove those critical of the pro-Western policies of Lebanon who favoured closer co-operation with the UAR, brought no relief to the grave situation then developing. Serious disturbances, originating in Tripoli and the northern areas adjacent to the Syrian border, broke out in the second week of May and spread rapidly to Beirut and also to Tyre and Sidon in southern Lebanon. The Druze population in the south-east was also involved in the disorders, being sharply divided into pro- and anti-Government factions. Hostile demonstrations led to the destruction of the US information service centres at Tripoli and Beirut. At the request of the Lebanese Government, the USA agreed to dispatch in all haste supplies of arms and police equipment and decided at the same time to reinforce the US Sixth Fleet stationed in the Mediterranean. The USSR accused the USA of interference in Lebanese affairs and declared that Western intervention might have grave consequences. The Lebanese Government itself charged the UAR with interference in its internal affairs and appealed for redress to the Arab League—which, meeting at Benghazi in June, failed to agree

on a course of action. The problem was brought before the UN, which resolved to send an observer corps to Lebanon.

The Lebanese Government was now, in fact, confronted with a widespread insurrection, in which the Muslim elements in the population were ranged against the Christian elements. The forces opposed to the existing regime controlled parts of Beirut, Tripoli and Sidon, as well as large areas in the north and the south of Lebanon. Attempts to negotiate a settlement led to no favourable result. The Prime Minister, Sami as-Sulh, gave an assurance that President Chamoun did not intend to ask for a constitutional amendment enabling him to seek re-election in September 1958, the date when his present tenure was due to end. To this assurance the leaders of the insurrection replied with a firm demand for the immediate resignation of the President, who made it clear, however, that he would not relinquish his office until September.

On 14 July 1958 (the date of the *coup d'état* which led to a change of regime in Iraq) President Chamoun requested the USA to send US troops into Lebanon to maintain security and preserve Lebanese independence. About 10,000 US troops were dispatched to the Beirut area, and the USA made it known that action on the part of forces under the control of the UAR against US troops in Lebanon might lead to most serious consequences. The USSR and the People's Republic of China made strong protests against the US intervention and asked for the prompt withdrawal of the US forces landed in Lebanon. On 18 August the USA gave a written undertaking to withdraw its troops, either at the request of the Lebanese Government, or in the event of the UN's taking appropriate measures to ensure the integrity and peace of the country. The UN General Assembly thereupon adopted a resolution, framed by its Arab members, providing for the evacuation of US troops under the auspices of the UN and the Arab League.

PRESIDENT CHEHAB, 1958–64

Meanwhile, the Lebanese Chamber of Deputies had, on 31 July 1958, elected as the new President of the state Gen. Fouad Chehab, the Commander-in-Chief of the Lebanese army—a choice supported by members from both sides involved in the internal conflict. He assumed office on 23 September, in succession to President Chamoun, and at once invited Rashid Karami, the leader of the insurgents at Tripoli, to become Prime Minister. An agreement was made on 27 September to the effect that the US forces were to leave Lebanon by the end of October.

In October 1959 the Lebanese Cabinet was increased from four to eight members, so that greater representation might be given to the various political groups. The Chamber of Deputies approved in April 1960 an electoral reform bill, which imposed for the first time the principle of the secret ballot in Lebanese elections and also enlarged the Chamber itself from 66 to 99 deputies—a total figure that maintained the existing ratio (laid down in 1943) of six Christian to every five Muslim (including Druze) deputies in the Chamber. The Chamber was dissolved by President Chehab on 5 May 1960, the Government of Rashid Karami resigning nine days later. A general election was then held in four separate stages on 12, 19 and 26 June and 3 July. The election took place in an atmosphere of complete calm, strict security measures being enforced throughout the various stages of the electoral process. In the new Chamber of Deputies there were 30 Maronite Christians, 20 Sunni Muslims, 19 Shi'a Muslims, 11 Greek Orthodox Christians, six Greek-Melkite Catholics, six Druzes, four Armenian Orthodox Christians, one Armenian Catholic, one Protestant and one member representing other elements. A large number of the 'rebel' personalities prominent in the events of 1958 and hitherto not seated in the Chamber were now returned as members.

A new Government, under the leadership of Saeb Salam, took the oath of office on 2 August 1960. The Cabinet, which included several personalities active on one side or the other in the troubles of 1958, was prompt to reaffirm the traditional policies of non-expropriation, of minimal government intervention in private enterprise, of encouragement for private investment both foreign and domestic, and of currency convertibility. By 1960 Lebanon had recovered, in economic terms, almost completely from the disturbances in 1958.

CABINET REFORM

It had come to be felt, since August 1960, that the Lebanese Cabinet, 18 members strong, was too large for the maintenance of an efficient administration and so, on 22 May 1961, the Prime Minister established a new Cabinet consisting of eight ministers only. However, on 24 October, as the result of a dispute with some members of his Government (notably Kamal Joumblatt, the Druze leader, who was Minister of Works and Planning), Salam resigned. Rashid Karami, a former Prime Minister, formed a new Government on 31 October.

Military elements, acting in conjunction with civilians described as supporters of the extremist Parti socialiste nationaliste, made an unsuccessful attempt, on 31 December 1961, to overthrow the Lebanese Government. The Parti socialiste nationaliste was in fact the old Parti populaire syrien, founded in the 1930s by Antoine Saadé with the aim of uniting several Arab states into a Greater Syria. Its current leader, Dr Abdallah Saadé, was now arrested and the party dissolved by the Lebanese Government on 1 January 1962. The Lebanese Government took firm action against all the elements suspected of involvement in the revolt, and crushed it within a few days.

On 19 February 1964 the Cabinet led by Rashid Karami resigned, after President Chehab had signed a decree dissolving the Chamber of Deputies (elected in 1960) and ordering elections to be held on four successive Sundays from 5 April to 3 May 1964. A caretaker Cabinet was appointed to supervise the elections for the new Chamber of Deputies.

PRESIDENT HÉLOU

Gen. Chehab, whose six-year term of office as President of the republic was due to end in September 1964, rejected all appeals that he should submit himself as a candidate for a second time. Even when the Chamber of Deputies approved a motion in favour of an amendment to the Constitution which would enable him to stand for a further term of office, Gen. Chehab persisted in his refusal. On 18 August Charles Hélou, Minister of Education in the caretaker administration, succeeded Gen. Chehab as President, pledging himself to follow the policies and reforms introduced under his predecessor.

On 25 September 1964 Hussein Oweini, the head of the caretaker Cabinet, formed an administration at the request of President Hélou. The new administration aroused dissatisfaction, however, in the Chamber of Deputies, since, deriving from the Cabinet appointed originally to act as a caretaker during the period of the 1964 elections, it was in fact composed wholly of non-members of the Chamber. Oweini resigned on 13 November and, five days later, gathered together a new Cabinet which, save for himself and the Minister of Foreign Affairs, consisted of members drawn from the Chamber of Deputies and reflected in itself all the main trends of opinion within the Chamber.

FOREIGN RELATIONS

On 20 July 1965 Prime Minister Oweini resigned. There had been much debate in the Chamber of Deputies about a proposed agreement to guarantee private US investment in Lebanon against expropriation, war or revolution—an agreement construed in some political circles as giving to the USA a possible excuse for intervention, at need, in Lebanese affairs. On 26 July Rashid Karami became the new Prime Minister, with a Cabinet of nine ministers, all chosen from outside the Chamber of Deputies.

There was friction during the first months of 1965 between the Federal Republic of Germany and the Arab states because of the decision by Bonn to enter into formal diplomatic relations with Israel. Anti-German demonstrations occurred at Tripoli and Beirut, and on 13 May 1965 Lebanon severed diplomatic relations with West Germany. In May 1965 Lebanon signed an agreement on trade and technical co-operation with the European Economic Community (or European Community—EC). There was some friction between Israel and Lebanon over border incidents during the summer and autumn of 1965. Members of the main Palestinian guerrilla organization, al-Fatah (the Palestine National Liberation Movement), made raids into Israel, provoking Israeli reprisals against the Lebanese village of Noule.

FINANCIAL CRISIS

Rashid Karami modified his Cabinet in December 1965 and January 1966, these changes arising from difficulties which hindered the full implementation of an administrative and judicial reform programme, one of the main advocates of which was President Hélou. Between December 1965 and March 1966 an estimated 150 officials including 100 civil servants were compelled to withdraw from public life. This sustained attempt to curb corruption and the abuse of office in government circles inevitably caused considerable tension. There was strong pressure in the Chamber of Deputies for a return to a Cabinet chosen mainly from the Chamber itself. This and other difficulties obliged Karami to offer his resignation to President Hélou, who appointed Dr Abdallah al-Yafi as the new Prime Minister. Dr al-Yafi assembled a 10-man Cabinet drawn entirely from the Chamber of Deputies with the exception of himself and Philippe Takla, the new Minister of Foreign Affairs. The constitution of the Cabinet represented a balance between the various religious interests and, from the point of view of politics, between the left-wing and right-wing elements in the Chamber of Deputies.

In October 1966 the Intra Bank of Lebanon was compelled to suspend operations, owing to a series of withdrawals amounting to more than £L11m. in the preceding month. One result of that financial crisis was that the Government resolved to discourage the creation of new commercial banks, foreign or Lebanese, for a period of five years. Hitherto there had been an almost complete freedom to establish new banks in Lebanon and there had been a large expansion of the banking system based on the flow into Lebanon of vast oil revenues from Saudi Arabia and from the states of the Persian (Arabian) Gulf.

On 2 December 1966 Dr Abdallah al-Yafi offered the resignation of his Government to President Hélou. Rashid Karami formed a new administration on 7 December. It was composed of figures drawn from outside Parliament, six of whom held ministerial posts for the first time.

In June 1967 the Lebanese Government aligned itself with the Arab states then engaged in war against Israel. On 8 June the Government asked the ambassadors of the United Kingdom and the USA to leave Lebanon. However, the months following the war witnessed a gradual easing of the tensions, and in September 1967 the Lebanese Cabinet agreed to reinstate its ambassadors in Washington and London.

POLITICAL INSTABILITY

Rashid Karami's Cabinet resigned from office in February 1968, whereupon President Hélou asked Dr Abdallah al-Yafi to form an interim administration, whose main task was to be the preparation and conduct of the general election in March 1968. The two most successful parties elected in the Chamber of Deputies were the Maronite-dominated Triple Alliance, of a right-wing complexion, and the Democratic Bloc, aligned further to the left. However, Dr al-Yafi's interim administration remained in office until October, when it was forced to resign, owing to bitter rivalry between the two main political groups, the 'Chamounists' and the 'Chehabists' (both named after former Presidents), disputes over sectional representation in the Cabinet, and the Government's inability to command a majority in the Chamber of Deputies. After a week of confusion, a new four-man Government was announced on 20 October, still headed by Dr al-Yafi.

THE GUERRILLAS AND ISRAEL

The first clash between Lebanese and Israeli forces on the border for over two years took place in May 1968. As the activities of the Palestinian guerrillas intensified, however, Lebanon became increasingly involved as a target for Israel's grievances against the Palestinians. On 26 December an Israeli airliner was machine-gunned by Arab guerrillas at Athens airport. Two days later, Israeli commandos raided Beirut airport and destroyed 13 aircraft, all belonging to Lebanese airlines. The Israeli Government stated that the raid should be regarded as a reprisal for the Athens attack, a warning to the Arab world not to make any repetition of it, and a further warning to Lebanon to police more effectively the activities of Palestinian *fedayin* (freedom fighters) in the country. The financial cost to Lebanon was relatively small, as most of the aircraft were insured abroad. The major after-effects of the raid were, firstly, the widespread criticism that it attracted even from countries normally favourable to Israel. Lebanon was viewed as a country which had taken little active part in the campaign against Israel, while the Palestinian *fedayin* within it were only enjoying the freedom available to them in Lebanon's open, tolerant society. The UN Security Council unanimously condemned Israel for the raid. The second effect was the fall of the Government on 7 January 1969, its alleged lack of preparedness for Israeli aggression dealing the final blow to a weak administration. On 20 January, after much political manoeuvring, a new Government was formed under Rashid Karami, who thus became Prime Minister for the seventh time.

This Government was immediately confronted with the basic problems underlying the Lebanese situation, foremost among these the Christian-Muslim balance. In theory, both religions were equally represented in Lebanon, but no census had been held since 1939 mainly because the authorities feared that the balance had shifted to a 60% Muslim predominance, which would seriously affect the political situation. (Indeed, according to 1983 estimates, the Muslim population of Lebanon, both Shi'a and Sunni, was 1.95m., while the combined Maronite and Greek Orthodox Christian communities numbered 1.15m.) The Christian community had a disproportionate share of the wealth and important positions, was generally conservative by Arab standards and took a moderate position on the Israel question. The less privileged Muslim majority was more in favour of both domestic reform (Lebanon had, for example, only the beginnings of a welfare state) and of a more militant position towards Israel. Early in 1969 numbers of Syrian guerrillas entered the country and spent as much time in action against the Lebanese army as against Israel. Unrest also appeared amongst the 260,000 Palestinian refugees in the Sidon camp; part of the frontier with Syria was eventually closed. Numerous strikes and demonstrations continued. The Karami Government felt unable to maintain the necessary coalition from the two communities and their various factions and resigned on 25 April. However, it continued to function as a caretaker administration as no stronger government could be formed.

In the late summer of 1969 a number of guerrilla groups were reported to have moved to new bases better sited for attacks on Israel, which continued to raid these bases in reprisal; the combination of these factors created some friction between the guerrillas and the Lebanese army. In October the army apparently attacked some of these camps in an attempt to restrict or direct their activities. This caused a political crisis in which the caretaker Government resigned, claiming that it had not authorized the army's actions, and the President and the armed forces administered the country directly. Radical elements and guerrillas took over Tripoli, the second largest city, for several days, and most of the Palestinian refugee camps were fully converted into military training and equipment centres. Militant support for the guerrillas was voiced throughout the Arab world, and there were threats of military intervention by Syria and Iraq.

On 2 November 1969 the Lebanese Commander-in-Chief and Yasser Arafat, the leader of al-Fatah, signed a cease-fire agreement in Cairo. This restricted the guerrillas' freedom of movement to certain areas; as further defined in January 1970, it also provided that camps had to be set up some distance from towns, that military training must cease in refugee camps, and that guerrillas must enter Israel before engaging in hostilities. The intention was not to impede guerrilla attacks, but to prevent innocent Lebanese from being injured, and their property from being damaged, by Israeli counter-attacks. The calmer atmosphere that followed the cease-fire enabled Karami to form another Cabinet towards the end of November. There was much concern about the weakness of the country's southern defences, and in January 1970 the new ministry felt strong enough to dismiss the Commander-in-Chief of the army, appointing instead Brig. Jean Njeim. In March there was a series of street battles in the Beirut area between the Palestinian guerrillas and militant right-wing Phalangist groups, but the Government and the army managed to avoid becoming involved. In May Israel launched a major air and ground attack on guerrilla positions in southern Lebanon, and occupied a substantial area

for nearly two days. Syria sent air assistance for the small Lebanese air force.

POLITICAL CRISES

Sulayman Franjiya was elected President in August 1970, and a new Cabinet was formed by Saeb Salam. Some measures of political liberalization, such as the relaxation of media censorship and the removal of the ban on extremist parties, did little to curb domestic unrest. Strikes and demonstrations against unemployment and inflation, student disorders and fighting between Phalangists and the Parti populaire syrien continued throughout 1971. The parliamentary elections of April 1972 reflected a marked swing towards left-wing political groups.

The Palestinian guerrillas remained Lebanon's major problem. Their bases in the refugee camps became more important following the expulsion of the guerrillas from Jordan in July 1971, and guerrilla operations against Israel produced violent Israeli reprisals. The villages of southern Lebanon bore the brunt of Israeli raids, and their inhabitants secured a greater measure of Lebanese army control over guerrilla activities in March 1972. Arab terrorist actions still provoked Israeli reprisals against Lebanon, even when there was little connection between the terrorists and Israel's vulnerable northern neighbour. The killing of Israeli athletes at the Olympic Games in Munich, West Germany, in September 1972 led to Israeli ground and air attacks on guerrilla bases, in which the Lebanese army suffered a number of casualties. The Lebanese Government was unable to persuade the guerrillas to suspend their activities against Israel, and several clashes between the Lebanese army and the guerrillas occurred.

In February 1973 Israeli commandos attacked guerrilla training bases in refugee camps about 160 km north of the Lebanese frontier, and escaped virtually unopposed. A further Israeli raid, in which three guerrilla leaders were shot in their homes in the centre of Beirut, and an attempt to blow up oil storage tanks at the Zahrani terminal, attributed to Palestinian extremists, resulted in the fall of the Salam Government. Salam resigned, frustrated at the inability of the Lebanese armed forces to prevent an Israeli military action in the capital, and Dr Amin Hafez formed a new Government. Several members of the Salam Cabinet remained in office, the new Government including representatives of most of the major political and religious groups.

Tension between the Lebanese army and the guerrillas culminated in May 1973 in Lebanese ground and air attacks on the refugee camps. An invasion by guerrillas based in Syria was repulsed, and a cease-fire was brought about by the mediation of other Arab states. The guerrillas apparently agreed to stop their terrorist activities within Lebanon and to cease using the camps for training guerrillas.

The Hafez Government lasted only seven weeks. The Prime Minister resigned on 14 June 1973, unable to settle the Sunni Muslim claim for a greater share in the allocation of government posts, and it was not until 8 July that Taki ed-Din Solh was able to form a new administration. A moderate, Solh enjoyed the support of many Sunni factions, and his Cabinet included representatives of all the main religious blocs. Outside Parliament, however, violent disorders continued, with industrial disputes resulting in demonstrations and clashes with police.

The potential religious hostility within Lebanon, and the political implications of the division of government and administrative posts on a confessional basis, were again evidenced in February 1974. Civil service reforms, intended to overcome the sectarian nature of certain appointments, were opposed by Maronites who feared that they would lose posts traditionally reserved for their community. The liberal reformist Parti national libéral threatened to withdraw its three cabinet members, and the proposed reforms were also condemned by the Phalange and the Bloc national. The Shi'a Muslims of southern Lebanon also made demands for increased representation and more investment and development in the south. The Shi'a leader, Imam Moussa as-Sadr, implied that he would organize his followers and arm them as protection against Israeli raids—as, indeed, he later did.

Although Lebanon was not directly involved in the October 1973 Arab–Israeli war, southern regions had continued to serve as a guerrilla base and to suffer Israeli reprisals. Southern villages were shelled intermittently, and small-scale raids across the border and acts of terrorism became commonplace.

In July 1974 there were clashes between Palestinians and Phalangists who continued to demand more government controls on guerrilla activities. Throughout 1974 and into 1975 Israeli shelling, air raids and incursions into Lebanon persisted, as did guerrilla attacks against the Israelis. Consequently the situation on the border remained tense. In September 1974, unable to curb internal sectarian violence by its ineffective ban on the possession of firearms, Taki ed-Din Solh's Cabinet resigned. In October a new Government was formed under Rashid Solh, although violence continued, finally erupting in a bloody clash between troops and citizens of the port of Sidon. The Cabinet split over the granting of a Muslim demand to confer citizenship to long-time residents of the country. Letter-bomb and dynamite explosions and further border fighting between the Israelis and guerrilla groups were followed by further fierce conflict between the Phalangists and Palestinians, in which over 150 died. Much damage was caused in Beirut, and, after an agreement by Solh to normalize relations with the Palestinians and the fact that the security forces had not intervened in the fighting, the Phalangists appeared to be on the defensive.

CIVIL WAR

Intercommunal strife had never been far from the surface in Lebanon. In February 1975 a demonstration in Sidon by a group of Muslim fishermen, in protest at the granting of what they perceived to be unduly advantageous fishing rights to a Christian-owned company (chaired by former President Camille Chamoun), escalated into clashes with the Lebanese army. Tensions were heightened as the apparent intervention of Palestinian elements on the side of the Muslims convinced Christian groups, notably the Phalangists, that the Palestinians—whose presence in Lebanon was already making the country vulnerable to Israeli attack—were now interfering in internal Lebanese affairs. Following an incident in April 1975, when Palestinians made an attack on some Phalangists, the Phalangists killed the passengers of a bus, who were mainly Palestinians. Intercommunal fighting between Christians and Muslims quickly spread. At this point the official policy of Yasser Arafat's Palestine Liberation Organization (PLO) was to stand aloof from the conflict, and Arafat himself was, in fact, instrumental in securing some of the many cease-fires of subsequent months.

In May 1975, shortly after the fighting began, Rashid Solh resigned as Prime Minister, and was replaced by Rashid Karami, who continued as Prime Minister through an exceedingly turbulent period until December 1976. In September 1975 a national dialogue committee was formed, consisting of 20 members from all political and confessional groups, to try to restore 'normal life'—a task in which they were unsuccessful. By October there was evident dissatisfaction with President Franjiya and his inability to bring the fighting to an end, and it also became increasingly evident that, in spite of the official policy of the PLO not to interfere in the internal affairs of Lebanon, members of extremist Palestinian groups, particularly those of the 'rejectionist front', were being drawn into the fighting on the side of the Muslims. It was also, at this point, the official policy of the Lebanese army not to intervene, although, later, breakaway groups became involved in the fighting. By early 1976 the PLO was becoming increasingly embroiled in the conflict, and several Syrian-based units of the Palestine Liberation Army were fighting in Lebanon on the side of the Muslims. Under these increasingly ominous conditions the term of the Chamber of Deputies was extended by a year (later increased to two years) and the general elections scheduled for April 1976 were postponed for up to 26 months. In January 1978 the Chamber's term was extended until June 1980. In March 1979 the Chamber was renamed the National Assembly and in April 1980 its term was further extended to the middle of 1983.

A temporary cease-fire gave a brief respite in January 1976, but by March no agreement had been reached on political reforms, fighting had flared up again, and 70 deputies signed a petition seeking President Franjiya's resignation. Further weight was given to this request in April, when a parliamentary session took place and 90 deputies voted unanimously to amend

Article 73 of the Constitution to allow presidential elections to be held up to six months before the expiry of the incumbent's term of office. Franjiya signed this amendment on 23 April, but, in spite of the election of his successor, refused to resign until the completion of his term of office in September 1976, when he was succeeded by Elias Sarkis, who had been Governor of the central bank.

INCREASED SYRIAN INTERVENTION

By May 1976 Syria was becoming increasingly involved in Lebanese affairs: it was estimated that about 40,000 Syrian-controlled troops were in Lebanon at this time. Yasser Arafat had ordered pro-Damascus Palestinian units to withdraw, and it now became clear that Arafat and the PLO had become entirely sympathetic to the Lebanese left-wing. In early June Syria launched a full-scale invasion of Lebanon officially to end the civil war and restore peace, but unofficially, it became clear, to crush the Palestinians. The conflict threatened to assume an international dimension, and an emergency meeting of Arab ministers of foreign affairs was convened in Cairo under the sponsorship of the Arab League. It was agreed to send a joint Arab peace-keeping force to Lebanon, to be accompanied by a phased, but not complete, withdrawal of Syrian troops. The force was to include participants from Syria, Libya, Algeria, Sudan, Saudi Arabia and the PLO, under an Egyptian Commander-in-Chief, but by the end of June 1976 the 1,000-strong force was effectively made up of 500 Syrian troops and 500 Libyans. Meanwhile, fierce fighting broke out in the area of two Palestinian refugee camps, Tal az-Zaatar and Jisr al-Basha, and most of Beirut was without water or electricity. The Arab League took steps to hasten the arrival of further contingents of the peace-keeping force, but fighting continued unabated until October 1976, when Arab summit meetings in Riyadh and Cairo secured a lasting cease-fire. During the course of the fighting there had been more than 50 abortive cease-fires and it was estimated that some 60,000 people had been killed and around 100,000 injured.

The Riyadh and Cairo summits arranged for a 30,000-strong, mainly-Syrian Arab Deterrent Force (ADF) to police Lebanon, and a four-party disengagement committee was established to attempt to implement the terms of the 1969 Cairo agreement between the Lebanese Government and the Palestinian guerrillas—considered to be one of the keys to an enduring peace. The committee began by restricting the level of heavy weapons allowed to the various factions, and then sought an agreement on the proportion of armed elements allowed in the Palestinian guerrilla camps. The Shtaura Agreement of July 1977 attempted to settle this problem by endeavouring to regulate the Palestinian base camps and to introduce a reconstituted Lebanese army into the border area.

In December 1976 President Sarkis appointed as Prime Minister Dr Selim al-Hoss, who formed a Cabinet of eight technocrats charged with rebuilding and reconstruction; and the Government was granted the power to rule by decree for six months, subsequently extended. A Council for Development and Reconstruction was established, and this council took over the functions of the former Ministry of Planning. In January 1977 censorship was imposed on the press, initially both on Lebanese and foreign journalists, but restrictions on foreign dispatches were soon removed.

The Druze chief and leader of the Lebanese left, Kamal Joumblatt, was assassinated on 16 March 1977. Although his murder was followed by a wave of revenge killings, it did not lead to any renewed outbreak of major fighting. However, the southern area of Lebanon, between the Litani river and the Israeli border, became the scene of renewed fighting during 1977. This area was largely spared during the civil war, and fighting developed when the Palestinians moved to the hills of southern Lebanon after being subdued by the Syrians in the civil war. A war 'by proxy' developed, with Syria allied with the Palestine guerrillas and Israel supporting the Lebanese Government. The Shtaura Agreement of July and a later cease-fire in September, arranged with the intervention of the USA, were ineffective.

The volatile situation flared up in March 1978 as a result of a raid by al-Fatah guerrillas into Israel on 11 March, when, in an attack on a bus near Tel-Aviv, more than 35 people were killed. In retaliation, and in order to prevent further raids, Israeli forces advanced into southern Lebanon three days later. On 19 March the UN Security Council adopted a Resolution (425) demanding that Israel cease its military action against Lebanese territorial integrity and withdraw its forces from Lebanese territory forthwith, and establishing a United Nations Interim Force in Lebanon (UNIFIL) to confirm the withdrawal and assist in the restoration of peace and the restoration of Lebanese government authority in the affected area. In May the Security Council endorsed a proposal to increase the eventual strength of UNIFIL from the 4,000 troops originally envisaged to 6,000. Israeli forces withdrew from southern Lebanon in June 1978, but relinquished control in southern border areas not to UNIFIL but to a right-wing, mainly-Christian Lebanese militia under the command of Maj. Saad Haddad.

In July 1978 fighting erupted again in Beirut between the Syrian troops of the Arab deterrent force and right-wing Christian militias. A cease-fire was proclaimed in early October and the ministers responsible for foreign affairs of the states participating in the Arab deterrent force (Kuwait, Lebanon, Qatar, Saudi Arabia, Sudan, Syria and the UAE) met at Beiteddin, near Beirut, and agreed on a declaration intended to bring peace to the area. It maintained that Lebanese central authority must be imposed, that armed militias must be curbed and that a truly national army must be formed.

LEBANON AFTER THE BEITEDDIN DECLARATION

The aims of the Beiteddin Declaration were not realized. In April 1979 Maj. Haddad proclaimed 'independent free Lebanon'—a slice of territory, covering about 1,800 sq km, next to the Israeli border. Encouraged and supplied by Israel, Haddad was able to maintain his 'independence'. In July 1980 the Phalangist Commander, Bachir Gemayel, consolidated his power by overcoming the militia of the Parti national libéral. This led to a strengthening of the Phalangist militia, with the result that Phalangist forces occupied the town of Zahle in the Beka'a valley. In April 1981 fighting developed between Syrian troops of the ADF and Christian militias in the Beirut area, and Syrian and Palestinian forces besieged Zahle. Syria maintained that Zahle and the Beka'a valley were essential for the security and defence of Syria against Israel, whereas the Phalangist forces sought the removal of Syrian forces from Lebanon.

During the remainder of April 1981 Israeli forces made frequent raids into southern Lebanon and Israeli aircraft strafed Palestinian guerrilla targets. When, at the beginning of May, two Syrian helicopters were destroyed by Israeli aircraft, Syria introduced surface-to-air missle (SAM) launchers into the Beka'a valley. Although it was thought that Israeli aircraft already had the capacity to withstand the outdated SAM missiles, the Israeli Prime Minister, Menachem Begin, adopted a very belligerent stance and threatened to destroy the missiles. An international crisis developed, but on 30 June Syrian forces ended the siege on Zahle, after mediation by the Saudi and Kuwaiti ambassadors to Lebanon. Regular troops of the Lebanese army then occupied positions in the town as the Phalangist militia withdrew. The US Middle East peace envoy, Philip Habib, was able to arrange a cease-fire which became effective on 24 July.

As during previous crises, the Lebanese Government, undermined by the divided interests imposed on its composition by the Constitution, was not able to exert its authority. In July 1979 Prime Minister al-Hoss introduced a Cabinet of 12 members, seven of whom were deputies, to replace the Government which had been in office since December 1976. In April 1980 the National Assembly voted to extend its term by three years, to 30 June 1983 (rather than by 18 months as the Government desired). President Sarkis tried to formulate a national accord. On 5 March 1980 he issued a 'message to the nation' which reiterated his policy for the future: the unity, independence and sovereignty of the whole territory; total opposition to mini-states and militias; allegiance to parliamentary democracy; acknowledgement that Lebanon was an Arab country; rejection of the Camp David agreements between Egypt and Israel; support for a future Palestinian state; co-operation with Syria; and support for UN resolutions concerning Lebanon.

On 7 June 1980 Dr al-Hoss offered his resignation, on the grounds that no progress had been made towards achieving

accord on those principles. On 16 July Sarkis accepted al-Hoss's resignation; he appointed Taki ed-Din Solh as Prime Minister, but the latter soon resigned, unable to form a government. It was not until October that Chafic al-Wazzan was able to form a Cabinet.

ISRAEL'S 1982 INVASION OF LEBANON

The 1981 cease-fire lasted until the following spring, when fresh Israeli air raids, which provoked PLO shelling of northern Israel, culminated in a full-scale invasion of Lebanon by the Israeli army. On 6 June 1982 Israeli forces attacked on three fronts. While one column pursued the Syrian army, which was retreating up the Beka'a valley, the most serious fighting took place against PLO forces around Beaufort Castle and along the coast. The Israelis preceded their attacks with bombardments that devastated many Lebanese towns and villages. Parts of Tyre, Sidon, Damour and Nabatiyah were almost obliterated by Israeli bombing raids. Civilian casualties among both Lebanese and Palestinians were enormous—according to *The Times* of London's correspondent in Beirut, about 14,000 people, at least 80% of them civilians, were killed during the first fortnight of the war.

The confrontation between the Maronite Christians and the alliance of radical Arab nationalists and Palestinians, which had been at the heart of the civil war of 1975–76, survived the Israeli invasion. The militia of the National Movement, in particular the Sunni Murabitoun and the Shi'ite Amal, fought alongside the PLO in the south and later in Beirut. The Phalangists, however, welcomed the invasion, although they did not take part in the actual fighting. During Israel's siege of west Beirut, which lasted two months, the Phalangists and Maj. Saad Haddad's militiamen acted as auxiliaries for the Israelis. The Maronites also shared Israel's political aims, demanding the expulsion of the PLO from Lebanon and the removal of Syrian troops. During July and August, while the Israelis kept up an almost continuous bombardment of west Beirut, negotiations took place between Americans, Israelis, Lebanese and Palestinians. The PLO commitment to withdrawal from the city, effected at the end of August, was negotiated by US diplomats through the mediation of former Lebanese Prime Minister Saeb Salam.

PRESIDENTIAL ELECTIONS

Bachir Gemayel, the younger son of Pierre Gemayel (the founder of the Phalangist Party and commander of the Lebanese Forces—LF—militia), had announced his presidential ambitions well in advance of the election. In peace-time there would have been no chance of his winning, but in the aftermath of the Israeli invasion he emerged as the obvious candidate. He was the strongest Maronite leader and the one most acceptable to the Israelis. Although Gemayel faced considerable opposition from the Muslim deputies, many of whom boycotted the voting, he succeeded in being elected on 23 August 1982. Three weeks later, before he had assumed power, he (with up to 60 others) was killed in a bomb explosion at the Phalangist Party headquarters. On the following day, 15 September, the Israeli army moved into Beirut, and on 16 September Phalangist militiamen, unhindered by the Israelis, entered the Palestinian refugee camps of Sabra and Chatila and began a massacre of their inhabitants (see Arab–Israeli Relations 1967–99, p. 30).

A week after the assassination of Bachir Gemayel, his elder brother, Amin, was elected President. Amin was a Phalangist deputy with a reputation as a moderate, and his election was welcomed by many Muslims who hoped that he would be able to control the extremist elements inside the Phalangist Party. The problems confronting him were enormous. Lebanon was still occupied by two foreign armies and violence was continuing in many areas. After the Sabra/Chatila massacre the Israelis withdrew from Beirut—but only as far as the airport, just south of the city, from where they consolidated their hold on the southern half of the country. The north of Lebanon was still dominated by the Syrian army which refused to withdraw from the country until the Israelis did so. Towards the end of the year there was savage fighting between pro- and anti-Syrian forces in Tripoli, while in the Chouf area, where the Israelis were in control, there were frequent battles between Phalangists and Druze militiamen. The Government was in control of only a small area of central Lebanon, but even there it was often unable to assert authority.

TALKS BETWEEN ISRAEL AND LEBANON

After insistent pressure from the US Government, talks between the Israeli and Lebanese Governments finally commenced at the beginning of 1983. The Israelis eventually dropped their insistence that talks should take place in Jerusalem, and it was agreed that the two sides would meet alternately at Khalde in Lebanon and Kiryat Shmona in Israel. Israel's demands included security arrangements that would allow Israel to keep military bases inside Lebanon, a predominant role for Saad Haddad in the reconstituted Lebanese army, and relations with Lebanon that stopped only just short of a formal peace treaty. All these demands were rejected by the Lebanese, and the USA also considered them to be excessive. On 22 February US President Ronald Reagan offered to guarantee the security of Israel's northern border once the army had withdrawn, but the proposal was rejected by the Israeli Government.

The negotiations remained stalled until the end of April 1983, when the US Secretary of State, George Shultz, made his first visit to the area. He was able to persuade the two sides to sign an agreement on 17 May which provided for the withdrawal of Israeli forces from Lebanon. However, the Israeli Government announced that it would not be bound by the agreement unless Syria also agreed to withdraw its forces from the Beka'a valley. Shultz returned to the Middle East in July, but during a visit to Damascus he was unable to persuade President Assad to agree to a withdrawal. The Syrian Government declared that it would not accept an agreement which it believed was in the interest only of Israel and the USA; nor was it prepared to support President Gemayel's attempt to extend his control over the areas occupied by Syrian and Israeli forces. In July, as violence between Phalangist and Druze militias intensified in the Chouf, an opposition front was established to confront Gemayel. Calling itself the National Salvation Front, and relying entirely on Syrian support, it consisted of Walid Joumblatt, the Druze leader, former Prime Minister Rashid Karami and ex-President Sulayman Franjiya, one of the chief opponents of the Gemayel family.

ISRAELI REDEPLOYMENT

In July 1983 Israel, its casualties at the hands of the contending militias increasing, decided to redeploy its forces south of Beirut along the Awali river. The Israeli redeployment took place at the beginning of September, and by the end of the year the Israeli troop presence had been reduced from 30,000 to 10,000. However, owing to a lack of co-ordination between the Israeli and Lebanese armies in the handing over of military control of the vacated areas, a full-scale war erupted between the Druze and Christian militias in the Chouf mountains. In the southern, Israeli-occupied part of what had become, effectively, a partitioned country, Maj. Saad Haddad's 'South Lebanon Army' (SLA), armed and trained by Israel, was employed as a police force, intended progressively to assume the duties of the Israeli forces. (Haddad died in December 1983 and his successor, Maj.-Gen. Antoine Lahad, was appointed in March 1984.) Israeli personnel were a constant target of guerrilla attacks and, in order to reduce their exposure, as well as the burden of military supervision, the Israelis resorted to arming local militias, of whatever religious character, so that they could be responsible for the policing of their own areas. However, this effectively meant that arms provided by the Israelis were turned on them. Israel launched several punitive air raids against Palestinian positions in the Syrian-controlled Beka'a valley, in retaliation against the attacks of PLO guerrillas infiltrating from the north, and there were rumours that PLO fighters were returning to Beirut.

THE REVOLT AGAINST ARAFAT

From September 1983 the struggle for control of al-Fatah between the forces of its leader, Yasser Arafat (Chairman of the PLO), and those of the Syrian-backed rebels Abu Musa and Abu Saleh, which had begun in the Beka'a valley in May, was concentrated around Arafat's last stronghold, the northern Lebanese port of Tripoli. After months of bitter fighting, in which

many Lebanese civilians, as well as Palestinian guerrillas, were killed or wounded, a truce was arranged through Saudi and Syrian mediation. This allowed Arafat and 4,000 of his supporters to leave Tripoli in December aboard five Greek-registered ships, under UN protection, bound for Algeria, Tunisia and the Yemen Arab Republic.

THE NATIONAL RECONCILIATION CONFERENCE

After the Israeli withdrawal, the 5,800-strong multinational force (comprising mainly French, Italian and US personnel), left to keep the peace between the various factions in Beirut, in the absence of an effective Lebanese army, was gradually drawn into the fighting. It came under attack from Muslim militiamen who were suspicious of its role in bolstering a Christian-led government, and of the presence off shore of massive, predominantly US, naval support. In the two most devastating incidents, 241 US and 58 French marines were killed in almost simultaneous suicide bombings, responsibility for which was claimed by two militant Shi'a groups, on 23 October 1983.

The inter-factional fighting in Beirut was punctuated by numerous short-lived cease-fires. The most successful of these began on 26 September 1983 and was accompanied by the resignation of Chafic al-Wazzan, who hoped to make way for a government of national unity. He was persuaded to remain in office, but these events were the prelude to a Conference of National Reconciliation, held in Geneva, Switzerland, from 31 October to 4 November. These talks were attended by most of the interested Lebanese parties, including the Shi'ite Amal militia, led by Nabih Berri, and the representatives of the National Salvation Front, which had been proclaimed, with Syrian backing, in July by the Druze leader, Walid Joumblatt (the son of Kamal Joumblatt, assassinated in 1977), in alliance with ex-President Franjiya, a pro-Syrian Maronite Christian, and former Prime Minister Rashid Karami, a Sunni Muslim. The conference effectively foundered on President Gemayel's refusal to do more than 'freeze' the 17 May agreement with Israel, rather than to abrogate the pact (as Syria wished) and risk losing US support for his Government. Broad agreement was reached, however, on the need for constitutional changes which would give Muslims representation in the Government commensurate with their majority status in the country.

In early February 1984, following abortive Saudi-mediated attempts to implement a comprehensive security agreement in Beirut, factional fighting developed with greater intensity than before, with the multinational force and the Lebanese army apparently powerless to prevent it. To the Muslim community, the reconstituted Lebanese army, armed and trained by the USA, appeared to be nothing more than an instrument to be used against them by the Christian President in co-operation with the Christian Phalangist militia. President Gemayel had refused to give the Amal leader, Nabih Berri, a post in the Cabinet, while Walid Joumblatt was openly committed to the President's removal. Muslim members of the army, unwilling to fight against their co-religionists, began to defect to the militias, while the Druze and Shi'ite forces co-operated in fighting the army. Chafic al-Wazzan (a Sunni Muslim) and the entire Cabinet tendered their resignation on 5 February. Shortly afterwards the USA, Italy and the United Kingdom decided to withdraw their peace-keeping troops from the multinational force. (The French troops were withdrawn in March.)

LEBANON ABROGATES THE 17 MAY AGREEMENT

By February 1984, Beirut was divided by the militias, east and west, along the so-called 'Green Line', into Christian- and Muslim-controlled sectors. On 16 February, with west Beirut in Shi'ite hands, with the army sustaining defeats south of the capital, and with his Government in effective control only of the eastern part of the city, Amin Gemayel offered, under the terms of a Saudi peace plan, to abrogate the 17 May agreement with Israel and to give greater government representation to Muslims; the President also proposed the formation of a government of national unity to institute the planned reforms of the Constitution. These proposals, which entailed the simultaneous withdrawal of all foreign forces from Lebanon and new security arrangements with Israel for southern Lebanon, proved to be unacceptable not only to Syria and to Gemayel's Muslim opponents, who largely took their lead from Syria (which equipped the Druze militia), but also to the Christian parties which were committed to the agreement with Israel as a means to preserve their dominance in Lebanese politics.

Finally, on 5 March 1984, bowing to Syria's influence in Lebanese affairs, President Gemayel abrogated the 17 May agreement in return for guarantees of internal security from President Assad of Syria. On the same day, Chafic al-Wazzan's Cabinet withdrew its resignation, and one week later the National Reconciliation Conference was reconvened in Lausanne, Switzerland. It failed to produce the results for which Syria had hoped. Moreover, it saw the beginning of the disintegration of the Lebanese National Salvation Front, as former President Franjiya vetoed Syrian plans for constitutional changes in Lebanon involving the diminution of the powers of the President, by convention a Maronite Christian post. The Conference broke up, having agreed another cease-fire and recommended the formation of a government of national unity—though the composition of such a government was still undecided. (A movement replacing the National Salvation Front was announced in Damascus in March, including Walid Joumblatt, George Hawi, leader of the Parti communiste libanais, Assem Qansou, leader of the al-Baath party, Inaam Raad, leader of the Parti nationaliste syrien, and representatives of the Socialist Union and Arab Democratic parties, but not Nabih Berri of Amal.)

THE GOVERNMENT OF NATIONAL UNITY

At talks in Damascus in April 1984, President Assad of Syria approved plans for a Lebanese government of national unity, giving equal representation to Christians and Muslims, proposed to him by President Gemayel. Gemayel chose Rashid Karami, who had held the post on 10 previous occasions, as Prime Minister of the new Government, which was proclaimed on 30 April. Karami announced his principal aims as being the ending of the Israeli occupation of the south; the restoration of civil order; and the reformation of the Constitution to reflect the majority status of Lebanon's Muslims. On 30 April, without first consulting the appointees, Prime Minister Karami announced a 10-member Cabinet consisting of five leading members each from the Christian and Muslim communities. Nabih Berri, designated Minister of Water and Electrical Resources and Justice, refused to participate in the Government unless some provision were made in it for dealing with the predominantly Shi'ite area of southern Lebanon occupied by the Israelis. A Ministry of State for Affairs of the South and Reconstruction was duly created, to which Nabih Berri was appointed on 7 May. The other appointees having accepted their posts, the Cabinet thus included the leaders of all Lebanon's main religious groups: only former President Franjiya, who was bitterly opposed to Pierre Gemayel and Camille Chamoun, both of whom were included in the Cabinet, refused to give his support to the Government. His son-in-law, Abdullah ar-Rassi, who had been made Minister of the Interior, boycotted Cabinet meetings in support of Franjiya's call for the dismissal of these two.

The new Government won the approval of the National Assembly in June 1984. Fighting in Beirut between Christian and Muslim militias had not ceased, however, and it was not until Syrian Vice-President Abd al-Halim Khaddam intervened to mediate between the two sides that a cease-fire took effect; this finally allowed the terms of a security plan, providing for the reorganization of the army and the disengagement of the rival militias, to be drawn up. An all-party Military Council, consisting of one member from each of the main religious groups, was established to supervise the reintegration of the 37,000-strong army and the disengagement of the militias. Brig.-Gen. Michel Awn (a Maronite Christian) was made Commander-in-Chief of the armed forces, with a Druze, Maj.-Gen. Nadim Hakim, as Chief of Staff. (Hakim died in a helicopter crash in August and was replaced by Maj.-Gen. Abu Dargham.) A new body, the Directorate of Internal Security, was placed under the control of a Shi'ite general, Uthman Uthman. Future appointments in the army would be distributed equally between Christians and Muslims.

The security plan was put into operation at the beginning of July 1984. Three army brigades began to take control of militia positions along the 'Green Line' and in the port and airport of

Beirut. The militias had earlier removed their heavy weaponry from the area and there was virtually no opposition to the implementation of the plan, even from the Phalangist militia which had bitterly opposed what it viewed as pro-Syrian, anti-Christian developments in Lebanese politics. The port and airport, closed since February, were reopened in mid-July, and more crossing points between the east and west of Beirut were also cleared.

However, Muslim and Druze dissatisfaction with the Government's lack of progress on constitutional reform, despite the Syrian influence on President Gemayel, led to sporadic fighting between rival Muslim and Christian militias and, occasionally, between Shi'a and Sunni Muslims belonging, respectively, to the Amal and Murabitoun militias. Troops of the Lebanese army failed to gain control of the city, although they reduced fighting along the 'Green Line'. President Gemayel's efforts to gain agreement on constitutional reform, already constrained by his fear of alienating his Christian supporters, were further handicapped by disagreements within the Cabinet. Walid Joumblatt maintained a torrent of vituperation against Gemayel, and in September 1984 vetoed the extension of the security plan along the southern coastal road and into the Druze bastion of the Chouf mountains, as he regarded the Lebanese army as merely a tool of the Christian Phalangists.

In September 1984 the Cabinet, which was agreed on the principle of increasing the number of members in the National Assembly to allow an equal representation for Christians and Muslims, appeared to have approved a total membership of 122 (from 99) but then failed to reach agreement on the number of members who would represent the various groups within the two major religious communities. Joseph Hashim, who became Minister of Posts, Telecommunications, Health and Social Affairs in September (succeeding Pierre Gemayel, who had died in August), caused further protest by demanding that the Maronite Christians form the largest single group in the Assembly. A 40-member committee, representing Muslims and Christians in equal numbers, was appointed to draw up proposals for political reforms. Ex-President Franjiya agreed to be represented on this committee, thus ending his boycott of the Government of National Unity.

Also in September 1984, Syrian mediation settled a feud in the northern port of Tripoli between the pro-Syrian Arab Democratic Party (known as the 'Red Knights') and the anti-Syrian, Sunni Muslim, Tawheed Islami (the Islamic Unification Movement), enabling a security plan to be implemented there.

In Beirut, sporadic violence continued and, at the end of October 1984, Walid Joumblatt (who was boycotting Cabinet meetings) and Nabih Berri threatened to resign from the Cabinet unless more progress was made on constitutional reform. A new security plan, effectively dictated by Syria, was introduced at the end of November. It was designed initially to put the whole of Beirut under the control of the Lebanese army, and then to extend the Government's authority north to Tripoli, south to Israeli-occupied territory and east to the Chouf mountains, demonstrating to the Israelis the ability of the Lebanese army to maintain security in the event of an Israeli withdrawal from the south of the country. Joumblatt's Druze militia repeatedly objected to the eastward deployment and obstructed the implementation of the plan. The army moved into Tripoli on 21 December, but a plan for the coastal areas to the north and south of Beirut was not agreed by all parties until 31 December. The army was deployed along the coast road to southern Lebanon in mid-January 1985.

ISRAEL'S WITHDRAWAL FROM LEBANON

With the cost of keeping a force in southern Lebanon proving a drain on a drastically weakened economy, and with its personnel increasingly the target of attacks by Lebanese resistance groups, Israel's Government of national unity, which was formed in September 1984, pledged itself to a withdrawal from Lebanon. Israel abandoned an unrealistic demand for a simultaneous withdrawal of Syrian forces from north-east Lebanon and, in November, entered into a series of talks at an-Naqoura, in southern Lebanon, with representatives of the Lebanese Government, who participated with Syrian approval. Israel's concern was that adequate security arrangements should be agreed to prevent the vacated areas from becoming bases for terrorist attacks on Israeli soldiers or territory, while the Lebanese Government wished to co-ordinate the withdrawal so as to prevent intercommunal fighting (such as occurred in the Chouf mountains in September 1983). The talks repeatedly foundered on the question of which forces should take the place of the Israeli Defence Force (IDF). The Lebanese, influenced by Syria, wanted UNIFIL to police the border with Israel (as it had been mandated to do in 1978) and the Lebanese army to deploy north of the Litani river, between UNIFIL and the Syrian army. Israel did not consider the Lebanese army to be a credible security force, and wanted UNIFIL to deploy north of the Litani with the southern Lebanese border patrolled by the Israeli-backed SLA. In the absence of any agreement, Israel withdrew from talks, and on 14 January 1985 the Israeli Cabinet voted to take unilateral steps towards a complete withdrawal, which was to be effected in three phases. The first phase involved the evacuation of the IDF from the western occupied sector, covering about 500 sq km around Sidon, to the Litani river area, around Nabatiyah, and was implemented in February 1985. Israel was prepared to test the competence of the Lebanese army in handing over responsibility for security in the evacuated area to it, operating in tandem with UNIFIL. The Lebanese Government, however, rejected a peace-keeping role for the UN force, and the Lebanese army moved into Sidon in mid-February.

The second phase of the Israeli withdrawal, designed to evacuate the IDF from the occupied central and eastern sector, including the Beka'a valley, to redeploy around Hasbayyah, began on 3 March 1985 with no fixed deadline. The process was accelerated during April as the majority Shi'ite community of the south (which, antipathetic towards the PLO, had initially welcomed the IDF) now attacked it in retreat. This prompted the Israelis to pursue an 'Iron Fist' policy, attacking Shi'ite villages, killing many inhabitants and detaining hundreds of suspected guerrilla fighters. Instead of abating, the level of guerrilla activity against the IDF, orchestrated by the Shi'ite National Resistance Movement, intensified. After the evacuation of Tyre, the second phase of the Israeli withdrawal was completed on 29 April. The third and final phase, taking the IDF behind Israel's northern border and leaving a buffer zone between 10 km and 20 km wide along the border controlled by the SLA, was completed on 10 June, three months ahead of the original schedule. However, several hundred Israeli troops remained inside Lebanon to support the SLA, whose numbers had been depleted since the start of the withdrawal operation by desertion and defection to the southern Lebanese resistance movement. The role of the SLA was not recognized by the Lebanese Government, Syria or Lebanese Muslims, and friction between it and UNIFIL increased.

The Israeli invasion succeeded in that (at the cost of 654 Israeli lives) it temporarily removed the threat of attack by the PLO from within Lebanon (although internal divisions contributed equally to the diminution of PLO strength) and, by a coincidence of interest, the Shi'tes of southern Lebanon were unwilling to allow the PLO to re-establish a military powerbase in the region. In the Shi'ites themselves, though, Israel created an enemy across its northern border which was more firmly entrenched and, potentially, more dangerous. In July 1985, less than one month after Israel completed its withdrawal from southern Lebanon, Syria withdrew 10,000–12,000 troops from the Beka'a valley, leaving some 25,000 in position.

CHRISTIAN REVOLT

After the initial euphoria of the Israeli departure from Sidon in February 1985, during the first phase of the IDF's withdrawal, fighting broke out between Christian Phalangists on one side and Druze and Shi'ite militias on the other, with the Lebanese army manifestly unable to keep the peace. In early March President Gemayel had approved a Syrian security plan which had the long-term aim of granting more political and constitutional power to Lebanon's Muslim majority, and which would immediately deprive Christian militias of revenues from illegal ports and the control of a key checkpoint on the road from Beirut to Tripoli. Samir Geagea, a commander in the LF militia, rebelled against what he viewed as a capitulation to Syrian and Muslim influence, and attracted substantial support from units of the LF in east Beirut and north of the capital. Geagea demanded the end of party control of the LF and the introduction

of a collective leadership for the Phalange. He also requested a democratically elected council to be established in areas controlled by the LF, to decide on any political reforms. Geagea soon controlled most of the LF in east Beirut, and street battles were fought between pro- and anti-Gemayel Christian factions. At the same time, fighting was renewed between Christian and Muslim militias along the 'Green Line' dividing east and west Beirut. The split in the Christian militia and the partitionist sentiments implicit in Geagea's proposals raised the possibility of Syrian military intervention in Beirut, to bolster President Gemayel and prevent the first stage in what might prove to be the inexorable sectarian fragmentation of Lebanon (thus creating a threat to Syria's internal stability). However, Geagea's revolt ended, as suddenly as it had begun, on 9 May, when Elie Hobeika was elected Commander of the LF. He pronounced himself ready to open a dialogue with Druze and Shi'ite leaders, acknowledged the role of Syria in creating a stable Lebanon, and pledged to evacuate the LF from the last Christian enclave in southern Lebanon at Jezzine.

It was to Jezzine that at least 60,000 Christian refugees from Sidon had gone to escape the fighting around Sidon. At the end of March 1985, units of the rebel Christian militia had launched an offensive, allegedly with Israeli encouragement, against the Palestinian refugee camp of Ain al-Hilweh (to which PLO guerrillas had been returning) and Muslim militiamen and troops of the Lebanese army in Muslim suburbs of Sidon. The exodus of Christians from Sidon began when, at the end of April, prior to the evacuation of the IDF from Jezzine, the LF removed some 300 men from the area to reinforce Christian forces involved in battles with Muslim militias in Beirut, and the remaining Christian militiamen retreated. The retiring IDF were followed into the buffer zone along the Lebanese border by 60,000 Christians from Jezzine.

On 10 April 1985 Prime Minister Rashid Karami, angered by the Government's inability to restore peace to Sidon and its failure to reinforce the beleaguered Lebanese army there, announced that he would boycott cabinet meetings until a cease-fire was agreed. Then, on 17 April, he announced, but was persuaded to withdraw, his resignation after west Beirut had been overwhelmed by fighting, instigated by the Shi'ite Amal militia and their Druze allies to crush the Sunni Murabitoun militia and its Palestinian allies, and to prevent the revival of a pro-Arafat PLO force in Beirut.

ATTEMPTED SYRIAN SUPPRESSION OF THE PLO IN BEIRUT

In May and June 1985, through its proxy, the Shi'ite Amal militia, and with the assistance of the largely Shi'ite Sixth Brigade of the Lebanese army, Syria renewed its attempt to prevent Yasser Arafat from re-establishing a power-base in Lebanon. Most of the estimated 5,000 PLO guerrillas who returned to Lebanon in anticipation of and after the Israeli withdrawal from the south were thought to be loyal to Yasser Arafat. The Palestinian refugee camps of Sabra, Chatila and Bourj el-Barajneh in Beirut were besieged by Amal guerrillas (without the assistance of the Druze militia, who helped the Palestinians to take in supplies and reinforcements), but they failed to gain control of the camps or to quell PLO resistance. Furthermore, Palestinians belonging to the Palestine National Salvation Front (PNSF) of pro-Syrian guerrilla organizations joined with Arafat supporters in resisting the Shi'ites, many of whom were among the 640 people killed in the fighting. An uneasy cease-fire agreement was arranged in Damascus on 17 June between Amal and the pro-Syrian Palestinian element in the camps, but it subsequently collapsed repeatedly.

HIJACK CRISIS IN BEIRUT

On 14 June 1985 two Lebanese Shi'ite Muslims, reputedly members of Hezbollah (the Party of God), hijacked a TWA passenger aircraft, with 153 people on board, on a flight from Athens to Rome. After twice taking it to Beirut and Algiers, and releasing more than 100 hostages, the hijackers landed for the third time in Beirut on 16 June. On 17 June Nabih Berri, who was acting as spokesman for the hijackers, announced that the remaining 42 hostages, mostly Americans, had been taken to secret locations in Beirut, pending response to the hijackers' demand for the release of 766 Lebanese prisoners, mostly Shi'ites, who were being held in Israeli prisons. Israel said that it would not release its prisoners unless asked to do so by the US Government. The USA declared that it would not use force to secure the release of the hostages, but threatened to impose sanctions against Lebanon. President Assad of Syria became involved in the negotiations for the release of the hostages (now reduced to 39 after further releases), through his links with Nabih Berri and Amal, and his influence was crucial in securing their freedom on 30 June.

ANOTHER SECURITY PLAN FOR BEIRUT

Weeks of fighting between Shi'ite, Sunni and Druze militias in west Beirut preceded another attempt by Syria to initiate the process of political reform. A security plan was introduced in July 1985, after 13 spiritual and temporal leaders of the Lebanese Muslim community had met for talks with Syrian leaders in Damascus. Under the terms of the plan, west Beirut was to be divided into five security zones, each controlled by its own security committee. The Muslim militias were asked to leave the streets and to close their offices. The plan was designed to lay the basis for its extension to Christian east Beirut, and for a renewal of inter-sectarian dialogue on political and constitutional reform, but its implementation was almost immediately disrupted by further fighting.

On 6 August 1985, in the central Lebanese town of Shtoura, representatives of most of the religious communities in the country (but, crucially, no one of stature representing the Sunni population and no Maronite Christians) announced the formation of a pro-Syrian national unity front. It had first been proclaimed in July, after meetings between the Syrian Vice-President, Abd al-Halim Khaddam, the Druze leader, Walid Joumblatt, and the leader of Amal, Nabih Berri. The front was committed to the end of the civil war and 'to the final liquidation of the sectarian regime' under disproportionate Maronite control. In mid-July, meanwhile, the LF settled its differences with ex-President Franjiya, President Gemayel's Christian rival in northern Lebanon, in order to oppose any attempt to implement political reforms without the consent of the Christian community.

Four weeks of intensive fighting between rival militias in Tripoli in September and October 1985 were interpreted as part of Syria's campaign to prevent the re-emergence in Lebanon of the pro-Arafat wing of the PLO. The pro-Arafat, Sunni Muslim Tawheed Islami (Islamic Unification Movement) and the pro-Syrian, Alawite, Arab Democratic Party fought for control of the city and its port, which was allegedly being used to distribute armaments and supplies to Arafat loyalists in other parts of the country. More than 500 people were killed and 500,000 were driven from their homes in Tripoli before a cease-fire was agreed in Damascus at the beginning of October, and the Syrian army moved into the city.

THE ABORTIVE NATIONAL AGREEMENT

A month of negotiations between the three main Lebanese militias (the Druze forces, Amal and the LF), beginning in October 1985, led to the preparation of a draft accord for a politico-military settlement of the civil war. Objections by the Christians to the curbing of presidential powers and a reduction in their political influence delayed approval of the accord, but on 28 December it was finally signed in Damascus by the three militia leaders (Joumblatt, Berri and Hobeika). It provided for an immediate cease-fire and for an end to the state of civil war within one year; the militias would be disarmed and disbanded, and responsibility for security would pass to a reconstituted and religiously integrated Lebanese army, supported by Syrian forces. The accord envisaged the immediate establishment of a national coalition government under a council of six ministers representing the main religious sects, for a transitional period of three years, after which the confessional system of power-sharing government would be abolished and a secular administration created. A new National Assembly would be elected within the three-year period to enact the necessary legislation. The number of deputies in the new assembly would be increased from 99 to 198, with the total divided equally between Christians and Muslims, and an upper house would be added to the legislature. For the period of transition, a Maronite would continue to hold the office of President, but some of his executive

powers would pass to the Prime Minister. The agreement recognized Lebanon's community of interest with Syria and envisaged a 'strategic integration' of the two countries in the fields of military relations, foreign policy and security.

The agreement seemed to offer some hope for Lebanon, as it had been negotiated by the actual combatants in the civil war and not merely by politicians. However, the Shi'ite Hezbollah and the Sunni Murabitoun militias were not parties to the accord, the Christian community was divided over it, and it made no provision for dealing with the problem of Palestinian refugees. Muslim support for the agreement was not widespread. The Sunni community had been virtually ignored during negotiations, and under the agreement the Druzes (although Joumblatt had signed it) would be likely to lose their autonomy in the Chouf region. Only Amal appeared to be wholly in favour of the accord. President Gemayel, who had not been involved in drafting the agreement, refused to endorse it, and at the end of December 1985 clashes erupted in east Beirut between elements of the LF who supported the accord and those who resented the concessions that had been made on their behalf by Elie Hobeika. In January 1986 Hobeika was forced into exile; Samir Geagea, the LF's Chief of Staff, was elected Chairman of the Executive Committee of the LF on 24 January, and urged the renegotiation of the Damascus accord. This effectively ended all hope that the peace agreement with the Muslim militias could be implemented.

President Gemayel, who regained much support among the Christian community for his opposition to the Damascus accord, was blamed for its failure by Muslim leaders. By January 1986 the Cabinet had not met for five months, and Muslim ministers subsequently refused to have any dealings with the President. They rejected his request for the Damascus agreement to be referred to the National Assembly and persisted in attempts to engineer his downfall. Inter-sectarian clashes in Beirut resumed in earnest on 22 January.

THE RESURGENCE OF THE PLO CONTINUES

In the south of the country Israel was faced with the consequences of the failure of its invasion. During 1986 rocket attacks on Israeli settlements in northern Israel were resumed by Palestinian guerrillas, who had been gradually returning to the refugee camps around Tyre and Sidon after the Israeli withdrawal in 1985, and had established a number of mobile bases in the south. Israel responded with air raids on Palestinian targets in southern Lebanon, mostly in the Syrian-occupied Beka'a valley, during 1986 and 1987. The Amal militia, while contributing to the southern Lebanese resistance movement within the Israeli-imposed security zone, north of the international border, was more concerned to liberate south Lebanon than to carry the struggle against Israel into Israel itself. It attempted, therefore, to keep PLO guerrillas and radical Lebanese groups as far away from the zone as possible, in order to prevent them from launching rocket and mortar attacks against Israeli territory or from infiltrating the zone and then Israel itself, which might provoke Israeli reprisals inside Lebanon. Amal's controlling influence in the south was coming under threat from the pro-Iranian Hezbollah, which was attracting increasing support. Hezbollah intensified resistance to the SLA, attacking its positions within the security zone along the border with Israel, and fired rockets into Israel itself. Despite the backing of Amal, the role of UNIFIL was cast into doubt by the increasing number of clashes between the peace-keeping force and the SLA and, in particular, Hezbollah, which viewed UNIFIL as an obstacle to the pursuit of war against Israel. In May it was reported that the Syrians, ignoring Israeli warnings, were constructing fortifications and tank and gun emplacements in the Lake Karoun area, in the southern Beka'a, immediately to the north of the SLA-patrolled security zone.

Fighting between Palestinian guerrillas and Shi'ite Amal militiamen for control of the refugee camps in the south of Beirut, which had continued sporadically ever since the nominal cease-fire of June 1985, erupted into major exchanges on 19 May 1986. The refugee camps of Sabra, Chatila and Bourj el-Barajneh were increasingly under the control of guerrillas loyal to Yasser Arafat, who were continuing to return to Lebanon. Sunni and Druze militias continued to lend discreet support to the Palestinians, and there was serious fighting in June between Sunni forces and the Syrian-backed Amal.

THE SYRIAN ARMY'S RETURN TO BEIRUT

Leaders of the Muslim communities in Lebanon met Syrian government officials in Damascus, and agreed to impose a cease-fire around the Beirut refugee camps on 14 June 1986. The cease-fire, which succeeded in reducing the fighting to the level of sniper exchanges, proved to be the first element in a Syrian-sponsored peace plan for Muslim west Beirut. About 1,000 Lebanese troops were deployed in west Beirut at the end of June. The Amal, Druze and Sunni militias were ordered to close their offices and to remain off the streets. Crucial to their co-operation was the appearance in Beirut, for the first time since 1982, of uniformed Syrian soldiers (several hundred of them), supported by members of the Syrian *Muhabarat* (security service) under the command of Brig.-Gen. Ghazi Kena'an. The security plan was temporarily successful in its limited objective of curbing the activities of militias in west Beirut, but the plan (and Syria's active involvement in it) was strongly opposed in Christian east Beirut, and only in August, after lengthy negotiations with Amal and Hezbollah, was it tentatively extended to the predominantly Shi'ite southern suburbs, which contained the majority of the city's Palestinian refugees. The Syrian presence failed to end fighting across the 'Green Line', or to prevent a wave of car bombings and abductions of Westerners by extremist Islamist groups.

On 19 August 1986 the Prime Minister, Rashid Karami, urged the resumption of peace talks between the various Lebanese communities, and on 2 September, after a meeting of Government Ministers (excluding President Gemayel), a new truce (reportedly the 191st since the civil war broke out in April 1975) was agreed. At the same time, the drafting of a national charter, aiming to end the civil war and to reform the confessional system of political representation, was to be put in train.

THE WAR OF THE CAMPS

Resistance to the re-emergence of the pro-Arafat PLO in Lebanon spread from Beirut to the Palestinian refugee camps around Tyre and Sidon at the beginning of October 1986. Amal forces besieged Rashidiyah camp, to the south of Tyre, and the camps at Miyeh Miyeh and Ain al-Hilweh, outside Sidon, cutting off access to food and medical supplies. According to the Palestine Red Crescent relief organization, 1,924 Palestinians died in the Beirut camps between November 1986 and the following February. In February 1987, after the plight of the Palestinians in Beirut, Tyre and Sidon had attracted worldwide sympathy, Amal agreed to allow supplies into Bourj el-Barajneh and to permit women from Rashidiyah to leave the camp to buy food. Syria reportedly asked Amal to abandon the siege of the camps but the respite for the inhabitants of Bourj el-Barajneh and Rashidiyah proved to be brief, and the siege of the other camps remained strictly in force.

PAX SYRIANA

In February 1987 fierce fighting took place in west Beirut between Amal forces and an alliance of the Druze, Murabitoun and Communist Party militias. Muslim leaders appealed for Syria to intervene to restore order, and, with the consent of Karami, Berri and Joumblatt, about 4,000 Syrian troops were deployed in west Beirut on 22 February. The Syrian force (which was soon increased to some 7,500 troops) succeeded in enforcing a cease-fire in the central and northern districts of west Beirut, but, once again, its leaders hesitated to attempt to extend its control to the predominantly Shi'ite southern suburbs, which Syrian-backed Lebanese security forces had failed to secure in July 1986 when Syrian troops first re-entered Beirut. President Gemayel initially opposed the latest deployment of Syrian troops in Beirut as being 'unconstitutional', but in March he welcomed several clauses in a Syrian-sponsored agreement on political reform, which had been approved by Lebanese Muslim leaders and which would give Lebanon's Muslim majority a greater role in the government of the country and reduce the powers of the Christian President.

On 24 February 1987 Syrian troops moved into areas of west Beirut occupied by Hezbollah militiamen, killing 23 of them,

but did not venture into the southern suburbs where Hezbollah had its greatest influence. On the following day Syria claimed that all 75 militia offices in west Beirut had been closed. The remaining Hezbollah fighters in west Beirut moved to the southern suburbs, while hundreds of Amal militiamen left Beirut to pursue the struggle against Israel in the south of Lebanon.

A Syrian-supervised cease-fire at all the embattled Palestinian refugee camps in Beirut began on 6 April 1987, and the siege of Chatila and Bourj el-Barajneh was suspended to allow supplies to be taken into the camps. The cease-fire agreement was negotiated by representatives of Syria, Amal and the pro-Syrian PNSF, who had made common cause with pro-Arafat PLO members to defend the camps. However, in Sidon, outside effective Syrian jurisdiction, renewed fighting broke out between Amal and members of the PLO loyal to Yasser Arafat. Amal maintained that it would only agree fully to end the siege of the camps if Arafat loyalists withdrew from villages near Sidon that they had captured from Amal in October and November 1986. Some 150 Syrian troops were deployed around Sidon in mid-April.

Prime Minister Karami announced his Government's resignation on 4 May 1987, following the failure of the Cabinet (which had recently held its first meeting for seven months) to agree on a course of action to alleviate Lebanon's acute economic problems. President Gemayel rejected Karami's resignation (although Karami, who had refused to have any dealings with President Gemayel since January 1986, did not formally submit it), and it seemed that he would remain in office until a suitable (i.e. Sunni) replacement could be found. On 1 June, however, Karami was killed when a bomb exploded in the helicopter in which he was travelling. President Gemayel appointed the Minister of Labour, Education, and Fine Arts, Dr Selim al-Hoss, as acting Prime Minister. It was not clear who was responsible for Karami's assassination, though the Christian section of the divided Lebanese army and the Christian LF were considered by the Muslim community to be the leading suspects. Karami, a Sunni Muslim, had been a firm ally of Syria and had been instrumental in the deployment of Syrian troops in Beirut in February. On 5 June Hussain al-Hussaini, the Shi'ite President of the National Assembly, resigned, alleging that President Gemayel was trying to conceal the truth about the circumstances, and authors, of Karami's death. Muslim leaders demanded a full investigation into the assassination.

On 21 May 1987 the National Assembly had voted to abrogate the agreement, signed by Lebanon and Yasser Arafat (for the PLO) in Cairo in 1969, that defined and regulated the PLO's activities and legitimized its presence in Lebanon. The annulment cancelled any theoretical right of the PLO to official Lebanese protection while it operated in Lebanon. In practice any such protection had long been withheld or had been impracticable. The abrogation of the Cairo accord was strongly suspected of being Syrian-inspired, coming, as it did, in the wake of the reunification of the PLO under Arafat's leadership at the 18th session of the Palestine National Council in Algiers in April, which had deprived the Syrian-sponsored PNSF of the support of the largest groups that had rebelled against Arafat in 1983. Although the divided Lebanese security forces were incapable of enforcing a withdrawal of PLO forces from Lebanon, in line with the abrogation of the Cairo accord, Syria, which had effectively assumed responsibility for security in Beirut, through its own forces and those of Amal was certainly in a position to attempt to do so. Such a policy would be merely a logical continuation of Syria's attempt to prevent the re-establishment of the PLO in Lebanon, and one which Syria could claim was sanctioned by the Lebanese National Assembly. (The Assembly also finally and formally cancelled the peace treaty of 17 May 1983 between Lebanon and Israel, abrogated by President Gemayel in March 1984 but on which the Assembly had never voted.)

Although the most intense fighting between Amal and PLO guerrillas had ended, and the removal of the blockade of the Palestinian refugee camps had been proclaimed in April 1987, the camps remained effectively under siege, apparently under the supervision of Syrian troops, and freedom of movement in and out of them was confined to women and children. On 11 September an agreement was announced between Amal (as part of the largely Muslim Unification and Liberation Front, which had been formed under Syrian auspices in July, and also included Walid Joumblatt's mainly Druze Parti socialiste progressiste—PSP) and the PLO in the camps, purportedly ending the 'war of the camps', in which more than 2,500 people had died. The agreement provided for the ending of the siege of the camps and for the withdrawal of Palestinian fighters from strategic positions outside the Ain al-Hilweh refugee camp, east of Sidon. However, neither measure was implemented, and in October differences over the withdrawal of some 5,000–8,000 Palestinian guerrillas led to renewed fighting around the disputed positions to the east of Sidon. On 16 January 1988, avowedly as a gesture of support for the uprising by Palestinians resident in Israeli-occupied territories, which had begun in December 1987, Nabih Berri, the leader of Amal, announced the ending of the siege of the Palestinian refugee camps in Beirut and southern Lebanon: Amal fighters and soldiers from the predominantly Shi'ite Sixth Brigade of the Lebanese army withdrew their positions around Bourj el-Barajneh and Chatila camps, to be replaced by Syrian troops, and the 14-month siege of Rashidiyah camp, near Tyre, was ended. However, PLO guerrillas loyal to Yasser Arafat still refused to withdraw from their positions overlooking Ain al-Hilweh camp near Sidon, disrupting the withdrawal of Amal from around Rashidiyah.

AMAL AND HEZBOLLAH CLASH

In cynical terms, it was politically inexpedient for Syria to continue to employ its proxy, Amal, in its attempt to suppress the PLO in Lebanon, at a time when the Palestinian uprising in the Israeli-occupied territories was attracting the sympathy of the world (in particular, the Arab world) to the plight of the Palestinians. By suspending Amal's campaign against the pro-Arafat PLO, Nabih Berri's forces could be deployed against the Hezbollah, whose ultimate aim was to establish an Islamic state in Lebanon on the Iranian model and whose strength was viewed by Syria as a threat to its own ambitions to control Lebanon. Amal's attacks were initially directed against Hezbollah bases in southern Lebanon, and clashes (the first military confrontation between the two groups) occurred at the end of March in the Nabatiyah area. On 9 April 1988 Amal claimed to have captured Hezbollah's last stronghold in the south, at Siddiqin, while Iranian Revolutionary Guards stationed at Sharqiyah and Jibshit had been ordered to leave the area.

In Beirut, Syria had demonstrated its opposition to hostage-taking by preventing a Kuwaiti Boeing 747, which had been hijacked by Islamic fundamentalists (alleged to be Lebanese), from landing at the city's airport in early April 1988. On 5 May fighting broke out between the Amal and Hezbollah militias (the latter supported by Iranian Revolutionary Guards) in the southern suburbs of Beirut. Attempts to impose a cease-fire through Iranian and Syrian mediation failed, and Syrian troops became involved in the fighting on 13 May, when Hezbollah guerrillas, who had wrested control of about 90% of the southern suburbs from Amal, briefly advanced into a Syrian-controlled area of west Beirut. On 15 May Syrian troops encircled the southern suburbs, while intensive negotiations took place between Syria and Iran. On 27 May several hundred Syrian troops moved into the southern suburbs of Beirut to enforce a cease-fire agreement reached by Syria, Iran and their militia proxies on the previous day. When the Syrian deployment was complete, Amal and Hezbollah were to close down their military operations in all parts of the southern suburbs, except in areas adjoining the 'Green Line', where they would continue to be allowed to post their men. On 3 June, in accordance with the agreement, Nabih Berri announced the disbandment of the Amal militia in Beirut and the Beka'a valley (areas under Syrian control) and all other areas of the country except the south (which was not controlled by Syrian troops).

ARAFAT LOYALISTS DRIVEN OUT OF BEIRUT

At the end of April 1988, following a partial reconciliation between Yasser Arafat and President Assad of Syria, Arafat loyalists in the Palestinian refugee camps of Chatila and Bourj el-Barajneh, attempted to drive out the fighters belonging to the Syrian-backed group, al-Fatah Intifada (Fatah Uprising) of Abu Musa. The Syrian troops who had surrounded the camps in April 1987 did not attempt to intervene in the fighting

but, with Amal (Syria's other surrogate in Lebanon's factional conflict) otherwise occupied, they allowed reinforcements to reach the rebel Fatah group. On 27 June 1988 the Arafat loyalists in Chatila were overrun and surrendered to the forces of Abu Musa. The following day Syria granted 100 PLO guerrillas safe passage from Chatila to the Palestinian camp at Ain al-Hilweh, near Sidon, although their entry into the camp was allowed by the local Sunni Muslim militia (the Popular Liberation Army, led by Mustafa Saad) only after the personal intervention of the Libyan leader, Col Qaddafi. On 7 July Bourj el-Barajneh, Yasser Arafat's last stronghold in Beirut, was captured by the forces of Abu Musa, and 120 Arafat loyalists were evacuated to Ain al-Hilweh.

LEBANON FAILS TO ELECT A NEW PRESIDENT

President Gemayel's term of office was due to expire on 23 September 1988, and the National Assembly was required to elect a new President before that date. As the election approached, political manoeuvring began in an attempt to find a candidate for the post (under the confessional tradition a Maronite Christian) who would be acceptable to both Christians and Muslims. The question was complicated by divisions within the Maronite community and the unwillingness of most Christians to accept a candidate who was thought to represent the interests of Syria. Discussions between Syrian representatives and the US Under-Secretary of State for Near East Affairs, Richard Murphy, seeking a suitable candidate, failed to produce a compromise choice.

By mid-August 1988 more than two dozen candidates for the presidency had declared themselves, but the three main contenders were: Gen. Michel Awn, the Commander-in-Chief of the Lebanese army; Raymond Eddé, the leader of the Maronite Bloc national libanais, who had been in exile in France since 1976; and former President Sulayman Franjiya. The latter did not announce his candidacy until 16 August 1988, two days before the date of the election, and the news immediately united President Gemayel and Samir Geagea, the commander of the LF, who opposed Franjiya's candidature on the grounds that he represented Syrian interests. (It was Franjiya who, as President, had invited Syria to intervene militarily in Lebanon to end the civil war in 1976.) President Gemayel and Geagea asserted that they would do everything legally in their power to prevent Franjiya from being elected. The reaction of Walid Joumblatt, the Druze leader, was to withdraw the presidential candidate of his own PSP and to support Franjiya's candidacy.

Votes for the presidency were to be cast in two ballots. To be elected, the successful candidate had to receive a majority vote of two-thirds of the members of the National Assembly in the first ballot and a simple majority in the second. Prior to the session at which the election was to be held, a quorum of the Assembly was deemed by its President, Hussain al-Hussaini, to be 51, or two-thirds of the surviving 76 members of the original 99-member National Assembly (whose mandate had been repeatedly renewed since 1972, owing to the impossibility of holding parliamentary elections). In the event, only 38 members (10 of the 41 Christian deputies and 28 of the 35 Muslim deputies) attended the session on 18 August 1988 at the temporary parliamentary premises on the 'Green Line'; al-Hussaini thus declared the session to be inquorate, and the election was postponed. (It was strongly alleged that several of the Christian absentees had been intimidated, threatened or forcibly prevented from attending the election by the Christian LF and soldiers under the command of Gen. Awn, while it was thought that the failure of some Muslim deputies to arrive was due to the perennial difficulty of travelling across factional boundaries in Beirut.)

On 2 September 1988 the acting Prime Minister, Dr Selim al-Hoss, withdrew the Government's resignation which had been tendered by the late Rashid Karami in May 1987. President Gemayel claimed that al-Hoss's action was unconstitutional, insisting that his Government held office only in a caretaker capacity. Consultations between Syria and the USA resumed during September 1988 in an attempt to agree upon a compromise presidential candidate who might be acceptable to the majority in Lebanon. It was reported that they had agreed to support the candidacy of Mikhail ad-Daher, a parliamentary deputy, but Christian army and LF leaders repeated their rejection of any candidate imposed upon Lebanon by foreign powers. A second attempt at a presidential election was scheduled for 22 September but, again, the session of the National Assembly failed to achieve a quorum. Only 14 deputies gathered for the vote in the old parliament building in west Beirut. Christian deputies assembled, instead, at a villa in east Beirut to repeat their opposition to a Syrian-imposed presidential candidate (i.e. Mikhail ad-Daher) and to the siting of the venue for the election in Syrian-controlled, Muslim west Beirut.

President Gemayel's term of office expired at midnight on 22 September 1988, and, only minutes before, in accordance with his constitutional privilege, he appointed a six-member interim military Government, composed of three Christian and three Muslim officers, led by Gen. Awn, to rule until a new President was elected. His choice of a military government was made after Muslim politicians had refused to participate in an interim civilian government which was to be headed, contrary to the National Covenant of 1943 (which divided power between the Christian and Muslim communities), by a Maronite Prime Minister, Pierre Hélou, instead of by a Sunni Muslim. The three nominated Muslim officers refused to accept their posts in the interim military administration (which were assumed by the remaining Christian ministers on 4 October 1988), while the two Christian members of the Government of Dr Selim al-Hoss (Joseph Hashim and Victor Qasir) surrendered their posts in recognition of the authority of the interim military administration. Dr al-Hoss appointed a Greek Orthodox Christian, Abdullah ar-Rassi, as Deputy Prime Minister on 24 September.

Lebanon was plunged into a constitutional crisis, with two governments (one Christian, in east Beirut, and one predominantly Muslim, in west Beirut) claiming legitimacy. Syria, for its part, refused to recognize the interim military Government. Concern over the stability of Lebanon's central institutions increased in October 1988, when the National Assembly failed to elect a successor to Hussain al-Hussaini, or to renew his one-year mandate. Meanwhile, each of the two governments claiming legitimacy warned the other not to encroach upon its jurisdiction. The authority of Gen. Awn's military administration was regarded as having been strengthened when Geagea's LF seized control of Gemayel's base in the Metn region, north of Beirut, in early October. Of Lebanon's central institutions, only the central bank remained intact, and it continued to make funds available to both governments for basic supplies of food and fuel.

In November 1988 Gen. Awn was dismissed as Commander-in-Chief of the army by Adel Osseiran, the Minister of Defence in Dr Selim al-Hoss's Government. However, since Awn retained the loyalty of large sections of the military, he remained its *de facto* leader. Fighting broke out in southern Beirut between rival Shi'a groups of the Syrian-supported Amal in that month, and between Amal and the Iranian-sponsored Hezbollah in January 1989. In the latter instance the two militias were reported to have agreed to a cease-fire on 30 January. In February a major confrontation occurred between the LF and the Lebanese army, when Gen. Awn attempted to restore the Government's authority over the illegal, militia-controlled ports. While neither side achieved a decisive victory, the authority of the Lebanese army, which had been steadily eroded, was restored as a result of the clashes. The balance of power in Beirut was perceived as gradually altering, and there were hopes that the success of the Lebanese army in its encounters with the LF would lead to the reunification of Beirut.

AWN'S ATTEMPT TO EXPEL SYRIAN FORCES FROM LEBANON

In March 1989, however, the most violent clashes for two years erupted in Beirut between Christian and Muslim forces positioned on either side of the 'Green Line'. While the immediate cause of the fighting was the blockade of illegal ports in west and south Beirut by Christian forces, it was Gen. Awn's declared intention to take all measures for the immediate expulsion of Syrian forces from Lebanon. On 29 March a cease-fire, agreed in response to an appeal from a six-member Arab League committee on Lebanon, was declared. However, exchanges of artillery fire resumed within a matter of hours.

Throughout most of April 1989 Awn's forces and Syrian troops exchanged artillery fire on an almost daily basis, and by the

end of the month almost 300 people had been killed. On 19 April, despite Awn's claim that he had a popular mandate to pursue the expulsion of Syrian forces from Lebanon, 23 Christian members of the National Assembly demanded an immediate cease-fire and appealed to the Arab League, the UN and the EC to intervene to end the fighting. In late April, following an emergency meeting of Arab League Ministers of Foreign Affairs, further proposals for a comprehensive peace plan were announced, recommending a cease-fire, under the supervision of an Arab cease-fire monitoring force. The cease-fire took effect on 28 April, but renewed exchanges of fire were reported on 30 April.

RENEWED DIPLOMATIC INITIATIVES AS THE CONFLICT ESCALATES

Further fighting between Christian and Muslim forces erupted at the beginning of May 1989, and on 3 May a delegation from the Arab League (consisting of the League's Assistant Secretary-General, Lakhdar al-Ibrahimi, and the Kuwaiti ambassador to Syria, Ahmed Abd al-Aziz Jassem) arrived in Beirut with the aim of enforcing the 28 April cease-fire and to arrange for the arrival of an Arab monitoring force. The delegation met the leaders of the rival Lebanese Governments, who were reported to have consented to the withdrawal of all land, sea and air blockades. Following a further outbreak of fighting, an urgent meeting was held between the Arab League delegation, the Syrian Government and the leaders of the rival Lebanese Governments. On 11 May it was announced that a further cease-fire had been agreed, but this collapsed on the same day.

At an emergency summit meeting of Arab leaders, held in Casablanca, Morocco, between 23 May and 26 May 1989 (subsequently extended by two days in order to achieve a unified position on the Lebanese question), a tripartite Arab Committee, consisting of King Hassan of Morocco, King Fahd of Saudi Arabia and President Chadli of Algeria, was formed to supplement the efforts of the Arab League Committee on Lebanon. Its aims were: to implement a cease-fire agreement in Lebanon within six months; to install an Arab observer force to supervise the cease-fire; and to act as an intermediary between the conflicting forces in Lebanon in order to facilitate an agreement on the question of political reform and the election of a new President. However, many observers doubted that the newly-formed Committee, presided over by King Hassan, could achieve these aims, not least because there had been no indication at the summit meeting in Casablanca of any willingness on the part of either Syria or Iraq to resolve their conflicting interests in Lebanon. Since the cease-fire in the Iran–Iraq War of August 1988, the traditional enmity between Iraq and Syria (which had intensified as a result of Syria's support for Iran during the war) had increasingly found expression by proxy in the conflict within Lebanon. By mid-1989, as Gen. Awn pursued his campaign to expel Syrian forces from Lebanon, Iraq had become the principal supplier of weapons to the Lebanese army.

As in its attempt to persuade other Arab leaders to condemn Syria's role in Lebanon, Iraq was unsuccessful in its demand, made at the Casablanca summit, for the withdrawal of Syrian troops from Lebanon. Other Arab leaders, while reportedly willing to condemn Syria's 'negative' role in Lebanon in private, were believed to fear Iraqi ambitions and to have sought to maintain a balance between Iraq and Syria. Egypt, Iraq, Jordan and the PLO all supported a proposal for the withdrawal of Syrian troops from Lebanon and for their replacement by an Arab peace-keeping force, but the plan was abandoned, in response to Syrian opposition.

At the beginning of June 1989 the Tripartite Arab Committee on Lebanon issued a renewed appeal for a cease-fire, but further exchanges of artillery fire took place the following day. At the same time King Hassan, King Fahd and President Chadli were reported to have instructed their Ministers of Foreign Affairs to begin the implementation of a 'plan of action' for Lebanon. On 10 June the three ministers travelled to Damascus, delivering to President Assad a letter from the Tripartite Arab Committee and receiving assurances from President Assad of Syria's willingness to co-operate with the Committee. Lakhdar al-Ibrahimi also made further attempts to mediate between the opposed parties in Lebanon, holding talks with both President Assad and Gen. Awn. By mid-June, however, it had not been possible to reach an agreement regarding the composition of the proposed Arab cease-fire monitoring committee.

On 28 June 1989 the Tripartite Committee renewed its appeal for a cease-fire and announced details of its peace plan for Lebanon. The new plan proposed a cease-fire, the removal of blockades of Muslim and Christian ports in Lebanon and the opening of roads between east and west Beirut prior to a meeting of the Lebanese National Assembly in an unspecified foreign country. The last component of the new plan for peace was immediately rejected by Gen. Awn, however, on the grounds that such a meeting would 'contradict the principles of sovereignty and national unity'. Despite the appeal for a cease-fire, exchanges of artillery fire continued.

Evidence of Soviet support for the new peace plan emerged in early July 1989, when Aleksandr Bessmertnykh, the USSR's First Deputy Minister of Foreign Affairs, travelled to Damascus with a message to President Assad from President Mikhail Gorbachev, which reportedly appealed for an end to the fighting in Beirut. Iraq had previously responded to a similar communication by stating that it was prepared to halt all supplies of armaments to Gen. Awn's forces. However, while some observers optimistically attached their hopes for the salvation of Lebanon to the USSR, the extent of Soviet influence on Syria, as its principal supplier of arms, was limited. Despite the prolonged ferocity of the hostilities since March, it had long been inconceivable that either of the 'superpowers' would commit itself to the resolution of the Lebanese conflict. On 31 July the Tripartite Committee abruptly suspended its work and blamed Syrian intransigence for the lack of progress on the Lebanese question. The Committee issued a communiqué accusing Syria of having a concept of Lebanese sovereignty that was inconsistent with the independence of Lebanon.

By August 1989 more than 600 people had been killed since Gen. Awn had begun his attempt to expel Syrian forces from Lebanon. In mid-August France dispatched senior government envoys to Middle Eastern capitals in a new diplomatic initiative to halt the fighting. Since the escalation of hostilities in March France had evacuated badly-wounded victims from both Christian and Muslim communities and had urged its partners in the EC to join forces in an urgent humanitarian mission. Because a substantial number of Lebanese Christians enjoyed dual French-Lebanese nationality, the French Government was faced with increasing domestic pressure to send such a mission. However, the suspicions of Muslim Lebanese regarding France's true intentions, and its possible future extension of military support to Gen. Awn's forces, were only partially allayed by the French policy of providing aid to both Muslim and Christian communities. The new French diplomatic moves were made in response to a further, dramatic escalation of the fighting in Beirut. On 13 August Syrian forces made their first attempt for more than 14 years to penetrate Christian-held territory, launching an attack on the town of Souk el-Gharb. This assault, combined with increased artillery bombardments of east Beirut, was regarded as an attempt by Syria to compensate, by military means, for its increasing diplomatic isolation: at the end of July the Arab League had formally referred to Syria as the principal obstacle to a settlement in Lebanon, while the USA had condemned Syria's renewed use of heavy-calibre weapons in Beirut. Syria, however, claimed that Gen. Awn bore full responsibility for the escalation of hostilities since he had earlier rejected an offer of a cease-fire by Lebanese militias allied to Syria.

The French diplomatic initiative was strongly condemned by the Iranian-backed Hezbollah militia, which described it as a French 'military adventure' to assist Gen. Awn. While France emphasized repeatedly that it was not considering any military intervention in Lebanon, the Beirut-based Revolutionary Justice Organization warned that such intervention by French forces (eight French naval vessels had been dispatched towards Lebanon by 22 August 1989, in anticipation of a renewed onslaught against Christian-held positions in Beirut) would rebound upon US hostages held in Beirut.

On 16 August 1989 the UN Secretary-General, Javier Pérez de Cuéllar, summoned an emergency meeting of the Security Council to discuss means of achieving a cease-fire in Lebanon. This meeting, convened under emergency powers of the Secretary-General which had been invoked on only two previous occasions, followed reports that both Syrian- and Iranian-backed

militias in Beirut were preparing to join regular Syrian forces to defeat the Lebanese army.

In late August 1989 French diplomatic pressure was reported to have led to an offer by Gen. Awn to meet his Muslim rivals at a conference, with no reference to his previous condition that political reform in Lebanon could be discussed only after Syrian forces had withdrawn from the country. On 27 August a French peace plan for Lebanon was formally presented to Syria's Minister of Foreign Affairs, Farouk ash-Shara', by the Director-General of the French Ministry of Foreign Affairs, François Scheer. The plan proposed: a cease-fire; a halt to deliveries of armaments to either side involved in the conflict; the introduction of political reforms to end the predominance of the Christians in Lebanon; and the phased withdrawal of foreign forces from Lebanon, beginning with the withdrawal of Syrian forces from west Beirut. While there was no immediate official response to these proposals by Gen. Awn's Government, Christian Lebanese sources in Beirut dismissed the proposals as 'Syrian-inspired' and as seeking to distract the international community from the primary issue of ending the siege of east Beirut.

On 7 September 1989, following allegations by the USA that its ambassador to Lebanon, John McCarthy, and his staff had been threatened with 'Christian terrorism', the USA announced its decision to evacuate its ambassador to Cyprus and close its embassy in Beirut. (The US embassy had been under a peaceful siege of civilians demonstrating in favour of increased US involvement in resolving the problems of Lebanon.) Prior to the embassy's closure, meetings between US diplomats and the head of the LF, Samir Geagea, had prompted accusations by Gen. Awn that the USA was seeking to divide Lebanese Christians as a prelude to concluding an agreement with Syria to end the fighting in Lebanon. The withdrawal of US diplomatic representation was regarded as signalling the failure of Gen. Awn's attempt to 'internationalize' the Lebanese conflict and to win Western support to expel Syrian forces.

On 18 September 1989 the Tripartite Arab Committee on Lebanon resumed its efforts to bring peace to Lebanon, following a meeting in Tripoli, Libya, at the beginning of September between President Assad and President Chadli, at which Assad agreed to have the Syrian presence in Lebanon debated. The Committee appealed for an 'immediate and comprehensive cease-fire'. A new peace plan was announced, under the terms of which a Lebanese security committee was to be established (under the auspices of the Assistant Secretary-General of the Arab League) to supervise the cease-fire. The new plan envisaged the removal of the Syrian naval blockade of Beirut's Christian enclave, while the committee would retain the right to inspect any ship reported to be carrying arms. At the same time, Beirut's international airport was to be reopened. Finally, the plan envisaged a meeting of the Lebanese National Assembly to discuss a 'charter of national reconciliation' drafted by the Tripartite Arab Committee. Members of the National Assembly were to assemble on 30 September at a venue to be announced. Unlike the Committee's previous plan for peace in Lebanon, the new plan made no appeal for the withdrawal of Syrian troops, and was thus welcomed by the Syrian Government. Gen. Awn rejected the proposal for an exclusively Lebanese security committee, arguing that, since Syrian forces were directly involved in the conflict, Syria should be represented on any committee established to supervise a cease-fire. However, due to his diplomatic isolation (the charter was supported by the USA, the USSR, the United Kingdom, France and almost every Arab nation), Awn subsequently relented. The cease-fire accordingly took effect from 23 September.

THE TA'IF AGREEMENT

At the end of September the Lebanese National Assembly met in Ta'if, Saudi Arabia, to discuss the charter of national reconciliation. The session was attended by 31 Christian deputies and 31 Muslim deputies. (Of the 99 deputies elected in May 1972, only 73 still survived.) At a further meeting on 22 October 1989, the charter of national reconciliation was endorsed by 58 of the 62 deputies attending the session. Subsequent to its first being announced, the charter had been amended at informal sessions of the National Assembly. However, the section dealing with Syria's role in Lebanon was the result of a prior agreement between the Tripartite Committee and Syria, and Lebanese deputies were prohibited from altering it. With regard to political reform, the charter now provided for the transfer of executive power from the presidency to a cabinet, with portfolios divided equally among Christian and Muslim ministers. The appointment of the Prime Minister would remain the prerogative of the President, to be exercised in consultation with the members and President of the National Assembly. The charter further provided for an increase in the number of seats in the National Assembly, from 99 to 108, to be divided equally among Christian and Muslim deputies. A further provision was the implementation of two security plans in Lebanon, one within six months and the other within 24 months. Following the endorsement of the charter, the election of a President and the formation of a new government, all Lebanese and non-Lebanese militias were to be disbanded within six months, while the internal security forces were to be strengthened. For a maximum period of two years the Syrian army would then assist the new government in implementing the security plan.

The endorsement of the charter of national reconciliation (the Ta'if agreement) by the National Assembly was immediately denounced by Gen. Awn as a betrayal of Lebanese sovereignty. Prior to their departure for Ta'if, Christian deputies to the Assembly had reportedly assured Gen. Awn that they would permit concessions on the question of political reform only in exchange for a full withdrawal of Syrian forces from Lebanon. While there was some support for Gen. Awn's position in east Beirut, the agreement had, to a large extent, been facilitated by the co-operation of Lebanon's Maronite leaders, most notably Georges Saadé, the leader of the Phalangist Party, who had played an important role in the Ta'if negotiations.

In an annex to the Ta'if agreement, the Tripartite Arab Committee on Lebanon had appealed to the National Assembly to meet in November 1989 to ratify the charter and to elect a new President. This session of the Assembly was duly held in the northern town of Qlaiaat on 5 November, when René Mouawad, a Maronite Christian deputy and a former Minister of Education and Arts, was elected as President. (Of the 58 votes cast in the second round of voting in the presidential election, Mouawad received 52; Georges Saadé and Elias Hrawi, another Maronite Christian deputy, withdrew after the first round of voting.) Deputies also unanimously endorsed the Ta'if agreement and re-elected Hussain al-Hussaini as President of the National Assembly. Prior to the meeting Gen. Awn had appealed to all Christian deputies to consult with him before attending. In response to the news that Muslim deputies had departed for Qlaiaat, Gen. Awn had announced the dissolution of the National Assembly. His reaction to the presidential election was to declare it unconstitutional, and the result null and void.

On 13 November 1989 President Mouawad invited Dr Selim al-Hoss to form a 'government of national reconciliation'. However, Maronite leaders were reluctant to participate in such an administration and thus openly oppose Gen. Awn. On 22 November, only 17 days after his election, President Mouawad was assassinated in a bomb explosion. Two days later, in the town of Shtaura, 52 deputies of the National Assembly convened and elected Elias Hrawi as the new President. At the same session, deputies voted to extend the term of office of the National Assembly until the end of 1994. A new Government was formed by Dr al-Hoss on 25 November, and received a unanimous vote of confidence from the National Assembly.

Following a meeting of the new Cabinet on 28 November 1989, it was announced that Gen. Awn had again been dismissed as Commander-in-Chief of the Lebanese army, and that Gen. Emile Lahoud had been appointed in his place. It was feared that Syrian forces would now launch a major assault on Awn's stronghold in Baabda, east Beirut. Geagea announced that, in the event of such an assault, the LF would fight beside Gen. Awn. In December, in an attempt further to isolate Gen. Awn, the central bank halted all transfers of funds to areas of Beirut controlled by him, and the Ministry of Defence was reported to have ceased paying the salaries of Awn's troops and officials.

On 31 January 1990 Gen. Awn ordered his forces to close all the barracks of the LF in east Beirut. There followed intense fighting between Awn's forces and the LF for control of the Christian enclave, precipitated by the refusal of Geagea to reject the Ta'if agreement, thus isolating Gen. Awn within the

Christian community. Awn had accordingly declared the LF to be an ally of Syria. (Maronite leaders had sought to avoid open conflict with Gen. Awn by minimizing their approval of the Ta'if agreement, and on 29 January Georges Saadé, who had been appointed Minister of Posts and Telecommunications in November 1989, announced that he would not serve in the administration, thus damaging its credibility as a government of national unity.) By early March 1990 more than 800 people had been killed, and more than 2,500 wounded, in the inter-Christian fighting since 31 January. In March Gen. Awn declared a halt to the conflict between Christian factions, and expressed willingness to negotiate with his opponents, implying that he was willing to accept the Ta'if agreement in a modified form. Inter-Christian fighting resumed, however, later in the month.

In April 1990 Geagea announced his recognition of the al-Hoss Government, formally accepting the Ta'if agreement, and in June Georges Saadé resumed his duties in the same administration as Minister of Posts and Telecommunications. In early June President Hrawi visited Egypt, Libya and Tunisia, where he reportedly sought Arab backing for the implementation of the resolutions agreed at Ta'if.

In July 1990 there were reports of fierce fighting between Amal and Hezbollah in southern Lebanon. Clashes between the rival Shi'ite groups had occurred in March in southern Beirut, prompting the intervention of Syrian forces. At the beginning of August Israel warned that it would intervene if its interests were endangered by the hostilities.

Meanwhile, at the end of July 1990, the al-Hoss administration began an attempt to pressurize Gen. Awn into relinquishing his power base in east Beirut by seeking to prevent essential supplies from reaching his forces. In the last week of July Awn had conferred with the Assistant Secretary-General of the Arab League, Lakhdar al-Ibrahimi, but had rejected the suggestion—which had already been proposed in a diplomatic initiative pursued by the French Government and the Vatican in June—of joining the al-Hoss Government under the terms of the Ta'if agreement.

THE IMPLEMENTATION OF THE TA'IF AGREEMENT

The crisis in the Gulf region, which was precipitated by Iraq's invasion of Kuwait in August 1990, had serious repercussions for Lebanon. Iraq's Lebanese allies—Gen. Awn and the PLO—hoped that Iraq's challenge to US and Saudi power would serve to weaken that power and subsequently undermine the regional and international consensus that supported the Ta'if agreement. The pro-Ta'if parties in Lebanon were apprehensive about the fate of the agreement, in view of the crisis developing in the Gulf. In response, they succeeded, on 21 August, in convening a session of the National Assembly at which the Constitution was amended to incorporate the reforms agreed at Ta'if.

The reforms stipulated that new deputies (40 in all, taking account of the 32 vacant seats in the old assembly) were to be appointed, rather than elected, for one term, owing to the 'extraordinary situation' in the country. The powers of the National Assembly were increased to the point where it became virtually impossible to dissolve it. The term of office of the President of the National Assembly was increased from one to four years, and the holder of that office would in future play a role in appointing the Prime Minister. The President, meanwhile, was divested of his autonomous prerogatives. Presidential decisions now required the co-signature of the Prime Minister, except in two instances: the appointment of a Prime Minister, and when accepting the Government's resignation. Nominally the President continued to be Commander-in-Chief of the armed forces, but the army remained subject to the full authority of the Cabinet. In appointing a Prime Minister, the President could only follow the choice of deputies to the National Assembly. He no longer enjoyed the right to chair meetings of the Cabinet, to determine the agenda of such meetings or to vote at them.

With the stipulations of the Ta'if agreement incorporated into the Constitution, executive power was effectively transferred to the Lebanese Cabinet. The main beneficiary of the changes was the office of the Prime Minister, who became the head of the Government, speaking in its name, implementing its policies and co-ordinating the various ministries. In the event of a vacancy in the office of the President, the Cabinet, under the chairmanship of the Prime Minister, would assume the privileges and responsibilities of the presidency. The speed with which the National Assembly was convened on 21 August 1990 reflected an evolution in Syria's attitude towards the process of constitutional reform. Syria's renewed interest in the Ta'if agreement came in response to US assurances regarding Syria's continued dominance in Lebanon and US support to that end.

On 28 September 1990 units of the Lebanese army loyal to the Government imposed an economic blockade on the areas of Beirut which were under the control of Gen. Awn. The blockade, which enjoyed Syrian and US support, was designed to force Awn into either co-operating with the al-Hoss Government, or evacuating his base at the presidential palace at Baabda. On 13 October Syrian forces commenced a military assault against the presidential palace at Baabda and other strategic areas under Awn's control. In a clear breach of the 'Red Lines' agreement between Syria and Israel, which regulated the parameters within which each country could operate in Lebanon, the Syrian air force shelled the presidential palace. That Israel did not retaliate in response to such a breach of the agreement reflected the USA's support of the Syrian offensive. The Syrian military operation was the first of the repercussions of the Gulf crisis in Lebanon, where Syria had effectively been granted freedom of action as a reward for its participation in the US-led multinational force deployed in Saudi Arabia. Awn's forces were completely defeated, and the areas under his control overrun. During the fighting Awn had departed for the French embassy in Beirut, in order to negotiate a cease-fire. As soon as Baabda had fallen under Syrian control, he was advised to remain in the embassy for his own safety, and the French Government, considering his protection to be a matter of honour, offered him and his family political asylum. The Lebanese Government, however, refused to allow Awn to depart for France, seeking to place him on trial for embezzlement of funds and crimes against the state.

Following Awn's defeat, the Government began to implement a security plan for the Greater Beirut area. On 24 December 1990 a new Government of national reconciliation was formed under Omar Karami, hitherto the Minister of Education and Arts. It was the first Lebanese administration to be formed since the amendment of the Constitution in August 1990 and was intended to continue with the implementation of the Ta'if agreement, begun under the previous Government. The new Prime Minister enjoyed exclusive Syrian support. The 30-member Cabinet included various militia and party leaders as well as traditional political figures. Cabinet posts were divided equally between Muslims and Christians: six Sunni Muslims, six Maronite Christians, six Shi'a Muslims, three Druzes, four Greek Orthodox Christians, three Greek Catholics, one Armenian Catholic and one Armenian Orthodox Christian.

The composition of the new Government attracted considerable criticism. Deputies in the National Assembly complained at their under-representation in the Cabinet, while the Lebanese press questioned the merits of ministers whose only qualifications for office were those of being either a military leader or the son of a prominent politician. Other commentators accused the President of nepotism. The Phalangist Party and the LF complained that the Government lacked 'national balance'. Druze representatives complained at the dilution of their influence, while Hezbollah, the Parti communiste libanais and the Parti national libéral were not represented in the Cabinet at all.

The new Cabinet presented a statement of policy to the National Assembly and received a vote of confidence on 4 January 1991. However, representatives of the Phalangist Party and the LF boycotted sessions of the Cabinet, complaining that more than two-thirds of its members were, either directly or indirectly, susceptible to Syrian influence. However, their boycott did not result in their outright resignation and was intended, rather, to gain certain assurances and guarantees. By the same token, on 11 January the Druze leader, Walid Joumblatt, withdrew from the Cabinet in protest at the dilution of Druze influence in the Government, and at the fate of the so-called 'people's army' and the civilian administration that had been established in the Chouf mountains by his PSP. The Government, meanwhile, adhered to the four-point programme which it had presented to the National Assembly, aiming to extend its authority over the whole of Lebanon; to disband the

militias; to formalize Lebanon's 'special relations' with Syria; and to appoint deputies to the vacant seats in the National Assembly and fill senior military and civilian posts.

On 6 February 1991 Lebanese army battalions were dispatched to the south of the country for the first time since the Israeli invasion of 1978. They were deployed in the wake of a serious escalation in Palestinian guerrilla operations in the south, and consequent Israeli retaliation, as a 'buffer' between the 6,000 Palestinian fighters in and around Sidon and units of the Israeli-backed SLA. However, the inadequacy of the army's capabilities in relation to the size of the area which it was meant to patrol meant that its deployment was largely symbolic. Its presence was nevertheless welcomed by the Shi'ite militia, Amal. The Iranian-backed Hezbollah reacted cautiously. Israel welcomed the deployment of the army in principle, but warned that swift and severe retaliation would ensue if it failed to suppress attacks against Israel.

On 28 March 1991 a full session of the Cabinet approved a plan to dissolve all Lebanese and non-Lebanese militias in the country and to appoint 40 new deputies to the National Assembly. All militias were to surrender their weapons and equipment to the Government during the period 28 March–30 April. Between the end of April and 20 June the army was to deploy in the region of Mount Lebanon, outside Greater Beirut, and to assume responsibility for the security of the rest of the country during 20 June–20 September. The new momentum in the Government's extension of its authority was a result of the defeat of Iraq by the multinational force in February. The USA, Saudi Arabia, Egypt and Syria, which had all contributed to the multinational force, were all also proponents of the Ta'if agreement. Ministers in the Government who had boycotted sessions of the Cabinet while awaiting the outcome of the war in the Gulf region (Samir Geagea, Georges Saadé, Michel Sassine and Walid Joumblatt) now began to adjust their positions. On 7 March Joumblatt retracted his resignation, and by 20 March the representatives of the LF in the Government—Sassine and Saadé—had ended their boycott of the Cabinet sessions. Geagea refused to accept a post in the Cabinet, but nominated an adviser, Roger Deeb, in his place.

Not surprisingly, the larger militias viewed their own disbandment with little enthusiasm. The LF urged the creation of a national guard to assume responsibility for the security of certain regions, while the PSP argued that the militias should be incorporated into official military structures. Palestinian representatives, meanwhile, announced that they would not comply with the Government's decision, as the presence of Palestinian militias was a regional, rather than a domestic, issue. However, strong regional and international pressure ultimately compelled Lebanon's major militias to comply with the Government's order to disband, and army units were deployed in areas previously controlled by the LF and the PSP.

Apprehension remained, none the less, with regard to armed groups which had refused to disband. These included the 6,000-strong pro-Arafat PLO; the 2,000-strong Iranian Revolutionary Guards, stationed in and around the town of Ba'albeck in the Beka'a valley; the 5,000-strong, Iranian-backed Hezbollah in the Beka'a valley and the south; and the 3,000-strong, Israeli-backed SLA. Arafat's al-Fatah group, based in Sidon, refused to disband, on the grounds that it did not constitute a militia, but, rather, a 'resistance movement' or, even, the regular army of the Palestinian state. It accordingly refused to surrender its weapons, but indicated its willingness to come to an agreement with the Lebanese Government regarding their location and use. The Government, for its part, refused to negotiate an agreement similar to the one signed in Cairo in 1969 and abrogated by the National Assembly in 1987. It also rejected the PLO's demands for its own embassy in Beirut; for a Palestinian brigade within the Lebanese army, with responsibility for the security of the Palestinian refugee camps; and for the right to launch attacks against Israel. After much pressure, however, the PLO finally declared that it would not impede the deployment of Lebanese troops in the south of the country.

The commander of the Iranian Revolutionary Guards, Hadi Rida Askari, insisted that they did not constitute a militia within Lebanon and that their withdrawal could take place only following a decision by the Iranian Government, made in consultation with Syria. Hezbollah, meanwhile, agreed to dismantle its military structure in Beirut, but insisted on maintaining armaments in the Beka'a valley and in southern Lebanon, in order to continue the struggle against Israel's occupation. The SLA rejected any suggestion that it would disarm or that Israel was ready to comply with the appeals of the Lebanese Government for the implementation of UN Security Council Resolution 425, which demanded the unconditional withdrawal of Israeli forces from Lebanon. Indeed, the fact that the Government had begun to disband Lebanese militias before their non-Lebanese counterparts aroused fears that its decision would be only partially applied and that the extension of its authority would encounter the perennial obstacle of the armed Palestinian presence in Lebanon, exacerbated by the presence of armed groups backed by Iran.

In accordance with the four-point political programme of the Government of national reconciliation, relations between Lebanon and Syria became closer, culminating in the signing, in May 1991, of a treaty of 'fraternity, co-operation and co-ordination'. The treaty was the natural outcome of the stipulations of the Ta'if agreement, establishing a formal structure for developing and implementing policies on a wide range of issues, and creating links between Lebanon and Syria in political, military, security and economic affairs. It received a mixed welcome, however. Georges Saadé and Roger Deeb abstained from voting at the Cabinet session at which the treaty was approved, and refused to join the official delegation which travelled to Damascus for its signing. The Maronite Patriarch, Nasrallah Sfeir, complained that such a treaty should not have been negotiated or signed before the Government had regained full sovereignty over the whole of Lebanon. He further warned that the treaty contravened the National Covenant of 1943.

The treaty declared that Syria and Lebanon had 'distinctive brotherly relations', based on their 'geographic propinquity, similar history, common belonging, shared destiny and common interests'. Moreover, it specified the executive mechanism by which these 'distinctive relations' were to be managed and developed. Five joint councils were established, which were to meet regularly in order to develop and execute policies affecting Lebanon. The most important of these was the Higher Council, comprising the Presidents of Lebanon and Syria, their Prime Ministers, Deputy Prime Ministers and the presiding officers of their respective legislatures. The Higher Council assumed responsibility for the co-ordination and co-operation of the two states in political, economic, security, military and other spheres. Its decisions were to be binding, albeit within the constitutional and legal frameworks of both countries. Opponents of the treaty claimed that the joint councils constituted a violation of Lebanese sovereignty and amounted, in effect, to Syria's annexation of Lebanon. In view of Syria's military strength, they regarded the treaty as unbalanced, and predicted grave consequences for Lebanon's independence, its democratic practices and its traditional freedoms. They considered to be even more alarming the Syrian Government's refusal to formalize its recognition of Lebanese sovereignty through the establishment of diplomatic relations. The supporters of the treaty, however, argued that it did not affect Lebanese freedoms, and that close relations with Syria were necessary for Lebanon's stability and prosperity.

On 9 May 1991 the National Assembly approved an amendment to Lebanon's electoral law, allowing the exceptional appointment by the Cabinet of 40 deputies to the National Assembly. The appointments were made to the 31 seats in the assembly which had become vacant since 1972, and to the nine new seats created in accordance with the Ta'if agreement. On 7 June 1991 the 40 deputies were selected (from a list of 384 candidates who had presented their credentials for office to the Ministry of the Interior) by the President, the Prime Minister and the President of the National Assembly, in close consultation with Syria. The term of office of the new assembly was to be four years. The appointed deputies were representative of the political and confessional breadth of the Cabinet. All except four (who represented the Phalangist Party and the LF) enjoyed close relations with Syria. Hezbollah and a new, popular 'Awnist' grouping remained unrepresented in the National Assembly.

Following the appointments to the National Assembly, the Government began to compile a list of militia members who would be enrolled into the state's security and administrative

structures, and to establish a schedule and locations for their 'rehabilitation'. On 29 May 1991 the Government had decided that some 20,000 militia members would be incorporated into the structures of the state. The decision stipulated that equal numbers of Muslims and Christians would be assimilated, among them 6,500 members of the LF, 2,800 members of Amal and 2,800 members of the PSP. The remainder would be absorbed from other militias. All were to undergo retraining courses, lasting up to six months, before being assigned to employment in the service of the state.

In early June 1991 Israel launched its fiercest attacks on Palestinian bases in southern Lebanon since its invasion of the country in 1982. The attacks coincided with statements by Israeli officials that Israel had no intention of withdrawing from its self-declared 'security zone', nor of reducing its support for the SLA. The escalation of the fighting in the south appeared to serve the interests of both Israel and the Palestinians. It supported the Palestinians' assertion that they needed to retain their weapons in order to fight a war against Israel; and it allowed Israel to claim that its northern border remained insecure and that it needed to maintain an armed presence in southern Lebanon.

On 1 July 1991 the Lebanese army began to deploy in and around Sidon, encountering some armed resistance from pro-Arafat Palestinian guerrillas. On 4 July the Government and the PLO concluded an accord whereby the latter agreed to allow the army peacefully to impose the Government's authority in the area. The deployment of the army in southern Lebanon was subsequently reported to have proceeded according to plan, although its jurisdiction did not include the village of Jezzine, where, although the locality was technically outside Israel's buffer zone, units of the SLA occupied positions.

The release, in August 1991, of John McCarthy, a British citizen who had been held hostage in Lebanon by Islamic Jihad (a pro-Iranian fundamentalist guerrilla group) since 1986, signalled the beginning of intensive diplomatic efforts by the UN to achieve a comprehensive exchange of hostages who were being detained, respectively, by Israel and by various sectarian groups in Lebanon. By June 1992 the release of all of Western hostages in Lebanon had been secured.

In August 1991 the National Assembly approved a general amnesty for crimes committed during the civil war; several specified crimes committed during 1975–90 were not covered by the amnesty. Under the terms of a presidential pardon, Gen. Michel Awn was finally allowed to leave the French embassy compound (where he had been sheltering since his defeat in 1990) and depart for exile in France. A condition of the amnesty was that he remain in exile for at least five years and refrain from political activities during that time.

At the beginning of September 1991 Lebanon and Syria formally concluded a security agreement, as envisaged in the bilateral treaty of May 1991. The agreement permitted Lebanon and Syria to seek mutual military assistance in the event of a challenge to the stability of either country. In mid-October President Hrawi travelled to Damascus for the first session of the Lebanese-Syrian Higher Council, established by the May accord. The chief topic of discussion at the first session of the Council was reportedly the opening session (in October) of the Middle East peace conference in Madrid, Spain, which Lebanese and Syrian delegations had been invited to attend.

In early November 1991 Karami announced that the USA had requested Israel to cease military activity in southern Lebanon, since it jeopardized the newly-begun peace process. However, Israeli military activity intensified in late November, in response to alleged attacks by Hezbollah fighters. A further, more serious, escalation of the conflict in southern Lebanon was precipitated in February 1992 by the assassination, by the Israeli air force, of Sheikh Abbas Mussawi, the Secretary-General of Hezbollah. Retaliation by Hezbollah fighters prompted an incursion by Israeli armed forces beyond the southern Lebanese buffer zone in order to attack alleged Hezbollah positions. Although the Lebanese army had begun to occupy positions in southern Lebanon that had been vacated by UNIFIL, Hezbollah had retained its freedom to conduct military operations, in an apparent reflection of Syria's belief that only by continued coercion would Israel withdraw from occupied Arab territories. In late March Syrian forces began to withdraw from Beirut, in preparation for their withdrawal to eastern Lebanon by September (in accordance with the Ta'if agreement).

During the early months of 1992 Lebanon's economic situation worsened dramatically, and the value of the Lebanese pound depreciated sharply; general strikes took place in April and May. There were widespread allegations of corruption and incompetence within the Government, and on 6 May Omar Karami and his Cabinet were forced to resign. Following discussions in Damascus between President Hrawi and Syrian leaders, Rashid Solh was appointed Prime Minister (a position he had held in 1974–75), and on 13 May his appointment was approved by 70 of the National Assembly's 108 deputies. A new Cabinet, announced on 16 May, included 15 members of its predecessor. It was regarded as insufficiently different in character from Karami's Government to modify the widespread perception of Lebanon as a Syrian protectorate, which many, including Karami, had blamed for the reluctance of Western countries to provide the country with significant economic assistance.

ELECTIONS TO THE NATIONAL ASSEMBLY

In addition to efforts to alleviate the economic crisis, a principal task of the Lebanese Government in mid-1992 was to prepare the country for its first legislative election since 1972. In order to comply with the terms of the Ta'if agreement (see above), this had to take place before November 1992, and in early April the Karami Government had indicated that the election would be held in the summer of 1992—although it was not certain that Syrian forces would have withdrawn to the eastern area of the Beka'a valley by this time, as the Ta'if agreement stipulated that they should. Lebanese Christian groups accordingly threatened to boycott the election, on the grounds that the continued Syrian presence would prejudice its outcome. The USA, too, urged the withdrawal of Syrian armed forces before the election took place. The Lebanese Government, for its part, argued that the Lebanese army was still unable to guarantee the country's security in the absence of Syrian armed forces.

On 16 July 1992 the National Assembly approved a new electoral law whereby the number of seats in the Assembly was raised from 108 (as stipulated by the Ta'if agreement) to 128, to be divided equally between Christian and Muslim deputies. On 24 July the timetable for the election was announced. Voting was to take place in three phases: on 23 August in constituencies in North Lebanon and the Beka'a area; on 30 August in Beirut and Mount Lebanon governorates; and on 6 September in constituencies in the South and in Nabatiyah. By mid-August it was clear that most Maronite Christian groups, in particular the Phalangist Party, would not present candidates. In July Syria had indicated that its troops would not withdraw to the Beka'a area until the process of constitutional reform was complete, in accordance with its interpretation of the Ta'if agreement. Christian groups continued to maintain that a fair election could not take place until the Syrian armed forces had withdrawn. As the Lebanese Prime Minister and Cabinet had been chosen in close consultation with Syrian leaders, the Government continued to invoke the inability of the Lebanese army to guarantee the country's security in the absence of Syrian armed forces: the position of Christian ministers in the Cabinet thus appeared more compromised than ever.

The first round of the election to the National Assembly proceeded, as planned, on 23 August 1992. Voting in the first round was to elect a total of 51 deputies—28 to represent North Lebanon and 23 the Beka'a area. A total of 273 candidates contested the first round, in which the participation of the estimated 900,000-strong electorate was described as high in Muslim districts and very low in Christian ones. There were widespread allegations of electoral malpractice both during and after the first round, prompting the resignation of the incumbent President of the National Assembly, Hussain al-Hussaini. All the candidates presented by the Iranian-backed Hezbollah, which contested the election as a political party, were elected. The religious denominations of the deputies elected to the National Assembly in the first round of voting were as follows: 16 Maronite Christians; 16 Sunni Muslims; 8 Shi'ite Muslims; 8 Greek Orthodox; 3 Greek Catholics; 2 Alawites; 1 Druze and 1 Armenian Orthodox.

The second round of voting in the election to the National Assembly—to elect 54 deputies to represent constituencies in

the Beirut and Mount Lebanon areas—took place on 30 August 1992, characterized by the low participation of the electorate especially in Christian districts. Indeed, in the Maronite district of Kesrouan voting was postponed, owing to a boycott by all candidates for election to its five seats. (All five seats were subsequently won by Maronite candidates in a by-election held on 11 October.) As in the first round of voting, there were widespread allegations of bribery and intimidation of the electorate. The religious denominations of the deputies elected to the National Assembly in the second round of voting were: 20 Maronite Christians; 8 Sunni Muslims; 6 Druze; 5 Shi'ite Muslims; 5 Greek Orthodox; 4 Armenian Orthodox; 1 Greek-Melkite Catholic; 1 Armenian Catholic; and 4 minority denominations.

The third round of voting, in constituencies in the South and in Nabatiyah, took place on 6 September 1992. The religious denominations of the deputies elected to the National Assembly in the third round of voting were as follows: 14 Shi'ite Muslims; 3 Sunni Muslims; 2 Maronite Christians; 2 Greek-Melkite Catholics; 1 Greek Orthodox; and 1 Druze. In October the Amal leader, Nabih Berri, was appointed President of the National Assembly.

LEBANON UNDER HARIRI

On 22 October 1992 Rafik Hariri was invited by President Hrawi to form a government. A new, 30-member Cabinet was appointed on 31 October. Hariri, a Lebanese-born Saudi Arabian entrepreneur, included many technocrats in his new Cabinet, and offices were not, as previously, distributed on an entirely confessional basis. His appointment was viewed as likely to restore some confidence in the country's economy and to facilitate its reconstruction. On 12 November the new Government secured a vote of confidence in the National Assembly.

On 16 December 1992, in response to the deaths in the Occupied Territories of five members of the Israeli security forces, and to the abduction and murder by the Islamic Resistance Movement (Hamas) of an Israeli border policeman, the Israeli Cabinet ordered the deportation to Lebanon of more than 400 alleged Palestinian supporters of Hamas. Owing to the Lebanese Government's refusal to co-operate in this action, the deportees were stranded in the territory between Israel's self-declared southern Lebanese security zone and Lebanon proper.

Serious escalations of the conflict in southern Lebanon between Hezbollah fighters, the SLA and Israeli armed forces occurred in October and November 1992, and fighting continued at a lower degree of intensity during the early months of 1993. In July the Government was reported to be attempting to curtail the activities of the Damascus-based Popular Front for the Liberation of Palestine—General Command (PFLP—GC), which had begun to mount guerrilla attacks on the positions of Israeli armed forces and Israeli-backed militias from southern Lebanon. On 25 July Israeli armed forces launched their heaviest artillery and air attacks on targets in southern Lebanon since 1982, with the declared aim of eradicating the threat posed by Hezbollah and Palestinian guerrillas and, moreover, of creating a flow of refugees so as to compel the Lebanese and Syrian authorities to take action to curb Hezbollah and the Palestinians. Syrian troops in Lebanon were also reported to have come under fire. According to Lebanese figures, Israel's so-called 'Operation Accountability' displaced some 300,000 civilians towards the north and resulted in 128 (mainly civilian) deaths. What was termed a cease-fire 'understanding', brokered by the USA, entered into effect at the end of the month, ending the week-long Israeli campaign, but this proved short-lived, and mutual offensives continued in subsequent months. In August, meanwhile, apparently as part of the cease-fire understanding, units of the Lebanese army took up positions, assigned to UNIFIL since the late 1970s, near the Israeli security zone.

A sudden cessation of attacks by Hezbollah units on Israeli targets in January 1994, during the approach to a meeting between US President Bill Clinton and President Assad of Syria, was cited as evidence, by Israeli observers, of Syrian control of Hezbollah. Hezbollah resumed attacks on Israeli targets in February, giving rise to the usual pattern of Israeli reprisals against Hezbollah targets. In June Israeli forces mounted an air attack on an alleged Hezbollah training camp in the Beka'a valley, close to the Syrian border. In early August further armed attacks by Israeli armed forces against Hezbollah targets in southern Lebanon caused the death of eight civilians, for which Israel subsequently made a formal apology. Israel claimed that Hezbollah had been involved in the planning of bomb attacks against Jewish targets in the United Kingdom and Argentina in July. An Israeli attack on the southern town of Nabatiyah on 19 October, in which seven civilians were killed, was unusual in that it was not a response to guerrilla activity in and around the southern Lebanese security zone, but, rather, appeared to have been made in retaliation for operations by Hamas in Israel itself. Hezbollah responded with rocket attacks on targets in northern and western Israel. There was a further escalation of the southern conflict in December, during which some six Israeli soldiers and eight members of the SLA were reported to have been killed.

Israeli attacks on targets south of Beirut in January 1995 caused a brief closure of the city's international airport (for the first time since 1987). In February 1995 Israel imposed a blockade on southern Lebanese fishing ports, in retaliation for the imposition, by the Lebanese army, of stricter security controls between the southern Lebanese security zone and sovereign Lebanese territory. These were enforced owing to the alleged involvement of Israeli agents in the planning of a car-bomb explosion in Beirut in December 1994. At the end of March 1995 the assassination of a Hezbollah leader by Israeli forces in southern Lebanon gave rise to fierce fighting between Hezbollah and Israeli forces in the area east of Sidon, and to rocket attacks by Hezbollah on Israeli targets in Galilee. In late April a Hezbollah fighter carried out a suicide bomb attack on an Israeli military convoy inside the Israeli 'security zone' in southern Lebanon, in which 11 Israeli soldiers were injured. Hostilities continued throughout May and June. On 8 July, in response to an attack three days earlier by Hezbollah fighters in which two Israeli soldiers were killed, Israeli armed forces reportedly attacked Nabatiyah with *fléchette* anti-personnel missiles—which were subject to an international ban; three children died in the attack. Hezbollah fighters retaliated with rocket attacks on targets in northern Israel. Israeli armed forces launched air and artillery attacks against Hezbollah targets in August, which were reported to have resulted in heavy casualties.

In March 1994 the National Assembly approved legislation instituting the death penalty for what were termed 'politically-motivated' murders. Shortly afterwards the Phalangist LF was proscribed, on the grounds that the organization had promoted the establishment of a Christian enclave and, hence, the country's partition. In the following month the LF leader, Samir Geagea, was arrested; he and several of his associates were subsequently charged in connection with the murder, in October 1990, of Dany Chamoun, son of former President Camille Chamoun and the leader of the right-wing Maronite National Liberal Party, and with the bombing of a Maronite church outside Beirut in January 1994. In September it was reported that the LF had temporarily relieved Geagea of the organization's leadership, and that it had revoked Geagea's recognition of the Ta'if agreement; the LF command was also reported to have countermanded Geagea's formal dissolution, in 1991, of the organization's militia status. In June 1995 Geagea and a co-defendant were convicted of instigating the murder of Chamoun, and were (together with seven others convicted *in absentia*) sentenced to death; the sentences were immediately commuted to life imprisonment with hard labour. Hearings in connection with the Maronite church bombing had been postponed. In early May 1994 Hariri withdrew from all his official duties owing to a dispute with President Hrawi, and with the President of the National Assembly, Nabih Berri, who both reportedly opposed his proposals to give the Government a measure of credibility with Lebanon's Maronite community by incorporating some of its representatives into the Cabinet. The dispute appeared to be resolved by President Assad of Syria's reported assurance to Hariri that pro-Syrian ministers within the Lebanese Cabinet would not seek to undermine the efficiency of the Government. Hariri resumed his duties later in May. At the beginning of September there was a minor reorganization of the Cabinet in which Michel Murr, the Deputy Prime Minister, replaced Beshara Merhej as Minister of the Interior. It was reported that this change represented an

attempt to increase the unity of the Government. In early December Hariri abruptly announced his resignation, a decision which was apparently due to his frustration at perceived attempts within the National Assembly to obstruct Lebanon's economic reconstruction. Hariri withdrew his resignation on 6 December, but not before it had caused a dramatic decline in the value of the Lebanese pound and emphasized the fragility of the recovery process. In May 1995 Hariri again resigned as Prime Minister, but was subsequently persuaded by the President to remain in office and reappointed on 21 May. It was reported that Hariri had resigned this time as a result of a dispute concerning the Constitution, which stipulated that the President should serve a single, six-year term of office after which he was not eligible for re-election. Hariri had reportedly sought the amendment of the Constitution in order to allow President Hrawi to serve a second term of office, which Hariri believed was necessary to guarantee stability in the continued early phase of economic reconstruction. While Hariri favoured discussion of the issue before the expiry of the parliamentary session at the end of May, Nabih Berri, who was opposed to such an amendment, stated that he would use his authority as President of the National Assembly to delay discussion of the issue. Hariri and Berri travelled to Syria, where it was agreed that Hariri would be able to form a new Cabinet, while discussion of the renewal of the presidential mandate would be postponed. Hariri thus formally resigned, and was immediately reappointed; a new Government was named shortly afterwards, and its programme was approved by the National Assembly in June. In October the National Assembly voted to amend Article 49 of the Constitution, thereby extending Hrawi's mandate for a further three years.

In late February 1996 it was announced that elections to the National Assembly would be held in September 1996. On 29 February the Confédération Générale des Travailleurs du Liban (CGTL) organized a general strike in support of its demand for a 76%-increase in public-sector salaries and for a 100%-increase in the minimum wage. In response the Government placed the army in charge of national security for a three-month period and imposed a curfew in the country's principal cities and towns.

'OPERATION GRAPES OF WRATH'

On 11 April 1996 Israeli armed forces began an intense, sustained campaign of air and artillery attacks on what they claimed to be positions occupied by the Hezbollah militia. These included, for the first time since 1982, attacks on the southern suburbs of Beirut. The declared aim of the Israeli campaign (code-named 'Operation Grapes of Wrath') was to achieve the complete cessation of rocket attacks by Hezbollah on settlements in northern Israel. Immediately prior to the Israeli campaign such attacks had caused injuries to some 13 Israeli civilians. Hezbollah claimed, in turn, that the rocket attacks had been provoked by deliberate attacks on Lebanese civilians by Israeli armed forces or their proxies. (An important element of the 1993 cease-fire 'understanding' had been that Hezbollah and Israel had effectively largely confined their conflict to the region of the security zone by agreeing to halt unprovoked attacks on civilian targets.) As a result of the Israeli operation some 400,000 Lebanese were displaced northwards after the Israeli military authorities warned that they would be endangered by the attacks on Hezbollah targets in the south. However, not all of the Israeli air attacks targeted alleged Hezbollah positions: one was made on a power-station in Bselim, a village north of Beirut in the Maronite heartland of the country where Hezbollah had never been established and there was nothing that could be construed as a Hezbollah target.

The Israeli campaign could be regarded as having been determined by the proximity of a general election in Israel and by the need of Israeli Prime Minister Shimon Peres to restore some of the confidence with the electorate which he had lost as a result of suicide bomb attacks perpetrated earlier in the year by Hamas in Israel. It could also be interpreted as an attempt to pressurize Syria into exerting increased control over Hezbollah. On 18 April 1996 an Israeli attack on a UN base at Qana resulted in the death of more than 100 Lebanese refugees who had been sheltering there. The attack (in which four UNIFIL soldiers were also killed) led to an intensification of efforts to find a diplomatic solution to the conflict, especially by the USA—Secretary of State, Warren Christopher, was dispatched to the region—and France. A cease-fire 'understanding' between Israel and Hezbollah took effect on 27 April. As in 1993, this was effectively a compromise confining the conflict to the area of the security zone in southern Lebanon, recognizing both Hezbollah's right to resist Israeli occupation and Israel's right to self-defence; the 'understanding' also envisaged the establishment of an Israel-Lebanon Monitoring Group (ILMG), comprising Israel, Lebanon, Syria, France and the USA, to supervise the cease-fire. According to the Israeli authorities, 'Operation Grapes of Wrath' resulted in no Israeli deaths, while 170–200 Lebanese civilians, in addition to some 50 fighters, were killed. For its part, Hezbollah claimed to have sustained minimal casualties, and its military capacity appeared largely undiminished. A UN report on the killing of Lebanese civilians at Qana, presented to the Security Council in May 1996, concluded that it was 'unlikely' that the shelling of the UNIFIL base had, as claimed by the Israelis, been accidental. The first meeting of the ILMG took place in July; the group was to be based in Cyprus, and would meet in an-Naqoura, near Lebanon's southern border. Prior to the meeting Israel and Hezbollah were reported to have exchanged prisoners and bodies of members of their armed forces for the first time since 1991.

ELECTIONS TO THE NATIONAL ASSEMBLY

In June 1996 the Cabinet approved a new electoral law in preparation for the legislative elections later in the year. Under the new legislation, the Beka'a valley was reunified as a single electoral area, having been divided into three areas for the 1992 legislative elections. In the forthcoming elections the 128 seats of the National Assembly would be divided among the country's five governorates as follows: Beirut, 19; the Beka'a valley, 23; the South and Nabatiyah, 23; the North, 28, and Mount Lebanon, 35.

In mid-July 1996 it was reported that Christian opposition leaders were urging the country's Christian communities to participate in the forthcoming elections, and that there had been relatively few appeals for a boycott such as had occurred in 1992. However, leading figures within the Christian community continued to criticize the new electoral legislation for its division of Mount Lebanon, where Lebanon's Maronite community was concentrated, into five electoral constituencies (thereby effectively dividing the Maronite vote, to the advantage of other, i.e. Druze, communities).

In early August 1996 Lebanon's Constitutional Court decided that the amendments to the electoral law (which had been approved by the National Assembly in July) were unconstitutional. The National Assembly subsequently approved an amendment to the new electoral law which, while it retained the controversial division of Mount Lebanon governorate, stated that this was an exceptional measure to be employed solely for the 1996 election.

In the first round of voting in the legislative elections, which took place in Mount Lebanon governorate on 18 August 1996, supporters of the Hariri Government achieved a comprehensive victory, winning 32 of the 35 seats. Some 189 candidates were reported to have contested the seats and the participation of the electorate was reported to have been relatively high—compared with that in the elections of 1992—at 45%. In the second round of voting, in the North, on 25 August, by contrast, opposition candidates were reported to have enjoyed greater success. In the third round of voting, in Beirut governorate, on 1 September, candidates contesting the elections on the list headed by the Prime Minister secured 14 of the 19 seats. Hariri himself won a larger number of votes than any other candidate contesting the Beirut governorate. However, prominent opponents of the Government, such as former Prime Minister Selim al-Hoss, also took seats in Beirut, where the participation of the electorate, at 30%, was relatively low. There was speculation that the marginalization of Hezbollah (through the creation of stronger links between Hariri and the President of the National Assembly and leader of Amal, Hezbollah's Shi'a rival, Nabih Berri) was taking place at Syria's insistence in order to appease Israel. In the fourth round of voting, in the South and Nabatiyah on 8 September, Hezbollah retained all four of its seats, having entered into an electoral alliance with Amal. Amal and Hezbollah, together with parties counted as their supporters, were reported to have won all of the 23 seats in the

South. (In the previous rounds of voting Hezbollah had lost two of the eight seats it had held in the outgoing National Assembly.) The participation of the electorate in the fourth round of voting was reported to have been 48%.

Prior to the fifth round of voting (in the Beka'a valley), it was reported that Syria had redeployed some 12,000 of its estimated 30,000 troops in Lebanon to the eastern part of the Beka'a valley. There was speculation that the redeployment had been made for fear of Israeli attacks. Under the terms of the Ta'if agreement the redeployment should have taken place before the legislative elections in 1992. In the final round of voting on 16 September 1996, the Amal-Hezbollah alliance won 22 of the governorate's 23 seats. The participation of the electorate, at 52%, was higher than in any of the previous rounds of voting. This brought the average turn-out in the five governorates to 45%, a marked improvement on the 32% average in 1992. (In May 1997 the Constitutional Court annulled the results of voting for four seats, having found evidence of electoral malpractice. By-elections took place in June, at which all but one of the deputies elected in 1996 were returned to office.)

Nabih Berri was re-elected President of the incoming National Assembly when it convened in October 1996. In late October Rafik Hariri was appointed for his third term as Prime Minister. Disputes reportedly ensued between the President, Prime Minister and President of the National Assembly regarding the composition of the Cabinet, and when this was named, in early November, following consultations with Syrian leaders, the distribution of portfolios among the country's various interests remained largely unchanged. The new Government's statement of policy, as delivered to the National Assembly in that month, emphasized a continuation of economic recovery efforts, and made reference to controversial proposals to prohibit public demonstrations, and to close private radio and television stations. The partial implementation of this last measure had already provoked considerable controversy. In September the Government had announced a ban on political broadcasts by about 150 radio and 50 television stations, and ordered the closure of these stations by the end of November; licences to broadcast political items had been granted to only a small number of stations, most of which were owned by prominent political figures, including Hariri and Berri.

In December 1996 there was a spate of attacks against Syrians in Lebanon, including one in which a bus carrying Syrian workers was hit with machine-gun fire in a predominantly Christian area. Consequently, Syrian Vice-President Abd al-Halim Khaddam indirectly accused Christian opposition leaders, hostile to the incumbent Lebanese Government and to Syria's presence in Lebanon, of collaborating with Israel. In late November seven Christians were sentenced by a military court to up to 15 years' imprisonment, convicted of espionage on behalf of Israel.

INTERNAL AFFAIRS

A further death sentence (commuted to life imprisonment) was imposed on Geagea in May 1996, following his conviction for ordering the assassination of another Maronite rival in 1990. In July 1996 he was acquitted of involvement in the Maronite church bombing of February 1994, although he received a 10-year prison sentence for attempting to recruit and arm militiamen after 1991 (when all militias had been banned). In August 1996 Geagea was further charged with orchestrating the death of Prime Minister Rashid Karami in 1987; his trial on this charge began in December 1997 and ended in June 1999 with another sentence of life imprisonment. Meanwhile, in May 1997 Geagea received yet another death sentence, (which was again commuted to life imprisonment), having been convicted of an assassination attempt in 1991 against Michel Murr (now Deputy Prime Minister and Minister of the Interior and of Municipal and Rural Affairs), who was at the time Minister of Defence.

Long-standing tensions between the Government and the Chairman of the CGTL, Elias Abu Rizq, apparently precipitated a split in the labour movement in April 1997. Prior to the CGTL's leadership elections, in that month, the Minister of Labour approved the admission of five new syndicates, each with voting rights, into the organization. Rizq refused to recognize the new members, and consequently two separate leadership polls took place—one attended by the incumbent and his supporters, the other by his rival, Ghneim az-Zoghbi, whose supporters included the five new syndicates. The Government was swift to recognize az-Zoghbi as the official leader of the CGTL. In May Rizq was arrested and detained for eight days, charged with usurping a civil office. The new leadership subsequently demonstrated a less confrontational approach towards the Government. In November, none the less, the CGTL organized a one-day general strike, in support of its demand for public-sector pay increases of as much as 20%, and for a 200% increase in the minimum wage.

In July 1997 Sheikh Sobhi Tufayli, Hezbollah Secretary-General in 1989–91, launched a campaign of civil disobedience (designated 'revolution of the hungry') in the Beka'a valley, in protest against the Government's perceived neglect of the region: Tufayli urged residents to withhold taxes and abstain from paying for utilities, in order to force the Government to reduce income taxes and increase development spending in the Beka'a. In November Tufayli instructed Beka'a residents to deny all ministers access to the region, prompting the Government to order the deployment of troops in the eastern Beka'a valley for a three-month period; it was also announced that residents who had joined the protests would be liable to prosecution by the Military Court. In December Tufayli announced an end to the blockade, after the Government announced new development projects for the Beka'a (allthough he subsequently threatened a resumption of the disobedience campaign if investment was not increased). In January 1998 Hezbollah announced the expulsion of Tufayli from the organization, although the former Secretary-General, who had been critical of Hezbollah's assimilation under its current Secretary-General, Hasan Nasrallah, into 'mainstream' politics, maintained that he represented the 'true' spirit of Hezbollah. At the end of January at least eight people were killed as a result of a confrontation in Ba'albek involving Tufayli and his supporters and local Hezbollah officials, in which the army intervened. In February Tufayli and 19 of his associates were charged with offences including undermining national security, forming an armed group, and causing the deaths of three soldiers; Tufayli, who had evaded capture following the Ba'albek incident, was charged *in absentia*.

The issue of government restrictions on the broadcast media again provoked controversy in the second half of 1997. In September the authorities began to close down unlicensed broadcasters, and two people were killed when security forces opened fire on members of the fundamentalist Tawheed Islami group who were attempting to prevent the closure of a private station in Tripoli. In December the Minister of the Interior prohibited a televised broadcast, from France, by Gen. Michel Awn, on the grounds that such transmissions were undermining national security. (The private satellite company that was to have transmitted the interview was owned by the Minister's brother.) The ban provoked a violent demonstration in Beirut: a number of arrests were made, and it was subsequently announced that 10 people were to be tried by the Military Court for attacking the security forces, while civil charges were to be brought against a further 23 protesters who had defied a ban (imposed in 1993) on public demonstrations. Awn's interview was eventually broadcast in January 1998 by a private terrestrial channel. In that month the Government announced a ban on the broadcast of all news and political programmes by privately-owned satellite channels, after a company owned by prominent Maronite interests transmitted an interview with a National Assembly deputy who was an outspoken critic of the Government. It was stated that, henceforth, the stations in question (including a company owned by Hariri) would be authorized only to transmit news bulletins prepared by the state-controlled Télé-Liban.

EVENTS IN THE SOUTH

Despite the cease-fire 'understanding' of April 1996, clashes continued, and numerous complaints were made to the ILMG by both sides throughout 1996 and 1997. In mid-June 1997 Lebanon welcomed the adoption by the UN General Assembly of a resolution demanding that Israel should pay US $1.7m. in damages for the shelling of the UN base at Qana in April 1996. Tensions were exacerbated in mid-1997 after Hezbollah, which according to the ILMG, had not previously violated the agreement, launched a series of rocket attacks against Israeli targets.

On 8 August it was reported that *Katyusha* rockets were aimed at the Israeli town of Kiryat Shmona in retaliation for Israeli attacks which had caused the deaths of several Lebanese civilians, and an attack on 4 August in which five Hezbollah members were killed. Violence continued to escalate in mid-August, following the deaths of two civilians (the children of a deceased SLA commander) in a bomb explosion in Jezzine, an SLA stronghold north of the security zone. In reprisal, the SLA launched an artillery attack on Sidon, killing at least six civilians. Hezbollah in turn violated the cease-fire 'understanding' with rocket attacks into northern Israel, prompting the Israeli military to direct its most intensive air strikes against presumed Hezbollah and PFLP—GC targets since Operation Grapes of Wrath in April 1996. In late August 1997 four Amal fighters and four members of the Israeli security forces were killed following an ambush by the Israeli military on the edge of the occupied zone; this followed the death of an Amal commander by a car-bomb in central Beirut. In early September 12 members of an élite Israeli commando unit were killed (reportedly the highest Israeli death toll in a single operation since 1985) after Amal fighters and the Lebanese army foiled an operation, apparently against an Amal base, south of Sidon. Later in the month there was intense fighting within the security zone: among those killed was a son of the Hezbollah Secretary-General, Hasan Nasrallah. Reciprocal attacks by Hezbollah and Israeli forces continued into October, with Israel additionally targeting PFLP—GC bases.

Meanwhile, the extent of Israeli casualties as a result of the occupation of southern Lebanon prompted a vocal campaign within Israel for a unilateral withdrawal from the security zone. At the beginning of April 1998 Israel's 'inner' Security Cabinet voted to adopt UN Security Council Resolution 425, but with the stipulation that Lebanon provide guarantees of the security of Israel's northern border. While welcoming the proposed departure from its territory, Lebanon emphasized that Resolution 425 demanded an unconditional withdrawal, and stated that neither would it be able to guarantee Israel's immunity from attack, nor would it be prepared to deploy the Lebanese army in southern Lebanon for this purpose; furthermore, Lebanon could not support the continued presence there of the SLA. Concern was also expressed that a unilateral withdrawal from Lebanon in the absence of a comprehensive Middle East peace settlement might foment regional instability. Israel's demand that Hezbollah be disarmed prior to any Israeli withdrawal was, moreover, unacceptable not only to Lebanon but also to Syria, which regarded its support for the resistance in southern Lebanon as essential leverage in its efforts to secure a parallel Israeli withdrawal from the Golan Heights.

Clashes persisted in southern Lebanon following Israel's 'adoption' of Resolution 425, amid continuing protests of violations of the April 1996 cease-fire 'understanding'. In mid-May 1998 at least 10 people were killed in an Israeli air raid on an al-Fatah training camp in the central Beka'a valley. At the end of the month, following a week of intense fighting in which five Hezbollah fighters and four SLA militiamen had died, two Israeli soldiers were killed in an ambush on their patrol. The deaths of two further Israeli soldiers were reported in late June. An exchange of bodies and prisoners of war proceeded none the less, under an arrangement brokered by the International Committee of the Red Cross: among the remains returned were those of an Israeli naval commander killed in the failed operation against Amal in September 1997, and those of the son of Hezbollah's Secretary-General. In late August 1998 at least nine Israelis were injured when rockets were fired into northern Israel, in retaliation for the death of an Amal commander near Tyre. The attack prompted the Israeli Cabinet to approve a proposal by the Minister of Internal Security that such operations would henceforth be countered with attacks against Lebanon's civilian infrastructure.

In July 1997 the US Secretary of State, Madeleine Albright, announced an end to her country's ban on travel to Lebanon, in response to a commitment by Hariri to increase co-operation in combating terrorism. (The USA had halted flights following the hijacking to Beirut of the TWA flight in 1985, and, in view of fears for the safety within Lebanon of US nationals, had announced in 1987 that US passports were invalid for travel to Lebanon.) In September Albright became the first US Secretary of State to visit Beirut since 1983. The Lebanese Prime Minister met with President Clinton and Albright in Washington, DC, in mid-June 1998; Hariri also held talks with the UN Secretary-General, Kofi Annan, in New York. The USA subsequently ended its ban on the sale of tickets to US citizens travelling to Lebanon, despite a rocket-grenade attack near the US embassy in Beirut, which the Lebanese authorities denounced as an attempt by Israeli sympathizers to undermine security in the capital.

MUNICIPAL ELECTIONS

Voting in Lebanon's first municipal elections since 1963 took place in four rounds, beginning on 24 May 1998. The elections had been due to take place in mid-1997, but had been postponed after Hariri, amid considerable controversy, withdrew draft legislation regulating the elections from parliamentary debate. At the first round (in Mount Lebanon governorate) Hezbollah won convincing victories in Beirut's southern suburbs, despite an attempt by Hariri and Berri to moderate the influence of the opposition by supporting joint lists of candidates; right-wing organizations opposed to the Government, including Dory Chamoun's PNL (which had boycotted the 1992 and 1996 elections), also took control of several councils. At the second round, in North Lebanon on 31 May 1998, efforts failed to achieve an inter-community balance in Tripoli, where a council comprising 23 Muslims and only one Christian was elected; elsewhere in the governorate there was notable success for candidates loyal to Samir Geagea. However, a joint list of candidates supported by Hariri and Berri (again in a stated attempt to reflect the sectarian balance) did win control of the Beirut council at the third round, on 7 June. Candidates endorsed by Hariri won seats in Sidon, while Berri's Amal gained overall control in Tyre. The final round of voting (in the Beka'a valley) took place on 14 June, when Hezbollah candidates were largely defeated by their pro-Syrian secular rivals and by members of the governorate's leading families. Other than in Beirut, the rate of participation by voters at all stages was high (about 70%), and most political groups expressed satisfaction at the conduct and outcome of the polls.

THE ISSUE OF DECONFESSIONALIZATION

In March 1998 Hrawi presented legislation to the Cabinet that would enable marriages to be conducted by civil authorities. Supporters of the President's bill stated that this would facilitate inter-faith marriages and thus erode sectarian divisions. However, the legislation was strongly opposed not only by religious leaders (all marriages were hitherto regulated by the religious authorities), but also by the Prime Minister. After having failed to persuade government members to reject the legislation, Hariri refused to sign the bill, on the grounds that it would offend religious sensibilities and create divisions at a time when it was essential to preserve a consensus in order to facilitate the implementation of the Government's economic programme. The National Assembly President was reported to have lent his support to Hrawi's legislation after the latter sought the establishment of a parliamentary committee to consider the 'deconfessionalization' of public life—a process that, it was generally considered, would be to the advantage of the Shi'ite community.

Rafik Hariri's refusal to submit President Hrawi's proposal to the National Assembly was in itself regarded as exemplifying what many Lebanese now regarded as the need for a reform of the 'confessional' system on which Lebanese politics was based. It was increasingly recognized that, while this system had undoubtedly preserved civil peace since the conclusion of the Ta'if agreement, it had also fostered institutional paralysis and cronyism and thus hindered post-war recovery. Many thus believed that the power-sharing arrangement between the President, Prime Minister and President of the National Assembly could not endure into the next presidency.

ELECTION OF PRESIDENT LAHOUD

The issue of President Hrawi's succession dominated political debate as his mandate neared completion. Although he frequently emphasized his determination to relinquish the presidency upon the expiry of his term of office in November 1998, it was widely speculated that his mandate would again be

extended. Meanwhile, the Commander-in-Chief of the armed forces, Gen. Emile Lahoud, was increasingly suggested as a suitable successor: it was widely believed that Lahoud's strong leadership and firm stance on corruption, in addition to his success in having reconstructed the army following the civil war, were the qualities required of the new President, in order to revive the process of political reform and economic regeneration. Moreover, despite Lahoud's reputation as a nationalist, by early October, when Hrawi and Assad met to discuss the succession, his candidacy had been fully endorsed by Syria, whose influence remained crucial in Lebanon's matters of State. For Lahoud to be appointed, an exceptional amendment was necessary to Article 49 of the Constitution—which requires that senior civil servants, such as Lahoud, resign their post two years prior to seeking political office—and on 13 October the National Assembly was convened, whereupon it overwhelmingly endorsed the constitutional amendment bill. Lahoud was duly elected President on 15 October 1998, with the approval of all 118 National Assembly deputies present at the ballot (which was boycotted by the Druze leader, Walid Joumblatt, and his supporters). Lahoud took office on 24 November; in his inaugural speech to the National Assembly, the new President identified law enforcement and the elimination of corruption in public life as priorities for his administration. At the end of the month it was announced that Hariri had unexpectedly declined an invitation from Lahoud to form a new government. Hitherto, it had been generally assumed that Hariri's continued premiership was essential to the process of economic reconstruction. Hariri attributed his effective resignation from the post that he had held since 1992 to what he regarded as a violation of constitutional procedures by Lahoud in appropriating powers not granted to the presidency by the Ta'if agreement: the agreement specifies that the appointment of a Prime Minister should be made following consultation with deputies, rather than directly by the President, and, while 83 deputies favoured Hariri's retention, 31 deputies had delegated their right to endorse the premier to Lahoud.

The election of Lahoud was widely believed to signal the beginning of a new era in which the President, rather than the Prime Minister, would play the central role in the political hierarchy and act as the principal channel of communication between the Lebanese establishment and the Syrian Presidency.

FORMATION OF A NEW GOVERNMENT

Following consultations between President Lahoud and the National Assembly, at the beginning of December 1998 Selim al-Hoss (who had headed four Governments during the civil war) was named as the new Prime Minister. A new, streamlined 16-member Cabinet was appointed, containing only two ministers from the previous administration, including, notably, Michel Murr, who retained the post of Deputy Prime Minister and Minister of the Interior (and was awarded the additional responsibility of the municipal and rural affairs portfolio). Prominent appointees to the Cabinet included former World Bank consultant, George Corm, as the Minister of Finance, and the Vice-Governor of the central bank, Nasir Saidi, as the Minister of Economy and Trade and of Industry. Moreover, the appointment of several 'reformists', together with the exclusion of representatives of the various 'confessional' blocs and former militia leaders was said to illustrate al-Hoss's declared commitment to a comprehensive programme of reconstruction under his leadership. (Hezbollah declined to participate in the new Government.) Al-Hoss presented his Government's programme—which emphasized reduction of the public debt, anti-corruption measures and economic liberalization, together with a review of legislation governing the broadcast media and accelerated electoral reform—to the National Assembly in mid-December; the legislature approved a motion of confidence in the new administration shortly afterwards. Later in December the newly-promoted Gen. Michel Sulayman was appointed to succeed Lahoud as head of the armed forces. The incoming Government also revoked the five-year ban on the holding of public demonstrations.

One of the first acts of the new administration was to implement an uncompromising initiative to eradicate corruption in office and the inefficient use of public resources—which were estimated to have cost the State some US $4,500m. since 1990; the judiciary was granted powers to investigate a number of political scandals and bring both current and former high-ranking officials to trial. In early January 1999 19 senior civil servants and leading officials were removed from their posts at the initiative of the new Prime Minister and the recommendation of the Civil Service Council; four other officials also lost their jobs in the first stage of an ambitious project to reform a state bureaucracy which numbers more than 230,000. The majority of those dismissed owed their positions to either Hariri, former President Hrawi or former minister Walid Joumblatt, although it was Hariri's supporters who suffered most from the new reforms. For this reason, the former Prime Minister reacted furiously when the Government decided to liquidate his state telecommunications enterprise, Ogero. Meanwhile, in early March the former Minister of Industry and Oil, Chahe Barsoumian, was detained on charges of misappropriation of public funds while in office: it had long been alleged that Barsoumian was involved in the illegal sale of fuel from a state-owned power plant. (Barsoumian's defence lawyers asserted that, as a former deputy, he enjoyed political immunity and should therefore appear before a special parliamentary tribunal rather than be tried by a criminal court.)

In early May 1999 it was announced that eight people had been arrested and had admitted to plotting a series of bomb attacks against Syrian and Lebanese military sites. The saboteurs' arrests followed a grenade attack in Beirut on a building which housed Syrian migrant workers. The men, who were believed to have been acting in protest against the continued 'occupation' of Lebanon by Syrian forces, were also implicated in a similar attack on a Syrian military centre in Hadath in December 1998. In mid-May 1999 a senior official of the al-Fatah faction of the PLO and his wife were killed by unidentified gunmen in Sidon; the attack was presumed to have been perpetrated by members of the PLO opposed to al-Fatah's willingness to negotiate with Israel. A few days later, a car bomb exploded in south Lebanon, seriously wounding another Fatah official; the incident led to fears of a renewed cycle of violence between rival Palestinian factions operating in Lebanon. In early June four judges, who were conducting the trial of two Palestinians in Sidon, were killed (and five bystanders were wounded) when two men opened fire on the court room. The attack followed several instances of violence in the Sidon area, although most had involved rival Palestinian groups rather than state officials. It was unclear whether the gunmen had been attempting to release the defendants to prevent the completion of the trial; one government official claimed that the gunmen's motive appeared to be to 'destabilize the country'. However, in early July a Nasserite deputy, Moustafa Saad, made allegations that 'very senior security services' were behind the assassinations, claiming that one of the judges was about to issue a provisional judicial order against several military personnel and civilians suspected of involvement in an assassination attempt on Saad in 1985.

By mid-June 1999 many observers noted that what had effectively been a three-month 'truce' between the new administration and former Prime Minister Hariri appeared to have ended. The state-run National News Agency (NNA) published a strong verbal assault on Hariri, reportedly originating from anonymous 'ministerial sources', in which the former Prime Minister was accused of corruption, of seeking to undermine the Government in order to facilitate his return to power, and even of collusion with Israel. Al-Hoss, however, vehemently denied that his Government was responsible for the anti-Hariri statement, or, indeed, that it had any prior knowledge of it. Meanwhile, in mid-1999 concerns were expressed at the recent prosecution of several prominent journalists in Lebanon, leading to speculation that the trials had been politically motivated, and accusations that President Lahoud had, in fact, deliberately initiated a purge of journalists loyal to Hariri, thereby imposing new restrictions on the more outspoken elements of the media on the pretext of maintaining a strict level of law and order. The journalists in question included a former board chairman of state-owned television, Fouad Naim, who was accused of the misuse of public funds, and a cameraman for Télé-Liban, who was detained by the security services in late July for allegedly collaborating with Israel.

DEVELOPMENTS IN SOUTHERN LEBANON

In early November 1998 the Lebanese authorities protested to both the UN and EU over the Israeli practice of transporting fertile topsoil from the 'security zone' across the border into Galilee; the cessation of such operations was subsequently confirmed by UNIFIL. In two separate incidents in that month, seven Israeli soldiers were killed as a result of attacks by Hezbollah on Israeli patrols in the occupied zone. There were further serious exchanges in late December, when 13 civilians were injured by Hezbollah rocket attacks in northern Israel, launched in reprisal for an Israeli air strike in southern Lebanon in which eight civilians (including a woman and her six children) were killed. (Israel subsequently issued a formal apology for the incident, and both assaults were condemned by the ILMG.) By the end of 1998, it was becoming increasingly clear that Israel was seeking a way out of its war in Lebanon. The Israeli army's annual report, issued in January 1999, claimed that the number of Hezbollah attacks against Israeli forces in southern Lebanon had risen from 715 in 1997 to around 1,200 in 1998, resulting in the deaths of some 23 soldiers in that year. In early January 1999 Israel's Security Cabinet voted to respond to future Hezbollah offensives by targeting infrastructure in central and northern Lebanon (which would extend the conflict beyond suspected guerrilla bases in the south). At the end of the month it was reported that the Israeli Prime Minister, Binyamin Netanyahu, had confirmed remarks made by Itzhak Mordechai (recently dismissed as Israel's Minister of Defence) that the Israeli Government was involved in secret contacts with Lebanon. The Lebanese authorities, however, denied that any talks were in progress, while Netanyahu and his new defence minister, Moshe Arens, dismissed any likelihood of an imminent withdrawal. Since Netanyahu had lost his precarious parliamentary majority in December 1998 and an Israeli general election was scheduled for 17 May 1999, fears were expressed in Lebanon that Netanyahu, wishing to bolster his flagging popularity, might resort to a bombing campaign in Lebanon in order to force the Lebanese Government to restrict Hezbollah's operations. However, although Israel shelled several targets in the south during January, no major offensive was launched.

Hezbollah intensified its campaign of resistance in the months preceding the Israeli elections. In mid-February 1999 it was reported that Israeli forces had responded by annexing the village of Arnoun, on the edge of the occupied zone. Hostilities escalated (in one incident three Israeli commandos were killed in exchanges with Hezbollah), and at the end of the month hundreds of Lebanese students stormed Arnoun in protest at the annexation, forcing its release from Israeli control. In mid-April, however, Israeli forces reannexed the village. Meanwhile, at the end of February Brig.-Gen. Erez Gerstein, the commander of the Israeli army's liaison unit with the SLA, was killed (together with two other Israeli soldiers and a journalist) in an ambush by Hezbollah in the 'security zone': Gerstein was the most senior member of the Israeli command to be killed in Lebanon since the 1982 occupation. Israel, stunned by the attack, retaliated by launching intensive air attacks on selected Hezbollah targets, while warning of full-scale land, air and sea offensives across Lebanon. In mid-April 1999 Moshe Arens announced that 80% of Israel's army posts in southern Lebanon had been transferred to the SLA and that further transfers were imminent, thus enabling additional Israeli troops to withdraw from their 'security zone'. Nevertheless, there was a sharp escalation of fighting as the date of the Israeli elections approached. On 15 May, two days before the general election and coinciding with the 51st anniversary of Israel's foundation, Hezbollah attacked three outposts manned by SLA militiamen, successfully capturing one outpost at Beit Yahun, over which the guerrillas flew their own flag. An SLA commander was killed in the operation, and Israel responded by launching air strikes and shelling several Hezbollah targets.

SLA WITHDRAWAL FROM JEZZINE

The incoming Israeli Prime Minister, Ehud Barak (who was elected on 17 May 1999), had made campaign pledges to effect an Israeli withdrawal from southern Lebanon by June 2000. After the victory of Barak's Labour-led One Israel coalition, Hezbollah began to concentrate its efforts on forcing Israel out of Lebanon and seeking to dismantle the demoralized SLA. On 31 May 1999 the SLA Commander, Gen. Antoine Lahad, announced that the SLA command had decided to withdraw unilaterally from the enclave of Jezzine, in the north-east of the occupied zone. The withdrawal of SLA forces began on 1 June and was reportedly completed by 3 June, when Lebanese internal security services officially took control of security in the town. (The Lebanese army refused to take control of Jezzine as this would effectively provide Israel with security guarantees in southern Lebanon prior to any comprehensive regional peace deal being concluded between Israel and Syria.) The Lebanese authorities claimed that the withdrawal from Jezzine was a victory for Lebanon's resistance movement led by Hezbollah, which had intensified its operations around the town in recent weeks. During the operation, two SLA soldiers were killed, while some 100 SLA members reportedly surrendered to the Lebanese army. Clashes between Israeli forces and Hezbollah continued throughout the month. On the night of 24 June, as Barak was conducting delicate negotiations to form a new government, Netanyahu, who was still technically the Israeli Prime Minister, ordered a series of air strikes against infrastructure targets in central and southern Lebanon—the heaviest aerial bombardment since 'Operation Grapes of Wrath' in 1996. Barak was reportedly not informed about the strikes, which destroyed two power plants in Beirut, plunging the Lebanese capital into darkness; a telecommunications centre and bridges connecting southern Lebanon with the rest of the country were also destroyed, killing at least eight civilians and injuring as many as 70. The Israeli air strikes followed a cross-border *Katyusha* rocket attack into the northern Israeli town of Kiryat Shmona (which killed two civilians), which appeared to have been in response to an earlier Israeli attack in which some seven civilians were wounded. The Lebanese Prime Minister described the 24 June raids as a 'deliberate, barbaric' act; the air strikes were also harshly condemned by the USA and by EU leaders.

In late June 1999 the outgoing Israeli Government boycotted a meeting of the ILMG, reportedly in protest against Hezbollah's non-compliance with the April understanding. However, the Israeli delegation agreed to resume the meetings in mid-July. At the end of July the US-based organization, Human Rights Watch, published a report which was highly critical of the hundreds of Israeli expulsions of Lebanese civilians from their homes in the 'security zone', which had been carried out since 1985 and which were in violation of the Geneva Convention. The human rights group urged the new Israeli Government to allow the expellees to return to their homes. Meanwhile, in late June 1999 UNIFIL accused Hezbollah of encouraging attacks on UN positions near the occupied zone by using UNIFIL outposts to launch attacks on Israel and the SLA. (An Irish UN soldier had been killed and two others injured at the end of May when an observation post was shelled by the SLA, reportedly in response to Hezbollah attacks carried out from the UNIFIL position.) In mid-August a senior Hezbollah official was killed in a car bomb attack in Sidon; the Lebanese Prime Minister strongly condemned the killing and Hezbollah stated that it held Barak personally responsible, although Israel denied any responsibility for the death. Two Israeli soldiers were subsequently killed in Hezbollah revenge attacks, bringing the total killed thus far in 1999 to 13. In response, Israel carried out air raids on several villages outside the occupied zone.

With the formation of a new Israeli Government in early July 1999, a new mood of cautious optimism was noticeable in both Syria and Lebanon. Barak was widely considered to be much more likely than his predecessor to negotiate a peace agreement incorporating Israel's withdrawal from the Golan Heights and southern Lebanon. A period of intense diplomatic activity on all tracks of the Middle East peace process ensued, accompanied by a scaling down of Hezbollah's military operations (although its leaders continued to press for a continuation of the armed struggle against Israeli occupying forces). Many Lebanese politicians and journalists remained sceptical about Barak's pledge to withdraw from southern Lebanon within one year of his election; in early July al-Hoss stated that Lebanon would wait to judge the new Prime Minister on his actions alone. By early September there were clear signs of Barak's willingness to begin 'final status' negotiations with the Palestinians. On 4 September Barak and the Palestinian National Authority President, Yasser

Arafat, signed a new memorandum, popularly known as 'Wye Two' (see Documents on Palestine, p. 136), in the Egyptian resort of Sharm esh-Sheikh: the agreement details a revised timetable for the outstanding provisions of the original Wye River Memorandum (see chapter on Israel and Documents on Palestine, p. 134), including the conclusion of 'final status' talks within one year of the resumption of talks on these issues (to be initiated no later than 13 September 1999).

RAPPROCHEMENT WITH OTHER ARAB STATES

In late December 1998 Lebanon and Syria signed a bilateral trade agreement in preparation for the customs union between the two countries which entered into effect on 1 January 1999. In mid-September 1999 the recently-invested King Abdullah of Jordan visited Beirut—the first visit to the Lebanese capital by a Jordanian monarch since 1965. During his visit the King promoted trade between Jordan and Lebanon, as well as the idea of closer economic integration between Jordan, Syria and Lebanon, following his country's recent *rapprochement* with Damascus.

Lebanon's relations with Iran also showed signs of improvement during 1999. In May Lebanon's Middle East Airlines (MEA) resumed flights between Beirut and the Iranian capital, Teheran, and in June Iran Air recommenced flights to Beirut (both airlines had suspended flights in 1979). Moreover, in June the Iranian Minister of Foreign Affairs, Kamal Kharrazi, led a high-level delegation to Beirut to discuss bilateral co-operation and recent regional developments; Kharrazi met President Lahoud, several senior Lebanese ministers (as well as the Secretary-General of Hezbollah), and inaugurated a new Persian language centre. At the same time, the President of the Lebanese National Assembly, Nabih Berri, visited Teheran, where he was elected deputy head of the Islamic parliamentary union.

PALESTINIAN REFUGEES IN LEBANON

In January 1999 the Lebanese authorities agreed to upgrade the status of travel documents issued to Palestinians residing in Lebanon, thereby allowing those Palestinians to be treated as holders of Lebanese passports. However, as the prospect of Israel and the PNA entering 'final status' peace negotiations became more real in mid-1999, Palestinian refugees in Lebanon became a key political issue. Prior to a tour of the region by the US Secretary of State, Madeleine Albright, in early September, Lebanese officials increasingly reiterated their rejection of the notion of permanent settlement of Palestinian refugees in Lebanon (According to the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), in mid-1999 365,805 Palestinian refugees were registered in Lebanon). The Lebanese Government had been angered by an announcement made by the new Israeli Prime Minister in July that the refugees would under no circumstances be permitted to return to Israel, and that 'a solution should be found in the countries where they are now living'. President Lahoud responded by demanding that any permanent peace agreement would have to guarantee the right of Palestinians to return home; he subsequently initiated legislation to prevent Palestinian refugees in Lebanon from being granted Lebanese citizenship.

LEBANON AND THE PEACE PROCESS

The Government's decision to send a Lebanese delegation to the opening session of a Middle East peace conference, held in Madrid, Spain, in October 1991, and to participate in subsequent rounds of bilateral negotiations, was criticized in both governmental and non-governmental circles. Critics argued that, since the terms of reference for the conference were UN Security Council Resolutions 242 and 338 only, Lebanon's participation was tantamount to a repudiation of UN Security Council Resolution 425, which demanded a comprehensive withdrawal of all Israeli armed forces from southern Lebanon; and that the implementation of Resolution 425 would henceforth be linked to the implementation of other UN resolutions. They asserted, moreover, that Lebanon had nothing to discuss in bilateral negotiations with Israel, since its relations with that country were regulated by the Armistice agreement of 1949, which remained valid.

Before the opening session of the Middle East peace conference was convened, Lebanon sought assurances from the USA on the following issues: that the implementation of UN Security Council Resolution 425 would not be linked to the implementation of other UN resolutions; that the country would receive support for the establishment of an international fund for Lebanon; that restrictions imposed by the US Government on its citizens with regard to travelling and investing in Lebanon would be removed; that the US Consulate in Beirut would be reopened; that the Lebanese national carrier, Middle East Airlines, should be allowed to resume flights to New York; and that arms paid for by the Government during Amin Gemayel's presidency would be delivered by the USA, and US-based training programmes for Lebanese army officers would be resumed.

With regard to Resolution 425, Lebanon's diplomacy was rewarded by a written US commitment to support its implementation in isolation from the wider Middle East peace process. On the other issues that Lebanon had raised, however, the USA remained non-committal, pending the release of all Western hostages being held in Lebanon. Some observers, too, regarded the US assurance on Resolution 425 to be unclear, since the US Government's letter of intent failed to distinguish between the nature of the Israeli and the Syrian armed presence in Lebanon. Another potential point of contention was the USA's demand that the activities of the Hezbollah militia in southern Lebanon should cease before the peace conference commenced, while the Government insisted that Hezbollah's resistance would continue until the Israeli armed forces had withdrawn from Lebanese territory.

Lebanon reacted cautiously to the Declaration of Principles on Palestinian Self-Rule in the Occupied Territories, signed by Israel and the PLO on 13 September 1993 (for details of the Declaration of Principles, see Documents on Palestine, p. 120). Fears were expressed, for instance, that, if the Declaration of Principles were to provoke violent confrontations between rival Palestinian factions, most of the violence would be likely to occur in Lebanon, endangering the country's reconstruction. There was also concern about the ultimate fate of the estimated 350,000 Palestinian refugees residing in Lebanon.

In late February 1994 Lebanon, together with the other Arab parties, withdrew from the Middle East peace process, following the murder, by a right-wing Jewish extremist, of some 30 Muslim worshippers in a mosque in Hebron on the West Bank. Together with Syria and Jordan, Lebanon agreed to rejoin the peace process in March. As before, any significant progress in negotiations between Lebanon and Israel remained dependent on the conclusion of a peace agreement between Syria and Israel.

Israel's proposal to withdraw from southern Lebanon, as approved by its Security Cabinet in April 1998 (see above), was deemed incompatible with Resolution 425 by Lebanon and Syria, and also by the Arab League, which rejected the proposal on 2 April. Both Lebanon and Syria declared their willingness to resume negotiations with Israel at the point at which they had been interrupted by Israel, but were opposed to completely new talks, as demanded by the Netanyahu administration in Israel.

In early September 1998, reportedly on the direct order of SLA commander Gen. Lahad, a Lebanese former communist activist was, amid considerable publicity, released from detention. Soha Bishara had spent 10 years in custody in the Israeli-occupied 'security zone' for an attempt on Lahad's life. It emerged that Bishara had been offered a visa by France, which had, moreover, offered asylum to Lahad and other senior officers of the SLA, prompting speculation that President Chirac was seeking to increase French influence in the Middle East peace process.

Economy

Revised for this edition by the Editor

INTRODUCTION

Lebanon's role as the Middle East's leading centre for trade and financial services was destroyed by the civil war which erupted in 1975. Attempts to prepare plans for reconstruction were frustrated by recurring outbreaks of violence, culminating in the Israeli invasion of June 1982, which added a new dimension to the country's devastation. Lebanon's gross domestic product (GDP) expanded, in real terms, at an average annual rate of 6%–6.5% between 1964 and 1974. Average income per head in 1974 was estimated at US $1,300, one of the highest levels among developing countries at the time. With the outbreak of the civil war, however, real GDP declined sharply. Expressed in constant 1974 prices, it was estimated to have averaged £L4,800m. per year in 1975–81. The Israeli invasion caused a further sharp decline in GDP, which, again expressed in constant 1974 prices, was estimated at £L3,080m. in 1982. Despite the intervening years of turmoil, Lebanon's GDP, expressed in constant 1974 prices, was estimated to have recovered to £L8,600m. in 1987. However, although the banking sector actually thrived after 1975, the development of alternative Middle East banking and financial centres, particularly in the Persian (Arabian) Gulf region, made it unlikely that an unstable Lebanon would regain its position as the commercial centre of the Arab world. After Amin Gemayel became President in September 1982 and formed a Cabinet comprising technical experts, it was hoped that the process of rehabilitating the country could begin in earnest. Although detailed programmes were prepared, they could not be implemented, owing to the continued civil conflict and to the unwillingness of potential aid donors to commit themselves before the restoration of stability. In the late 1980s, after years of relative resilience to political events, the deterioration of the political situation, combined with a high level of unemployment, major shifts in population, the breakdown of the infrastructure and the perpetual postponement of reconstruction and development projects, plunged the economy to new depths of depression, and it teetered on the verge of collapse. Those who could afford to leave the country made efforts to establish themselves abroad, often in Cyprus, the USA or Australia. For those with no escape route, however, the outlook was grim. Hopes of an economic revival were raised when the civil war effectively ended in 1991. GDP for that year has been estimated at £L4,132,000m., measured at current prices, or £L3,720m. in constant 1974 prices, compared with an estimated £L1,973,000m. in 1990 (£L2,690m. in constant 1974 prices), and £L1,350,000m. in 1989 (£L3,107m. in constant 1974 prices). In 1992, however, the Government failed to narrow the budget deficit and, amid allegations of corruption and incompetence on the part of ministers, the value of the local currency collapsed, leading to a sharp rise in inflation and the resignation of Omar Karami's Government. The legislative elections held in mid-1992 and the subsequent appointment of an entrepreneur, Rafik Hariri, as Prime Minister paved the way for a serious start to economic reconstruction, which was to be based on higher receipts of foreign aid. In 1992 it is estimated that Lebanon's GDP, expressed in current prices, amounted to £L9,499,000m. (£L3,887m. in constant 1974 prices). In 1993 GDP increased to an estimated £L13,122,000m., or £L4,161m. in real (1974) terms. Lebanon's GDP increased by 8.0% in 1994 and by 6.5% in 1995, but growth slowed to 4% in 1996. According to estimates by Banque Audi (a leading commercial bank), GDP increased, in real terms, by 3.5% in 1997, to total $14,957m. at current prices (compared with $13,240m. in 1996). The bank estimates that in 1998 GDP rose by a further 3%, to total $16,350m. at current prices. The IMF estimated that GDP amounted to $11,400m. in 1995, indicating GDP per caput of $3,260 (still considerably lower, in real terms, than in 1974). Lebanon's GDP grew by an annual average of 78.2% in 1980–90 and 8.3% per year in 1990–97, according to World Bank figures.

Lebanon's economic life after the outbreak of the civil war in 1975 was intimately shaped by the violence, which included the Israeli invasions of the south in March 1978 and of the area up to and including Beirut in 1982. According to the Lebanese authorities, of a total of more than 100,000 people killed between 1975 and 1982, up to and including the Israeli invasion, 19,085 people were killed and 30,302 wounded between 4 June and 31 August 1982, and the Council for Development and Reconstruction (CDR—created in 1977 as the main co-ordinator of reconstruction efforts) estimated the cost of material damage at US $1,900m., with damage to housing alone of $670m.

In 1979 the CDR disclosed proposals for a five-year reconstruction programme that envisaged expenditure of £L22,000m. However, following the Israeli invasion, the CDR produced a revised, 10-year programme, covering the period 1982–91, with plans for estimated spending of £L68,000m. The CDR's proposals stressed that the private sector would continue to be the main generator of economic activity, and that credit programmes for the private sector would be strengthened. Of the total planned expenditure, one-quarter was to be raised locally, and the rest from Arab oil states, international lending agencies and foreign governments. As a result of fighting from September 1983, however, and the consequences of the Israeli invasion of the south, the cost of the 10-year plan had to be revised on more than one occasion: in mid-1984 it was estimated by the CDR at more than £L100,000m. (US $17,000m.), compared with the March 1983 revision (£L62,200m. or $13,000m.) of the original 1978 plan (see below); and at the beginning of 1985 the estimated cost had soared to £L530,000m. ($33,000m.), taking account of new damage and the fall in the value of the Lebanese pound. In March 1983 the World Bank published a report on the country's reconstruction needs and detailed a programme which allocated £L4,130m. to telecommunications, £L3,854m. to energy, £L2,941m. to roads, £L2,121m. to urban development and £L2,222m. to education. The Bank also emphasized the need for a separate, $223.5m.-reconstruction project to cover urgent requirements, especially in Greater Beirut. In late 1991 a US engineering company, Bechtel, and a Lebanese consultancy, Dar al-Handasah, completed a government-commissioned plan for the country's emergency reconstruction needs. The $3,000m.-plan covered 133 projects, most of them for completion within three years. Of the total, $819m. was allocated to road schemes, $461.9m. to housing, $320m. to sewerage schemes, $234.9m. to health sector schemes and $200m. to water supply projects. The emergency reconstruction plan, covering 1992 to 1995, formed part of a 10-year programme called Horizon 2000. This originally envisaged public expenditure totalling $11,700m. (at constant prices of 1992). Of the total, $10,200m. was for physical infrastructure, $300m. for investments in institutions and planning and $1,200m. for grant and credit support for private sector enterprises. Horizon 2000 aims to double real GDP per caput in the 1995–2007 period.

Mobilizing resources for investment is one of the greatest challenges facing the Lebanese Government; flows of aid have been far smaller than the amounts pledged. The end of the civil war in early 1991 seemed likely to lead to an increase in foreign aid. In December of that year the World Bank sponsored a meeting of potential donors to Lebanon in Paris, at which the Lebanese Prime Minister, Omar Karami, reportedly requested US $4,450m. for urgent projects in the subsequent three to five years. Following the meeting, it was confirmed that as much as $700m. in concessionary loans and grants had been pledged for the 1992–94 period, albeit mainly in earlier, bilateral meetings.

In late 1991 and early 1992 Lebanon secured a series of other aid commitments, although it was unclear whether these were included in the $700m. figure which had emerged after the Paris donors' meetings. In November 1991, for example, the Kuwait Fund for Arab Economic Development (KFAED) had agreed to make a $36.2m.-loan for power projects, and in the following month the Arab Fund for Economic and Social Development (AFESD) granted a $73m.-loan, also for power schemes. In February 1992 it was announced that Italy had agreed to provide $460m. in loans and grants for electricity, water,

telecommunications, refuse collection, health, agricultural and transport projects. Italy thus emerged as by far the biggest Western contributor to Lebanon's reconstruction.

By mid-1992 the International Fund for Assisting Lebanon (for the establishment of which an agreement had been concluded at the Arab summit meeting held in Baghdad in May 1990) had still not been formed, although in October 1991 the Minister of Foreign Affairs, Faris Bouez, announced that the Fund would have a capital of $2,000m., of which $500m.–$600m. would come from Gulf states and a further $500m. from Japan, France, Germany and Italy. Subsequently, however, Lebanon descended into a deep economic crisis which, the Government claimed, was partly due to the fact that foreign aid had not been arriving at the rate anticipated.

Meanwhile, the Government's hopes that expatriate Lebanese might use some of their substantial funds to invest in their country's reconstruction appeared too optimistic. In 1991 the IMF estimated that between $10,000m. and $15,000m. was held abroad by expatriates. Although there was a significant influx of private funds after the end of the fighting in 1991, these were mainly invested in property rather than in more directly productive areas.

The end of the civil war in 1991 did, nevertheless, allow the launch of some reconstruction work, although this was constrained by shortages of funds. The Italian company Emit, for example, began work on a US $30m.-Italian Government-funded project to improve Beirut's water supply system, and in February 1992 French companies submitted offers for three French Government-funded contracts to repair and upgrade telecommunications and power installations. Local and international contracting firms were meanwhile preparing studies for a range of other schemes. There was a marked increase in the amount of foreign aid granted to Lebanon following the legislative elections which took place in mid-1992, and the appointment of a new Government under Rafik Hariri. In March 1993 the World Bank agreed to grant the country $175m. for the reconstruction of its infrastructure. While this loan encouraged other lenders to grant aid, the World Bank made clear its concern at the Government's continued inability to bring state finances under control. In particular, the Bank was concerned at its failure to reduce the country's budget deficit. During 1993 and 1994 international confidence in Lebanon's new-found stability increased, and was reflected in a major influx of development aid from governments and lending agencies. During a visit to London in early 1994 Prime Minister Hariri said that the country had secured about $1,500m. in foreign funding and that a further $920m. was being negotiated. He commented that the Horizon 2000 programme could be completed in as little as five years if sufficient funding was available. Private capital, mostly from expatriate Lebanese, had also begun to return on a large scale. Within one month of Hariri's appointment as Prime Minister and during the first nine months of 1993 aggregate bank deposits increased by a further $1,500m. In early 1995, however, according to the CDR, the total contribution of funds by donors to the Lebanese economic recovery programme amounted to $1,900m. Of this, $1,500m. was in loans and the remainder in grants. The total was disappointingly close to the one announced by Hariri in early 1994 and suggested that the CDR would be obliged to seek funds from other sources if it was to meet its financing needs. The European Union (EU), the World Bank, Saudi Arabia, Kuwait, the AFESD and Italy had provided most of the funds to date. In 1995 the World Bank, concerned about Lebanon's rapidly growing public debt, suggested that the Government should scale down its commitments under Horizon 2000, identify a core investment programme of no more than $3.5m. for the next two years and increase the role of the private sector in financing infrastructure, public health and education.

The Israeli attack on southern Lebanon and Beirut in April 1996 is estimated to have cost Lebanon some US $500m. in damage and disruption to business, and to have reduced economic growth by up to 2% of GDP. The instability caused by the bombing and by the election of a right-wing Government in Israel in May further depressed investor confidence.

After the cease-fire agreement between Hezbollah and Israel, Prime Minister Hariri sought to establish a consultative committee including the USA and EU member states to assist Lebanon's development. At the same time, he announced that his Government needed to raise US $5,000m. for reconstruction during the period 1997–2001, of which $270m. was to be spent on basic infrastructure; $216m. on social services including health, education and housing; $324m. on public services; $150m. on agriculture and industry; and $40m. on public facilities. This was the first indication that the Government acknowledged its inability to secure the scale of financing originally envisaged for Horizon 2000. The CDR reported that by April 1996 $2,700m. had been received from foreign donors; $2,303m. in loans, and the rest in grants. In December 1996, at the 'Friends of Lebanon' meeting held in Washington and attended by some 30 countries, as well as many international organizations, the Lebanese Government claimed to have received pledges of $3,200m. for the period to the end of 2001. The donations, $1,800m. less than the $5,000m. requested for a total of 31 projects, and the subsequent lack of detail concerning such projects raised speculation about the true extent of funding commitments made at the meeting. Moreover, the collapse of the Middle East peace process further jeopardized Lebanon's plans to re-establish Beirut as a regional services centre.

In late 1997 further doubt was cast on the viability of Lebanon's reconstruction programme when members of the Cabinet refused to endorse a proposal by the Prime Minister that petrol prices should be increased in order to raise $800m. in bonds on international markets to finance domestic social projects. This measure was part of an emergency plan proposed by Hariri to service Lebanon's foreign debt through revenue from taxes and price rises. Increasing concern had been expressed at the Government's financial management, in particular at its failure to reduce the huge, persistent budget deficit (see below). (Some 80% of government expenditure is absorbed by public-sector salaries and debt-servicing, while the collection of revenues is complicated by widespread tax evasion.) It was also noted that growth in Lebanon's GDP remained alarmingly low for a country engaged in infrastructural renewal (and considerably lower than the targeted annual average of 8% under Horizon 2000), and it remained uncertain to what extent the funding commitments that the Government claimed to have secured in December 1996 had been honoured. Increasing public disquiet at the unavailability of funds for welfare spending were reported to have acted as a further catalyst for Hariri's emergency proposals.

In an attempt to restructure Lebanon's public debt (equivalent to 95% of GDP at the end of 1997) and thus reduce the cost of debt-servicing, some US $2,000m. was borrowed on international capital markets between mid-1998 and February 1999. The Government of Selim al-Hoss, which took office in December 1998, proposed further such borrowing in order to increase to about one-third the proportion of public debt denominated in foreign currency. The incoming administration additionally emphasized a programme of administrative reform and reduction of the burdensome pubic-sector payroll, measures to counter corruption in public life and improved fiscal discipline. The elimination of monopolies was identified as a priority, and the private sector promoted as having a fundamental role in job creation: the telecommunications and electricity sectors were notable targets for deregulation, and a reorganization of the water supply network, delayed under the previous Government, was to proceed. The draft budget for 1999 envisaged a shortfall equivalent to 40% of expenditure (the 1998 target of 42% had been only marginally exceeded). It was planned to increase levels of income and corporation tax, as well as taxes on petrol and luxury goods, while reducing the tax burden on those with lower incomes. In February 1999 the World Bank agreed to disburse some $600m. in concessionary loans over a three-year period for reconstruction projects and in budgetary support: such funding was regarded as indicative of the confidence of the international financial community in the new President and Prime Minister. This, in addition to the willingness of the Lebanese to tolerate the austerity that economic adjustment will entail, will be essential to the restoration of international competitiveness and enhanced investment.

POPULATION AND EMPLOYMENT

No proper census has been held in Lebanon since 1932, for fear of upsetting the delicate political balance between the various

sects or confessions. Until 1991 all political and administrative offices were allocated on the basis of the 1932 census, which showed Christians in the majority by six to five over non-Christians. It has been widely recognized for many years, however, that Muslims account for about 60% of the total population. (In 1983 the combined Shi'a and Sunni Muslim population was estimated at 1.95m., while the combined Maronite and Greek Orthodox Christian communities were numbered at 1.15m.) The increase in the Muslim proportion occurred partly because of the higher ratio of Muslims in the Palestinian population in Lebanon and partly because Muslims tended to have a higher birth rate and to emigrate less than Christians. Demographic changes strained to the limit the delicate system of allocating offices on a sectarian basis which was adopted under the National Covenant of 1943. They were finally recognized in the Ta'if agreement of 1989, which stipulated, among other things, that Christians and Muslims should be represented by an equal number of deputies in the National Assembly.

The effects of the civil war on the size, composition and geographical distribution of Lebanon's population have been dramatic. From an estimated 3.1m. inhabitants in 1974 (which made Lebanon one of the most densely populated countries of the Middle East), the total is believed to have declined to 2.7m. in 1979, thereafter rising slightly, to reach about 2.9m. in 1990. By mid-1998, owing to the return of many Lebanese from exile, the population was estimated to have increased to almost 3.2m. According to Ministry of Health figures for 1996, 29.2% of the population were aged 14 or under, 63.8% 15–64 years, and 7% 65 years or over. The labour force was estimated at 1m. in 1996.

The total of those killed or disabled during 1975–76 was estimated by the Lebanese Chamber of Commerce, Industry and Agriculture at 30,000 (although other estimates were as high as 60,000), while thousands more were killed or wounded during the spring and autumn of 1978. By the Lebanese Government's reckoning, a further 19,085 people died as a result of the Israeli invasion of 1982. Each round of violence tended to trigger a fresh wave of population flow, whether within Lebanon, for example from the south into Beirut, or abroad. Those who went abroad often joined relatives or friends already there, for Lebanese emigration was considerable from the 1890s onwards, and by 1960 an estimated 2.5m. Lebanese, or people of Lebanese descent, were living outside the country. The biggest migrant community has traditionally been in the USA, and other favourite settling places were West Africa, Latin America and Australia. Remittances from Lebanese working abroad have traditionally been a staple source of national income. On average, the remittances from the 250,000–300,000 Lebanese workers abroad provided up to 35% of Lebanon's gross national product (GNP). However, returns slumped in 1983, according to US observers, with the usual monthly remittance of US $125m.–$200m. falling to $75m.–$100m., reflecting the recession in the Gulf, where many Lebanese worked, caused by the world oil glut.

A study carried out at the American University of Beirut (AUB) showed the impact of the civil war and its aftermath on the labour force. It stated that in 1974 the non-agricultural labour force was 597,778, and had there been no civil war, the number would have reached 791,354 in 1979, instead of which it was only 426,239. The number of Lebanese working abroad in 1975 was 98,000, but by 1979 the number had risen to 210,000. Of these, 73,400 were in Saudi Arabia, 15,800 in Kuwait, and smaller numbers in other Arab states. Outside the Arab world, 17,300 were in West Africa, 27,000 in Europe, 17,000 in Latin America, 11,600 in North America and 14,000 in Australia. While Lebanon's recovery was hampered by the drain of skills and brains, there was at the same time a pool of unemployed, estimated at more than 200,000 in 1979. The sectors in which there was the greatest contraction of the workforce between 1974 and 1979 were industry (from 138,359 to 86,941), construction (from 46,517 to 18,942) and transport and communications (from 47,113 to 25,256). Many of those not in regular employment were engaged in paramilitary activities, or were part of the thriving 'black' economy. The exodus of thousands of Palestinian and Syrian workers from Lebanon, as a result of the Israeli invasion, caused a shortage of skilled and unskilled labour. The construction industry, in particular, was seriously affected. In 1985 it was estimated that 28% of the active population (18–68 years old) were unemployed, whereas before the civil war the rate had been 5%. Unemployment was estimated at almost 50% in 1987 and at 35% in 1990. According to official estimates, unemployment declined from almost 50% in 1987, to 35% in 1990 and to 18.5% in 1996.

AGRICULTURE

Of the total area of the country, about 52% consists of mountain, swamp or desert, and a further 7% of forest. Only 23% of the area is cultivated, although a further 17% is considered cultivable. In late 1996, however, the Ministry of Agriculture warned that soil erosion and groundwater pollution had reached critical levels and that a reafforestation programme would be launched in order to prevent desertification. The coastal strip enjoys a Mediterranean climate and is exceedingly fertile, producing mainly olives, citrus fruits and bananas. Many of the steep valleys leading up from the coastal plain are carefully terraced and very productive in olives and soft fruit. In the Zahleh and Shtaura regions there are vineyards, while cotton and onions are grown in the hinterland of Tripoli. The main cereal-growing district is the Beka'a, the fertile valley between the Lebanon and the Anti-Lebanon ranges, to the north of which lies the source of the river Orontes. The Litani river also flows southwards through the Beka'a before turning west near Marjayoun to flow into the Mediterranean just north of Tyre. This valley is particularly fertile and cotton is now grown there with some success. Throughout the country the size of the average holding is extremely small and, even so, a small-holding, particularly in the mountains, may be broken up into several fragments some distance apart. The agricultural sector contributed over 9% of GDP between 1972 and 1974, but the proportion declined to about 8.5% during the civil war, when depopulation of the countryside occurred and both public and private investment in agriculture declined. The number of people employed in the agricultural sector fell from 147,724 in 1975 to an estimated 103,400, or 23% of the labour force, in 1985. In 1997 it was estimated that only 3.7% of the total labour force were employed in agriculture. The Hariri Government, which took office in 1992, was criticized for giving the agricultural sector a low priority in its investment plans, but by early 1997 the necessity of agricultural development had been recognized. Indeed, the Government encouraged commercial bank lending to the agricultural sector by subsidizing interest rates. The Ministry of Agriculture's budget was also increased so that it could finance more agricultural research and also supply farmers with basic needs. From October 1997 a list of prohibited agricultural imports was to be introduced to protect local producers. Cereals and products used by the food processing industry would be exempt. According to the World Bank, agriculture (including forestry and fishing) contributed an estimated 12% of GDP in 1997.

In early 1997 the CDR announced a number of projects, including the development of 5,600 ha of farmland by terracing hillslopes, building 300 km of roads in remote rural areas and assisting the Ministry of Agriculture with staff training, to be supported by a US $31m. grant from the World Bank.

Lebanon's wheat crop totalled an estimated 45,000 metric tons in 1997, according to the FAO. Fruit-growing increased substantially from the early 1950s and played an important part in the economy during the civil conflict. A rush to plant apple trees in the 1950s resulted in gluts, followed by a reduction in output in the late 1960s. Production of apples was estimated at 136,000 tons in 1997, while production of grapes was estimated at 350,000 tons in that year. Other significant crops include citrus fruits, sugar beet, potatoes, tomatoes, cucumbers and olives. A small quantity of tobacco is also produced. According to the FAO, agricultural production increased by an annual average of 4.5% in 1990–97, rising by 1.7% in 1996 and by 1.6% in 1997. According to central bank figures, agricultural GDP declined by an average of 17.7% per year in 1986–90, but showed a slight increase, averaging 1.4% per year, in 1990–94.

Agriculture was the sector worst affected by the Israeli attacks in April 1996, when the south and the western Beka'a valley experienced heavy bombardment. It was estimated that almost half of the 1996 tobacco crop was lost, together with 20% of the area's vegetable crop, and that citrus production had also been

badly damaged. Losses to tobacco and vegetable crops were estimated at $26m.

The relative lack of security in Lebanon has allowed two crops to flourish: hemp (*Cannabis sativa*), the source of hashish; and the opium poppy (*Papaver somniferum*), the source of opium and its derivatives, heroin and morphine. Before the civil war, Lebanon's annual hashish production was estimated at 100 tons. Between 1987 and 1989 output averaged 700–900 tons, although production declined to 100 tons per year in 1990–91, owing to inclement weather. In 1988–91 annual opium production averaged 40 tons. More recently, the Government has tried to encourage farmers to substitute other crops for hemp and the opium poppy. As part of this programme, plans were announced in June 1996 to establish a crop substitution office for the north-eastern Ba'albek-Hermel region in the Beka'a valley. In late February 1997 the Government and the UN Development Programme (UNDP) reportedly signed an agreement to implement the second phase of the programme at a cost of US $12m. The Government and the UNDP were to contribute $4m. and $3.8m., respectively, while $2.2m. was to be invested by France, $595,000 by Italy and $690,000 by the EU.

INDUSTRY

Until the time of the first sudden increase in petroleum prices, in 1973–74, the only minerals which were exploited in Lebanon were lignite and some iron ore, smelted in Beirut. There have been hopes of petroleum discoveries for a number of years but, so far, these hopes have been unfulfilled.

Even before expectations of a petroleum discovery were raised, Lebanon was of considerable importance to the petroleum industry. Two of the world's most important oil pipelines cross the country, one from the Kirkuk oil wells in Iraq to Tripoli and the other from Saudi Arabia to Zahrani near Sidon. At each terminal there is an important petroleum refinery. Both the pipelines and the refineries have, however, been the subject of disputes.

Revenues from the Kirkuk–Tripoli pipeline, which was managed by the Iraq Petroleum Company (IPC), were reduced after both Iraq and Syria nationalized IPC assets in their countries on 1 June 1972. After the Iraqi Government and IPC had reached a settlement on the nationalization in 1973, a dispute over the ownership of the IPC refinery in Lebanon followed, as a result of which the Lebanese Government appropriated the refinery and agreed to compensate IPC. In April 1976, however, Iraq suspended pumping, choosing to direct its Kirkuk petroleum to the Persian (Arabian) Gulf instead. Lebanon was thus faced with a loss of around £L30m. per year in royalties as well as the loss of cheap petroleum. During the early part of 1977 the refinery at Tripoli was processing only 5,000 barrels per day (b/d), compared with an average of 36,000 b/d in 1975. By 1978, however, it was operating at around 75% of capacity on petroleum which reached Tripoli by sea or from nearby Zahrani. Iraq finally resumed pumping to Syria through the former IPC pipeline in early 1979, but the transfer of Kirkuk crude petroleum via Lebanon remained dependent on the conclusion of a new bilateral transit and supply agreement. It was reported in March 1981 that Iraq had agreed to start re-pumping after a break of five years. The initial rate of delivery was to be about 200,000 b/d, doubling after two months. Of this, 35,000 b/d were to be used domestically, with the remainder exported. At the time of the agreement, the Tripoli refinery was using 26,000 b/d of Saudi Arabian crude petroleum, which was pumped to Zahrani and then transported to Tripoli by tanker.

On 24 December 1981 Iraqi petroleum started to flow through the pipeline, but within days it was damaged by a bomb blast. Although the pipeline was repaired, its vulnerability to sabotage was underlined when, in March 1982, it was blown up again. Politics intervened when, on 10 April, the trans-Syria pipeline was closed and Iraqi deliveries to Tripoli were suspended. The refinery subsequently processed Iraqi petroleum which had been transported via Turkey. The fighting between PLO loyalists and anti-Arafat factions in Tripoli in December 1983 caused damage to the refinery which was estimated at US $120m., while $60m.-worth of petroleum products were destroyed when 29 of the refinery's 36 major tanks, and 16 of its smaller tanks, were hit. The refinery began to receive shipments of Iraqi oil again in April 1984, when repairs were completed. Supplies of Iraqi oil ceased in 1990, as a result of the economic sanctions imposed on Iraq. In October 1990 Syria agreed to supply Lebanon with 20,000 b/d of light crude petroleum, to be delivered through the pipeline linking Tripoli with the Syrian oil terminal at Banias. In early 1991, after the completion of repairs and modifications, the Tripoli refinery resumed operations.

The Zahrani refinery was, until 1986, operated by the Mediterranean Refinery Co (Medreco), owned jointly by Caltex and Mobil. Mobil, Caltex's two parent firms (Texaco and Standard Oil of California) and Exxon also own the Trans-Arabian Pipeline Co (Tapline), which formerly operated the Saudi-Lebanese pipeline. Tapline suspended its pumping operations in early February 1975 because oil tankers found it cheaper to load petroleum directly from the Saudi terminal at Ras Tanura in the Gulf. This suspension cost Lebanon more than £L20m. in royalties. The company also demanded that the Lebanese Government pay for the higher cost of Saudi petroleum (previously supplied to the Zahrani refinery at a price of US $5 per barrel), claiming that it was owed $100m. in back payments. A settlement was reached in August 1975, but when the refinery, which had been out of action for much of 1976, recommenced operations at the end of November 1976, the question of back payments arose again. Accumulated debts for 1975/76 were estimated at $120m., and in August 1977 it was finally agreed that these would be settled by the Saudi Arabian Government. However, it was not until early 1979, in the wake of the Iranian Revolution and the decline in Iran's exports of petroleum, that Tapline resumed operations on its former scale.

In early August 1981 Tapline suspended all deliveries of crude petroleum to the Zahrani refinery because of non-payment of debts, but a few weeks later Saudi Arabia announced that it would pay most of Lebanon's petroleum bill. The Israeli invasion of Lebanon in 1982 presented further complications. The Zahrani refinery was out of action from June to November, after it had been bombed. Tapline's oil pipeline passed through Israeli-held territory, so Saudi crude petroleum was delivered by tanker. In February 1982 Tapline announced that it had lost some US $350m. on its Lebanese operations since 1975, and that it had decided to close the damaged pipeline, which, for political and security reasons, would not be repaired. In September 1983 Tapline gave 90 days' notice that it was to stop operating in Lebanon and Syria and in early 1984 the Government took control of Tapline's installations. In 1986 Medreco ceased operations and the Government took control of the Zahrani refinery. In 1991, with the civil war apparently concluded, the Government announced its intention to bring the Zahrani refinery back into operation. Nevertheless, by late 1996 plans to renovate the Zahrani refinery and the refinery near Tripoli appeared to have been abandoned when it was announced that preliminary studies had been completed for an oil refinery in Syria to supply Lebanon with petroleum products. In August 1998, however, a joint French–Iranian proposal that could reactivate the Tripoli refinery, out of service since 1993, was announced. Under the plan, the Iranian Government would finance a feasibility study, and, if rehabilitation was recommended, French contractors would undertake the work.

The civil war had a dramatic impact on Lebanese industry. Between 1975 and 1982, up to and including the Israeli invasion, some 400 industrial units were destroyed or seriously damaged, according to the CDR. During their invasion, Israeli forces were said to have destroyed 25 of the country's major industrial units and to have damaged many smaller enterprises. Damage to the textile industry was particularly severe. Before the invasion, fewer than 50% of the 1,200 textile factories which were operating before 1975 remained active, and during the invasion a further 70 enterprises were completely destroyed and more than 150 others damaged.

The Chouf war of autumn 1983 cost local industry an estimated £L10m. per day; 140 factories, employing 25,000 workers, in the Choueifat-Kfarchima district of southern Beirut were forced to close. The Israeli occupation of southern Lebanon also posed serious problems for industrialists, who had to compete with a large influx of Israeli goods entering the country. This not only meant that local goods were competing with cheaper Israeli items, but it also led to problems between Lebanon and its Arab neighbours, who suspected that Israeli goods were being exported to them via Lebanon and imposed an embargo

on some Lebanese products. Other factors which hampered industrial development were the shortage of skilled workers (owing to emigration to the Gulf), ageing machinery, and the weak and damaged infrastructure.

Much of Lebanon's remaining industry is located in the Christian Zone, which until 1989 was relatively free of widespread violence. During the period 14 March–10 May 1989, however, 170 Lebanese factories were damaged in Gen. Awn's 'war of liberation' against Syria, 20 of them being completely destroyed. Factories sustained further damage during inter-Christian fighting in early 1990.

Industry in Lebanon traditionally consisted of small-scale operations run by individuals who employed a handful of people. Food processing, yarn and textile firms accounted for about 44% of industrial output and furniture and woodworking factories for about 29%. Mechanical industries accounted for only about 7% of total production and the remainder was contributed by the cement, ceramics, pharmaceutical and plastic industries. With the exception of petroleum companies, the largest industrial employers prior to the civil conflict were probably the food-processing industries, followed by the well-developed textile industries.

The civil conflict prevented any sustained revival of industry during the 1980s. The value of industrial exports in 1980 was 15% higher than in 1979, and in 1981 there was a further increase, of 25%, to £L2,290m. However, these increases were mainly due to the depreciation of the Lebanese pound. The major buyers of Lebanese industrial exports in 1981 were Iraq, Syria, Saudi Arabia and Jordan, which together accounted for 86% of all sales. The invasion of Lebanon by Israel in 1982 caused the value of industrial exports to decline to £L1,924m. in 1982 and to £L1,296.4m. in 1983. In 1984 their value fell to £L984m. Assisted by the rapid depreciation in the value of the Lebanese pound, the value of industrial exports subsequently increased sharply: to US $372m. in 1985, $438m. in 1986 and $690m. in 1987. In 1988, however, it amounted to only $274m., and in 1989—a year in which factories in east Beirut sustained particularly heavy damage—only $174m. The 1990 figure was $127m. With the end of the fighting in 1991, the value of industrial exports recovered to $206m.; the 1992 figure was $210m. The Israeli occupation of the south, the cumulative effect of years of violence, the recession in the Gulf, which was Lebanon's principal export market, and competition from cheap, smuggled goods, all contributed to the decline of industry. The new industrial zone around Sidon, which developed after 1976, was effectively throttled by the Israeli presence and the influx of subsidized Israeli goods. Lebanon's industrial sector was estimated to be operating at only 40% of capacity in early 1986, with textiles, leather goods and finished wood products accounting for the bulk of production, while the labour force employed in manufacturing industry had declined to an estimated 45,000 in 1985. The Hariri Government, which took office in 1992, was criticized both for giving the industrial sector a low priority in its investment plans and for implementing monetary policies which prevented the expansion of industrial production. According to the World Bank, the industrial sector (including manufacturing, construction and power) contributed an estimated 27% of GDP in 1997. Manufacturing contributed 17% of GDP in that year.

The lack of adequate sources of power hindered industrial development in the 1960s, but Lebanon gradually achieved the position of having excess capacity. In 1972 it began to supply power through a 100-kWh line to southern Syria, and in March 1976 the two countries agreed on the exchange of power through a similar line between Tripoli and Tartous. Work on implementing the power link-up project began in 1977 as part of moves to repair the country's badly damaged electricity network. A seven-year electrification scheme, costing some £L1,260m., was drafted, which was expected to be financed by the World Bank and the AFESD. An important feature of the plan was the upgrading of the Zouk power station, and in 1980 the European Investment Bank (EIB) lent around US $4.3m. for two 125-MW generators for the station. In early 1982 the state-owned Electricité du Liban (EDL) obtained a further loan of 7m. ECUs to help to finance the expansion of the Zouk power station. Generating capacity in 1990 totalled 515 MW, with thermal stations accounting for 465 MW and hydroelectric plants for 50 MW. By comparison, a capacity of 1,200 MW was required to satisfy the peak level of 1991 demand. In early 1991 officials from EDL outlined plans for a series of projects to expand existing power facilities and establish new ones. The projects included the construction of a 200-MW gas turbine station in the Beka'a valley; the installation of a 200-MW gas turbine and a 100-MW steam turbine at Zahrani; the addition of a 150–180-MW steam turbine at the Zouk station; the installation of 100-MW and 150-MW steam turbines at the Jiyyeh power station; the construction of a 100-MW steam turbine at the Harisha power station; and the construction of a new power station, with a 250-MW steam turbine, at Batroun. According to EDL, Lebanon required an additional 2,400 MW of capacity in order to satisfy projected demand in the 1990s. Owing to the decline in the value of the local currency and the ending of subsidies on the prices of fuel oil and electricity to industry, raw materials and energy now cost more, and these higher costs will hamper any industrial recovery. In 1993 the Italian firm Ansaldo Energia, South Korea's Hyundai Corpn and two French firms, Bouygues and Clemessy, won contracts to repair and rehabilitate the electricity sector. The work is being financed by the AFESD, the KFAED and the World Bank. Also in 1993 Electricité de France was appointed to prepare tender documents for the construction of two 450-MW combined-cycle power stations, one in the south, at Zahrani (near Sidon), the other in the north, at Beddawi (near Tripoli). In 1996 it was reported that a number of local banks had agreed to lend the Government $60m. towards the cost of the two stations, which were being built by an Italian and German consortium, at a projected total cost of $536m. Construction of the Beddawi and Zahrani plants was completed in 1998, although by mid-1999 both had a capacity of only 200 MW, largely owing to inadequate transmission. Another two 77-MW gas turbine stations were completed at Tyre and Ba'albek in June 1996. The Government has also begun a $300m. plan to expand and upgrade the electricity grid, including the construction of several substations linked to the four new power plants, in order to fulfil demand until 2005. By the beginning of 1997 international banks and financial institutions, including the EIB, had pledged some $184m. towards the cost of expanding the country's electricity grid. In early 1997 EDL launched a $100m. Eurobond to provide additional funds for the expansion programme.

Despite Israeli bombing in April 1996 which damaged two electricity transformer stations in Greater Beirut, electricity rationing was avoided and repairs were completed by July with French assistance, at an estimated cost of $30m. Following the rehabilitation of many power stations, production by EDL increased by almost 50% in 1996, by 11.6% in 1997 and by 7.7% in 1998. Nevertheless, in early 1997 it was reported that 15% of all power generated was being lost, not only because equipment was out-dated, but also because of damage to the electricity network during the many years of civil conflict. The privatization of EDL's consumer billing and collection service was also being considered because the company itself was able to collect only some 40% of revenues owed to it. Meanwhile, it was reported that Lebanon had joined a project to connect the electricity grids of Jordan, Iraq, Egypt, Turkey and Syria, being partly financed by the AFESD. In June 1999 Israeli bombing again damaged Beirut's electricity infrastructure; attacks on two power stations at Bsalim and Jamhour resulted in damage worth an estimated $23m. (and therefore significantly greater than that of 1996), while electricity rationing was expected to continue into the autumn.

In 1998 it was reported that, in order to reduce the cost of fuel imports, the Government was considering a plan to convert the power stations at Beddawi and Zahrani to using natural gas, rather than fuel oil, for the generation of electricity. One potential means of supplying the new fuel is a project, with an estimated cost of $200m., to pipe gas to the Lebanese plants from the Homs natural gas refinery in Syria. Plans for the construction of an offshore pipeline—capable of importing 6m.–9m. cu m of natural gas per day from Syria—were under consideration in 1999. A second stage would provide Syrian gas to the Lebanese power stations at Harisha and Jiyyeh.

EXTERNAL TRADE AND BALANCE OF PAYMENTS

Reflecting the post-war increase in reconstruction activity, the value of Lebanon's merchandise exports (valued f.o.b. at the official dollar rate) increased from US $455m. in 1990 to $546m. in 1991, while imports (valued f.o.b. at the customs dollar rate) rose from $2,528m. in 1990 to $3,748m. in 1991. The trade deficit thus increased from $2,073m. in 1990 to $3,202m. in 1991. Net transactions in services, other income and private unrequited transfers (including workers' remittances from abroad) produced a surplus of $303m. in 1991, resulting in a deficit on the current account of the balance of payments (excluding official transfers) of $2,899m. in that year. However, there was a surplus on the capital account (including net errors and omissions) of $3,973m. in 1991, leaving the overall balance in surplus by $1,074m. In 1992 there was a trade deficit of $3,185m. (exports $601m., imports $3,786m.) and a current account deficit of $2,798m. The capital account was in surplus by $2,851m., resulting in an overall surplus of $53m. Meanwhile, the customs dollar rate, used to calculate to value of imports in terms of US currency, was adjusted in July 1992 to $1 = £L800 (having been $1 = £L200 since the beginning of the year). The new rate remained in operation until July 1995, although throughout this period the free market exchange rate was about £L1,700 per US dollar.

In 1993 Lebanon's expenditure on imports surged, reflecting the gathering pace of reconstruction, but, as in previous years, the current account deficit was more than offset by capital inflows. The overall balance of payments (defined as net change in foreign assets of the banking system) was US $1,169m. in surplus in 1993, although there was a trade deficit of $4,222m. (exports $686m., imports $4,908m.) in that year. In 1994 the trade deficit was $4,798m. (exports $743m., imports $5,541m.), while the deficit on the current account was $4,103m., compared with $3,806m. in 1993. However, net capital inflows in 1994 were $5,234m., leaving an overall surplus of $1,131m. The c.i.f. value of total Lebanese imports in that year was $5,990m. On that basis, Lebanon's principal suppliers of goods in 1994 were Italy ($799m.), Germany ($598m.), the USA ($555m.) and France ($534m.). In 1995 the deficit in Lebanon's balance of trade increased to $5,770m. (exports $985m., imports $6,755m.) although the overall balance of payments recorded a surplus of $256m., owing to a surplus of $872m. on other current transactions and the inflow of $5,154m. in net capital receipts. In 1995 Lebanon's total export earnings included $161m. from re-exports (net of transit values). Of total domestic exports ($824m.) in that year, 28.7% were consigned to the United Arab Emirates (UAE), compared with 18% in 1994, while Italy and the USA were the principal suppliers of goods in 1995, accounting for 13% and 11%, respectively, of total imports (about $7,300m. on a c.i.f. basis). In July 1995 the use of differential exchange rates for valuing imports and exports was discontinued. Since that date the value of all external trade in US currency has been calculated on the basis of the official dollar rate (the previous month's average market rate).

The trade deficit remained high in 1996, with the value of total imports (on a c.i.f. basis) rising by 3.5%, to $7,559m., and exports increasing to $1,018m. Some 54% of all imports came from Western Europe, 11.9% from North America and only 6.3% from the Arab world. The principal supplying countries in 1996 were Italy ($915m. or 12.1% of total imports), the USA ($824m. or 10.9%), Germany ($644m. or 8.5%) and France ($588m. or 7.8%). Machinery (including electrical) and transport equipment accounted for almost one-third of the value of total imports. Government measures to protect domestic industry resulted in a slight fall in the value of textile imports. Almost two-thirds of exports were to the Arab world and just under 20% to Western Europe. In 1996, as in the previous year, the UAE was the main destination for Lebanese exports (accounting for $238.4m. or 23.4% of the total), followed by Saudi Arabia ($139.0m. or 13.7%). Pulp, paper and paper products accounted for almost one-third of the value of exports. Once again the trade deficit was offset by an increase in capital inflows, estimated at $6,500m., giving an overall balance-of-payments surplus of $786m. In late 1996 it was reported that some progress had been made in negotiations to establish an association agreement between Lebanon and the EU, involving access to European markets for Lebanese agricultural products. In 1997 Lebanon recorded another substantial trade deficit, with total imports (c.i.f.) valued at $7,456.6m. and exports declining to $642.3m. The principal suppliers of imports in that year were Italy ($987m. or 13.2%), France ($709m. or 9.5%), the USA ($685m. or 9.2%), Germany ($648m. or 8.7%) and Switzerland ($493m. or 6.6%), while the principal markets for Lebanese exports were Saudi Arabia ($96.9m. or 15.1%), the UAE ($57.7m. or 9.0%), France ($45.9m. or 7.2%), the USA ($38.6m. or 6.0%) and Syria ($37.6m. or 5.9%). From October 1997 the Government prohibited imports of certain foodstuffs in order to encourage local farmers and to reduce imports, which cost the country some $1,400m. annually. In 1997, overall, Lebanon recorded a surplus of $419.8m. on the balance of payments. In February 1998 it was reported that Lebanon and Syria had agreed gradually to abolish customs tariffs, reducing them by 25% annually from 1999. In 1998 there was a trade deficit of $6,344m. (exports $716m., imports $7,060m.), although the overall balance of payments was $488m. in surplus. Again in 1998, the principal supplying countries were Italy ($812m. or 11.5%), France ($687m. or 9.7%), the USA ($659m. or 9.3%), Germany ($613m. or 8.7%) and Switzerland ($447m. or 6.3%), while the main destinations for Lebanese exports were Saudi Arabia ($87.0m. or 12.2%), the UAE ($70.9m. or 9.9%), France ($62.6m. or 8.8%), the USA ($47.2m. or 6.6%) and Syria ($46.7m. or 6.5%). The principal exports in 1998 were food products, chemical products, jewellery, electrical equipment, textiles and metal manufactures. The principal imports in 1998 were food products, electrical equipment, vehicles, chemical products, mineral products and metal manufactures. In the first six months of 1999 the trade deficit was about $2,680m., a decline of 15.2% in comparison with January–June 1998.

In July 1998 it was reported that the Lebanese Government was shortly to apply for observer status at the World Trade Organization.

CURRENCY AND FINANCE

The importance of Beirut as the commercial and financial centre of the Middle East derived, in the 1950s and onwards, from the almost complete absence of restrictions on the free movement of goods and capital, and from the transference of the Middle Eastern headquarters of many foreign concerns from Cairo to Beirut after 1952. Moreover, large sums were earned in the Gulf by Arabs who sought to invest locally, especially in property, and for them Beirut was a convenient centre. Its dominance was further strengthened later by the massive increases in surplus oil revenue earned by the producing states, much of which was channelled through Lebanon.

The growing competitiveness of financial centres in Europe and the Gulf region had, even before the disruption caused by the civil conflict, led the Government to seek ways of enhancing Beirut's attractions as a banking centre. A banking free-zone law which took effect in April 1977, exempted non-residents' foreign currency accounts from taxes on interest earned, from payment of a deposit guarantee tax and from reserve requirements. Moreover, in June 1977 the Government decided to lift the moratorium on new bank licences which had been imposed in the wake of the collapse of the Intra Bank in 1966. In 1977 a new specialized bank, the Banque de l'Habitat, was set up and in 1978 two new commercial banks, the International Commerce Bank and Universal Bank, were granted licences bringing the total number of banks operating in Lebanon to 81 as of mid-1979. In April 1980 the American Express International Banking Corpn became the first foreign bank to open a new branch in Beirut since 1975. In the spring of 1983 the central bank raised the minimum capital requirement for new banks from £L50m. to £L75m., and that for new financial institutions from £L5m. to £L15m. This was the third such increase since 1977.

Lebanon's banking system withstood the years of conflict surprisingly well, but by 1985 the strains were evident: non-performing loans accounted for 45% of banks' total loan portfolios, compared with 25% in 1984; costs were rising, while revenues were static or falling; and interest rates were extremely high, as a result of fierce competition in a depressed market. In addition, robberies were a serious problem. In 1985 50 banks were robbed, with losses of £L4,000m. The number of banks operating in Lebanon rose to 88 in 1986. The balance

sheet of Beirut's commercial banks for 1985 and 1986 looked impressive, but it had to be interpreted with care. Total assets/liabilities amounted to £L455,614m. in 1986, a rise of 181% compared with 1985 (during which a rise of 61.9%, compared with 1984, had been recorded). Loans to the private sector rose by 120.3%, and treasury bill holdings by 32.8%. Loans to non-resident banks rose by 446.4%, private-sector deposits by 184.2%, and liabilities to non-resident banks rose by 281.7% compared with 1985. Even more impressive apparent growth was recorded between the first quarter of 1986 and the first quarter of 1987. Total assets/liabilities rose by 229.3%. Loans to the private sector increased by 158%, and treasury bill holdings by 82.6%. Loans to non-resident banks rose by 452.9%, private sector deposits by 22.7% and liabilities to non-resident banks by 389.9%. However, the rise in private-sector deposits was almost entirely attributable to the collapse in the value of the Lebanese pound, as almost all such deposits were in foreign currencies. The rise in loans to the private sector were more indicative of the high rate of inflation than of any general economic recovery. Loans to non-residents and non-resident banks had risen (hugely) because these advances were almost all in foreign currencies. The expansion in treasury bill holdings merely reflected the Government's increasing use of such bills to finance its growing deficits.

The remarkable resistance of the Lebanese pound to the pressures of the civil conflict was chiefly due to the absence of restrictions on withdrawals or foreign exchange transactions, to an increase in the supply of foreign currencies to finance the conflict, and to the pound's strong gold backing and the flow of remittances safeguarding the balance of payments. Shortly before the war, in October 1974, the pound had reached a record high value, standing at £L2.22 against the US dollar. It lost just over 30% of this value during the war in 1975–76, but quickly recovered to £L3 after the cease-fire. Although the Lebanese pound declined in value in the two months following the beginning of the Israeli invasion in June 1982, from £L5.00 to the US dollar to £L5.20, it had strengthened to £L4.11 to the dollar by mid-November. Although officially valued at US $389.4m. in March 1982, the 9.22m. ounces of gold that were held by the central bank were worth some $4,000m. at mid-1987 market prices. In view of the legendary strength of the Lebanese pound, the rapid erosion of its value from late 1983 onwards was a considerable psychological blow. In July 1983 the exchange rate stood at $1 = £L4.15; by late June 1984 it had dropped below $1 = £L6, and by March 1985 it stood at $1 = £L20.00, at that time its lowest level ever. Excluding gold, Lebanon's official reserves declined from $1,903m. to $672m. in 1984. They recovered to $1,074m. at the end of 1985, owing to new import controls and a net inflow of capital, but fell to $488m. at the end of 1986, as imports began to rise again, and totalled only $368m. at the end of 1987. The appreciation of the Lebanese pound during much of 1988 prompted a recovery. By the end of 1988 reserves stood at $978m. They exceeded $1,000m. for most of the first three quarters of 1989, but by the end of the year they had declined to $938m. After further falls in the value of the Lebanese pound, the value of reserves was only $659.9m. by the end of 1990. During 1991 the stabilization of the exchange rate, the growth in exports and an influx of private funds from expatriate Lebanese combined to produce an increase in reserves to $1,276m. by the end of the year. At the end of November 1992 the value of reserves was $1,588m. During 1993 reserves continued to expand, to reach $1,900m. In April 1994 foreign reserves were $1,300m. but had increased again, to $5,885.6m., at the end of December 1996. The central bank's gross reserves of foreign exchange totalled $5,932m. at 31 December 1997, rising to $6,508m. at the end of December 1998.

By July 1986 the Lebanese pound had fallen to $1 = £L38, or by about 50% since the end of 1985. This included an official devaluation of the pound by 16.35% against the US dollar in March 1986. The exchange rate fell below $1 = £L100 for the first time in February 1987 and continued to fall, reaching $1 = £L455 at the end of 1987 and $1 = £L530 at the end of 1988, following the failure to elect a new President in September of that year. During much of 1989 the exchange rate was stable, at about $1 = £L510, despite the violence of Gen. Awn's 'war of liberation' against Syria. With Awn's acceptance of the Arab League peace plan in September, however, the pound strengthened, to $1 = £L460, and it appreciated further, to $1 = £L410, after the approval of the Ta'if agreement on 23 October and the election of President Mouawad. This was the highest level that the pound had reached since the spring of 1988. By mid-January 1990, following President Mouawad's assassination, the pound had declined again, to $1 = £L544. The continuing political deadlock between east and west Beirut; the inter-Christian fighting in east Beirut; and the impact of the crisis in the Gulf region from August all caused further deterioration in the value of the Lebanese pound. In September the average rate of exchange was $1 = £L1,080. Following the defeat of Gen. Awn in October, the reunification of Beirut and the disbandment of the militias, the Lebanese pound gained in strength. In January and February 1991 the exchange rate averaged $1 = £L1,000, but by the end of the year it had strengthened to about $1 = £L880. On 19 February 1992, however, the central bank resolved to cease its currency support operations, prompting a dramatic slide in the value of the Lebanese pound. By 5 May the exchange rate was $1 = £L1,600. The central bank claimed that it had withdrawn its support from the pound because the currency had become overvalued. It was widely believed, however, that the real reason was the central bank's concern over the Government's inability to reduce its deficit (see below). Rising tensions in the prelude to the legislative elections held in mid-1992, and the implications of the Maronite boycott of the elections, gave rise to a further decline in the value of the currency. On 21 July 1992 the exchange rate was $1 = £L2,050, and on 7 September it was almost $1 = £L2,800. Post-electoral stability and the establishment of the Government of Rafik Hariri caused the currency to strengthen, and in 1993 the exchange rate averaged $1 = £L1,741. In 1994 the average exchange rate appreciated to $1 = £L1,680. During the Israeli attacks on southern Lebanon and Beirut in April 1996 the exchange rate of the Lebanese pound to the US dollar remained stable, and moves by the central bank to support the national currency proved largely unnecessary. During 1996 the exchange rate averaged $1 = £L1,571, some 3% higher than the average of $1 = £L1,621 recorded in 1995. In early 1997 the central bank announced that it would intervene in the exchange rate only when there was a rise or fall of £L10 against the dollar. The Lebanese pound continued to appreciate against the US dollar in 1997, when an average rate of $1 = £L1,539.5—some 2% higher than the average for 1996—was recorded. The currency strengthened further in 1998, with the exchange rate moving from $1 =£L1,527.0 at the beginning of the year to $1 = £L1,508.0 at the end of December. The latter rate was maintained throughout the first half of 1999.

Government budget deficits have risen in recent years (see Public Finance and Development, below). The 1987 deficit was projected at £L65,000m.; that for 1988 at £L60,300m.; that for 1989 at £L89,500m.; and that for 1990 at £L387,000m. The Government accordingly borrowed heavily from the central bank and the commercial banks. At the end of May 1984 the public debt amounted to £L35,529m. ($2,250m.). By the end of 1987 it had risen to £L194,100m., of which £L127,200m. represented outstanding treasury bills. At 31 October 1988 the debt totalled £L504,500m., but one year later it had risen to £L755,000m. By November 1990 it had reached £L1,442,000m., and by March 1992 it was reportedly £L2,800,000m. Net total debt at the end of 1993 reached £L4,993,900m. Debt-servicing became a heavy burden on state finances, with interest payments totalling £L784,000m. in 1993 and £L1,488,000m. in 1994. The public debt continued to increase, despite warnings from independent financial organizations, and reached £L16,238,700m. by the end of 1996, equivalent to about 79% of that year's GDP. By the end of 1997 Lebanon's net public debt had increased to £L22,094,400m., and by the end of 1998 it amounted to £L25,826,300m. During the first five months of 1999 the public debt increased by 4.9%, compared with an increase of 6.4% in the corresponding period of 1998. In April 1998 the Government converted part of the debt into foreign currency by borrowing on the Eurodollar market, in order to reduce debt-servicing obligations. Of total public debt at the end of December 1998, £L19,543,800m. (75.7%) was domestic debt. External debt increased from $1,304.6m. at the end of 1995 to $1,856.0m. at the end of 1996. It rose to $2,431.8m. at the end of 1997 and reached $4,166.1m. at the end of 1998. According to official figures,

interest payments in 1995 totalled £L1,875,204m. (£L1,744,518m. on domestic debt and £L130,686m. on foreign debt), accounting for 32.0% of all government budgetary expenditure. The central bank reported that interest payments in 1996 totalled £L2,692,930m. (£L2,507,950m. on domestic debt and £L184,980m. on foreign debt), accounting for 37.2% of all budget spending. In 1997 interest payments increased to £L3,380,000m. (36.9% of total expenditure). In 1998 interest payments totalled £L3,214,000m. (41.1% of total expenditure). Almost all of Lebanon's domestic debt is in the form of treasury bills. During the early months of 1997 interest rates on treasury bills declined steadily and there was an increase in the proportion of longer-term bills, easing the pressure somewhat on repayments. The central bank was continuing to issue new treasury bills but was concentrating on those with longer maturities in order to restructure the domestic debt and make it more manageable. At the end of 1997 the share of long-term bonds in domestic debt had risen to 67%, compared with 54% at the end of 1996; the share had increased to 78% at the end of 1998.

In October 1987, for the first time in Lebanese history, the commercial banks refused to co-operate with the monetary policies of the central bank (Banque du Liban). For the previous two years the central bank had tried to increase its control over the banking sector, in a vain attempt to halt the depreciation in the Lebanese pound. The commercial banks refused to continue to subscribe to treasury bills, which financed the majority of government spending, and initiated legal proceedings against the central bank, in respect of fines imposed on them in 1986 and 1987. The central bank was forced to concede, cancelling the fines and revoking some of its recently-promulgated measures.

Renewed signs of problems in the banking sector emerged in late 1988, when rumours of a liquidity crisis caused a sudden withdrawal of deposits from Bank al-Mashrek, the banking arm of the partly state-owned Intra Investment Co. The bank's chairman, Roger Tamraz, was forced to resign and, amid controversy over Tamraz's role, the central bank agreed to underwrite only the claims of local non-institutional depositors. In early 1989 the Swiss and French banking authorities withdrew the licences of two of Bank al-Mashrek's affiliates, the Paris-based Banque de Participations et de Placement (BPP) and the Lugano-based BPP, because of their failure to satisfy liquidity requirements. In May 1989 another Lebanese-controlled French bank, United Banking Corpn, had its licence withdrawn because of an apparent fraud combined with over-lending to high-risk countries. In July the French authorities rescinded the licence of a third Lebanese-controlled bank, the Lebanese Arab Bank, again because of over-lending to high-risk creditors. The difficulties in France seriously undermined confidence in the entire Lebanese banking system, and in early August it was disclosed that more than US $200m. had been withdrawn from Lebanese banks, most of the funds having been transferred to France.

Currency speculation had become a major source of profit for commercial banks, especially the smaller ones, and the relative stability of the exchange rate in 1991 and early 1992 caused renewed problems in the banking sector. In 1991 some 20 of Beirut's 90 banks were reported to be in serious difficulty and late in the year four small banks ceased operations. In February 1992 the Banque Libano-Brésilienne and the Banque Tohme both closed, and in March the Globe Bank also ceased trading.

In late 1991 the central bank ordered commercial banks to increase their capital and reduce their 'hard' currency loan exposure by restricting lending to 55% of their 'hard' currency deposits by mid-September 1992. Beirut newspaper reports, however, suggested that the banks' foreign currency loans in September 1991 totalled US $1,380m.—equivalent to 48% of their 'hard' currency deposits. The banks were also instructed to make extra capital provisions for their head offices and for each branch. At the same time, the central bank informed commercial banks that they would soon be able to revalue their fixed assets. Their nominal value had remained constant for several years and had been rendered virtually meaningless by inflation.

In 1991 the Lebanese Bankers' Association proposed a series of reforms, including new procedures for the liquidation and merging of banks. New banking and investment legislation required all Lebanese banks to meet the Bank for International Settlements' capital-asset ratio of 8% by February 1995.

In 1996 commercial banks announced record profits, in some cases 50% higher than in 1995, achieved largely through the purchase of treasury bills issued by the central bank. However, with Lebanon experiencing mounting public debt and decelerating economic growth (owing to low levels of investment), the central bank attempted to make the banks less dependent on treasury bills for their income and to encourage them to lend more. At 31 December 1998 the commercial banks had total deposits to the value of £L46,113,004m. held for customers, of which 34.5% were held in local currency. Loans to the private sector in local currency were worth only £L2,073,501m. or a mere 11.1% of all loans. Most lending was in foreign currency. In the first half of 1997 the Lebanese Banks' Association reduced the interest rate on the Lebanese pound from 24% to 16%, and the central bank abolished the regulation requiring banks to hold at least 40% of their local currency deposits in treasury bills. In April 1997 the central bank also attempted to reduce the high cost of credit by introducing a programme to subsidize short and medium-term loans by commercial banks to the private sector for productive projects. Independent financial analysts, however, argued that interest rates were still too high and doubts were expressed that banks would find new investment outlets. It was argued that Lebanon was unlikely to re-establish itself as a major financial centre while there were more than 70 commercial banks, since many of them are family-owned and previous government efforts to force them to merge have proved unsuccessful. It was reported that the country's leading 16 banks accounted for 84% of total assets in 1998. At the end of 1996 the Government introduced a regulation allowing banks to list up to 30% of their shares on the Beirut Stock Exchange but by mid-1997 only three banks had decided to do so.

Well before the civil war, inflationary pressures had been one of Lebanon's most serious economic problems, and the conflict removed all vestiges of price restraint. The minimum monthly wage was increased to £L310 in 1977, then to £L415, and from that to £L525 in 1979, but this did little to relieve the chronic post-war hardship afflicting much of the population. In April 1982 the Cabinet approved a 17% pay rise for private and public sector workers. In 1983 the minimum wage was raised by 18.9% to £L1,100 per month, and by January 1987 it had been raised to £L3,200 per month. Inflation, which was estimated at 20% in 1982, fell marginally, to between 16% and 18%, in 1983, but reached an annual rate of 50% or more in early 1985. The 1986 figure was well over 100%. By the end of August 1987, the annual rate of inflation was about 200% (though the cost of many basic consumer items, such as sugar, milk, meat and cheese, was estimated to have risen by 300% since the beginning of the year), and the disastrous depreciation in the value of the Lebanese pound meant that the minimum monthly wage of £L4,300 was worth only US $15. Demonstrations combining protests against poverty and against the continuing civil conflict became more frequent. Lebanon's reserves of foreign exchange declined to $300m. in August, but the Government was reluctant to reduce state subsidies on basic commodities (which cost about $100m. per year) for fear of provoking greater unrest. Despite substantial increases in the heavily subsidized domestic prices of petroleum products in June 1986 and January 1987, the IMF estimated that the cumulative deficit on the oil trade account would reach about £L17,000m. by the end of 1986, while the deficit for 1986 alone was expected to reach about £L4,000m. In September 1987 the government subsidy on petroleum was substantially reduced with the result that the price of petrol more than doubled. At the beginning of October the minimum monthly salary was raised to £L8,500 in order to compensate for the high rate of inflation, but in the same month the prices of bread and fuel were raised by 43% and 15%, respectively. Declines in standards of living prompted the Confédération Générale des Travailleurs du Liban (CGTL), the country's leading independent labour union, to call a five-day general strike in November, which was generally supported in an unprecedented display of national unity. During 1987, according to official estimates, the consumer price index rose by 420% (though a survey of the prices of 30 basic commodities showed that they had risen by an average of 624% up to mid-December).

In 1988–93 the value of the Lebanese pound continued to fall, giving rise to further price increases. In two months, from mid-February 1992, the value of the currency declined by 65%,

causing the price of food and that of many other commodities to double. Strikes and street demonstrations followed, culminating in the resignation, in May, of Omar Karami's Government. During 1992 the inflation rate was estimated to have averaged 100%. In March 1991 the Government finally removed subsidies on bread and fuel, although, at the same time, it levied a tax of 18% on petrol. In August 1991 public-sector salaries were increased by 60% (the increase backdated to the beginning of the year) and in December they were increased again, by 120%. In the same month the remaining subsidies on wheat and flour were removed. Early in 1996 the CGTL requested a 76% increase in salaries and an increase in the minimum monthly wage from £L250,000 to £L500,000 but its demands were rejected by the Government. However, in May the Government did decree salary increases for workers in the private sector effective from the beginning of the year. The minimum monthly wage was increased to £L300,000, the wages of those earning over £L250,000 and £L800,000 were increased by 10%, and those earning over £L800,000 by 5%. The CGTL declared that the wage increases were too small, and private sector employers, who normally set their own wage levels, did not welcome government interference. In August 1999 fuel distributors threatened to take industrial action, after the Government raised the price of petrol over two successive weeks.

The stabilization of the exchange rate in 1992–93 resulted in lower inflation. In 1993 prices rose by about 10%. As of January 1994 the minimum monthly wage was increased to £L200,000, from £L118,000. According to the Beirut Chamber of Commerce, the annual rate of inflation averaged 6.8% in 1994, 9.4% in 1995 and 6.1% in 1996. In early 1997 the Government declared that, although it was determined to boost economic growth, it was also committed to maintaining annual inflation at less than 10%. The annual rate of inflation averaged 23.9% in 1990–97; however, the rate slowed to an average of 2.1% in 1997. According to Banque Audi, by December 1998 the annual rate of inflation was 2.9%. The Government forecast inflation for 1999 at 6%.

In June 1994 a secondary share market opened, dealing mainly in shares of Solidère, the company established to redevelop Beirut's war-ravaged commercial centre. It was the first time that stock had been traded in Lebanon since before the civil war. In order to counter speculation, no stock is permitted to rise or fall by more than 5% in one day. Solidère, sponsored by Rafik Hariri before he became Prime Minister, has a capital of US $1,820m. Of this, $1,170m. has been allocated to the owners and tenants of properties affected by the development, which covers 160 ha. The other $650m. was raised by public subscription in January 1994. Solidère commenced work on its redevelopment programme in 1994. On completion in 2018, the development should have 40,000 residents and accommodate businesses and government offices employing 100,000 people. By mid-1997 a number of major buildings had already been restored, but, generally, work has proceeded far more slowly than was initially envisaged, owing to the shortfall in funds committed to Lebanon's reconstruction. By mid-1999 some construction projects in the Beirut central district were subject to either delay or cancellation, amid reports of a deterioration in relations between Solidère and the new al-Hoss Government. Solidère has demanded compensation for losses incurred following the Government's decision to cancel the relocation of the finance and interior ministries to central Beirut. In mid-1999 work on the souks project was reported to be behind schedule, as was a plan to replace the unfinished Murr Tower with a new $130m.-building, to house the Beirut Trade Centre. Nevertheless, work was due to begin in November on the construction of a $35m.-headquarters for the finance group, Lebanon Invest. Solidère's net profits for 1996 were $58.9m., an increase of 81% on the previous year's level. The company distributed a dividend of $0.25 per share in 1996, with nominal value of $10, an increase of 25% on the 1995 level. During the early months of 1997 a steady appreciation was reported in Solidère's global depositary receipts (GDRs), which are listed on the London Stock Exchange. In May 1998, however, the company cancelled its plans to issue GDRs worth about $70m. For 1997, despite a 32% increase in profits, Solidère proposed to pay an unchanged dividend of $0.25 per share. Solidère announced a 30% decrease in profits for 1998, and in that year, for the first time, the company failed to pay a dividend to its shareholders, as the value of its shares on the Beirut Stock Exchange declined sharply. The company's ultimate success largely depends on whether Lebanon can re-establish its role as a financial services centre serving the surrounding region.

TOURISM AND COMMUNICATIONS

Beirut's hotels, its port and airport, as well as Lebanon's largest non-government employer, Middle East Airlines (MEA), were all severely affected by the civil conflict, which erupted just as tourism was beginning to recover from the effects of the October 1973 war. As the civil conflict progressed, the prosperous hotel district in the centre of Beirut became the scene of some of the fiercest fighting. According to the Lebanese Hotel Owners' Association, 145 hotels were damaged, incurring losses of some £L218m. In Beirut alone the number of hotels had fallen from 130 (with 10,486 beds) in 1975 to 44 (with 4,631 beds) by 1979. The contribution of tourism to GNP, which was 20% before 1975 declined to 7.4% in 1977. Visitors spent only 469,272 nights in Beirut in 1979, compared with 2,307,122 nights in 1974. In 1980 there was some improvement, with a 15% rise in the number of visitors to 135,548, who spent a total of 585,531 nights in Beirut. Overall occupancy was only 27%, however. The cost of damage sustained by Beirut's hotels during the Israeli invasion in 1982 was estimated at £L400m.

The National Council for Tourism in Lebanon (NCTL) undertook a massive promotional campaign through its nine offices in Europe, the USA and the Middle East, issuing a glossy monthly bulletin and preparing brochures, books and other materials. In the spring of 1983 the newly-formed National Council for External Economic Relations (NCEER) took over all the activities of the NCTL (until the disbandment of the NCEER in 1985). The Ministry of Tourism and the CDR drew up plans to rebuild the four international-class seaside hotels in Beirut at a cost of around US $100m. They also outlined schemes to clean up the beaches. Although the security problem made it difficult to move from area to area within Lebanon, inside those areas domestic tourism flourished during the years of the civil conflict. The Ministry of Tourism reported a significant rise in investment in hotel construction from the beginning of 1994 to the middle of 1996, with total investment for that period reported at $325m. A number of leading pre-war hotels, such as the Phoenicia Intercontinental in Beirut, are to be refurbished and expanded, and new hotels built. Although the number of tourists visiting Lebanon, mainly Lebanese living abroad, increased after the end of the civil war in 1990, by 1996 hoteliers still reported very low occupancy rates. The Israeli attacks on southern Lebanon and Beirut in April 1996 exacerbated the problem of diminished tourism levels, and a marketing campaign was launched by the Ministry of Trade and Industry in February 1997 to attract tourists from the Gulf states. Recent efforts to revive the tourist industry appear to have met with considerable success. Tourist arrivals increased by 22% in 1995, and by a further 3.5% in 1996. According to the Ministry of Tourism, the number of tourist arrivals (excluding Syrian nationals) in 1997 was 557,568, an increase of some 31.5%. Tourism receipts reached an estimated US $715m. in 1996, compared with $710m. in the previous year. Of total arrivals in 1998, 40.1% were from Arab countries, and 30.4% from Europe.

MEA suffered a loss of £L14m. in 1975, and of £L69.1m. in 1976. A recovery occurred in 1977, with profits reaching £L22m., but 1978 was again disappointing, with staff prevented by the fighting from reporting for duty and passenger traffic some 16% lower than had been expected. In 1979 MEA made a startling recovery, recording a profit of £L51.14m., its highest ever. However, the MEA Chairman, Asad Nasr, warned that inflation and increases in fuel prices meant the airline must expect narrower profit margins in the future. In 1980 profits slumped to £L9m., and in 1981 the airline's losses were £L88m. In October MEA increased its capital from £L100m. to £L150m. Shortly beforehand, plans had been announced to introduce new routes, including a service to New York.

The Israeli invasion in 1982 plunged MEA into its worst-ever crisis. The airline was closed for 115 days, losing almost £L140m., and five aircraft were destroyed. The airline recorded a loss of £L187.5m. in 1982. The fighting in the Chouf in September 1983 led to the closure of Beirut airport. In that year

MEA made a loss of about £L250m., and its problems continued in 1984. In that year Beirut airport was closed from February until July, during which time MEA lost US $250,000 per day.

MEA's losses in 1985 amounted to £L454m., and they were expected to total £L50m. in 1986. In 1987 the airline's losses were £L452m., and in 1988 they totalled £L500m. In 1989 MEA was badly affected by a further, prolonged closure of Beirut airport during Gen. Awn's 'war of liberation' against the Syrian presence in Lebanon. Losses of US $15m. were forecast for 1990.

In 1987 MEA suffered from a dispute over the new, privately-developed Halat airport, sited in Christian-held territory to the north of Beirut and intended to enable Christians to travel to and from the country without having to enter Muslim-controlled west Beirut. The Government refused to recognize Halat as an international airport, and in January 1987 Christian LF militiamen closed Beirut airport by shellfire, in order to put pressure on the Government over the issue of Halat. One of MEA's Boeing 707s was destroyed and the airline dispersed its fleet outside the country for fear of further losses. Beirut airport reopened in May, after the LF accepted assurances from the Minister of Transport that a newly established government commission, examining the feasibility of converting military airstrips to civilian use, would grant Halat airport official status. The destruction of the 707 in 1987 reduced MEA's active fleet to 11 aircraft. In addition, the company owns three Boeing 747s which, for several years, were leased to other airlines, generating annual revenues of about US $17m. In November 1989, however, the company decided to take the 747s back into service with MEA. One of the leased aircraft was returned in 1990, and another in 1991, when, the civil conflict apparently having concluded, MEA was achieving high occupancy rates for its services to and from Beirut. In 1991 the airport handled 825,000 passengers, compared with 638,000 in 1990. In early 1992 it was reported that MEA had leased two Airbus A310s from the Dutch airline KLM for three years. In 1992 MEA's losses amounted to $6m., but in mid-1993 the company's Chairman, Yousuf Lahoud, announced that it was hoping to make a small profit in 1993. MEA continued to renew its fleet and embarked on a programme to restructure the company in order to improve efficiency. Passenger numbers increased slightly in 1996 but the company recorded losses of $50m., two-thirds higher than the figure for 1995. MEA expected losses of $20m. in 1997. At the end of 1996 it was reported that the central bank controlled a 90% stake in the company and in early 1997 it was announced that MEA had increased its capital by $47.4m.

There was an increase in airfreight, due to companies' reluctance to store goods in Lebanon, which in turn necessitated a faster turnaround that could be provided only by air. Lebanon's chief cargo-carrier, Trans-Mediterranean Airways (TMA), in operation since 1953, hoped to profit from this transport trend, although in 1982 the company made a loss of £L57m., of which £L50m. was attributable to the Israeli invasion. The airline was also badly affected by the discontinuation of its round-the-world service as a result of disputes over lost traffic rights in northern Europe, the USA and Japan. In 1983 TMA's losses totalled £L61m., and in May 1984 the company asked for immediate government financial assistance to assure its survival. In mid-1985 TMA suffered serious losses as a result of a three-week ban on its aircraft entering Saudi Arabian airspace. It failed to recapture the lost volume of freight when the ban was lifted, and was forced to request further financial help from the Government. Flights were suspended in July, when pilots organized a strike in protest at the company's failure to pay salaries. In August the airline was placed under government control. In July 1986 a majority stake in TMA was acquired by Jet Holdings, an east Beirut group headed by the financier Roger Tamraz. In December the airline resumed flights between Europe and the Middle and Far East. Following the collapse, in late 1988, of Roger Tamraz' business interests, the Lebanese central bank effectively took control of Jet Holdings and, through it, TMA. The move was resisted by Tamraz' partners in Jet Holdings, and in early 1990 TMA's ownership was still disputed. In early 1991 it was reported that a committee, established by the Ministry of Transport to decide TMA's future, had estimated the company's debts at US $80m., while its assets amounted to only $45m. The committee proposed three options for TMA: a merger with MEA; the company's takeover by MEA; or a substantial grant of funds by the Government to enable the airline to resume operations in its own right. In March 1993 the 74% stake in TMA, formerly controlled by Roger Tamraz, was bought for $8m. by a holding company, the Lebanese Co for Aviation Investment (LCAI). The main shareholder in LCAI is Banque Libano-Française SAL. In approving the acquisition, the court handling the bankruptcy of the Tamraz-controlled Al-Mashrek Bank also waived TMA's $39m.-debt to the bank. TMA's fleet comprises seven Boeing 707s, one of which is on lease to Saudi Arabian Airlines and another to the Kuwait Airways Corpn. TMA continues to suffer from serious financial problems and this largely accounted for a decline in the volume of air cargo recorded in 1996 compared with 1995. In 1996 the company employed 450 workers. In May TMA announced that it had debts of $80m. and was unable to pay its employees. In mid-1994 a joint venture, comprising the German company Hochtief and Athens-based Consolidated Contractors International Co, won an estimated $490m.-contract to expand Beirut international airport to handle 6m. passengers per year. The new runway was originally scheduled for completion by the end of 1997 and the rest of the work by late 1998. However, the number of passengers that the airport handled totalled 1,672,657 in 1995, 1,715,434 in 1996 and 2,006,950 in 1997, suggesting that the expansion plan was overambitious and could be subject to delays. In 1998 the number of passengers who used Beirut international airport increased slightly, to 2,060,020.

During the early 1970s Beirut port suffered substantial congestion, owing, mainly, to the volume of goods bound for Saudi Arabia, Kuwait and Iraq, where petroleum revenues had boosted development expenditure. Shortly before the outbreak of the civil conflict in 1975, British consultants Peat, Marwick Mitchell & Co and consulting engineers Coode & Partners conducted a major study of Beirut and Tripoli ports and drafted a master plan. In 1977, the British consultants revised their forecasts to include reconstruction, and the CDR appointed a port committee in August 1977 to oversee the reconstruction and modernization process, the total cost of which was estimated at more than US $144m. Although work on the port continued, there were frequent disruptions, owing to the civil conflict.

With the reunification of Beirut after the siege of 1982, the reign of snipers and political factions at the port was ended for a while. A temporary strengthening of government authority began to ease the problem of illegal ports, of which at least 17 had begun operating as a result of the civil war. These ports imposed tariffs which were only a fraction of those payable at the official ports, and the official ports, for their part, were seriously affected by smuggling. Of particular significance was the appropriation by the Lebanese army, in March 1983, of the notorious fifth basin of Beirut port, which had been a valuable source of revenue for right-wing Lebanese militias for a number of years. According to some sources, it had accounted for 90% of the country's illegal trade. Import duties and airport and seaport charges, which had formerly accounted for more than 45% of government revenues, contributed less than 15% in 1983. Tripoli port remained under the control of pro-Syrian militias or was the scene of fierce fighting between rival groups, while Israeli forces continued to occupy the ports of Sidon and Tyre in the south. Fighting between rival militias intensified, however, and, after the withdrawal from Beirut of the multinational peace-keeping force in March 1984, the Government was unable to impose its authority over the operation of the ports. A brief expansion of government control took place during 1984, after the formation of an administration that was more representative of the country's diverse factions. This helped to increase customs' revenues from the ports, but the improvement was short-lived (see Public Finance and Development, below). In February 1989 Gen. Awn, the head of Lebanon's Christian Government, ousted the Lebanese Forces militia from the fifth basin of Beirut port and then, acting in the name of state legitimacy, moved to close illegal militia ports in the Muslim parts of the country, imposing an aerial and maritime blockade. Several weeks of bitter Christian–Muslim battles followed, and, during Gen. Awn's 'war of liberation' against Syrian forces, ports were a major target. The port of Tripoli made a significant recovery following the deployment there of Syrian troops at the end of 1985. After a two-year closure, Beirut port reopened on 15 March 1992, and

in the first half of the year it handled 671 vessels and just over 1m. tons of cargo. This represented about one-quarter of pre-civil war traffic levels.

In late 1980 the CDR recommended to the Cabinet that the concession for a new port at Sidon should be granted to a Sidon businessman, Rafik Hariri. The CDR advised that Hariri should be granted the concession for 30 years, and that he should set up a joint company with the CDR, with capital of £L250m. It was a controversial decision, because the British consultants who had prepared the plans for Beirut port said that, in a politically unified Lebanon, only two ports, Beirut and Tripoli, were needed, and that if the South must have a port, then Tyre, further south, would be more suitable than Sidon. In 1985, however, Hariri's Paris-based company, Oger International, invited bids for the construction of the first phase of a new port at Sidon. The problem of illegal ports seemed, finally, to have been solved in May 1991, when, in an assertion of its authority, the new Government of national reconciliation disbanded the country's militias, and units of the Lebanese army were deployed in the ports. In May 1998 it was reported that bids were expected to be invited in the near future for the development of a new port in Sidon, requiring total projected investment of US $400m. The project, to be implemented in four stages, involves land reclamation, dredging and the construction of two breakwaters and two berths.

In November 1993 Port Autonome de Marseille, of France, won a US $1m.-contract to advise on a scheme to redevelop Beirut port. Work began on the project in early 1997. Entrecanales of Spain secured a $102m.-contract to expand the four existing docks, to increase facilities for containers and to prepare a feasibility plan for a fifth dock. A loan worth $57m. was made by the EIB towards the cost of the project, which is also being financed by the private company managing the port, the Compagnie de Gestion et d'Exploitation du Port de Beyrouth (CGEPB). The work is scheduled for completion in 1999, when the port authority intends to spend some $40m. on new port equipment. The port's free-trade zone, closed since the mid-1970s, has reopened. The port handles some three-quarters of Lebanon's imports, but port traffic declined in 1996. The number of ships visiting the port declined from 3,443 in 1995 to 3,227 in 1996, and the volume of freight handled also decreased, from 6,904,000 metric tons in 1995 to 6,307,000 tons in 1996. In 1997 the number of vessels using Beirut port was 3,040 (a fall of 5.8%, compared with 1996), while the volume of freight handled was 6,010,000 tons (a decline of 4.7% from the previous year's total). In 1998 the volume of freight handled at Beirut port declined by a further 5.1%, to 5,705,839 tons. In 1995 the port of Tripoli handled 938 vessels and 3,344,000 tons of freight, while Sidon handled 203 vessels and 306,000 tons of freight. The Minister of Transport announced in 1996 that these two ports would also be expanded.

In April 1983 the Ministry of Posts and Telecommunications confirmed that it intended to establish an autonomous body to administer the country's telephone and telecommunications services, as recommended by the World Bank. The deterioration of the telecommunications system during the civil war led many businesses to turn to private satellite communications systems. In early 1990 it was reported that 85 such systems were in use. In addition, international links were being maintained via cellular telephone systems operating through Cyprus, while private telephone systems were also in use for internal communications. In 1993 a major telecommunications rehabilitation project was launched, involving the replacement of existing exchanges and the installation of more than one million lines. As part of this, Siemens of Germany won an estimated US $40m.-contract to install 420,000 new lines in and around Beirut, while the French company Alcatel is installing telephone exchanges with 270,000 new lines in the Beirut and Tripoli areas. Sweden's Ericsson was appointed to repair telephone switching systems in the south, the Beka'a valley and parts of Mount Lebanon. By early 1997 significant progress had been made but many lines were still not working and the Government estimated that an investment of some $500m. would be needed to repair and modernize the system. Nevertheless, in mid-1997 it was reported that the installation of some 250,000 new fixed telephone lines using local contractors to reduce the cost had begun. The use of mobile phones has increased, and Lebanon has the highest use of mobile phones per head of any Arab country. (In 1998 the International Telecommunication Union reported that 16% of Lebanese owned a mobile telephone, while some 45% of all telephones in the country were mobile.) In early 1997 two local companies, France-Télécom Mobile Liban (FTML) and Libancell, signed contracts with Ericsson of Sweden and Siemens of Germany respectively, to expand their network capacity to a total of 240,000 subscribers. During 1999 Cellis (FTML's cellular operator) and Libancell were involved in a dispute with the Government over subscription levels, government charges and proposals to increase competition in the market. The Government claimed that, with their combined total of 580,000 subscribers, the two operators had exceeded the agreed capacity limit of 500,000. In June the Ministry of Posts and Telecommunications invited international consultants to advise the Government in negotiations between Cellis and Libancell, and to recommend a future strategy for the mobile telephone market (including the possibility of introducing licence agreements and of allowing an international operator to bid for a third cellular licence). In September 1998 the Ministry of Posts and Telecommunications invited tenders for the supply of a national network of 4,000 public telephones.

Meanwhile, in July 1998 the CDR awarded a 12-year postal concession to two Canadian companies. As a result, a new operating company, to be called Liban Poste, was to provide the national postal service. The new company's seven-member board of directors, comprising three Canadians and four Lebanese, would be responsible for the management and upgrading of Lebanon's postal services.

In 1994 plans were announced for a US $500m.-scheme to rebuild Lebanon's coastal railway. The 170-km line links Tyre and Sidon in the south with Beirut and Tripoli in the north. The southern section of the line ceased operating in 1948, during the first Arab–Israeli War. Services on the section from Beirut to Tripoli stopped at the start of the Lebanese civil war. An east-west railway line from Beirut to the Syrian border also ceased operating during the civil war, but no plans have been announced for its reconstruction.

In July 1999 the CDR announced plans to invite bids for the first stage in the construction of a road linking Dbayeh, in north-east Beirut, to the northern suburb of Antélias. The cost of the initial project, which is being financed by the KFAED, is estimated at $25m.

PUBLIC FINANCE AND DEVELOPMENT

The draft state budget for 1987 forecast total expenditure of £L27,250m., compared with £L17,937m. in 1986, an increase of 52%. In addition, there was a supplementary budget of £L42,000m., covering posts and telecommunications, the national lottery, and wheat, fuel and sugar subsidies. Moreover, the supplementary budget allocated £L20,000m. for the under-subscription of treasury bills. Revenue was expected to total £L4,250m., compared with £L12,712m. in the 1986 budget. In previous years, the Government's estimates of customs revenues had been wildly optimistic, given the authorities' continuing inability to wrest control of the ports from militias. The sharp fall in revenues projected in the draft 1987 budget indicated greater realism. The 1987 draft budget forecast a deficit of £L65,000m., about twice the actual shortfall during 1986.

In some years there was an alarming discrepancy between the budget proposals and the actual course of economic events, largely as a result of the political turbulence in the country. Thus, in 1986, the actual deficit was an estimated £L34,000m. (expenditure £L36,000m.; revenue £L2,000m.), compared with the £L5,225m. for which the budget had allowed. This was largely due to a huge shortfall in customs revenues. In more settled times, these would have been a major source of government revenue. From the mid-1970s, losses of revenue from taxation and customs duties, caused by the inability of the Government to impose taxes and the proliferation of illegal ports, deprived it of valuable income. As a result of stricter government control of the ports in 1983, customs revenues rose to £L1,280m. in that year, compared with only £L403m. in 1982. However, in 1984, when the Government might have expected to earn some £L3,000m. in customs duty, income from this source amounted to only £L452m., or nearly 65% less than in 1983. The Government introduced further measures to close

illegal ports in October 1984, but parts of Beirut port were again under the control of the Christian militias by April 1985. In 1985 customs receipts totalled £L481m., compared with the budget projection of more than £L3,000m. (about 35% of total revenue). The 1986 budget estimate for customs revenue (about £L4,000m.) proved equally unrealistic. In the event, customs receipts for the year totalled only £L373m. The draft 1987 budget allocated £L8,836m., or one-third of the ordinary budget (the largest single portion of expenditure), to servicing the national debt (an estimated £L98,000m. in March 1987), while a further £L20,000m. was allocated in a supplementary budget for the undersubscription of treasury bills.

The draft budget for 1988 estimated expenditure at £L70,000m. with a deficit of £L38,030m. A revised budget set expenditure at £L167,000m. and revenue at £L106,700m. The increase in revenue was occasioned by central bank earnings which were much higher than had been anticipated. The draft budget for 1989 was presented by the Cabinet of Prime Minister Dr Selim al-Hoss at the beginning of October 1988, despite the appointment of a military government by President Gemayel to administer the country during the transition from the end of his tenure until the election of a new President. Such was the political uncertainty during 1989, however, that the actual spending and revenue of the country's two governments probably bore only a slight resemblance to the al-Hoss draft budget. However, it forecast total expenditure during 1989 of £L219,500m. and total revenue of £L130,000m., leaving a deficit of £L89,500m. (the figures, as in the 1988 budget, were distorted by the huge depreciation in the value of the Lebanese pound). The allocation for servicing the national debt (£L194,100m. in January 1988) was again the largest single item of expenditure, accounting for 32% (£L70,240m.) of the total. In April 1990 Ali Khalil, the Minister of Finance in the Cabinet of Dr Selim al-Hoss, presented a draft budget for 1990, in which expenditure was fixed at £L597,000m. and revenues at £L210,000m., leaving a deficit of £L387,000m. Debt service was, again, by far the biggest spending category, accounting, at £L183,557m., for 30% of the total. Defence was the second largest spending category, at £L97,486m., and education, at £L66,454m., the third largest. The 1991 budget, approved by the National Assembly in September of that year, set spending of £L1,158,000m., of which one-quarter was allocated to debt-servicing, 17% to public works and 12% to defence. After criticism, the Government, in February 1992, recalled a draft 1992 budget which had projected spending at £L2,500,000m. It was subsequently replaced by a draft budget that forecast spending at £L1,550,190m. A draft budget for 1993, prepared before the appointment of Rafik Hariri's Government, projected spending at £L2,271,791m. and forecast revenues of more than £L1,500,000m., giving a deficit of about £L770,000m. The biggest spending category in the draft budget for 1993 was debt-servicing, which accounted for 26.3% of projected total spending. The 1993 budget, approved in December 1993, set spending at £L3,400,000m. and provided for a deficit of £L1,698,700m. Actual revenues in 1993 totalled £L1,800,000m., which was 82% higher than in 1992. Customs duties accounted for £L662,000m. (twice the 1992 figure), while income tax receipts, at £L126,000m., were three times the level of the year before, underlining the Government's success in establishing its authority.

Expenditure in the 1994 budget was projected to total £L4,106,000m., and revenues forecast at £L2,246,000m. Actual expenditure amounted to £L5,204,048m., while revenues, at £L2,241,028m., fell slightly short of target. The draft budget for 1995 envisaged total revenues of £L3,150,000m., while expenditure was estimated at £L5,630,000m. In fact, in 1995 expenditure amounted to £L5,856,049m., while revenues totalled £L3,033,059m., resulting in a deficit equivalent to almost 50% of expenditure. In the budget for 1996 total expenditure was projected at £L6,458,000m., while revenues were forecast at £L4,022,000m. Actual revenues in 1996 were only £L3,536,060m., while expenditure increased to £L7,244,840m., resulting in an overall deficit of £L3,708,780m., equivalent to about 18% of GDP. In the draft budget for 1997 expenditure was forecast at £L6,570,000m., while it was estimated that revenues would total £L4,100,000m. Expenditure was projected to decrease by some 11%, compared with actual expenditure for 1996, with 40% allocated to interest payments on domestic debt, 35% to wages and salaries and only 7.4% to capital projects, almost one-half of the proportion projected for 1996. According to the central bank, actual revenues in 1997 increased by 6.1%, compared with 1996, to £L3,752,340m. Actual expenditure in that year rose by 26.4% to £L9,161,000m., 39.4% greater than had been forecast. Lebanon's budget deficit in 1997 thus amounted to £L5,408,660m., equivalent to 59.0% of total expenditure (compared with 51.2% in 1996). For 1998 the Government drafted a budget which forecast revenues of £L4,600,000m. and expenditure of £L7,920,000m. The budget deficit for 1998 was thus forecast at £L3,320,000m., equivalent to 41.9% of expenditure. Actual revenues in 1998 increased by 18.1%, compared with 1997, to £L4,429,680m.—3.7% less than had been forecast. Actual expenditure fell by 14.7%, to £L7,816,820m.—only 1.3% less than had been forecast. The budget deficit in 1998 thus totalled £L3,387,150m., equivalent to 43% of expenditure and some 14% of GDP. Budget forecasts for 1999 projected expenditure of £L8,395,000m., and a budget deficit equivalent to 40% of expenditure. Between January and August, according to the Ministry of Finance, a deficit of 43% was recorded.

In addition to its budgetary deficit, the Government has to secure financing for extrabudgetary capital expenditures by the CDR. These increased from £L175,026m. in 1994 to £L486,057m. in 1995 and to about £L550,700m. in 1996.

* Figures for exports are calculated on the basis of the official dollar rate, which is the previous month's average exchange rate of Lebanese pounds per US dollar. Data for imports have been based on the same method since July 1995. Previously the value of imports was calculated by using the customs dollar rate, which was fixed at US $1 = £L 800 between July 1992 and July 1995. On the basis of prevailing exchange rates, the value of total imports (in US $ million) was: 2,215 in 1993; 2,856 in 1994; 5,335 in 1995.

† Figures refer to domestic exports only. Adding re-exports and subtracting transit values, the value of total exports (in US $ million) was: 482 in 1993; 743 in 1994; 985 in 1995.

1996 (US $ million): Total imports c.i.f. 7,559.1; Total exports f.o.b. 1,018.0.
1997 (US $ million): Total imports c.i.f. 7,450.8; Total exports f.o.b. 633.8.
1998 (US $ million): Total imports c.i.f. 7,059.6; Total exports f.o.b. 715.9.

Directory

The Constitution

The Constitution was promulgated on 23 May 1926 and amended by the Constitutional Laws of 1927, 1929, 1943, 1947 and 1990.

According to the Constitution, the Republic of Lebanon is an independent and sovereign state, and no part of the territory may be alienated or ceded. Lebanon has no state religion. Arabic is the official language. Beirut is the capital.

All Lebanese are equal in the eyes of the law. Personal freedom and freedom of the press are guaranteed and protected. The religious communities are entitled to maintain their own schools, on condition that they conform to the general requirements relating to public instruction, as defined by the state. Dwellings are inviolable; rights of ownership are protected by law. Every Lebanese citizen over 21 is an elector and qualifies for the franchise.

LEGISLATIVE POWER

Legislative power is exercised by one house, the National Assembly, with 108 seats (raised, without amendment of the Constitution, to 128 in 1992), which are divided equally between Christians and Muslims. Members of the National Assembly must be over 25 years of age, in possession of their full political and civil rights, and literate. They are considered representative of the whole nation, and are not bound to follow directives from their constituencies. They can be suspended only by a two-thirds majority of their fellow-members. Secret ballot was introduced in a new election law of April 1960.

The National Assembly holds two sessions yearly, from the first Tuesday after 15 March to the end of May, and from the first Tuesday after 15 October to the end of the year. The normal term of the National Assembly is four years; general elections take place within 60 days before the end of this period. If the Assembly is dissolved before the end of its term, elections are held within three months of dissolution.

Voting in the Assembly is public—by acclamation, or by standing and sitting. A quorum of two-thirds and a majority vote is required for constitutional issues. The only exceptions to this occur when the Assembly becomes an electoral college, and chooses the President of the Republic, or Secretaries to the National Assembly, or when the President is accused of treason or of violating the Constitution. In such cases voting is secret, and a two-thirds majority is needed for a proposal to be adopted.

EXECUTIVE POWER

With the incorporation of the Ta'if agreement into the Lebanese Constitution in August 1990, executive power was effectively transferred from the presidency to the Cabinet. The President is elected for a term of six years and is not immediately re-eligible. He is responsible for the promulgation and execution of laws enacted by the National Assembly, but all presidential decisions (with the exception of those to appoint a Prime Minister or to accept the resignation of a government) require the co-signature of the Prime Minister, who is head of the Government, implementing its policies and speaking in its name. The President must receive the approval of the Cabinet before dismissing a minister or ratifying an international treaty. The ministers and the Prime Minister are chosen by the President of the Republic in consultation with the members and President of the National Assembly. They are not necessarily members of the National Assembly, although they are responsible to it and have access to its debates. The President of the Republic must be a Maronite Christian, and the Prime Minister a Sunni Muslim; the choice of the other ministers must reflect the level of representation of the communities in the Assembly.

Note: In October 1998 the National Assembly endorsed an exceptional amendment to Article 49 of the Constitution to enable the election of Gen. Emile Lahoud, then Commander-in-Chief of the armed forces, as President of the Republic: the Constitution requires that senior state officials relinquish their responsibilities two years prior to seeking public office.

The Government

HEAD OF STATE

President: Gen. EMILE LAHOUD (inaugurated 24 November 1998).

CABINET
(September 1999)

Legislature

MAJLIS ALNWAB
(National Assembly)

The equal distribution of seats among Christians and Muslims is determined by law, and the Cabinet must reflect the level of representation achieved by the various religious denominations within that principal division. Deputies of the same religious denomination do not necessarily share the same political, or party allegiances. In the general election of 1996 constituencies were based on the country's five traditional governorates: Mount Lebanon, the North, Beirut, the South and Nabatiyah, and the Beka'a valley. In 1996, with the stipulation that this was an exceptional measure, Mount Lebanon was subdivided into five voting districts. The term of office of the National Assembly is four years.

President: NABIH BERRI.

Vice-President: ELIE FERZLI.

Religious Groups in the National Assembly (General election, 18 August, 25 August, 1 September, 8 September and 15 September 1996)

Maronite Catholics	34
Sunni Muslims	27
Shi'a Muslims	27
Greek Orthodox	14
Druzes	8
Greek-Melkite Catholics	8
Armenian Orthodox	5
Alawites	2
Armenian Catholics	1
Protestants	1
Others	1
Total	128

Political Organizations

Armenian Revolutionary Federation (ARF): rue Spears, Beirut; f. 1890; principal Armenian party; also known as Tashnag Party, which was the dominant nationalist party in the independent Armenian Republic of Yerevan of 1917–21, prior to its becoming part of the USSR; socialist ideology; collective leadership.

Al-Baath: f. in Syria, 1940, by MICHEL AFLAK; secular pro-Syrian party with policy of Arab union, branches in several Middle Eastern countries; Sec.-Gen. ABDULLAH AL-AMIN, Beirut.

Al-Baath: pro-Iraqi wing of Al-Baath party; Sec.-Gen. ABD AL-MAJID RAFEI.

Bloc national libanais: rue Pasteur, Gemmayze, Beirut; tel. (1) 584585; fax (1) 584591; f. 1943; right-wing Lebanese party with policy of power-sharing between Christians and Muslims and the exclusion of the military from politics; Leader RAYMOND EDDÉ; Pres. SÉLIM SALHAB; Sec.-Gen. JEAN HAWAT.

Ad-Dustur (Constitutional Party): Beirut; f. 1943; led struggle against French mandate, established 1943 National Covenant; Leader MICHEL BECHARA AL-KHOURY.

Al-Harakiyines al-Arab: Beirut; f. 1948 by GEORGES HABASH; Arab nationalist party, with Marxist tendencies.

Al-Hayat al-Wataniya: Beirut; f. 1964 by AMINE ARAYSSI.

Hezbollah (Party of God): Beirut; e-mail hizbollahmedia@hizbollah.org; internet http://www.hizbollah.org; f. 1982 by Iranian Revolutionary Guards who were sent to Lebanon; militant Shi'ite faction which has become the leading organization of Lebanon's Shi'a community; demands the withdrawal of Israeli forces from occupied southern Lebanon; Chair. MUHAMMAD RA'D; Spiritual leader MUHAMMAD HUSSEIN FADLALLAH; Leader and Sec.-Gen. Sheikh HASAN NASRALLAH.

Al-Hizb ad-Damuqratiya al-Ishtiraqi al-Masihi (Christian Social Democratic Party): Beirut; f. 1988; formerly Christian Social Democratic Union; Sec.-Gen. WALID FARIS

Note: Lebanon and Syria have very close relations but do not exchange formal ambassadors.

Judicial System

Law and justice in Lebanon are administered in accordance with the following codes, which are based upon modern theories of civil and criminal legislation:

Code de la Propriété (1930).

Code des Obligations et des Contrats (1932).

Code de Procédure Civile (1933).

Code Maritime (1947).

Code de Procédure Pénale (Code Ottoman Modifié).

Code Pénal (1943).

Code Pénal Militaire (1946).

Code d'Instruction Criminelle.

The following courts are now established:

(*a*) Fifty-six **'Single-Judge Courts'**, each consisting of a single judge, and dealing in the first instance with both civil and criminal cases; there are seventeen such courts at Beirut and seven at Tripoli.

(*b*) Eleven **Courts of Appeal**, each consisting of three judges, including a President and a Public Prosecutor, and dealing with civil and criminal cases; there are five such courts at Beirut.

(*c*) Four **Courts of Cassation**, three dealing with civil and commercial cases and the fourth with criminal cases. A Court of Cassation, to be properly constituted, must have at least three judges, one being the President and the other two Councillors. The First Court consists of the First President of the Court of Cassation, a President and two Councillors. The other two civil courts each consist of a President and three Councillors. If the Court of Cassation reverses the judgment of a lower court, it does not refer the case back but retries it itself.

First President of the Court of Cassation: AMIN NASSAR.

(*d*) **The Council of State**, which deals with administrative cases. It consists of a President, Vice-President and four Councillors. A Commissioner represents the Government.

President of the Court of the Council of State: YOUSUF SAAVOLLAH EL-KHOURY.

(*e*) **The Court of Justice**, which is a special court consisting of a President and four judges, deals with matters affecting the security of the State; there is no appeal against its verdicts.

In addition to the above, the Constitutional Court considers matters pertaining to the constitutionality of legislation. Military courts are competent to try crimes and misdemeanours involving the armed and security forces. Islamic (*Shari'a*), Christian and Jewish religious courts deal with affairs of personal status (marriage, death, inheritance, etc.).

Religion

Of all the regions of the Middle East, Lebanon probably presents the closest juxtaposition of sects and peoples within a small territory. Estimates for 1983 assessed the sizes of communities as: Shi'a Muslims 1.2m., Maronites 900,000, Sunni Muslims 750,000, Greek

Orthodox 250,000, Druzes 250,000, Armenians 175,000. The Maronites, a uniate sect of the Roman Catholic Church, inhabited the old territory of Mount Lebanon, i.e. immediately east of Beirut. In the south, towards the Israeli frontier, Shi'a villages are most common, while between the Shi'a and the Maronites live the Druzes (divided between the Yazbakis and the Joumblatis). The Beka'a valley has many Greek Christians (both Roman Catholic and Orthodox), while the Tripoli area is mainly Sunni Muslim.

CHRISTIANITY

The Roman Catholic Church

Armenian Rite

Patriarchate of Cilicia: Patriarcat Arménien Catholique, rue de l'Hôpital Libanais, Jeitawi, 2400 Beirut; tel. (1) 583520; fax (1) 449160; f. 1742; established in Beirut since 1932; includes patriarchal diocese of Beirut, with an estimated 12,000 adherents (31 December 1997); Patriarch: Most Rev. During 1996–98 the Government took measures to close down unlicensed private broadcasters, and to restrict the activities of those licensed to operate. In particular, the broadcasting of news and political programmes by private satellite television channels has been banned.

Finance

(cap. = capital; dep. = deposits; res = reserves; m. = million; brs = branches; amounts in £L)

BANKING

Beirut was, for many years, the leading financial and commercial centre in the Middle East, but this role was destroyed by the civil conflict. To restore the city as a regional focus for investment banking is a key element of the Government's reconstruction plans.

Central Bank

Water

In mid-1999 the Government was in the process of establishing five new regional water authorities (in the governorates of the North, South, Beka'a, Beirut and Mount Lebanon), to replace the existing water authorities and committees. According to the proposed reorganization, which was due to have been implemented in 1998, the new authorities were to operate under the supervision of the Ministry of Electricity and Water Resources.

Transport

RAILWAYS

Office des Chemins de Fer de l'Etat Libanais et du Transport en Commun: Gare St Michel, Nahr, Beirut; tel. (1) 587211; telex 43088; fax (1) 447007; since 1961 all railways in Lebanon have been state-owned. The original network of some 412 km no longer transports passengers. However, Lebanese authorities have planned a rail reconstruction project, costing US $40m.–$60m. Pres. BASAM ABD AL-MALAK.

ROADS

At 31 December 1996 Lebanon had an estimated 6,350 km of roads, of which 2,170 km were highways, main or national roads and 1,370 km were secondary or regional roads. The two international motorways are the north–south coastal road and the road connecting Beirut with Damascus in Syria. Among the major roads are that crossing the Beka'a and continuing south to Bent-Jbail and the Shtaura–Ba'albek road. Hard-surfaced roads connect Jezzine with Moukhtara, Bzebdine with Metn, Meyroub with Afka and Tannourine. A road construction project, costing an estimated US $100m., was planned for Beirut in the late 1990s.

SHIPPING

A two-phase programme to rehabilitate and expand the port of Beirut is currently under way. In the second phase, due to commence in 1996, the construction of an industrial free zone, a fifth basin and a major container terminal are envisaged, at an estimated cost of US $1,000m. Tripoli, the northern Mediterranean terminus of the oil pipeline from Iraq (the other is Haifa, Israel—not in use since 1948), is also a busy port, with good equipment and facilities. Jounieh, north of Beirut, is Lebanon's third most important port. A new deep-water sea port is to be constructed south of Sidon. The reconstructed port of an-Naqoura, in the 'security zone' along the border with Israel, was inaugurated in June 1987.

Port Authorities

CIVIL AVIATION

Services from the country's principal airport, in Beirut, were subject to frequent disruptions after 1975; its location in predominantly Muslim west Beirut made it virtually inaccessible to non-Muslims. In 1986 a new airport, based on an existing military airfield, was opened at Halat, north of Beirut, by Christian concerns, but commercial operations from the airport were not authorized by the Government. Services to and from Beirut by Middle East Airlines (MEA) were suspended, and the airport closed, at the end of January 1987, after the Christian LF militia shelled the airport and threatened to attack MEA aircraft if services from their own airport, at Halat, did not receive official authorization. Beirut airport was reopened in May, after the LF accepted government assurances that Halat would receive the necessary authorization for civil use. However, the commission concluded that Halat did not possess the facilities to cater for international air traffic. Some 2.1m. passengers used Beirut International Airport in 1998.

MEA (Middle East Airlines, Air Liban SAL): POB 206, Immeuble MEA, blvd de l'Aéroport, Beirut; tel. (1) 629125; telex 20820; fax (1) 629260; internet http://www.mea.com.lb; f. 1945; took over Lebanese International Airways in 1969; privatization pending in 1999; regular services throughout Europe, the Middle East, South America, North and West Africa and the Far East; Chair. FADI SAAB.

Tourism

Before the civil war, Lebanon was a major tourist centre, and its scenic beauty, sunny climate and historic sites attracted some 2m. visitors annually. In 1974 tourism contributed about 20% of the country's income. Since the end of the civil conflict tourist facilities, in particular hotels, have begun to be reconstructed, and the Arab Tourist Organization designated 1994 as the International Year of Tourism in Lebanon. Excluding Syrian visitors, the annual total of tourist arrivals increased from 177,503 in 1992 to 557,568 in 1997. Tourism receipts reached an estimated US $715m. in 1996. Of total arrivals in 1998, 40.1% were from Arab countries, and 30.4% from Europe.

National Council of Tourism in Lebanon (NCTL): POB 11-5344, rue Banque du Liban 550, Beirut; tel. (1) 343196; fax (1) 343279; e-mail mot@lebanon-tourism.gov.lb; internet http://www.lebanon-tourism.gov.lb; government-sponsored autonomous organization responsible for the promotion of tourism; overseas offices in London (United Kingdom), Paris (France), Frankfurt (Germany), Cairo (Egypt), and Jeddah (Saudi Arabia); Pres. SAMY MAROUN; Dir-Gen. NASSER SAFIEDDINE.

Defence

Commander-in-Chief of the Armed Forces: Gen. EMILE LAHOUD (Maronite Christian).

Chief of Staff of Armed Forces: Maj.-Gen. ABU DIRGHAM (Druze).

Commander of the Air Force: Brig.-Gen. FAHIM AL-HAJJ.

Director-General of the Internal Security Forces: Brig.-Gen. UMAR MAKHZUMI (Shi'ite) (acting).

Defence Budget (1998): £L901,000m. (US $592m.).

Total armed forces (August 1998): (estimated) 55,100: army 53,300; air force (estimated) 800; navy 1,000.

There is also an internal security force of some 13,000 (under reorganization), attached to the Ministry of the Interior. The strengths of the principal sectarian militias (before they, with the exception of Hezbollah, began to disband in March 1991) were estimated as follows: Lebanese Forces (Christian) 18,500 regulars (16,500 reserves); Druze 8,500 regulars (6,500 reserves); Amal (Shi'ite) 10,200 regulars (4,800 reserves); Hezbollah (Shi'ite) 3,500 regulars (11,500 reserves). The Israeli-backed South Lebanon Army, patrolling the buffer zone along the border with Israel, numbered an estimated 2,500. In March 1978 a 6,000-strong UN Interim Force in Lebanon (UNIFIL), (increased to 7,000 in February 1982 but numbering some 4,473 in August 1998), was deployed to try to keep the peace near the border with Israel. An estimated 30,000 Syrian troops remain in Lebanon.

Education

Education is not compulsory. Primary education has been available free of charge in state schools since 1960, but private institutions still provide the main facilities for secondary and university education. Private schools enjoy almost complete autonomy, except for a certain number which receive government financial aid and are supervised by inspectors from the Ministry of National Education.

Primary education begins at six years of age and lasts for five years. It is followed either by the four-year intermediate course or the three-year secondary course. The baccalaureate examination is taken in two parts at the end of the second and third years of secondary education, and a public examination is taken at the end of the intermediate course. Technical education is provided mainly at the National School of Arts and Crafts, which offers four-year courses in electronics, mechanics, architectural and industrial drawing, and other subjects. There are also public vocational schools providing courses for lower levels. In 1996 the total enrolment at primary and secondary schools was equivalent to 95% of all school-age children (94% of boys; 96% of girls); enrolment at secondary schools in that year was equivalent to 82% of the appropriate age-group (males 78%; females 85%).

Higher education is provided by 13 institutions, including six universities. Teacher training is given at various levels. A three-year course which follows the intermediate course trains primary school teachers and another three-year course which follows the second part of the baccalaureate trains teachers for the intermediate school. Secondary school teachers are trained at the Higher Teachers' College at the Lebanese University. Two agricultural schools provide a three-year course for pupils holding the intermediate school degree. In 1998 Lebanon secured a loan of US $60m. from the World Bank, in order to restructure the country's system of technical and vocational education.

Lebanon has the highest literacy rate in the Arab world. In 1970 the rate of illiteracy among people aged 10 years and over was 21.5% for males and 42.1% for females. In 1995, according to estimates by UNESCO, the average rate of adult illiteracy was 7.6% (males 5.3%; females 9.7%). Expenditure on education by the Central Government in 1996 was £L476,890m. (6.2% of total budgetary expenditure).

LIBYA

(THE GREAT SOCIALIST PEOPLE'S LIBYAN ARAB JAMAHIRIYA)

Physical and Social Geography

W. B. FISHER

The Great Socialist People's Libyan Arab Jamahiriya (as Libya has been known since April 1986) is bounded on the north by the Mediterranean Sea, on the east by Egypt and Sudan, on the south and south-west by Chad and Niger, on the west by Algeria and on the north-west by Tunisia. The three component areas of Libya are: Tripolitania, in the west, with an area of 285,000 sq km (110,000 sq miles); Cyrenaica, in the east, which has an area of 905,000 sq km (350,000 sq miles); and the Fezzan, in the south, with an area of 570,000 sq km (220,000 sq miles)—giving an approximate total for Libya of 1,760,000 sq km (680,000 sq miles). The independence of Libya was proclaimed in December 1951; before that date, following conquest by the Italians, Tripolitania and Cyrenaica had been ruled by a British administration, at first military, then civil; and the Fezzan had been administered by France. The revolutionary Government which came to power in September 1969 renamed the three regions: Tripolitania became known as the Western provinces, Cyrenaica the Eastern provinces, and the Fezzan the Southern provinces.

The political and economic capital of Libya is Tripoli. However, as part of a radical government decentralization programme undertaken in September 1988, all but two of the secretariats of the General People's Committee (ministries) were relocated in other parts of the country.

PHYSICAL FEATURES

The whole of Libya may be said to form part of the vast plateau of North Africa, which extends from the Atlantic Ocean to the Red Sea; but there are certain minor geographical features which give individuality to the three component areas of Libya. Tripolitania consists of a series of regions at different levels, rising in the main towards the south, and thus broadly comparable with a flight of steps. In the extreme north, along the Mediterranean coast, there is a low-lying coastal plain called the Jefara. This is succeeded inland by a line of hills, or rather a scarp edge, that has several distinguishing local names, but is usually alluded to merely as the Jebel. Here and there in the Jebel occurs evidence of former volcanic activity—old craters, and sheets of lava. The Jefara and adjacent parts of the Jebel are by far the most important parts of Tripolitania, since they are better watered and contain most of the population, together with the capital town, Tripoli.

South of the Jebel there is an upland plateau—a dreary desert landscape of sand, scrub, and scattered irregular masses of stone. After several hundred kilometres the plateau gives place to a series of east–west running depressions, where artesian water, and hence oases, are found. These depressions make up the region of the Fezzan, which is merely a collection of oases on a fairly large scale, interspersed with areas of desert. In the extreme south the land rises considerably to form the mountains of the central Sahara, where some peaks reach 3,500 m in height.

Cyrenaica has a slightly different physical pattern. In the north, along the Mediterranean, there is an upland plateau that rises to 600 m in two very narrow steps, each only a few km wide. This gives a bold, prominent coastline to much of Cyrenaica, and so there is a marked contrast with Tripolitania where the coast is low-lying, and in parts fringed by lagoons. The northern uplands of Cyrenaica are called the Jebel Akhdar (Green Mountain), and here, once again, are found the bulk of the population and the two main towns, Benghazi and Derna. On its western side the Jebel Akhdar drops fairly steeply to the shores of the Gulf of Sirte (Surt); but on the east it falls more gradually, and is traceable as a series of ridges, about 100m in altitude, that extend as far as the Egyptian frontier. This eastern district, consisting of low ridges aligned parallel to the coast, is known as Marmarica, and its chief town is Tobruk.

South of the Jebel Akhdar, the land falls in elevation, producing an extensive lowland, which, except for its northern fringe, is mainly desert. Here and there occur a few oases—Aujila (or Ojila), Jalo and Jaghbub in the north; and Jawf, Zighen and Kufra (the largest of all) in the south. These oases traditionally supported only a few thousand inhabitants and were less significant than those of the Fezzan, though some are now in petroleum-producing areas and, consequently, increasing in importance. In the same region, and becoming more widespread towards the east, is the Sand Sea—an expanse of fine, mobile sand, easily lifted by the wind into dunes that can sometimes reach about 100 m in height and more than 150 km in length. Finally, in the far south of Cyrenaica, lie the central Saharan mountains—the Tibesti Ranges, continuous with those to the south of the Fezzan.

The climate of Libya is characterized chiefly by its aridity and by its wide variation in temperatures. Lacking mountain barriers, the country is subject to the climatic influence of both the Sahara and the Mediterranean Sea, and, as a result, there can be abrupt transitions in climatic conditions. In winter it can be fairly raw and cold in the north, with sleet and even light snow on the hills. In summer it is extremely hot in the Jefara of Tripolitania, reaching temperatures of 40°C–45°C. In the southern deserts, conditions are hotter still; Gharian has recorded temperatures in excess of 49°C. Several feet of snow can also fall here in winter. Northern Cyrenaica has a markedly cooler summer of 27°C–32°C, but with high air humidity near the coast. A special feature is the *ghibli*—a hot, very dry wind from the south that can raise temperatures in the north by 15°C or even 20°C in a few hours, sometimes resulting in temperatures of 20°C or 25°C in January. This sand-laden, dry wind (which can cause considerable crop damage) may blow at any time of the year, but spring and autumn are the usual seasons.

The hills of Tripolitania and Cyrenaica annually receive as much as 400 mm–500 mm of rainfall, but in the remainder of the country the rainfall is usually 200 mm or less. Once every five or six years there is a pronounced drought, sometimes lasting for two successive seasons.

ECONOMIC LIFE

Such conditions imposed severe restriction on all forms of economic activity. Although petroleum was discovered in considerable quantities in Libya, physical and climatic conditions made exploitation difficult and, until the closure of the Suez Canal in 1967, the remote situation of the country, away from the currents of international trade, was a further handicap. However, production of crude petroleum increased rapidly and proximity to southern and central Europe presented a considerable advantage over the costly Suez passage that was reflected in the price. The introduction of petroleum revenues transformed the economic situation of Libya. Extensive development was undertaken, with the aim of improving housing, and the fostering of industries to produce consumer goods. Roads, electricity, improved water supplies, telecommunications links and reorganized town planning were all targeted by development initiatives, and the construction of a number of sizeable industrial plants was approved.

In the better-watered areas of the Jefara and, to a smaller extent, in northern Cyrenaica, cultivation of barley, wheat, olives and Mediterranean fruit is practised.

The Fezzan and the smaller oases in Cyrenaica are almost rainless, and cultivation depends entirely upon irrigation from wells. Millet is the chief crop, and there are several million date palms, which provide the bulk of the food. Small quantities of vegetables and fruit—figs, pomegranates, squashes, artichokes and tubers—are produced from gardens. Along the northern coast, and especially on the lower slopes both of the Tripolitanian Jebel and the Jebel Akhdar, vines are grown, though less so than formerly because of the prohibition of wine-making since independence.

Over much of Libya, pastoral nomadism, based on the rearing of sheep and goats (and some cattle and camels), is the only possible activity. In Cyrenaica, nomads outnumbered the remainder of the population for many years, but in Tripolitania the main emphasis is on agriculture, although herding is still practised. Several industries have developed—petroleum refining, of course, plus some petrochemical activity, iron and steel production and some light industries. Overall, the scale of industrial activity is still small, but growing. Major efforts have been made to improve agriculture, with debatable success. One increasing difficulty is the exodus of rural workers to jobs in the developing towns, and foreign labour has had to be introduced on some rural development schemes. Another limitation is over-use of artesian water in the Jefara. In certain areas near the coast, the water-table has fallen by 3 m–5 m per year, resulting in invasion of the aquifers by sea-water.

The population of Libya seems to have been Berber in origin, i.e. connected with many of the present-day inhabitants of Morocco, Algeria, and Tunisia. The establishment of Greek colonies, from about 650 BC onwards, seems to have had little ethnic effect on the population; but in the ninth and 10th centuries AD there were large-scale immigrations by Arabic-speaking tribes from the Najd of Arabia. This latter group, of relatively unmixed Mediterranean racial type, is now entirely dominant, ethnically speaking, especially in Cyrenaica, of which it has been said that no other part of the world (central Arabia alone excepted) is more thoroughly Arab.

A few Berber elements do, however, survive, mainly in the south and west of Libya; while the long-continued traffic in Negro slaves (which came to an end in the 1940s) has left a visible influence on peoples throughout Libya and especially in the south.

Arabic, introduced by the 10th century invaders, is the one official language of Libya, but a few Berber-speaking villages remain.

History

Revised for this edition by RICHARD I. LAWLESS

PRE-ISLAMIC LIBYA

In earliest historical times two races inhabited Libya—the 'Libyans' and the 'Ethiopians'—the former, of Mediterranean stock, inhabited the coastal areas; the latter, of negroid and African stock, inhabited the interior. Phoenician sailors began to visit Libya in about 1000 BC to trade for gold and silver, ivory, apes and peacocks, and established the permanent colonies of Leptis, Uai'at (Tripoli) and Sabratha on the coast. A more famous Phoenician colony, Carthage, was established to the west of what is now called Libya, and by 517 BC had come to dominate the others. During the Punic wars between Rome and Carthage the Tripolitanian half of Libya fell under the control of the Numidians until Julius Caesar created the province of Africa Nova.

In about 600 BC the Greeks had colonized Cyrene, and raised it to be a powerful city. Cyrene later fell under the domination of Alexander the Great, came under the Ptolemies in about 322 BC and was bequeathed to Rome in 96 BC. Libya then enjoyed several centuries of prosperity under Roman rule, but, by the middle of the fourth century AD, decline had set in. In AD 431 the Vandals, under Genseric, conquered the country, but a hundred years later the Emperor Justinian's general Belisarius reconquered the country for the Byzantine Empire. Repeated rebellions by Berber tribes, however, soon reduced the country to anarchy.

ARAB INVASION

Arab invaders overran the country and captured Tripoli in 643. The majority of the invaders embraced Islam, but mainly in its schismatic forms as Kharijites, Ibadites and Shi'ites. Continual rebellion induced the Caliph of Baghdad, Haroun ar-Rashid, to appoint, in 800, Ibrahim ibn al-Aghlabid as governor, with his capital at Qairawan (now Kairouan, in Tunisia). This Aghlabid dynasty, virtually independent of the Abbasid caliphate of Baghdad, ended in the 10th century when a Shi'ite uprising founded the Shi'ite Fatimid Dynasty, which from Tunisia conquered Egypt, transferring the seat of government to Cairo in 972. Bulukkin ibn Ziri was made governor of Ifriqiya, and at the beginning of the 11th century the Zirid Amir returned to orthodox Sunnism and acknowledged the sovereignty of the Caliph of Baghdad.

The Fatimid Caliph of Baghdad reacted by invading Libya in 1049, and the next five centuries witnessed little but inter-tribal wars. By the 16th century the northern coast of Africa had become infested with the dens of pirates, and was attracting the crusading and imperialistic designs of Christian Spain. Ferdinand the Catholic sent an expedition which took Tripoli in 1510. The Muslim world had now become, under the Ottoman Turks, more united than it had been for 600 years, and Sinan Pasha was able to wrest Tripoli from the Knights Hospitallers of St John (to whom it had been confided by Charles V) in 1551. Ottoman rule was loose but oppressive. The professional soldiers, the Janissaries, became a power within the state, and the activities of the pirate corsairs, often with the blessing of the Ottoman pashas, attracted reprisals from the European naval powers.

In 1711 a local notable, Ahmad Karamanli, of Ottoman origin and an officer in the Janissaries, was proclaimed *dey*, (originally, deys were high officers of the Ottoman army of occupation) and eventually recognized as pasha. The Karamanli dynasty lasted until 1835. Piracy had again contributed much to its finance, and when European naval action suppressed piracy after the Napoleonic wars, the Karamanlis were ruined. In 1835, probably through fear of the extension of French power in Algiers and Tunis, the Sultan decided to reoccupy Libya and to bring it once more under the direct rule of the Porte (the Ottoman administration in Constantinople). The years that followed were marked by corruption, oppression and revolts, but also by the rise of the Sanusi religious brotherhood.

ITALO-TURKISH CONFLICTS

On 29 September 1911 Italy declared war on Turkey for reasons largely of national prestige. After a short bombardment, Italian troops landed at Tripoli on 3 October. Italy knew the Turks to be involved in the Balkans, and knew, through its commercial infiltration of Libya, their weakness in Africa. But the attack on Libya was not the easy exercise which Italy expected. The Turks withdrew inland but the Libyans organized themselves and joined the Turks, to whom the Porte sent assistance in the form of arms and of two senior officers, Ali Fethi Bey and Enver Pasha. The presence in the Italian army of Eritrean troops was a spur to the pride of the Libyans. In October and November a number of actions were fought around Tripoli in which the Italians had little success. A seaborne Italian force then descended on Misurata and seized it, but could make no progress inland. At ar-Rumeila they suffered a considerable reverse.

Turkey, however, defeated in the Balkan War, was anxious for a peace, which was signed on 18 October 1912. One of the conditions of this peace was that the Libyans should be allowed 'administrative autonomy'. This was never realized.

Peace with Turkey did not, however, mean peace in Libya for the Italians. Although most of the Tripolitanians submitted and were disarmed within two years, the Sanusiya of Cyrenaica under Said Ahmad ash-Sharif, and their adherents in the Fezzan and Tripolitania, refused to yield. The Sanusiya maintained a forward post at Sirte (Surt) under Sayyid Ahmad's brother, Sayyid Safi ad-Din as-Sanusi. The extent of contact between the latter and one Ramadan as-Sueihli of Misurata is not clear. Ramadan had been in the resistance to the Italians and two years later had appeared to be submissive. At all events, he found himself commanding Libyans in an action started by the Italians at al-Qaradabia in 1914, to push back Said Safi ad-Din. Ramadan and his Misuratis changed sides in this action, to the discomfiture of the Italians. By the time that the First World War had started, the Italians held only the coastal towns of Tripoli, Benghazi, Derna and Tobruk, and a few coastal villages near Tripoli.

The First World War gave Turkey and its German allies the opportunity of fomenting trouble against Italy in Libya. Arms and munitions were sent by submarine. Nuri Pasha from Turkey and Abd ar-Rahman Azzam from Egypt joined Said Ahmad ash-Sharif in Cyrenaica. Ramadan as-Sueihli became head of a government at Misurata. The Sultan, to prevent quarrels, sent Osman Fu'ad, grandson of Sultan Mourad, as Amir, and Ishaq Pasha as commander-in-chief in Tripolitania. The strategic objective of these efforts was to engage Italian forces in Libya and British forces in the Western Desert. The climax of Nuri Pasha's efforts with the Sanusi was a disastrous action in the Western Desert against the British, as a result of which Said Ahmad ash-Sharif handed over the leadership to Said Muhammad Idris. He was compelled to make the treaty of az-Zawiatna with the British and the Italians, who recognized him as Amir of the interior of Cyrenaica, provided that he desisted from attacks on the coastal towns and on Egypt.

The end of the war in 1918 left Italy weak and the Libyans, deserted by the Turks, weary. The Tripolitanians attempted to form a republic with headquarters at Gharian and with Abd ar-Rahman Azzam as adviser. The Italians made a truce with them at Suani ibn Adam, permitting a delegation to go to Rome, and entertaining the idea of 'administrative independence'. Ramadan as-Sueihli visited Tripoli. In Cyrenaica, Said Muhammad Idris as-Sanusi likewise attempted to come to terms; in 1921, at Sirte (Surt), the Tripolitanian leaders agreed with him to join forces to obtain Libya's rights and to pay homage to him as Amir of all Libya. Meanwhile the delegation to Rome had returned empty-handed and Ramadan as-Sueihli had been slain in a tribal fight.

ITALIAN COLONIZATION

The advent of the Fascists to power in Italy (1922) coincided with the appointment in Tripoli of a vigorous governor, Count Volpi. Thereafter, it took until 1925 to occupy and pacify the province of Tripolitania and to disarm the population. In Cyrenaica, however, the famous Said Omar al-Mukhtar, representing the Amir Muhammad Idris, whose health had collapsed, maintained the struggle. The Italians realized that the only effective policy was to deprive the Sanusiya of their bases, the oases of the south. Jaghbub was occupied in 1925, Zella, Ojila and Jalo in 1927. In 1928 Marshal Badoglio was appointed Governor-General and in 1929 he occupied Mizda in the Fezzan. Omar al-Mukhtar still resisted. The Italians removed into concentration camps at al-Aqeila the tribes of the Jebel Akhdar. In 1930 Rodolfo Graziani, an experienced Italian military commander, was dispatched to Cyrenaica, and the infamous barbed-wire fence was erected along the frontier with Egypt. Finally, in 1931, isolated from all support, Omar al-Mukhtar, now an old man, was surrounded, wounded, captured, and hanged.

Starting in the early 1920s, the Italians proceeded to colonize parts of Libya which they had occupied, and which geographical and ecological conditions rendered profitable for development. They enlarged and embellished the coastal towns. They extended throughout the cultivable areas an excellent network of roads. They bored wells, planted trees, and stabilized sand-dunes. But their civilizing policy was weighted heavily in favour of their own race. The object was clearly the settlement in Africa of as much as possible of Italy's surplus peasant population. These were encouraged to come in large numbers. Skilled cultivators of olives, vines, tobacco and barley, they needed the best lands and were provided with them. The priority given to the progress of the Libyans was a low one. Primary education for the Libyans was encouraged, and schools provided for them, but the main medium of instruction was Italian. Very few Libyans were accepted into Italian secondary schools.

INDEPENDENCE

There followed the Second World War, and the occupation in 1942 of Cyrenaica and Tripolitania by a British military administration and of the Fezzan by French forces. Thereafter, until 1950, the country was administered with the greatest economy on a care and maintenance basis. Its final fate was long in doubt, until the UN decreed its independence by 1952. On 24 December 1951 Libya was declared an independent united kingdom with a federal constitution under King Idris, the former Amir Muhammad Idris, hero of the resistance.

According to the Constitution promulgated in October 1951, the State of Libya was a federal monarchy ruled by King Muhammad Idris al-Mahdi as-Sanusi and his heirs, and divided into the three provinces of Tripolitania, Cyrenaica and the Fezzan. The federal Government consisted of a bicameral legislature, i.e. a Chamber of Deputies, to which was responsible a Council of Ministers appointed by the King, and a Senate of 24 members (eight for each province). The King had the right to nominate 12 of the senators, to introduce and to veto legislation, and to dissolve the Lower House at his discretion. The Constitution also provided that provincial legislatures should be created for the subordinate provinces of the new realm.

On the attainment of full independence, serious political, financial and economic problems confronted Libya. Not the least of these was the task of fostering amongst the population a sense of national identity and unity. The loyalties of the people were still given to the village and the tribe, rather than to the new federal state.

These rivalries revealed themselves in the next two years. The Party of Independence, which supported the Constitution, won control in the February 1952 elections for the Federal Chamber of Deputies. The National Congress Party of Tripolitania, however, was opposed to the federal principle and advocated a unitary state, with elections based on proportional representation (which would have given Tripolitania the main voice). Disorders arising from this disagreement led to the outlawing of the Tripolitania party and the deportation of its leader, Bashir Bey as-Sa'adawi. A Legislative Council for Tripolitania was formed in 1952 but had to be dissolved in 1954 because of continued friction with the federal Government and the King.

Efforts were undertaken, with Western technical aid, to increase the economic resources of Libya, e.g. to improve irrigation and initiate schemes for water catchments, to extend reafforestation, to teach better methods of farming, and to explore the possibilities of extending industries which could process local products and raw materials such as edible oils, fruits, vegetables, fish, etc.

FOREIGN RELATIONS IN THE 1950s

The first important development in the sphere of foreign relations was the admission of Libya to the League of Arab States in March 1953. The second development reflected the economic difficulties of the new state and its close links with Western Europe. In July 1953 Libya concluded a 20-year treaty with the United Kingdom. In return for permission to maintain military bases in Libya, the United Kingdom undertook to grant the new state £1m. annually for economic development and a further annual sum of £2.75m. to offset budgetary deficits.

In September 1954 a similar agreement was signed with the USA. A number of air bases were granted to the USA in return for economic aid amounting to US $40m. over 20 years, an amount which was later substantially increased. Libya also consolidated relations with France and Italy, signing a friendship pact with France in 1955 and a trade and financial agreement with Italy in 1957. In addition Libya was attempting to

cement relations with its Arab neighbours. In May 1956 Libya concluded a trade and payments pact with Egypt, arranging the exchange of Libyan cattle for Egyptian foodstuffs.

The critical problem for Libya was to ensure that enough funds from abroad should be available to meet the normal expenses of the Government and to pay for much-needed improvements. At this time, its strategic position was all Libya had to sell, hence its involvement with the Western military alliance. The Libyan attitude to the communist world was much more reserved. Reliance on income from foreign military bases continued, therefore, to dominate foreign policy, and in the late 1950s and early 1960s Libya received subsidies and military assistance from both the United Kingdom and the USA in return for the use of military bases.

PETROLEUM DISCOVERIES

After 1955–56, when Libya granted concessions for petroleum exploration to several US companies, the search for petroleum resources became one of the main interests of the Libyan Government. By the end of 1959 some 15 companies held petroleum concessions in Libya. An oilfield at Zelten in Cyrenaica was discovered in June 1959. By the end of the year, six productive wells had been found in Tripolitania, four in Cyrenaica and one in the Fezzan. By the beginning of July 1960 there were 35 petroleum wells in production, yielding altogether a little less than 93,000 barrels of petroleum per day. Petroleum production showed a tremendous increase in the 1962–66 period, with exports rising from 8m. tons in 1962 to more than 70m. tons in 1966.

A UNITARY REALM

A general election was held in Libya on 17 January 1960. Most of the 55 seats were contested, but there was no party system in operation. The election was fought mainly on a personal basis. Secret balloting, limited in earlier elections to the urban areas, was now extended to the rural districts. The Prime Minister, Abd al-Majid Koubar, and the other members of his Cabinet retained their seats.

Libya's increasing wealth was making the business of government more complex and several changes of administration ensued between 1960 and 1963. Finally, in March 1963, a new Cabinet was appointed under the premiership of Dr Mohi ed-Din Fekini.

Dr Fekini stated in April 1963 that his Government intended to introduce legislation designed to transform Libya from a federal into a unitary state—a change which would mean increased efficiency and considerable administrative economies. On 15 April the Prime Minister presented to the Chamber of Deputies a bill which contained a number of important reforms: (1) the franchise was to be granted to women; (2) Libya would have (as before) a bicameral parliamentary system, but henceforward the King was to nominate all the 24 members of the Senate (previously one-half were nominated and the other half were elected); (3) the Kingdom of Libya would cease to be a federal state comprising three provinces (Tripolitania, Cyrenaica and the Fezzan), becoming instead a unitary realm divided into 10 administrative areas; (4) the administrative councils established in each of the three provinces were to be abolished, the exercise of executive power residing now in the Council of Ministers. Libya became a unitary state by royal proclamation on 27 April 1963.

THE REALITY OF INDEPENDENCE

In the field of foreign relations, Libya was by now helped by the prospect of financial independence and was making its voice heard in international affairs, particularly in Africa. As a result of decisions taken at the Addis Ababa conference of African Heads of State in May 1963, Libya closed its air and sea ports to Portuguese and South African ships. The signing of pacts with Morocco (1962) and Algeria (1963) meant that Libya now had closer links with all the Maghreb countries. Libya was also showing signs of ending its dependence on the West. The 1955 agreement with France had allowed France to retain certain military facilities in Libya—notably in the field of communications—for the defence of French African territories, but Dr Fekini felt that, with the coming of independence to French African territories in the early 1960s, the matter should be reconsidered.

The question of foreign military bases in Libya now came to the fore. Dr Fekini resigned in January 1964 and the new Prime Minister was Mahmoud Muntasser, formerly Minister of Justice. The Government issued a statement on 23 February, stating that it did not propose to renew or extend its military agreements with the United Kingdom and the USA and that it supported the other Governments of the Arab world in the resistance to imperialism. Muntasser defined the aim of his Government as the termination of the existing agreements with the United Kingdom and the USA and the fixing of a date for the evacuation of the bases in Libya. The Chamber of Deputies then passed a resolution calling for the achievement of this aim and providing that, if negotiations were unsuccessful, the Chamber would pass legislation to abrogate the treaties and close the bases.

The Anglo-Libyan treaty of 1953 was due to expire in 1973. Under the treaty, the United Kingdom maintained a Royal Air Force staging post near Tobruk, an Air Force detachment at Idris airport in Tripoli and Army District Headquarters at Tripoli and Benghazi. The American-Libyan agreement of 1954 was to expire in 1971. Near Tripoli was situated the largest American airbase outside the USA. Under the treaties, Libya had received large amounts of financial, economic and military aid from the USA and from the United Kingdom. Petroleum revenues had greatly reduced Libyan dependence on such aid. The United Kingdom withdrew the bulk of its forces in February and March 1966.

At elections for the Libyan Parliament, held in October 1964, in which women voted for the first time, moderate candidates won most of the 103 seats. King Idris dissolved the Parliament, however, on 13 February 1965, because of complaints about irregularities in the election procedure. The Prime Minister resigned, to be succeeded by Hussain Maziq, Minister for Foreign Affairs. A new election for Parliament was held on 8 May 1965, with over 200 candidates contesting the 91 seats and 16 members being returned unopposed.

The outbreak of the six-day Arab–Israeli war in June 1967 was followed by serious disturbances in Tripoli and Benghazi, in which port and oil workers and students, inflamed by Egyptian propaganda, played a prominent part. The British and US embassies were attacked and the Jewish minorities were subjected to violence and persecution which resulted in the emigration of most of them to Italy, Malta and elsewhere. The Prime Minister, Hussain Maziq, proved unable to control the situation and was dismissed by the King on 28 June. Firm measures by his successor, Abd al-Qadir Badri, brought a return to order but the antagonisms which he aroused forced him, in turn, to resign in October. He was succeeded as Prime Minister on 28 October by the Minister of Justice, Abd al-Hamid Bakkoush.

An immediate result of the June 1967 war was a decline of about 80% in the Libyan output of crude petroleum, owing to the boycott of oil supplies from Arab countries to the United Kingdom, the USA and the Federal Republic of Germany. There was a gradual return to full production in the months following the conflict, however, and the ban on the export of petroleum was lifted in September. The closure of the Suez Canal brought about a considerable increase in Libya's petroleum exports and general prosperity, although the Libyan Government agreed to make annual aid payments totalling £30m. to the United Arab Republic (UAR) and Jordan to alleviate the consequences of the war. Libya's petroleum output increased by about 50% in 1968 and the country became, after only seven and a half years, the second largest producer in the Arab world, with the great advantage, as a supplier to Europe, of being on the more convenient side of the Suez Canal.

The new Prime Minister, Abd al-Hamid Bakkoush, initiated a programme of progressive change, seeking to modernize Libya's administration, reform the civil service and improve the educational system. He also sought to provide the armed forces with modern equipment, and, under a contract announced in April 1968, the purchase from a British firm of a surface-to-air missile defence system, costing £100m., was arranged. An agreement to buy British heavy arms followed, but in September 1968 Bakkoush was replaced as premier by Wanis al-Qaddafi, since the pace of Bakkoush's reforms had apparently alienated some

conservative elements. Both Cabinets enjoyed close relationships with Western countries but played little part in Arab politics.

THE 1969 COUP

On 1 September 1969 a military coup was staged in Tripoli while the King was in Turkey for medical treatment. Within a few days the new regime gained complete control of the entire country. The coup was remarkable for the absence of opposition, relatively few arrests, virtually no fighting and no deaths at all being reported. A Revolution Command Council (RCC) took power and proclaimed the Libyan Arab Republic. The RCC initially remained anonymous but was soon revealed as a group of young army officers, the leader, Col Muammar al-Qaddafi, being only 27. The aged King Idris refused to abdicate but accepted exile in Egypt when it became obvious that the revolution had been completely accepted by his people. He remained there until his death, aged 93, in May 1983.

A provisional Constitution, announced in November, stated that supreme power would remain in the hands of the RCC, which appointed the Cabinet; there was no provision for a future general election or national assembly, and the royal ban on political parties was to continue. A largely civilian Cabinet was appointed, under close military supervision. The Ministers of Defence and of the Interior were accused of organizing an abortive counter-revolution in December, and were tried and sentenced in 1970. In January Col Qaddafi himself became Prime Minister and several of his colleagues also joined the Cabinet.

The principal force underlying the regime's policies was undoubtedly that of professed Arab nationalism. Internally, this led to the strict enforcement of the royal law requiring businesses operating in Libya to be controlled by Libyans—banks being particularly affected. The remaining British military establishment in Libya, requested to leave as soon as possible, was finally removed in March 1970, and the much larger US presence at Wheelus Field was removed in June. Most of the European and American specialists (managers, teachers, technicians and doctors), were replaced by Arabs, mainly from Egypt. English translations disappeared from street signs, official stationery and publications, and most hoardings, the use of Arabic alone being permitted; similarly, the Islamic prohibitions on alcoholic drinks and certain Western clothes were officially revived. In July 1970 the property of all Jews and Italians still living in Libya—some 25,000 people—was sequestered by the Government, and both communities were encouraged to leave without delay; some Jews were, however, offered compensation in government bonds. In the same month the three main petroleum marketing companies—Shell, Esso and an ENI subsidiary—had their distribution facilities nationalized.

Another anti-government plot was reported to have been crushed in July 1970. In the autumn two ministers resigned and there were signs of a power struggle developing within the RCC. The internal dissension apparently increased in the first part of 1970 over the proposed federation with the UAR, Syria and Sudan, and over Qaddafi's promises of a constitution and political institutions, including an elected President. A step towards introducing these was the announcement in June 1971 that an Arab Socialist Union (ASU) was to be created as the state's sole party.

FOREIGN POLICY AFTER THE COUP

The new regime almost immediately received enthusiastic recognition from the radical Arab countries and the USSR, and the rest of the world also granted recognition within a few days. As would be expected from the Arab nationalist inspiration behind the revolution, the monarchy's close ties with Western powers were abandoned in favour of close relations with the Arab world and Egypt in particular; this friendship became the basis of a triple alliance announced late in 1969, Sudan being the third member. The alliance was intended to develop both politically—as a strong bulwark against Israel and the West—and economically, in that the economies of the three countries complemented each other to a considerable extent. However, when a federation agreement was signed in April 1971, it was Syria which became the third member. Libya also adopted a militant position on the Palestine question, and this created some diplomatic problems regarding arms contracts, particularly with the United Kingdom.

Although in July 1970 the Libyan Government followed Egypt in accepting US proposals for a cease-fire with Israel, it continued its militant statements on the Middle East problem. Qaddafi stated that a peaceful solution was impossible and rejected the UN Security Council resolution on which the US initiative was based. During the fighting between Palestinian guerrillas and the Jordanian army in September 1970, Libya redirected its financial aid from the Jordan Government to the guerrillas and severed diplomatic relations with King Hussein's government.

The coup appeared to have reoriented Libya away from the Maghreb; in the summer of 1970 Libya withdrew from the Maghreb Permanent Consultative Committee. Relations with Tunisia improved in the latter half of 1970, after initial concern in Tunis in 1969 at the radical leanings of the new regime, and Qaddafi headed a delegation which visited Tunisia in February 1971. Relations with Morocco were severed in July 1971, after the Libyan Government prematurely gave its support to an attempt to overthrow King Hassan, which failed within 24 hours.

There was little evidence of any closer relationship with the communist powers, although the People's Republic of China was recognized in June 1971 and the USSR was given due credit for its Middle East policies. However, communism was regarded in Libya as a 'foreign' ideology, antipathetic to more 'progressive' Arab socialism (as in Sudan). Hence, in July 1971, Qaddafi was ready to help President Nimeri of Sudan to regain power after a coup, led by communists, had ousted him. A regular BOAC flight from London to Khartoum was forced down over Libya and two leaders of the Sudanese coup (one of whom, Col Babiker an-Nur, was travelling back to become Head of State), were taken from the plane and deported to Sudan, where they were promptly executed by the restored regime.

PETROLEUM POWER

In April 1971 the negotiations with the oil companies operating in Libya, which had begun soon after the 1969 coup, finally ended in a new five-year agreement raising the total posted price for Libyan crude petroleum to US $3.447 per barrel. In the last stage of the negotiations, conducted in Tripoli, the Libyan Government also represented the interests of the Algerian, Iraqi and Saudi Arabian Governments. Threats of an embargo on the export of crude petroleum were used as a lever in the negotiations.

In 10 years Libya's position had changed from one of penury and dependence to one of power, based entirely on the country's ability to interrupt petroleum supplies. The pronouncements of Qaddafi were, therefore, by now of greater significance to the West. In July 1971 the Deputy Prime Minister, Maj. Abd as-Salam Jalloud, visited the Federal Republic of Germany, France and the United Kingdom: Federal Germany, which bought a particularly large proportion of its crude petroleum from Libya, needed to maintain good relations; France was anxious to discover the use to which Libya would put the *Mirage* jet-engined fighter aircraft that were being supplied under the 1970 agreement; the same anxiety was revealed in the United Kingdom over the supply of armaments, but none of these countries could afford to alienate Libya.

In December 1971, avowedly in retaliation for the United Kingdom's failure to prevent the Iranian occupation of the Tunb islands in the Gulf, Libya nationalized the assets of British Petroleum (BP). This began the process of nationalizing the foreign oil companies (described in more detail in the Economy section; see below).

Relations with the United Kingdom became very strained in the winter of 1971–72, not only because of the nationalization of BP but also because of Libyan intervention in the dispute with Malta over the British bases there. Libya had, for some time, been actively fostering relations with Malta, and talks on possible Libyan aid to Malta were held in August 1971. In January 1972 the British naval training mission was ordered to leave Libya, and in February the 1954 agreement with the USA was abrogated.

Libya's attitude towards the USSR had remained cool, and the Government was violently opposed to the Iraqi-Soviet treaty, signed in April 1972. Nevertheless, in February 1972, Maj. Jalloud visited Moscow and in March an agreement on petroleum co-operation was signed. It was also reported that the USSR might supply arms to Libya.

At home, Qaddafi continued his attempts to run the legislature and the Government entirely in accordance with Islamic principles. At the end of March 1972 the ASU held its first national congress. At subsequent sessions, the ASU adopted resolutions to clarify its position and policies, and to abolish censorship of the press, while, at the same time, maintaining financial control of newspapers.

In July 1972 disagreement within the RCC led to Qaddafi's replacement as Prime Minister by Maj. Jalloud, who formed a new Cabinet in which all but two of the ministers were civilians.

ARAB UNITY

A recurrent feature of Qaddafi's foreign policy has been the announcement of proposals for the union of Libya with neighbouring states, and the subsequent collapse of such planned mergers. The Tripoli Charter of December 1969, establishing a revolutionary alliance of Libya, Egypt (then the UAR) and Sudan, was followed by gradual moves towards federation and the adhesion of Syria. Sudan withdrew, but in September 1971 referenda in Libya, Egypt and Syria approved the constitution of the Federation of Arab Republics, which officially came into existence on 1 January 1972, but which had few practical consequences.

The Federation was not Qaddafi's only attempt to export his ideals by means of merger. At the time of Malta's dispute with the United Kingdom over the use of bases, in 1971, he proposed a union of Malta with Libya, but was rebuffed. In December 1972, in a speech in Tunis, he proposed the union of Libya and Tunisia, much to the surprise of his audience, not least President Bourguiba, who immediately rejected the idea, making some pointed remarks about Qaddafi's inexperience.

A merger of Libya and Egypt was agreed in principle in August 1972 but, as the date of implementation approached, certain difficulties became apparent. Qaddafi, who had recently launched his 'Cultural Revolution' of April 1973, was seen as a reactionary Muslim puritan in Egypt, and he was openly critical of Egyptian moral laxity. Egyptian suspicion of Libyan revolutionary enthusiasm, notwithstanding, the union came into effect on 1 September 1973, with the establishment, in theory, of unified political leadership and economic policy and a constituent assembly. The union soon fell apart, wrecked by Qaddafi's opposition to Egypt's conduct of the October 1973 Arab–Israeli war.

President Qaddafi's attitude towards the Palestine problem had long been a source of discord between Libya and other Arab states. He gave financial support to the Palestinian guerrillas, and a number of Libyan volunteers were sent to assist them, Qaddafi's objective being the complete destruction of Israel. He was extremely critical of what he saw as the lack of total commitment to the Palestinian cause on the part of Egypt and Syria, and frequently expressed the opinion that the Arab states could not, and did not deserve to, defeat Israel. He accused Egypt and Syria of being more interested in the recovery of territory lost in the 1967 war than in aiding the Palestinian resistance movement, which was being 'destroyed by the Arabs in co-operation with Israel'. Qaddafi was not informed of the Egyptian and Syrian plan to attack Israel in October 1973, was strongly critical of their battle plan, and refused to attend the Algiers meeting of Arab Heads of State after the war, declaring that it would only ratify Arab capitulation. Libya was nevertheless an enthusiastic proponent of the use of the Arab petroleum embargo against countries which were considered to be pro-Israel. During the war, Libya's participation had been limited to the supply of arms and equipment, and its conclusion seemed only to complete Qaddafi's disillusionment concerning the union with Egypt.

Presidents Qaddafi and Bourguiba announced the union of Libya and Tunisia on 12 January 1974, following two days of talks. A referendum to approve the decision was to be held on 18 January, but was almost immediately postponed. The decision had been taken in the absence of the Tunisian Prime Minister, Hedi Nouira. When he returned to Tunisia, the pro-merger Minister of Foreign Affairs was dismissed, and Tunisia's attitude changed, to support the indefinite deferment of the union. Qaddafi's impetuous action aimed to produce a unified state, but Tunisia now treated the agreement as merely a declaration of principle, without any practical effect.

Qaddafi's enthusiasm for Arab unity continued unabated, but the failure of political mergers led him to propound a new course. His speeches attacked the Arab leaders who blocked unity and failed to 'liberate' Palestine, and he spoke of Libyan aid for revolution and the achievement of Arab union by popular pressure on the Governments of Tunisia, Egypt, Algeria and Morocco. Libya had, for some time, been providing money, arms and training for subversive or 'liberation' organizations operating in Ireland, Eritrea, the Philippines, Rhodesia, Portuguese Guinea, Morocco and Chad, as well as providing aid for sympathetic countries such as Pakistan, Uganda, Zambia, Togo and, after May 1973, Chad. Now it appeared that Libya was supporting subversion in Egypt and Sudan. Attempted coups in Egypt in April and Sudan in May 1974 were believed to have had Libyan support, and relations between Libya and other Arab states became increasingly hostile. Qaddafi's failed mergers and his interference in the internal affairs of other countries were believed to have been major factors in his withdrawal from an active political role in April 1974, when it was seen that he had failed in his policy of exporting the ideals of the Libyan 'Cultural Revolution'.

THE 'CULTURAL REVOLUTION'

President Qaddafi's somewhat idiosyncratic political and social philosophy first obtained full expression in a speech in April 1973, when he called for the immediate launching of a 'cultural revolution to destroy imported ideologies, whether they are eastern or western' and for the construction of a society based on the tenets of the Koran. The form which this revolution was to take was laid down in a five-point programme: 'people's committees' would be set up to carry out the revolution, the 'politically sick' would be purged, the revolutionary masses would be armed, a campaign would begin against bureaucracy and administrative abuses, and imported books which propagated communism, atheism or capitalism would be burned. The people's committees set about their task of supervising all aspects of social and economic life, criticizing and dismissing officials and business executives who failed to show the required revolutionary fervour, and destroying offensive books and magazines.

In May 1973 Qaddafi presented his 'third international theory', which was 'an alternative to capitalist materialism and communist atheism'. In effect, it appeared to be an appeal for a return to Islamic fundamentalism (an appeal which was subsequently echoed in other Middle Eastern countries), together with a rather confused combination of socialism and respect for private property, and much talk of tolerance and the rights of oppressed nationalities. While the 'Cultural Revolution' proceeded apace in Libya, Qaddafi seemed more concerned with foreign policy and his new-found role as a revolutionary philosopher, who had proposed a universally applicable theory which would replace existing ideologies. Qaddafi concentrated on the formulation and propagation of his theory, and on his erratic, unsuccessful attempts to export the Libyan revolution by merger or by subversion, while the mundane details of administration were increasingly referred to Maj. Jalloud, the Prime Minister.

The return to the teachings of the Koran and the rejection of external influences took several forms, some of them petty, such as the insistence upon the use of Arabic in foreigners' passports, and some macabre, as in the revival of such features of Koranic law as the dismembering of thieves' hands. The theory was also invoked in the disputes with foreign oil companies in 1973 (dealt with in detail in the Economy section), presented as an expression of Libyan independence.

On 5 April 1974 it was announced that Qaddafi, while remaining Head of State and Commander-in-Chief, had been relieved of political, administrative and ceremonial duties, and was to devote himself to ideological and mass organization work. It appeared that, willingly or otherwise, Qaddafi had effectively been replaced by Prime Minister Jalloud. After a five-month

withdrawal from active direction of the Government, Qaddafi re-emerged in the autumn of 1974 and it soon became apparent that he was more firmly in command than ever.

THE CREATION OF THE SOCIALIST PEOPLE'S LIBYAN ARAB JAMAHIRIYA

President Qaddafi's theories had, since 1973 (when he presented his third international theory), demonstrated a strong desire to foster 'people's assemblies' at all levels of Libyan life. Under a decree promulgated by the ruling RCC in November 1975, provision was made for the creation of a 618-member general national congress of the Arab Socialist Union (ASU), the country's only permitted political party. The congress, which held its first session in January 1976, comprised members of the RCC, leaders of existing 'people's congresses' and 'popular committees', and trade unions and professional organizations. Subsequently the General National Congress of the ASU became the General People's Congress (GPC), which first met in November 1976. Qaddafi announced plans for radical constitutional changes and these were endorsed by the GPC in March 1977. The official name of the country was changed to The Socialist People's Libyan Arab Jamahiriya, and power was vested in the people through the GPC and the groups represented in it. The RCC disappeared and a General Secretariat of the GPC, with Qaddafi as Secretary-General, was established. The Council of Ministers was replaced by the General People's Committee, with 26 members, each a secretary of a department. People's committees were set up at local level, ostensibly to give citizens control over their own affairs. In reality, their creation enabled Qaddafi to dispose of governors, ministers and local officials, some of whom were beginning to resist his more radical reforms. In March 1979 Qaddafi resigned from the post of Secretary-General of the General Secretariat of the GPC, so that he could devote more time to 'revolutionary work'. The General Secretariat was reorganized, as was the General People's Committee, which was reduced to 21 members.

In late 1979 Qaddafi urged Libyans living abroad to take over Libyan embassies; diplomats were ousted and 'people's bureaux' established in most Western countries. At the fifth meeting of the GPC, in January 1980, several government ministers were dismissed, notably the experienced Petroleum Secretary, 'Izz ad-Din Mabrouk, who was accused of inefficiency in nationalizing the petroleum industry. The sixth meeting of the GPC, in January 1981, reshuffled several ministerial appointments, discussed the 1981–85 economic plan, and made further proposals for transforming Libyan society along the lines described in Qaddafi's 'Green Book' (published in three volumes over the period 1976–79). The Ministry of Foreign Affairs was abolished and replaced by a Bureau of Foreign Liaison.

QADDAFI'S EXTERNAL INVOLVEMENTS

Relations with Egypt deteriorated after Qaddafi boycotted the Rabat summit meeting of Arab Heads of State in October 1974. Qaddafi was unhappy about the decision to recognize the Palestine Liberation Organization (PLO), under Yasser Arafat, as the sole legitimate representative of the Palestinians. He subsequently demonstrated support for the 'rejectionist front'—the wing of the Palestinian guerrilla movement which rejected the concept of a possible settlement of the Arab–Israeli conflict under terms which could be acceptable to Arafat, Jordan and Egypt.

The war of words with Egypt continued in 1975, with articles in the Libyan press containing bitter personal attacks on President Sadat and with the Egyptian press accusing Qaddafi of preparing to mount an invasion of Egypt. A delegation from the National Assembly of the Federation of Arab Republics, which visited Tripoli and Cairo in May, was able to bring about a temporary reconciliation but, at the end of May, relations deteriorated again after reports that Libya was to allow the establishment of Soviet military bases on its territory in return for huge supplies of Soviet weapons. It later appeared that the arms deal did not include the establishment of Soviet military bases in Libya, and was, in fact, smaller than at first reported. Libya, in turn, condemned Egypt for signing the second interim disengagement agreement between Egypt and Israel in September 1975. Relations with Egypt did not improve in 1976 or 1977, and in July 1977 for a while, frontier clashes had the appearance of open war.

Relations with Egypt were not improved when, in November 1977, President Sadat of Egypt launched his peace initiative by visiting Israel. Qaddafi condemned Sadat's move and was a leading instigator of the Tripoli summit of 'rejectionist' states which formed a 'front of steadfastness and confrontation' against Israel in December 1977. Qaddafi remained strongly opposed to Sadat's peace initiative throughout 1978 and following the signing of the Egyptian-Israeli treaty in March 1979, Qaddafi withdrew from the Baghdad summit meeting of Arab states on the grounds that the sanctions which were being contemplated against Egypt were insufficiently far-reaching.

In early 1980 a serious rift developed between Qaddafi and Arafat, leader of the PLO, who was accused of having abandoned the armed struggle in favour of a strategy of diplomacy and moderation. In January relations were formally broken with al-Fatah, the largest component organization of the PLO, and all aid was suspended, although Libya continued to support other wings of the movement. The Libyan authorities began to organize Palestinians in the country into 'people's congresses' to pursue war against Israel independently, and by May about 27 such groups were reported to have been set up. However, a summit meeting of the 'steadfastness front' in Tripoli in April seemed to restore a measure of solidarity, and the PLO representative returned to Tripoli in May.

Relations with the USA were erratic throughout 1979 and the first half of 1980. In early 1979 Qaddafi threatened to cut off petroleum exports unless US President Jimmy Carter lifted a ban on sales to Libya of agricultural and electronic equipment and transport aircraft. The sacking of the US embassy in Tripoli, by mobs protesting at the presence in the USA of the exiled Shah of Iran, led to the withdrawal of the US ambassador in December 1979. In May 1980 Qaddafi announced that he was exacting compensation to the value of thousands of millions of dollars from the USA, the United Kingdom and Italy for damage which had been sustained by Libya during the North African campaigns of the Second World War. These countries were threatened with a petroleum embargo and the withdrawal of Libyan assets from their banking systems if the demands were not met. In mid-1979 Libyan petroleum accounted for an estimated 600,000 of the 8m. barrels per day which were being imported by the USA.

Although Qaddafi strenuously denied Libyan involvement, a guerrilla raid on the Tunisian mining town of Gafsa in January 1980, with the presumed intent to incite a popular rebellion, was attributed to Libya. France sent military aid to support the Tunisian Government against the potential Libyan threat, and in February the French embassy in Tripoli and consulate in Benghazi were burned as a demonstration of Libya's anger at this action. The incident prompted Qaddafi to pledge publicly his determination to counter French intervention in Africa by any means. In February 1982, however, relations between Libya and Tunisia improved when Qaddafi visited Tunisia and a co-operation agreement between the two countries was signed.

In March and April 1979 a Libyan military presence in Uganda was unable to prevent the overthrow of Idi Amin, and heavy losses were incurred. Morocco severed diplomatic relations in April 1980, following the decision by Libya to recognize the independence of the Western Sahara.

During the early months of 1981 there was a build-up of Soviet and East European military advisers in Libya, and in March 1983 it was announced that Qaddafi was to sign a treaty of friendship and co-operation with the USSR. The treaty was not expected, however, to contain military clauses which would commit the USSR to supporting Libya in the event of armed clashes. This increasing interest in the USSR closely paralleled worsening relations with the USA. The US embassy in Tripoli was closed down in May 1981 and relations deteriorated further in August, when US aircraft shot down two Libyan aircraft which had intercepted them over the Gulf of Sirte (Surt), claimed by Libya as its territorial waters. In November 1981 President Ronald Reagan alleged that a Libyan 'hit-squad' had been sent to assassinate him.

In February 1983 relations with the USA deteriorated further with the discovery of an alleged Libyan coup plot against the Sudanese Government. US naval vessels moved into Libyan

waters and four US surveillance aircraft were spotted over the Libyan-Sudanese border. The US Administration, however, denied that these events were anything more than routine military movements, and said that US troops were merely training Egyptian forces.

LIBYA'S INVOLVEMENT IN CHAD: 1973–88

For many years Libya had been supporting the Front de libération nationale du Tchad (FROLINAT) in its rebellion against the Chad Government. In 1973 Libya occupied the Aozou strip, a region of 114,000 sq km (reputed to contain valuable deposits of minerals) in the north of Chad, basing its action on an unratified treaty of 1935, whereby Italy and France altered the frontiers between their two colonies and, according to Libya, sovereignty over the strip passed to Italy and subsequently to Libya, when it achieved independence in 1951. Chad raised this grievance at the OAU conference in Gabon in July 1977, and an *ad hoc* committee of reconciliation was established to regulate affairs in the disputed area, but Libya consistently refused to attend its sessions. In March 1978 the FROLINAT rebels were achieving such success against the Chad army that Gen. Félix Malloum (the President of Chad) was forced to appeal to Libya to arrest the progress of the rebels. A cease-fire was arranged at reconciliation meetings, held in the Libyan towns of Sebha and Benghazi, at the end of March. Sporadic fighting continued, however, amid allegations that certain factions of FROLINAT were still receiving substantial Libyan support.

A series of military reverses resulted in the downfall of the Malloum Government in March 1979 and, following an initiative by Nigeria, a cease-fire was signed at Kano by the four opposing Chadian factions. With the prospect of a share in the government of Chad at last, the mainstream of FROLINAT and, earlier, certain splinter groups withdrew their support from Libya over its annexation of the Aozou strip. Although a signatory of the Kano agreement, Libya engaged in a series of retaliatory attacks deep inside the northern border in mid-April. In June a 2,500-strong Libyan army invaded northern Chad and was driven back after several days' fierce fighting by FROLINAT forces. Chad's new coalition Government, formed in late April, was dominated by former FROLINAT insurgents and excluded the extreme factions from the south. The secessionist movement which subsequently appeared in the south was soon known to be receiving considerable support from Libya, while Libyan military aid continued to be received by certain guerrilla groups in the north. Dissent by the south and external pressure led to the disintegration of the coalition Government, but a second attempt to implement a 'Government of National Unity' foundered as, parallel to the north-south conflict, the inter-Muslim conflict intensified between President Goukouni Oueddei and the Minister of Defence, Hissène Habré. By March 1980 the Chad capital, N'Djamena, was the site of a pitched battle between Habré's forces and the armies of the President and his allies. In May Libya responded to an appeal from President Goukouni (some of whose Muslim rivals had received Libyan backing a year earlier) for reinforcements to help in stemming the rapid advance of Habré's forces in the capital.

During the latter half of 1980 an increasing number of Libyan troops were engaged in Chad, eventually helping President Goukouni to overcome the forces of Hissène Habré in December. In January 1981 it was announced that Libya and Chad had resolved to work for 'complete unity'. This could have been interpreted either as an agreed merger or as an occupation which was imposed on Chad by Libya. Some Libyan units withdrew from Chad in May 1981, but others remained because of a supposed threat from Sudan, which distrusted Qaddafi's African intentions. Some observers considered that Qaddafi had plans for the creation of a vast 'Saharan Republic', comprising Libya, Niger, Chad, Algeria, Tunisia and Mauritania, but, if so, this plan received a set-back in October 1981, when President Goukouni of Chad requested the removal of some 10,000 Libyan troops from his country. They were subsequently replaced by an OAU peace-keeping force, although Libya maintained troops in the Aozou strip. Despite Libyan support, Goukouni was unable to keep control of Chad, and the capital, N'Djamena, was captured by Habré's forces in June 1982.

Qaddafi persistently denied the charge of interfering in Chad's internal affairs, but in June 1983 Libyan aircraft supported troops of ex-President Goukouni Oueddei in capturing the city of Faya-Largeau, in northern Chad, from Chadian government forces. Government troops repossessed the town at the end of July but, after prolonged bombing by Libyan aircraft, it again fell to the rebel forces in August. France responded to a request for aid from President Habré by deploying 3,000 troops in Chad from August, ostensibly in the role of military instructors, although they had orders to retaliate if fired upon. A defensive line across Chad at latitude 15° N, secured by French troops, caused a military stalemate, and serious fighting did not resume until after the collapse of peace negotiations in January 1984, when French troops extended the defensive line 100 km northwards to latitude 16° N. By April 1984 Libya was reported to have annexed the northern desert area of Chad and to have 6,000–7,000 troops in the region. The French force remained to the south, in the hope of a political solution. Libya, having made the Aozou strip secure, seemed to have achieved its main objective and to have abandoned all pretence of simply supporting the rebels. In May Qaddafi offered to withdraw Libyan troops from Chad if France would, in turn, withdraw its forces. In September, without consulting the Government of Chad, France and Libya reached an agreement providing for the evacuation of both countries' forces. In November it was reported that the joint withdrawal had been completed, although US and Chadian intelligence reports maintained that some 4,000–5,000 Libyan troops remained in northern Chad. In December 1984 President Mitterrand of France declined to intervene to remove Libyan forces from Chad by force, except in the event of their moving south of latitude 16° N.

Libyan forces allegedly supported the rebel army of Goukouni Oueddei, when it ended a lull in the civil war in February 1986, by launching an offensive southwards, across latitude 16° N. France sent a small 'deterrent' force to support President Habré, and French fighter-bombers attacked the Libyan-built rebel airfield at Ouadi Doum. In October Libya transferred its support from the Chadian rebels who were led by Goukouni to those led by Acheikh Ibn Oumar, the leader of the Conseil démocratique révolutionnaire (CDR), one of the factions in the loose GUNT coalition of opposition groups. The latter replaced Goukouni as the leader of the GUNT in November. Goukouni had been pursuing a conciliatory policy towards President Habré, and at the end of October he was reportedly wounded while resisting arrest in Tripoli. Goukouni's Forces armées populaires (FAP) declared allegiance to Habré's Government, in opposition to the Libyan presence in Chad. The FAP lost control of the oasis town of Zouar, in north-western Chad, in December, but recaptured it in January 1987, with the assistance of government troops, who had earlier occupied the Libyan garrison town of Fada, near latitude 16°N. At the end of March Libyan forces abandoned their last important base in Chad, at Faya-Largeau (after it had been rendered indefensible by the government troops' capture of the airbase at Ouadi Doum, 150 km to the north-west), and retreated towards Aozou. An estimated 4,000 Libyan soldiers were killed between January and the end of March, and Libya was forced to abandon Soviet-made aircraft, valued at US $500m., at Ouadi Doum. Libyan troops in Chad (whose involvement in the fighting Col Qaddafi publicly continued to deny) were supported by the Islamic Pan-African Legion, a force consisting of mercenaries and volunteers from many African countries, which was formed in Libya.

President Habré's forces advanced into the Aozou strip and captured the town of Aozou in a new offensive on 8 August 1987. France, which maintained a force of 2,400 troops to the south of latitude 16° N, refused to provide protective fighter aircraft, or to deploy troops north of that latitude, in support of the Chadian Government offensive, which it had counselled against. Libya responded to the loss of Aozou by bombing towns in northern Chad, including Faya-Largeau, Ouadi Doum and Aozou itself. Libyan counter-attacks on Aozou on 14 and 20 August were both repulsed, but on 28 August Libyan forces recaptured the town, and advanced on Ounianga-Kebir, 100 km south of the disputed strip. Chadian forces responded by capturing and destroying an airbase at Maaten as-Sarra, 100 km inside Libya (claimed to be a base for Libyan raids on Chad), on 6 September. France criticized the Chadian incursion into Libya, reiterating its opinion that the question of sovereignty over the Aozou strip should be determined by international

arbitration. On 11 September Chad and Libya agreed to observe a cease-fire proposed by the OAU. Later in the month Col Qaddafi refused to attend a session in Lusaka, Zambia, of the six-nation *ad hoc* committee established by the OAU to consider the conflict in Chad. However, President Habré was present, and Libya was represented by the Secretary for Foreign Liaison, Jadallah Azouz at-Tali.

In November 1987 the UN General Assembly refused to debate the Aozou issue, concluding that its resolution was the responsibility of the OAU. The OAU *ad hoc* committee accordingly proposed a summit meeting of the Libyan and Chadian Heads of State, which, after several postponements, was finally scheduled for 24 May 1988. However, on the eve of the summit, it was announced that Col Qaddafi would not be attending, in protest at Chad's treatment of prisoners of war. Qaddafi had continued to state his terms for a peaceful settlement of the dispute as: the recognition of Libyan sovereignty over the Aozou strip; the withdrawal of 'foreign troops' from Chad; the conclusion of an armistice between President Habré and the opposition forces led by Goukouni; and the release of prisoners of war. On 25 May, however, in a speech delivered in Tripoli to celebrate the 25th anniversary of the foundation of the OAU, Col Qaddafi announced his willingness to recognize the Government of Hissène Habré. He also invited Habré and Goukouni to hold reconciliation talks in Libya and offered to provide financial aid for the reconstruction of bombed towns in northern Chad. In June Habré said that he was ready to re-establish diplomatic relations with Libya, which had been severed in 1982. The Ministers of Foreign Affairs of Libya and Chad held further talks in Gabon in July but, apart from reaching agreement, in principle, on the restoration of diplomatic links, no progress was made on the crucial issues of sovereignty over the Aozou strip, the return of Libyan prisoners of war and the future security of common borders.

On 3 October 1988 Libya and Chad announced the resumption of diplomatic relations and an undertaking to settle their differences by peaceful means and to co-operate with the OAU committee appointed for that purpose.

SETTLEMENT OF CHAD CONFLICT

On 31 August 1989 a peace accord was signed in Algiers by the Libyan Secretary for Foreign Liaison, Jadallah Azouz at-Tali, and Chad's Minister of Foreign Affairs, Acheikh Ibn Oumar, envisaging an end to fighting over the disputed Aozou strip. The agreement, concluded with the help of Algerian mediation, envisaged that the parties would attempt to resolve their dispute through a political settlement within one year. It further provided for the withdrawal of all forces from the disputed region, which was to be placed under the administration of a group of African observers, pending a settlement. All hostilities were to cease, and all prisoners being detained by both sides were to be released.

In October 1989 Chad claimed that its forces had killed 600 members of the Libyan-backed Islamic Pan-African Legion near its border with Sudan. Libya denied Chadian claims that it was involved in the activities of the Legion, including border violations contrary to the peace accord signed in Algiers. In November a joint commission, composed of delegations from Chad and Libya, held its first meeting to consider the provisions of the Algiers agreement.

In March 1990 Chad claimed that a further violation of its borders by mercenaries belonging to the Islamic Pan-African Legion had taken place with the support of the Sudanese Government, which was alleged to have allowed its territory to be used to launch the incursion. In April the Chadian Government claimed to have intercepted and destroyed forces belonging to the legion within Chadian territory, and accused Libya of reinforcing its military presence in the Aozou strip with Palestinian mercenaries. Libya again denied any involvement in the activities of the Legion. Following a meeting in August in the Moroccan capital, Rabat, between Col Qaddafi and President Habré, the Chadian Minister of Foreign Affairs announced that the dispute over the Aozou strip would be referred to the International Court of Justice (ICJ) and that both countries would continue to seek a political settlement to the conflict.

In December 1990 the Government of President Habré was overthrown, following a three-week campaign by the rebel Mouvement patriotique du salut (MPS), led by Col Idris Déby. Déby, who proclaimed himself President, had used Sudan as a base for his activities and had been supplied with weapons and other equipment by Libya. He received immediate congratulations from Col Qaddafi, who welcomed the new regime's decision to repatriate 2,000 Libyan prisoners of war, detained in Chad since the end of the 1986–87 war. However, some 700 Libyan prisoners of war who opposed Qaddafi and who had reportedly been training at a camp near Lake Chad that was operated by the US Government's Central Intelligence Agency (CIA), were evacuated by the USA, arousing protests from Tripoli. Despite President Déby's denials of involvement, the incident resulted in a sharp decline in relations between Chad and Libya. In May 1991 the USA was reported to have offered asylum to some 350 of the former Libyan soldiers.

QADDAFI'S ATTEMPTS TO QUELL OPPOSITION AT HOME AND ABROAD

In February 1980 the third meeting of the revolutionary committees, bodies dominated by students and young male adults, which are responsible for ensuring the progress of the revolution at popular level (and which, effectively, impose Qaddafi's will on the popular, or people's committees), called for the 'physical liquidation' of opponents of the revolution who were living abroad and of 'elements obstructing change' inside Libya. An extensive anti-corruption campaign was launched in the same month, ostensibly to eradicate 'economic' crime. Between February and April, more than 2,000 people were arrested, mainly on charges of bribery, to be tried by members of the revolutionary committees. However, the arrests of several senior military officers introduced political overtones. In April Qaddafi issued an ultimatum to Libyan exiles abroad to return to Libya by 10 June, beyond which date he could not undertake to protect them from the revenge of the revolutionary committees. Since February 1980 several Libyans who were known to be hostile to the regime have been killed in Western countries.

Of the two new ministerial posts created at the ninth meeting of the GPC in February 1984, one was that of Secretary for External Security (the other being Secretary of Universities), to which Col Younis Bilqassim Ali was appointed. Although the functions of the post were not officially described, its creation appeared to formalize the activities of the Libyan Government to protect its representatives abroad and to silence opponents of the regime inside Libya and elsewhere, which had already been pursued for some time. An office, attached to the Bureau of Foreign Liaison, to combat international terrorism was also established in early 1984. The chief of the people's bureau in Rome had been assassinated in January, and generally the Libyan authorities seemed sensitive to the growth of opposition groups abroad. The National Front for the Salvation of Libya (NFSL), which came to the fore in 1984, had been formed in 1981 and was based in Sudan under the leadership of Muhammad Yousuf Mugharief, a former Libyan ambassador to India, but it was only one of several such groups opposed to Qaddafi, which he accused foreign governments of nurturing.

Early in March 1984, following a repetition of the official exhortation to Libyans, first made in 1980, to liquidate enemies of the revolution, seven bombs exploded in the United Kingdom, in Manchester and London. It was believed that these attacks were aimed at Libyan dissidents whom Qaddafi had recently accused the United Kingdom of harbouring. Then, on 17 April, during a demonstration outside the Libyan people's bureau in London by Libyans opposed to Qaddafi's regime, a policewoman was killed and 11 people were injured by shots fired from inside the Bureau. A 10-day siege of the Bureau ensued, during which the United Kingdom broke off diplomatic relations with Libya and ordered its diplomats to leave the country—which they did on 27 April. Revolutionary students had taken over the Bureau in February with the tacit approval of the Libyan Government. Qaddafi denied responsibility for the murder of the policewoman but, after the United Kingdom broke off diplomatic relations, he was understood to have ordered so-called 'hit-squads' to suspend their activities in Europe for fear of economic or other sanctions. In mid-1999, however, Qaddafi accepted Libya's 'general responsibility' for the policewoman's death, and expressed 'deep regret' for the incident (see below).

Inside Libya, Qaddafi's opponents had been active during 1984. In March an explosion at an ammunition dump in al-Abyar had killed or wounded several hundred Libyan soldiers, but the most serious incident took place on 17 May, when up to 20 commandos belonging to the NFSL attacked Qaddafi's residence in a heavily fortified barracks in the suburbs of Tripoli. According to the Front, 15 of the commandos were killed but heavy casualties were inflicted on Libyan soldiers.

The actions of Qaddafi's opponents were the signal for a wave of arrests of suspected dissidents in the first half of 1984, and several students were hanged.

QADDAFI'S CONFUSED FOREIGN POLICY

With visits to Jordan, the Yemen Arab Republic, Saudi Arabia, Algeria and Morocco during the second half of 1983, Qaddafi seemed intent on ending Libya's diplomatic isolation, but there was no compromise in his support for Goukouni Oueddei in Chad and for the Polisario Front in the Western Sahara, issues on which he had ignominiously failed to win backing at the OAU summit meeting in June. Libya, with Syria and the People's Democratic Republic of Yemen, again found itself in a minority by dissenting from the decision of the Organization of the Islamic Conference (OIC), taken in January 1984, to readmit Egypt to membership. Qaddafi was also open in his support of the revolt against Yasser Arafat's leadership of the Palestine National Liberation Movement (Fatah), and of Iran in the Iran–Iraq War. Iraq severed diplomatic relations with Libya in June 1985, after Qaddafi had signed a 'strategic alliance' with Iran.

After the attack on his Tripoli headquarters in May 1984, Qaddafi accused Tunisia of being involved with Sudan and the United Kingdom in the incident. Libyan agents had previously sabotaged an oil pipeline from Algeria to Tunisia. Tunisia withdrew its ambassador to Tripoli for a time before relations were restored. In May 1984, in common with other Arab countries, Libya 'froze' diplomatic relations with Liberia and the former Zaire after they had restored their relations with Israel. Libya's support of the Fatah rebels and the secessionist movement in southern Sudan put it at variance with Jordan and Egypt, the leaders of an emergent moderate Arab tendency. The sacking of the Jordanian embassy in Tripoli in February caused Jordan to break off diplomatic relations with Libya.

On 13 August 1984 Libya and Morocco unexpectedly signed a treaty of union in Oujda (Morocco). The proposed 'Arab-African Federation' was unanimously approved by the Libyan GPC on 31 August and endorsed by an overwhelming majority in a Moroccan referendum on the same day. From the outset, the incongruous partnership of King Hassan's moderate, pro-Western Morocco and Col Qaddafi's maverick Libya had an air of impermanence, particularly in the light of previous and, on the surface, more likely 'unions' of Arab states which had proved abortive. The union, which Qaddafi envisaged as the first step towards the creation of a politically united 'Greater Maghreb', soon demonstrated the weakness of its foundations. The first meeting of the joint parliamentary assembly of Libya and Morocco, which was due to take place in Rabat in July 1985, was cancelled by King Hassan in anger over Col Qaddafi's announcement of a treaty between Libya and Iran. King Hassan abrogated the treaty of union with Libya at the end of August 1986, following violent criticism by Qaddafi of his meeting in July with the Israeli Prime Minister, Shimon Peres.

A previous agreement establishing a confederation of Arab states involving Libya, which had been dormant for years, was effectively dissolved in October 1984, when Egypt unilaterally withdrew from the putative 'Union of Arab Republics' which it had entered into with Libya and Syria in 1971. Egypt had accused Libya and Iran of laying mines in the Red Sea and the Gulf of Suez, which had damaged 18 vessels in July and August 1984, and suspected it of other terrorist and espionage activities. Col Qaddafi caused Egypt further alarm when he visited Sudan in May 1985 to endorse the new regime of Lt-Gen. Abd ar-Rahman Swar ad-Dahab, who overthrew President Nimeri in a bloodless coup in April 1985. Nimeri had been one of the very few Arab leaders who had supported President Sadat of Egypt's peace initiative with Israel in 1978, which was anathema to Qaddafi, who was repeatedly accused of supporting plots to topple the Nimeri Government. Qaddafi urged the rebels in southern Sudan (the Sudanese People's Liberation Army), whom he had supported against Nimeri, to surrender their weapons and to begin negotiations with the new Government. He also advocated the overthrow of 'reactionary regimes' in the region, presumably a reference to Egypt and Jordan. Diplomatic relations between Libya and Sudan were restored in April, and a military protocol, whereby Libya was to aid Sudan in training its armed forces and supplying equipment, was signed in Tripoli in July. By 1988 Libya had emerged as Sudan's principal supplier of armaments. At the same time, Libyan troops and members of the Islamic Legion, recruited by Libya, were alleged to have crossed into Sudan, in the region of Northern Darfur which has borders with Libya and Chad, at will, while Chadian rebel forces, supported by Libya, launched raids into Chad from Southern Darfur. Following a military coup in Sudan in June 1989, the new regime announced its intention to negotiate a peace settlement with the rebels in southern Sudan. At a meeting in Libya in March 1990 the Sudanese military leader, Gen. Omar Hassan Ahmad al-Bashir, and Col Qaddafi discussed the framework for a possible union between their two countries. An agreement on integration, signed in Tripoli in August 1990, was intended to facilitate a full merger. Neighbouring countries reacted with concern at this development. A charter linking the Libyan province of Tahadi and the Darfur region of Sudan was scheduled to be considered at a meeting in October 1990. Little significant progress towards a merger has since been achieved, although 'minutes of integration' and an agreement on freedom of movement, residence, work and ownership were signed by Libya and Sudan in June 1991.

In December 1984 Libya and Malta signed a five-year security and economic co-operation treaty, whereby Libya was required to defend Malta if requested to do so by the Maltese Government. In June 1985 a ruling by the ICJ in The Hague, on a maritime boundary dispute between Libya and Malta, extended Libya's territorial waters 18 nautical miles (33 km) northwards towards Malta.

In July 1985 Col Qaddafi barred Egyptians from working in Libya, in retaliation against a similar measure preventing Libyans from working in Egypt. In the following month, Tunisia expelled 283 Libyans (including 30 diplomats) for alleged spying. Earlier, Libya had begun to expel Tunisian workers from Libya. About 30,000 Tunisians were deported between August and October, and thousands of others from Mali, Mauritania, Niger and Syria were also expelled, officially as part of a policy to achieve self-sufficiency in labour. Tunisian imports were halted, and Col Qaddafi urged the overthrow of Tunisia's President Bourguiba. On 26 September Tunisia severed its diplomatic relations with Libya.

CONFLICT WITH THE USA

Details of a plan by the CIA to undermine the Qaddafi regime in Libya were revealed in the American press in November 1985, and the growing US conviction that Libya was promoting international terrorism contributed to a serious worsening of relations between the two countries towards the end of 1985. Libya had already been accused by Egypt of co-ordinating the hijacking of an Egyptian airliner to Malta in November, as a result of which 60 people had died. The incident led to an increase of military tension along the Libyan-Egyptian border. On 27 December Palestinian terrorists killed 19 people in simultaneous attacks on passengers at the departure desks of the Israeli airline, El Al, in Rome and Vienna airports. The US Government accused Libya of harbouring and training the members of Abu Nidal's Fatah Revolutionary Council, who were believed to be responsible for the attacks, and of being a centre for international terrorism. On 7 January 1986 President Reagan ordered the severance of all economic and commercial relations with Libya, and, on the following day, 'froze' Libyan assets in the USA. However, he was unsuccessful in persuading the USA's European allies to impose economic sanctions against Libya. A meeting of the Ministers of Foreign Affairs of Arab countries belonging to the OIC gave verbal support to Libya in January.

A dispute over navigational rights was the ostensible cause of the eventual clash between US and Libyan forces in 1986, though, as far as the USA was concerned, it had the appearance of a pretext for the clash itself, and the naval manoeuvres which

led up to it, despite the fact that Libya was the first actually to use military force. Libya had maintained since 1973 that the entire Gulf of Sirte (Surt), and not merely the 12 nautical miles (22 km) off its coast that were recognized by international law, constituted Libyan territorial waters. In December 1985 Col Qaddafi drew a notional 'line of death' across the north of the Gulf of Sirte, along latitude 32° 30′ N, which he warned US and other foreign shipping not to cross. At the end of January 1986, ostensibly in the exercise of its right to navigation in the area under international law, the US Navy's Sixth Fleet was deployed off the Libyan coast, though it appears that at no time did any US vessel cross the 'line of death'. On 24 March, the day after the Sixth Fleet had begun its fourth set of manoeuvres in the area since January (and the eighteenth since 1981), Libya fired Soviet SAM-5 missiles (which had been operational only since January) at US fighter aircraft flying over the Gulf of Sirte and inside the 'line of death'. In two retaliatory attacks on 24 and 25 March, US fighter aircraft destroyed missile and radar facilities in the coastal town of Sirte, and sank four Libyan patrol boats in the Gulf. A meeting of the League of Arab States (Arab League) criticized the US action, but rejected a Libyan appeal for Arab economic sanctions to be imposed against the USA.

On 5 April a bomb exploded in a discotheque in West Berlin, killing a US soldier and a Turkish woman. The USA gathered what it considered to be irrefutable evidence connecting Libya with this and a catalogue of other incidents and plots against US targets in Europe and the Middle East. On 15 April US military aircraft (including 18 F-111 fighter-bombers from bases in the United Kingdom and planes from the Sixth Fleet) bombed military installations, airports, government buildings (among them Col Qaddafi's own residential compound) and suspected terrorist training camps and communication centres in the Libyan cities of Tripoli and Benghazi. A total of 37 people were reported to have died in the raids, including many civilians, who were the inevitable victims of bombs and missiles which were directed against military or terrorist targets in largely civilian areas. On 16 April Libya fired two missiles at the Italian island of Lampedusa, the site of a US coastguard station.

The US raids were generally deplored as a new round in an escalation of violence in the Middle East, and an upsurge in terrorist activity in Europe and the Middle East was feared. However, there was little sympathy for Libya. Most other Arab countries confined themselves to verbal condemnation of the USA, and Libya was disappointed by the Soviet reaction, which was purely rhetorical. A meeting of the League of Arab States failed to take place after a disagreement over the agenda, which Qaddafi demanded should only include discussion of the US raid. Libya expelled about 250 foreign journalists at the end of April 1986, and in May, after the EC had decided to limit the size of Libyan diplomatic and commercial delegations within the Community, to restrict the movement of Libyan diplomats, and to tighten immigration regulations against Libyans, Col Qaddafi ordered the expulsion from Libya of 36 diplomats representing seven West European countries.

In the weeks following the US raids, Col Qaddafi was only rarely seen in public. There were rumours that he had lost overall control of the Government to Maj. Abd as-Salam Jalloud, who, although he held no formal government post, was accepted to be Qaddafi's deputy and was head of Libya's revolutionary committees (popular organizations throughout the country, which exist independently of the government bureaucracy) and the revolutionary guard corps, which were entrusted with responsibility for preserving the integrity of the revolution. The US Government had hoped that the raids on Libya would destabilize the regime of Col Qaddafi and create the conditions in which opposition groups could stage a coup. However, as the year progressed, Qaddafi gradually emerged from his retreat and appeared to remain firmly in control of government. At the end of May 1986, the USSR promised to continue sales of military equipment to Libya, but urged the condemnation of terrorism.

Conflict with the USA erupted again in January 1989, when US aircraft shot down two Libyan fighter aircraft in 'self-defence' over international waters in the Mediterranean. The incident occurred at a time when the USA was becoming concerned that Libya was about to produce chemical weapons at a plant near Rabta, 60 km south of Tripoli. Qaddafi claimed that the plant was a pharmaceutical factory, being built with West German and Japanese help.

MAGHREB UNITY

In March and June 1986, in an attempt to consolidate its good relations with Algeria, Libya proposed a union of the two countries. The proposal was submitted to President Chadli of Algeria by Col Qaddafi's deputy, Maj. Jalloud, in June 1987. At the end of Jalloud's visit to Algiers, the parties issued a joint communiqué stating that President Chadli and Col Qaddafi would meet to discuss the proposal, although Algeria, reacting unenthusiastically to Libya's approaches, emphasized the need for 'compatibilities' between the countries—apparently a reference to Algeria's concern over Libya's intervention in Chad and its policy towards Tunisia. Algeria subsequently suggested that a framework for a new Algerian-Libyan relationship (and, by definition, one not going as far as actual union) already existed in the Maghreb Fraternity and Co-operation Treaty of 1983, between Algeria, Mauritania and Tunisia. Later in June, at short notice, Col Qaddafi arrived in Algeria in an attempt to persuade President Chadli to accede to the union proposals. However, he succeeded only in achieving agreement on several minor co-operation issues.

Economic links between Libya and Algeria expanded, and in early October 1987 the two Governments agreed in principle on a treaty of political union. The accord was to be announced officially on 1 November, but, owing to political opposition in Algeria, the announcement was not made. Instead, the Algerian Government proposed that Libya should sign the Maghreb Fraternity and Co-operation Treaty. This eventuality was made more likely by the re-establishment of diplomatic relations (at consular level) between Libya and Tunisia at the end of December.

In February 1988 Col Qaddafi, President Chadli and President Ben Ali of Tunisia held discussions concerning a proposed regional political accord, following which the border between Libya and Tunisia was reopened.

An expansion of economic co-operation was treated as the first stage towards regional integration in other fields. On 22 March 1988 Libya and Algeria signed two agreements relating to industrial development. The first was for a tripartite project to supply an estimated 90,000m. cu m of Algerian natural gas to Libya, via a trans-Tunisian pipeline. The second provided for the construction of a combined aluminium and petroleum coke complex in Zuwarah, Libya, to generate electricity for both countries, and the establishment of a joint company to undertake petrochemical projects. In April Libya and Tunisia signed a co-operation pact encompassing political, economic, cultural and foreign relations. Few details were released, but plans included the construction of an oil pipeline between Libya and Tunisia. Col Qaddafi announced that, from the date of the pact, Tunisians would be given priority among foreign nationals seeking employment in Libya, while the border posts on the frontier with Tunisia would be dismantled and Libyans and Tunisians would be guaranteed freedom of movement in both directions.

The leaders of the five countries of the Maghreb (Algeria, Morocco, Tunisia, Libya and Mauritania) held a meeting in Algiers (the first of its kind since they achieved independence), after the Arab summit meeting there in June 1988, to discuss the prospects for 'a Maghreb without frontiers'. After the meeting, the participants issued a joint communiqué announcing the creation of a Maghreb commission, comprising a delegation from each of the five countries, to concentrate on the establishment of a semi-legislative, semi-consultative council which would co-ordinate legislation in the region and prepare joint economic projects. At the end of June, Algeria and Libya announced that they would each be holding a referendum on a proposed union of the two countries. The proposition to be considered by the peoples of Algeria and Libya, however, fell short of the total merger for which Col Qaddafi had hoped, and envisaged, instead, a federation of the two states, within a Great Arab Maghreb.

In July 1988 the Maghreb commission met for the first time, in Algiers, and announced the creation of five working parties to examine areas of regional integration (including education,

finance, economy and regional security), which would report to the second meeting of the commission in October. In August President Ben Ali of Tunisia visited Libya, and he and Col Qaddafi signed a series of co-operation agreements and established a technical commission to examine means of accelerating co-operation and the merger process, as a prelude to the creation of the Great Arab Maghreb.

In February 1989, at a summit meeting in Morocco of North African Heads of State, the participants concluded a treaty proclaiming the formation of a 'Union of the Arab Maghreb' (UAM), comprising Algeria, Libya, Mauritania, Morocco and Tunisia. The treaty envisaged the establishment of a council of Heads of State, regular meetings of Ministers of Foreign Affairs, and the eventual free movement of goods, services and capital throughout the countries of the region. At the second summit meeting of the UAM, held in Algiers in July 1990, it was decided that Libya would hold the annual presidency of the Union in 1991.

A third summit meeting of the UAM was held in Ras Lanouf, Libya, on 10 March 1991 and was opened by Col Qaddafi in his role as President of the organization for the first six months of that year. This was the first meeting of the UAM states since the invasion of Kuwait by Iraq in August 1990 and it reflected the difficulty they had encountered in maintaining a united response towards the conflict in the Gulf region. The final communiqué expressed 'deep pain over the tragic developments in the Gulf' and urged that the economic sanctions imposed on Iraq by the UN should be lifted. Agreement was reached on the establishment of a Maghreb Bank of Investment and Foreign Trade, and on co-operation in other fields. At a subsequent UAM summit meeting in Casablanca in September 1991 the forthcoming Middle East peace conference was discussed and the UN was urged to lift the economic sanctions that it had imposed on Libya.

GOVERNMENT CHANGES AND DOMESTIC REFORM

At its annual meeting in 1986, the GPC reduced the number of secretariats in the General People's Committee from 22 to 10. Several Committee posts were merged or abolished. Changes of personnel were also made in the composition of the General Secretariat of the GPC. The object of the changes was, apparently, greater administrative efficiency. The public service functions of the secretariats which were dismantled were, in future, to be handled by specially created national companies, such as already existed for the administration of the petroleum industry, the secretariat for which was among those to be abolished. The GPC also resolved to form 'suicide squads to strike at the enemy'. According to the human rights organization, Amnesty International, Libya assassinated at least 25 of its political opponents abroad between 1980 and 1987. In March 1987 the GPC elected a new General People's Committee. Only three Secretaries were re-elected from the previous Committee, and only two of these retained their former posts.

Increasing dissatisfaction at home with political repression, a deteriorating economy and shortages of basic commodities, combined with opposition to the military involvement in Chad and pressure from abroad to improve the image of his Government and ease his political isolation, caused Col Qaddafi to embark on a series of liberalizing economic and political reforms during 1988. In foreign policy, Qaddafi openly admitted the error of his involvement in Chad and adopted a more pragmatic approach to his ambition of union within the Maghreb and to his relations with other Arab and African countries, eliminating barriers to trade and tourism with neighbouring countries and declaring his opposition to terrorism. At home, he accused Libya's revolutionary committees of murdering political opponents of his regime. In early March Qaddafi began to encourage the reopening of private businesses, in recognition of the failure of the state-sponsored supermarkets to satisfy the demand for even the most basic commodities, which had caused a thriving 'black market' to emerge. At the same time, all prisoners (including foreigners), except those convicted of violent crimes or of conspiring with foreign powers, were released; Libyan citizens were guaranteed freedom of travel abroad; and the revolutionary committees were deprived of their powers of arrest and imprisonment, which had often been indiscriminately and arbitrarily used. A new secretariat (ministry) was formed in May for Jamahiri (Mass) Mobilization and Revolutionary Guidance, apparently to monitor and regulate the revolutionary committees. In June the GPC approved a charter of human rights, guaranteeing freedom of expression and condemning violence. In March the GPC had created a people's court and a people's prosecution bureau to replace the 'revolutionary courts'.

At the end of August 1988, Col Qaddafi announced the abolition of the army and the police force. The army was to be replaced by a force of Jamahiri Guards, comprising conscripts and members of the existing army and police force, which would be supervised by 'people's defence committees' located in strategic areas. The most obvious sign of the practical implementation of a new policy of government decentralization was the decision in September to relocate all but two of the secretariats of the General People's Committee (ministries) away from the capital, Tripoli, mostly in Sirte (Surt), 400 km east of Tripoli. Further reform was promised when, in January 1989, Qaddafi announced that all state institutions, including the state intelligence service and the official Libyan news agency, were to be abolished.

There were reports, in November 1989, of a challenge to Col Qaddafi's leadership by Muslim fundamentalists. Armed clashes between them and the Libyan security forces were reported to have occurred, prompting Col Qaddafi to urge the GPC to consider legislation to suppress fundamentalist groups.

At the meeting of the 16th session of the GPC, held in Tripoli during 2–10 March 1990 to consider future government policy, Col Qaddafi strongly criticized corruption in government administration. The Secretary for Higher Education subsequently tendered his resignation, following criticism from delegates, and the Secretary for Transport also resigned, in protest at corruption and the exorbitant fares charged by the state-controlled Jerma Bus Company.

In October 1990 the GPC implemented the most extensive changes to the General People's Committee since March 1987. The appointment of the uncompromising Abu Zaid Omar Dorda as the new Secretary-General (Prime Minister) and of 11 new secretaries was approved, increasing the number of secretariats in the GPC from 19 to 22. The opposition National Front for the Salvation of Libya claimed that several of those promoted had been involved in purges against dissidents and had been expelled from European countries. The former Secretary-General, the moderate Umar Mustafa al-Muntasser, was appointed Secretary of a new combined Economic and Planning Secretariat. The new Strategic Industries Secretariat was to be headed by another moderate, Jadallah Azouz, who was replaced as Secretary for Foreign Liaison by Ibrahim Muhammad Bashari. The Secretariats for Electricity, Social Security and Youth and Sports, which had been abolished in 1986, were revived. The Secretariat for Jamahiri Mobilization and Revolutionary Guidance, formed in 1988, was abolished, and a new secretariat was created to promote co-operation with the UAM. At the same time, three of the five-member General Secretariat of the GPC were replaced, Abd ar-Raziq Sawsa becoming Secretary-General of the GPC in place of Dr Muftah al-Usta Omar.

DEVELOPMENTS IN EXTERNAL RELATIONS

Following his reconciliation with Yasser Arafat's wing of the PLO in March 1987, Col Qaddafi sponsored efforts to reunite the divided Palestinian movement prior to the 18th session of the Palestine National Council in Algiers in April, although this strained relations with Syria, which had supported the revolt against Arafat's leadership of the PLO in 1983. It appeared that, after years of relative political isolation, Col Qaddafi found it expedient to realign Libyan policy with that of the majority of Arab states. After the Palestinian uprising (*intifada*) in the Israeli Occupied Territories began in December 1987, Col Qaddafi intensified his efforts to reconcile the opposing factions within the PLO, and in June 1988, at the request of Yasser Arafat, he sent Libyan representatives to Lebanon to mediate between Palestinian guerrillas loyal to Arafat and members of 'Abu Musa's' rebel Fatah, who were fighting for control of Beirut's Palestinian refugee camps. He subsequently intervened personally to persuade the Sunni Muslim militia in southern Lebanon to allow Arafat loyalists, who had been driven out of Beirut, to enter the Palestinian camp of Ain al-Hilweh, near Sidon. Yasser Arafat and representatives of the dissident,

Syrian-backed PLO factions visited Tripoli in September 1988 to attend the anniversary celebrations of the Libyan revolution, and their presence gave rise to speculation of a reconciliation, engineered by Col Qaddafi. In June Col Qaddafi had attended an Arab summit meeting in Algiers (the first such summit that he had attended for 18 years), which had been arranged to discuss Arab support for the Palestinian uprising.

In May 1987 Australia ordered the closure of the Libyan people's bureau in Canberra, accusing Libya of trying to destabilize the South Pacific region. Libya had been providing paramilitary training to dissident groups in the French territory of New Caledonia and the Indonesian provinces of Irian Jaya and East Timor, and, according to the Australian Government, had been involved in subversive activities in Australia.

In September 1987 Libya re-established 'fraternal' links with Iraq, modifying its support for Iran in the Iran–Iraq War and urging the observance of a cease-fire, according to the terms of UN Security Council Resolution 598. Later in the same month, Jordan restored its diplomatic relations with Libya. However, Libyan support for Iran had not completely ceased. Col Qaddafi refused to attend the extraordinary summit meeting of the League of Arab States which took place in Amman in November to discuss the war. His representative quickly dissociated Libya from an apparently unanimously supported resolution, which censured Iran for its occupation of Arab (i.e. Iraqi) territory and for failing to accept UN cease-fire proposals. Libya also dissented from the League's decision to remove the prohibition on diplomatic relations between member states and Egypt.

Libya attended an emergency summit meeting of the Arab League in Casablanca, Morocco, in May 1989, but not a meeting of the Ministers of Foreign Affairs of member states (held immediately prior to the summit meeting), at which Egypt was formally readmitted to the Arab League. Meetings between Col Qaddafi and President Mubarak of Egypt in October were thought to signal the countries' imminent reconciliation, but by mid-1991 Libya remained the only Arab state not to have restored full diplomatic relations with Egypt following its diplomatic and economic isolation by Arab states in 1979. Meeting in Cairo in February 1990 for the fourth time since May 1989, Col Qaddafi and President Mubarak agreed to strengthen financial and economic ties between Egypt and Libya.

In March 1990 both the USA and the Federal Republic of Germany claimed that Libya had commenced production of mustard gas at a plant near Rabta, 60 km south of Tripoli (see above, 'Conflict with the USA'). When a fire broke out at the plant during the same month, Libya accused these countries, together with Israel, of involvement in sabotage. All three countries denied any involvement. The Federal German Government stated that it would take measures, in accordance with international law, to halt the production of chemical weapons at Rabta, while the US Government refused to discount future military action against the plant. In June the US Government alleged that the plant at Rabta had not been destroyed by fire, as Libya had claimed, and voiced suspicions that a second such plant, for the production of chemical weapons, was under construction. In July the US Government claimed that members of a Muslim movement, which was trying to overthrow the Government of Trinidad and Tobago, had received training in Libya.

Libya's relations with France improved in April 1990, after the release of three Europeans who had been held hostage in Lebanon. The French Government formally thanked the Libyan Government for its role in obtaining their release. In March France had returned to Libya three *Mirage* jet fighter aircraft which it had impounded in 1986 after their delivery to France for repairs. However, the French Government denied that the return of the aircraft had played any part in securing the release of the hostages. However, in September, following an official investigation, France alleged that Col Qaddafi, together with President Assad of Syria and the leader of the Popular Front for the Liberation of Palestine, Ahmad Jibril, had been responsible for planning the bombing of a French passenger aircraft over the Sahara in September 1989.

In June 1991, following a secret visit to Tripoli by a member of the United Kingdom Parliament, it was revealed that Col Qaddafi had offered £250,000 to a British police charity, together with a letter of regret for the killing of a policewoman outside the Libyan people's bureau in London in 1984 (see Qaddafi's Attempts to Quell Opposition at Home and Abroad, above). The Member of Parliament was reported to have discussed with Col Qaddafi a series of proposals aimed at restoring diplomatic relations between the United Kingdom and Libya, which had been severed at the time of the incident. However, the proposal was rejected by the UK Foreign and Commonwealth Office (FCO), which said that there could be no possibility of a resumption of relations until there was convincing evidence that the Libyans had renounced their support for groups engaged in international terrorism, including the Irish Republican Army (IRA). In addition, the FCO emphasized that Libya should co-operate in bringing to justice those responsible for the murder of the policewoman.

Early in 1992 Col Qaddafi was reported to have given assurances, through intermediaries, that he would reveal to the United Kingdom Government information about his dealings with the IRA, in return for improved relations with the United Kingdom. However, in an interview with a British newspaper in May 1992 he appeared to renege on this promise, claiming that he feared that the revelation of such information might be used to 'trick' him. He admitted that Libya had supplied the IRA with arms and explosives, but denied that IRA members had trained in Libya. All links with the IRA had now been severed, he maintained.

THE GULF CONFLICT 1990–91

Col Qaddafi attended the emergency summit meeting of the League of Arab States, held in Cairo on 10 August 1990 to discuss the Arab response to the invasion of Kuwait by Iraq. Subsequently, 12 Arab nations voted in favour of a motion condemning the invasion and advocating the deployment of a pan-Arab force for the defence of Saudi Arabia and other states from possible Iraqi aggression. Libya voted against the measure, and in September Libyan aircraft were reported to be transporting food supplies to Iraq in violation of UN Security Council Resolution 661 (of 6 August 1990) which imposed mandatory economic sanctions on Iraq. Libya also announced that its ports were at Iraq's disposal for the purpose of importing food supplies. Following the commencement, on 16 January 1991, by a multinational armed force, of 'Operation Desert Storm' to secure the liberation of Kuwait, anti-war demonstrations occurred in Libya. The Saudi Arabian ambassador in Tripoli urged Col Qaddafi to support the concerted action, but during February the Libyan Government offered to supply food, medicine and blankets to Iraq.

President Mubarak of Egypt was thought to have persuaded Col Qaddafi to exercise restraint during the war between Iraq and the multinational force, and relations between Egypt and Libya continued to improve in its aftermath. Talks were held on moves towards greater economic integration, and in March 1991 Col Qaddafi abolished immigration and customs controls for Egyptians travelling to Libya. However, the subsequent flood of visitors resulted in the reimposition of checkpoints. Col Qaddafi visited Cairo in early July 1991 for the ratification of 10 integration agreements, and on 6 August the Egyptian Government announced the opening of Egypt's border with Libya, removing all obstacles to travel and trade. A security agreement on border movements was signed on 23 August.

INAUGURATION OF THE GREAT MAN-MADE RIVER

The first phase of Libya's 'Great Man-made River' project (GMR), begun in 1984 and designed to carry water from Saharan wells through 2,400 miles of 13ft-diameter pipes to the more populous coastal regions, and to provide irrigation for agriculture, was inaugurated by Col Qaddafi on 28 August 1991 in a ceremony near Benghazi, attended by several Arab and African leaders, PLO leader Yasser Arafat and the Secretary-General of the League of Arab States. Few Western leaders were present. The scheme, the largest irrigation project in the Middle East, will take 25 years to complete, at an estimated cost of US $25,000m. During his visit for the ceremony, President Mubarak of Egypt held further talks with Col Qaddafi on economic co-operation. Libya had offered to resettle up to one million Egyptian farmers on lands to be irrigated by the GMR project.

THE LOCKERBIE AFFAIR AND THE IMPOSITION OF UN ECONOMIC SANCTIONS

In December 1988 all 259 people aboard a Pan Am Boeing 747, en route to New York, died when the aircraft exploded over Lockerbie, Scotland. Eleven people in the village also died. The plane had been flying from Frankfurt, Germany, where it was believed that a suitcase containing a bomb had been loaded on board. Investigations had revealed that this suitcase had arrived at Frankfurt on a flight from Malta, where an employee of Libyan Arab Airlines, Al-Amin Khalifa Fahima, was stationed. On 13 November 1991 Scotland's Lord Advocate and the acting US Attorney-General issued international warrants for the arrest of Fahima and the former security chief of the Libyan airline, Abd al-Basset al-Megrahi, accusing them of responsibility for the bombing of the Pan Am aircraft. Two days later the Libyan Secretariat for Foreign Affairs issued a statement denying any Libyan involvement in the bombing, condemning all forms of terrorism and urging the investigation of the charges by a neutral international body or the ICJ. A British demand for the extradition of the two men, presented by the Italian ambassador in Tripoli on 18 November, was refused, as was a repeated demand by the British and US authorities on 27 November.

A campaign was mounted by Libya among its Arab neighbours to enlist their support in countering the allegations, and it continued to resist pressure for the extradition of the two Lockerbie suspects and also for the arrest of four other Libyans sought by France in connection with the bombing of a French DC-10 airliner over the Sahara (in Niger) in September 1989, in which 171 people had died. One of those accused over the latter incident, Abdallah Sannousi, was the brother-in-law of Col Qaddafi himself and deputy head of the Libyan intelligence services. On 5 December 1991, the Arab League Council, meeting in Cairo, expressed solidarity with Libya and urged the avoidance of sanctions. However, on 26 December President Bush extended economic sanctions, which the USA had imposed on Libya in January 1986, for a further year.

Meanwhile, Libya had announced that it would conduct its own inquiry into the Lockerbie allegations under the chairmanship of Judge Taher az-Zawi. He was reported to have stated, on 7 December 1991, that the two suspects had been detained and would stand trial in Libya. An offer by the Libyan Secretary for Foreign Liaison, Ibrahim Muhammad al-Bishari, to send Libyan judges to London or Washington to discuss the case was rejected.

A unanimous resolution (No. 731) by the UN Security Council, adopted on 21 January 1992, demanded the extradition of the Lockerbie suspects to the USA or the United Kingdom as well as Libya's full co-operation with France's inquiry into the loss of its aircraft in Niger in 1989. Libya declined to extradite the men, but did offer to place them on trial in Libya. It also offered to allow French officials to interrogate the four men suspected of complicity in the Niger bombing. On 18 February al-Megrahi and Fahima appeared in court in Tripoli, where the judge refused to allow their extradition, claiming that there were no grounds for it in international or criminal law. The Libyan response to UN Security Council Resolution 731 was rejected by the USA, the United Kingdom and France, which urged the UN to impose sanctions on Libya.

On 23 March Libya applied to the ICJ for an order confirming its right to refuse the extradition of the Lockerbie suspects by applying the terms of the 1971 Montreal Convention on airline terrorism. It was claimed that the convention allowed Libya the option of trying the suspects in its own courts, a view opposed by lawyers acting for the United Kingdom and the USA, who claimed that Libya was 'wriggling, twisting and turning' in its attempts to evade the surrender of the suspects and the imposition of UN sanctions. A judgment was not expected for another two years but the ICJ nevertheless ruled, on 14 April, that it had no power to prevent the UN from enacting sanctions against Libya.

An offer in late March 1992 by Col Qaddafi to place the suspects under the jurisdiction of the Arab League was subsequently withdrawn. Intensive diplomacy by the League, spearheaded by President Mubarak of Egypt (who, at the request of the PLO, met Col Qaddafi in Tripoli on 12 April), came to nothing. On 31 March the UN Security Council adopted Resolution 748, imposing mandatory economic sanctions against Libya. From 15 April 1992 all civilian air links and arms trade with Libya were to be prohibited and its diplomatic representation reduced. An embargo on the sale of Libyan petroleum was not imposed. There was widespread hostility in the Arab world to the imposition of sanctions against a fellow Arab and Muslim state. The UN was accused of hyprocrisy for not enforcing similar measures against Israel over its failure to comply with UN Security Council Resolution 242 (1967), which demands Israeli withdrawal from the Occupied Territories. It was also feared that Islamic fundamentalists in countries such as Egypt, Algeria, Tunisia and Morocco might exploit the ensuing economic hardships for their own political ends.

In Libya itself demonstrators immediately took to the streets to condemn the West, and Col Qaddafi threatened to cut off oil supplies to, and withdraw all business from, those countries which complied with Resolution 748. On 2 April demonstrators besieged several Western embassies in Tripoli. The embassy of Venezuela (which had held the presidency of the Security Council when Resolution 748 was passed) was ransacked and burned. It was reported that exit visas had been refused to a number of foreign nationals, despite earlier assurances, and fears were expressed that Col Qaddafi might seek to use some of them as hostages. Speaking in Tripoli's Green Square on 4 April at a dawn rally to mark the end of the month of Ramadan, Col Qaddafi rejected Resolution 748 and sought to depict the situation as a new crusade against Islam by the Christian West. 'Muslims all over the world, the battle being waged by modern Western crusading forces, having ended against communism, is now being directed against Islam,' he declared.

UN sanctions took effect on 15 April 1992, the anniversary of the US air strikes against Tripoli and Benghazi in 1986 (see above). The previous day Col Qaddafi had severed all international communications and travel links in a day of self-imposed isolation to mark the anniversary. Prior to the imposition of sanctions, Libya was reported to have been stockpiling food and medicines and to have transferred liquid capital from Europe to banking centres in the Gulf region and the Far East. Arab neighbours rallied to find new land and sea routes to circumvent the air embargo, and it was announced that a hydrofoil service from Malta to Tripoli would operate five times a week instead of weekly. The immediate effect of the sanctions was thus primarily psychological and it was thought that this would cause little more than inconvenience, rather than actual hardship, in the foreseeable future.

In May 1992, at Col Qaddafi's instigation, 1,500 people's congresses were convened in Libya and abroad, to enable ordinary citizens to debate the fate of the two Lockerbie suspects and their response to the UN sanctions. Arab diplomats and the more pragmatic members of Qaddafi's circle had begun to urge a compromise, fearing that the imposition of further UN sanctions, particularly an embargo on sales of petroleum (Libya earns 95% of its income from such sales), would be disastrous. Observers concluded that Qaddafi was seeking to resolve his dilemma and save face by using the people's congresses as a means of distancing himself from any eventual 'surrender'. In late June the GPC announced its decision to allow the two Lockerbie suspects to stand trial abroad, provided the proceedings were 'fair and just'. It suggested that such a trial might take place under the auspices of either the Arab League or the UN. In August, at a meeting with Col Qaddafi, UN Under-Secretary-General Vladimir Petrovsky warned that, if Libya continued to refuse to comply with Resolution 731, the UN might strengthen the sanctions already in force against it. On 12 August, however, the UN Security Council merely renewed the sanctions for a further 120 days.

In early January 1993 Libya closed all of its land borders for three days in protest at the UN's decision, taken in early December 1992, to renew the sanctions in force against Libya. In mid-February an article appeared in the US press that alleged that Libya was constructing an underground factory for the manufacture of chemical weapons at Tarhuna, west of Tripoli. In January Libya refused to a sign a UN convention banning chemical weapons, on the grounds that not all Middle Eastern and North African states were party to the convention.

During the approach to the UN Security Council's sanctions review in April 1993, Libya attempted to rally Arab support

and announced in late March that it was tabling new proposals to try and break the deadlock. In the USA a group of senators, led by Edward Kennedy, urged the US Senate Foreign Relations Committee to seek the expansion of UN sanctions against Libya. At the same time, there were new allegations in the US press that Libya was building a second chemical weapons plant. Despite the USA's efforts to secure a tightening of the economic embargo, at its April meeting the Security Council did not modify the original sanctions which were retained for a further 120 days. Following the meeting, the USA stated that it would continue to consult its allies about tougher sanctions, including a possible ban on Libyan oil exports. However, the main European importers of Libyan crude petroleum, in particular Germany, Italy and Spain, remained firmly opposed to an oil embargo. In July the French Minister of Foreign Affairs, Alain Juppé, stated that France would demand tougher sanctions if Libya failed to comply with Resolution 731 before the next Security Council review in early August.

At its meeting on 13 August 1993 the Security Council decided to maintain existing sanctions. The USA, the United Kingdom and France, increasingly frustrated at Qaddafi's defiance, issued an ultimatum to Libya stating that if the two suspects were not surrendered for trial by 1 October 1993, they would propose a UN Security Council resolution imposing tougher sanctions, covering oil-related, financial and technical sectors. Libya rejected the deadline but repeated its offer to discuss holding the trial in a country other than the USA or the United Kingdom. In a television interview, Qaddafi claimed that 'all the sanctions in the world or even in the universe will never make Libya submit'.

As the 1 October 1993 deadline approached, pressure on Libya had mounted. US President Bill Clinton, in his first speech to the UN General Assembly, vowed to bring the perpetrators of the Lockerbie bombing to justice. When Libya failed to comply with Western demands, the USA, the United Kingdom and France introduced a draft resolution at the Security Council, seeking to impose tighter sanctions. After further negotiations had failed to break the deadlock, the Security Council finally yielded to the demands of the USA, the United Kingdom and France. On 11 November UN Security Council Resolution 883 was adopted, imposing new sanctions against Libya. The resolution provided for the freezing of all Libyan assets abroad, with the exception of earnings from hydrocarbon exports, placed a ban on the sale to Libya of certain equipment for the 'downstream' oil and gas sectors and placed further restrictions on Libyan civil aviation, including the immediate closure of all Libyan Arab Airlines offices abroad.The new measures came into force on 1 December 1993. Resolution 883 states that sanctions will be lifted as soon as the two Libyans accused of responsibility for the Lockerbie bombing are handed over for trial in the United Kingdom or the USA and Libya co-operates fully with the French authorities investigating the bombing of a UTA airliner over the Sahara in 1989. It also made provision for the reimposition of sanctions within 90 days if Libya failed to comply with all the demands set out in Resolutions 731 and 748.

In response to Resolution 883, Qaddafi declared that he was prepared to destroy Libya's oilfields and ports as a gesture of defiance to the West. In a series of public speeches he urged the Libyan people to make sacrifices in the cause of national dignity and rejected all further negotiations with the UN and the Western powers on the Lockerbie affair. Through editorials in *Ash-Shams*, Qaddafi criticized his own foreign secretariat for urging the surrender of the two accused Libyans. This was interpreted as an attack on Omar al-Muntasser, the Libyan Secretary for Foreign Liaison and International Co-operation. Nevertheless, al-Muntasser retained his post in the reshuffle of the General People's Committee at the end of January 1994. When the GPC met in January 1994, the Lockerbie affair was high on the agenda but the statement issued at the end of the session contained no hint that a compromise was possible and instead accused the USA of using sanctions to continue its policy of oppressing Libya and causing suffering to the Libyan people. In a speech in Misurata in February 1994 Qaddafi declared that the Lockerbie affair was closed, but two weeks later he proposed that the two accused men be tried by an Islamic court either in the USA, the United Kingdom or any other country, provided that the court officials were Muslims. The proposal was rejected by the British Foreign Office. After the Secretary-General of the League of Arab States held talks in Tripoli at the end of February, JANA, the official Libyan press agency, accused the Arab League of submitting to US pressure over UN sanctions and declared that Libya wished to play no further part in the organization. In February 1994 President Clinton renewed US sanctions against Libya, originally imposed in 1986, and reaffirmed his determination to see the two Libyans accused of the Lockerbie bombing extradited to face trial. He described Libya as an exceptional threat to US national security and interests.

On 12 June 1994 the Ministers of Foreign Affairs of the OAU member states adopted a resolution urging the UN Security Council to revoke the sanctions that it had imposed on Libya. The following day a member of the Palestinian Fatah Revolutionary Council, who was on trial in Lebanon (accused of the assassination of a Jordanian diplomat), claimed that the Council had been responsible for the explosion which destroyed the aircraft over Lockerbie in December 1988. At various times since February 1992 various parties had alleged that Iranian, Syrian and Palestinian agents—sometimes separately, sometimes in collaboration—had been responsible for the explosion. Nevertheless, both the US and the British authorities remained convinced that there was still sufficient evidence to continue to seek the extradition of the two Libyan suspects who had been formally indicted for the offence in the USA and Scotland.

In mid-February 1995 the Government announced that it would not assume the chairmanship of the UAM, as it was due to do later in the year, because other UAM member states were enforcing the sanctions which the UN had imposed on Libya. In late March the US Secretary of State announced that the USA would seek to persuade the UN Security Council to apply a ban on Libyan sales of petroleum before its forthcoming review of the sanctions already in force. At the end of the month, however, the Security Council did no more than renew the existing sanctions, prompting the USA to announce that it would impose more stringent unilateral sanctions on Libya.

In April 1995 Col Qaddafi successfully defied UN sanctions by ordering a Libyan aircraft carrying 150 pilgrims to leave Tripoli for Jeddah in Saudi Arabia. His decision came only hours after the UN had agreed to allow 6,000 Libyan pilgrims to visit Saudi Arabia for the annual *hajj* on 45 EgyptAir flights. The UN immediately condemned the Libyan action as a 'flagrant violation of the UN air embargo' and criticized Egypt and Saudi Arabia for their involvement. Both countries appeared to have had prior knowledge of the flight. However, the UN Security Council did not withdraw its permission for the EgyptAir flights. At the request of President Mubarak of Egypt, Col Qaddafi did not proceed with further Libyan flights to Saudi Arabia, but he claimed that the Libyan people had won a victory through their 'steadfastness and determination to die for the sacred right of the *hajj*'. Qaddafi himself declined to make the pilgrimage to Mecca.

In May 1995 Qaddafi adopted a new strategy over the extradition of the two Libyan Lockerbie suspects (see above) by insisting that the UN Security Council should first investigate the US bombing of Tripoli in 1986 and that Israel should first comply with some 40 UN resolutions. However, at the end of July 1995 the UN decided not to lift the sanctions in force against Libya, although it rejected persistent US demands for stronger sanctions, including an oil embargo. In November the USA again failed to convince its European allies to impose an embargo on Libyan oil, but despite appeals from Egypt and the Arab League for some relaxation in the sanctions, the existing embargo was once again renewed. The USA nevertheless continued its uncompromising stance towards Libya, and in December introduced domestic legislation to strengthen economic sanctions against both Libya and Iran, targeting in particular oil companies that invest in the two countries. In May 1996 it was reported that the EU Council of Ministers had protested against sanctions planned by the USA to penalize non-US companies investing in oil and gas projects and supplying refinery equipment to Libya. At the end of June Col Qaddafi once again flouted UN sanctions by flying to Cairo in order to attend the Arab summit meeting convened by President Mubarak following the victory of Likud leader Binyamin Netanyahu in the Israeli legislative elections. The summit meeting urged the UN to lift sanctions against Libya, and appealed to the United Kingdom

and the USA to accept an Arab proposal that the two Libyan suspects in the Lockerbie affair should be given a neutral and fair trial in The Hague, the Netherlands, (rather than in the United Kingdom) but with Scottish judges in session and in accordance with Scottish law. Despite appeals by Russia, the People's Republic of China, Egypt, Indonesia and Botswana for sanctions to be lifted, and for the trial of the two Libyan suspects to be held in a third country, the UN renewed existing sanctions against Libya at the end of July 1996, and there seemed to be little prospect of them being lifted in the foreseeable future.

In October 1995 Libya withdrew its candidacy for a seat on the UN Security Council after the USA, the United Kingdom and France had organized a campaign to prevent its election. Libya relinquished its candidacy in favour of Egypt, stating that it did not wish to sit on the Council because the UN had become a tool of the USA. In November Libya was excluded from the summit meeting of Mediterranean countries in Barcelona, Spain, after strong pressure from the UK Government. Later in that month a Libyan dissident, Ali Mehmed Abuzeid, a founder member of the NFSL, was killed in London amidst reports that he had given information to the Italian police about arms smuggling to Libya. Although it was claimed that Abuzeid was the victim of a Libyan 'hit-squad', British intelligence sources dismissed the theory that the killing was political. Nevertheless, in December the British Government accused the senior Libyan diplomat in London of intimidating Libyan dissidents in exile there and expelled him. In retaliation, Libya immediately expelled a British diplomat.

At the beginning of 1996 there were acrimonious exchanges with the US authorities after Col Qaddafi appeared to support the actions of Palestinian Islamists responsible for a series of devastating suicide bomb attacks in Israel, and reports that Libya had donated US $1,000m. to Louis Farrakhan, the controversial leader of the US Nation of Islam movement, who had visited Tripoli in the previous December. In February the CIA repeated its claim that Libya was developing a secret chemical plant at Tarhuna for the manufacture of poison gas, in order to replace the Rabta facility (see above), and in March the US Secretary of Defense, William Perry, during a visit to Cairo, told the Egyptian authorities that, if necessary, the USA would use force to close down the plant. In early April President Mubarak indicated that Egypt had requested detailed data from the USA and that, if reports about the plant were confirmed, he might offer to mediate with Libya. In May the Libyan Secretary for Foreign Liaison and International Co-operation, Omar al-Muntasser, complained to the UN Security Council that the USA was preparing an attack on Libya, on the pretext of destroying the plant at Tarhuna, and strongly denied the existence of a chemical weapons facility there. Libya instead insisted that the plant formed part of the GMR project (see 'Inauguration of the Great Man-made River,' above). The USA repeated that it would take whatever action necessary to prevent the plant's completion, but excluded the use of chemical weapons. However, US efforts to win support for its proposal to destroy the alleged plant met with little success. Despite reports of photographic evidence confirming the plant's existence, many observers remained sceptical, although the arrest, in August, of two Germans accused of exporting computerized equipment often used in the manufacture of poison gas to Libya, reinforced the opinions of a number of US officials. Similar concerns had been expressed by the USA in June, when it was reported that Libya had signed a clandestine co-operation pact with Ukraine, which was understood to provide for the transfer of advanced weapons' technology to Libya. In December the US press published additional claims, which alleged that Ukraine had agreed to provide Libya with a package of military equipment, including missiles, valued at $500m., in contravention of the UN arms embargo. The charges, allegedly founded on a CIA report, were denied by Ukranian officials.

The Libyan leader's stance on the suicide bomb attacks in Israel also soured relations with the EU, which had begun to show some signs of improvement at the beginning of 1996 when Libyan and EU representatives held talks in Brussels. At the international anti-terrorism summit meeting hastily convened in Egypt in March—the so-called 'Summit of Peacemakers'—the British Prime Minister, John Major, condemned Libya and Iran for sponsoring terrorism, although the final communiqué failed to mention any state by name. Qaddafi denounced those Arab states which participated in the meeting, with the exception of Egypt. In April the South African Minister of Foreign Affairs, Alfred Nzo, on an official visit to Tripoli, called for the lifting of 'unjust sanctions' against Libya, incurring the displeasure of Britain, the USA and France. South Africa's President Nelson Mandela had earlier insisted that he would stand by countries that had supported the ANC in its struggle against apartheid and in February had issued an invitation to the Libyan leader to make an official visit to South Africa. South Africa announced that it was to appoint a non-resident ambassador to Libya. In February 1997 it was reported that President Mandela had ordered an inquiry into allegations that South Africa had illegally supplied chemical weapons to Libya since his Government had come to power.

USA IMPOSES SECONDARY SANCTIONS

In July 1996 the USA increased its pressure on Libya when the US Congress unanimously approved a controversial Iran and Libya sanctions act, which aimed to further weaken the Libyan economy as a penalty for that country's alleged support of international terrorism. The legislation had originally targeted only Iran, but had been amended to include Libya, and involved the imposition of sanctions on any non-US country investing more than US $40m. (subsequently revised to $20m.) in Libya's oil and gas industry in any one year (see Economy, below). European Governments protested vociferously against the legislation, and promptly lodged a protest with the World Trade Organization (WTO). Trade between the EU and Libya at that time was worth some $20,000m. each year, while almost 90% of Libya's oil exports went to Western Europe where they provided around 10% of all petroleum supplies. European oil companies, particularly those of Italy and Spain were heavily involved in the Libyan oil industry, and were, therefore, the countries most likely to suffer as a result of the new sanctions. In response to the European challenge, the USA invoked article 21 of the General Agreement on Tariffs and Trade (GATT), which permits a signatory to break the agreement if national security interests are involved. In November a Libyan-sponsored resolution which called for the repeal of the Iran and Libya sanctions act was adopted by the UN General Assembly. Libyan diplomatic efforts, however, failed to make any progress towards the removal of UN sanctions, which were once again renewed, unchanged, in mid-November. The appointment in February 1997 of Abu Zaid Omar Dorda, a former Prime Minister, as the new Libyan representative to the UN, was interpreted by a number of observers as an indication that Libya intended to make no further concessions, but would instead adopt an uncompromising approach to the Lockerbie affair. In January it had been reported that Libya had once more defied the UN-imposed air embargo, when an official delegation flew to Accra in Ghana. Moreover, in late March Libyan aircraft again transferred worshippers to Saudi Arabia for the annual pilgrimage, despite the fact that the UN had permitted EgyptAir to organize flights for the Libyan pilgrims. In May Qaddafi travelled by air to Niger and Nigeria, and was welcomed at the airport of the latter country by the military leader, Gen. Abacha. The violations were strongly condemned by the UN, but no action was taken against the Libyan regime. In April the EU and the USA came to an agreement to limit the impact of the Iran and Libya sanctions act upon European countries. Under the new arrangement the US Administration promised to protect European companies from the adverse effects of the legislation, while in return the EU agreed to withdraw its complaint to the WTO regarding an earlier US law, the Helms-Burton Act, which imposed sanctions on non-US companies involved in business with Cuba. By that time no charges had been brought against any foreign company by the USA. In July, in protest at the UN Security Council's renewal of existing sanctions and the unanimity requirement which enabled the USA to veto the lifting of sanctions, Abu Zaid Omar Dorda announced Libya's intention to no longer respect those sanctions.

EU protests at new US sanctions did not imply any change in Europe's position on Libya, and despite the visit by an EU delegation to Tripoli in June 1996, relations remained strained. Nevertheless, Qaddafi appeared to be seeking to take advantage of the divisions between the USA and the EU by working

to improve European relations, particularly with France. He praised France for its pursuit of an independent foreign policy and allowed the French judge investigating the 1989 bombing of a French airliner over Niger unprecedented access to Libyan evidence during his visit to Tripoli in July, which led to the judge's decision to try *in absentia* the Libyans suspected of the attack. However, the announcement, in November, of the decision to create a rapid reaction force, EUROFOR, a joint project involving France, Italy, Spain and Portugal, which was to respond to humanitarian crises and undertake peace-keeping missions in the Mediterranean, was unreservedly denounced by Qaddafi. A declaration by German authorities in October that clear evidence was available to prove the Libyan Government's direct involvement in a 1986 bomb attack on a Berlin discotheque, which provided a pretext for the US raids against Libya 10 days later was also a major set-back; it was announced that arrest warrants had been issued for the three Libyans believed to have been involved in the attack. Despite this development, three German deputies, who visited Libya in March 1997 as members of a parliamentary delegation responsible for relations with the UAM, recommended that regular contact between the German parliament and the GPC should continue. In the same month Libya achieved rare success in foreign policy when the Vatican resisted US pressure and established formal diplomatic relations with Libya. Pope John Paul II had often spoken out against the imposition of UN sanctions on Libya, and his officials stated that the establishment of diplomatic links with Libya took place in recognition of that country's efforts to protect freedom of religion and the Vatican's wish to see a peaceful and stable Mediterranean region. Archbishop José Sebastián Laboa became the Pope's first envoy to Tripoli, while Libya was to open a people's bureau in Vatican City. In contrast, Libya remained excluded from co-operation initiatives between the EU and southern Mediterranean states, which were launched in Barcelona in 1995.

In October 1996 the Libyan leader provoked diplomatic outrage during the visit of Necmettin Erbakan, Turkey's first Islamist Prime Minister, when he criticized Turkey's membership of NATO and its close association with the West, urging the establishment of an independent Kurdish state. There was an angry response from Ankara and Turkey's ambassador to Tripoli was recalled. After a few months, however, the situation improved and the Turkish ambassador returned, but in June 1997 Turkey again withdrew its ambassador, after Qaddafi reportedly made remarks on Libyan television criticizing the Turkish army and Government, and denouncing military agreements between Turkey and Israel.

In February 1997 the OAU Ministerial Council met in Tripoli for the first major meeting of the organization to be convened outside Addis Ababa, Ethiopia. The delegates called for an end to UN sanctions against Libya, and a committee of five ministers was established to mediate between Libya and the Western states in order to try to resolve the Lockerbie affair.

NEW DEVELOPMENTS IN THE LOCKERBIE AFFAIR

In July 1997 the Arab League, which had previously been criticized by Qaddafi for its lack of support, formally proposed that the two Libyan suspects in the Lockerbie affair be tried by Scottish judges under Scottish law in a neutral country. At an Arab League meeting in September the member states urged a relaxation of the air embargo on Libya and voted to defy UN sanctions by permitting aircraft carrying Qaddafi, and other flights for religious or humanitarian purposes, to land on their territory. In October the President of South Africa, Nelson Mandela, visited Libya, despite US disapproval, and publicly expressed support for the proposals to hold a trial of the Lockerbie suspects in a third country. Later that month the United Kingdom requested the UN to send envoys to examine the Scottish legal system, and in December, following the renewal of sanctions by the UN in November, the UN issued a report concluding that the Libyan suspects would receive a fair trial under the Scottish system. However, in February 1998 the ICJ ruled that it was competent to hear Libya's complaints that the USA and the United Kingdom were acting unlawfully by insisting on the extradition of the two Libyan suspects. The USA and the United Kingdom had attempted to prevent the case from being heard, on the grounds that intervening UN Security Council resolutions had rendered it unnecessary. Libya declared that the ICJ ruling had given its claims legitimacy and that UN sanctions should now be disregarded. Nevertheless, sanctions were renewed in March and no progress towards lifting them was achieved at a debate within the Security Council later in the same month.

In April 1998 a representative for the families of the British victims of the Lockerbie bombing and a professor of Scottish law travelled to Libya, where they met Col Qaddafi. The Libyan leader was reported to have agreed to the trial of the two Libyan suspects in The Hague, the Netherlands. In the following month US and EU representatives concluded an agreement under which European companies would be able to invest in Iran, Libya and Cuba without incurring sanctions as set out in the so-called 'Iran-Libya sanctions act' of 1996 and the Helms-Burton Act. In return for this concession, which had been negotiated with reference to the involvement of Total of France in Iran, EU states were reported to have agreed to monitor more carefully their exports to Libya. In June 1998 at a meeting in Ouagadougou, Burkina Faso, the OAU resolved that from September its members would cease to comply with UN sanctions against Libya unless the USA and the United Kingdom agreed to a trial being held in a neutral third country and authorized flights to Libya on humanitarian, religious or diplomatic missions with immediate effect. In the following months several African Heads of State openly flouted the air embargo and flew directly to Libya for talks with Col Qaddafi. Relations with Italy, Libya's major trading partner, improved significantly. A wide-ranging accord was signed in Rome in July, in which Italy expressed regrets for its colonial past, and which provided for joint infrastructure projects, especially in the energy sector. in October the two countries signed a further agreement on technical and scientific co-operation under which Libyans will receive training in Italy. France also appeared keen to improve relations with Libya, where French companies were actively seeking investment opportunities in the energy sector. France and Libya agreed that the six Libyans implicated in the 1989 bombing of a French airliner over Niger could be tried *in absentia*.

In late August 1998 the USA and the United Kingdom, under mounting diplomatic pressure, sought to regain the initiative in the Lockerbie affair and agreed to a trial of the two Libyan suspects in the Netherlands before a panel of Scottish judges and in accordance with Scottish law. Soon after the offer was made the UN Security Council unanimously approved a resolution (No. 1192) allowing the lifting of UN sanctions against Libya as soon as the two suspects were surrendered for trial. The USA, however, threatened to extend sanctions to include a multilateral oil embargo should Libya reject the new offer, although there seemed little likelihood that international support would be forthcoming for such a measure. Col Qaddafi gave a cautious welcome to the US and British proposal, but the Libyan authorities later requested negotiations about the terms of a trial in the Netherlands. The USA and the United Kingdom made it clear that their offer was non-negotiable, but did agree to clarify any technical or legal points through the office of the UN Secretary-General. The Libyan Government also appointed a new, high-level legal team to represent the two suspects, headed by a former Secretary for Foreign Liaison, suggesting to some observers that the interests of the Libyan regime rather than those of the accused would now be given priority. The two suspects, Al-Amin Khalifa Fahima and Abd al-Basset al-Megrahi, had been under virtual house arrest for some six years, with their passports confiscated by the authorities. During a British television broadcast in October, Qaddafi indicated that the two men might be guilty but emphasized that the bombing had not been officially sanctioned and that the suspects may have been seeking their own revenge for the US air strikes against Libya in 1986. Some analysts concluded that the Libyan leader had decided to try to resolve the conflict with the West and had withdrawn support from a number of radical political groups in an effort to refute accusations that the Libyan State sponsored terrorism. The fact that 'Abu Nidal', the leader of the pro-Palestinian Fatah Revolutionary Council, was reported to have been expelled from Libya in mid-1998 was regarded as evidence of this change. Subsequently, the Fatah Revolutionary Council accused Libya of arresting several of its members and

demanded their release. By the time Kofi Annan, the UN Secretary-General, visited Libya in early December, Qaddafi had agreed to a trial in the Netherlands under Scottish law but a problem remained over US and British insistence that, if convicted, the two Libyans must serve their sentences in a Scottish prison. The Libyan leader assured Kofi Annan that he wished to resolve the Lockerbie issue and in mid-December, just before the 10th anniversary of the bombing, the GPC expressed 'satisfaction' with the idea of a trial in the Netherlands and welcomed the UN Secretary-General's efforts to facilitate this. A Scottish legal expert and adviser to the families of UK victims of the bombing, interviewed for a British television documentary in mid-December, expressed serious doubts that the evidence against the two Libyan suspects was strong enough to secure a conviction.

In early January 1999 the head of the Libyan judiciary issued warrants for the arrest of several former US officials for their alleged involvement in air strikes against Libya in 1986 and stated that the matter would be referred to the UN Security Council if the men were not surrendered. This was viewed as a move designed to draw attention to what Libya insists are double standards employed by the USA on issues relating to international law. Relations with the United Kingdom were further strained when a former British intelligence officer revealed details of an alleged plot by the British security services to assassinate the Libyan leader in 1996. The allegations were strongly denied by the British Foreign Secretary. Despite a visit to Libya by envoys of South Africa and Saudi Arabia in mid-January 1999, by late February Qaddafi had not surrendered the two suspects. The USA and the United Kingdom, increasingly frustrated by the delay, warned Libya on 25 February that unless the two suspects were surrendered within 30 days, sanctions would be strengthened. However, Libya rejected this ultimatum and the USA and the United Kingdom failed to obtain a resolution from the Security Council in support of further sanctions, to which China, France and Russia had all indicated their opposition.

In early March 1999 the six Libyans accused of bombing a French airliner over Niger in 1989 were found guilty *in absentia* after a three-day trial in Paris and were sentenced to life imprisonment. The French authorities proceeded to issue international warrants for the arrest of the six men and demanded that the Libyan authorities should punish them. It appeared very unlikely that Libya would impose prison sentences on the men, who include Col Qaddafi's brother-in-law. In July 1999 Libya paid more than US $31m. in compensation to the families of the 70 people killed in the bombing of the French airliner. According to the French authorities, the payment represented 'an acknowledgement by the Libyan authorities of the responsibility of their citizens'.

In mid-March 1999, after further diplomatic efforts by South Africa, President Nelson Mandela, on a visit to Libya, announced that the Libyan authorities would release the two accused men for trial by 6 April. This was confirmed by Col Qaddafi in a television broadcast in which he stated that he had accepted South African and Saudi Arabian assurances about arrangements for the trial in the Netherlands. The Libyan Government then sent a letter to the UN Secretary-General guaranteeing to surrender the two suspects. If the men are convicted they will serve their sentences in a Scottish prison, but the United Kingdom was reported to have agreed that the two men would be held separately from the rest of the prisoners, that UN monitors would ensure that they were not subjected to interrogation by the British or US intelligence services, and that they would have regular access to Libyan consular services. While there was much speculation about the Libyan leader's motives in finally agreeing to surrender the two men, many analysts argued that economic factors played a key role. On 5 April Al-Amin Khalifa Fahima and Abd al-Basset al-Megrahi arrived at Valkenburg airport in the Netherlands, accompanied by the UN's chief legal counsel, Hans Corell. Neither man opposed extradition and they were placed in the custody of Scottish police officers and transferred to Camp Zeist, near Utrecht, a former US air base, which has been designated Scottish territory for the purposes of the trial. At Camp Zeist they were formerly arrested by Scottish police and legal proceedings began when the two men appeared before a Scottish law officer to be committed for trial on charges of murder, conspiracy to murder and contravention of the 1982 Aviation Security Act. The short committal hearing was held in camera, but two UN observers were present. The trial is scheduled to begin in February 2000, after a special court agreed to the defence's request for a six-month adjournment. With the surrender of the two suspects, the UN Security Council immediately suspended the sanctions imposed on Libya in 1992. The UN was to review the sanctions issue in three months' time, after receiving a report from the UN Secretary-General on whether Libya has renounced terrorism and agreed to pay compensation to the relatives of victims of the bombing if the two Libyan suspects are convicted. International airlines quickly began to make arrangements to resume services to Tripoli and Benghazi. The Italian foreign minister, Lamberto Dini, who visited Tripoli on 6 April 1999, declared that the surrender of the two suspects created conditions for Libya's full reintegration into the international community. However, although the EU formally suspended UN sanctions on 19 April 1999, a number of penalties imposed on Libya before the 1992 UN embargo were retained and were expected to remain in place until the publication of the UN Secretary-General's report on Libya's compliance with UN Security Council Resolution 1192.

In late April 1999 the USA, while refusing to follow the example of the UN and end sanctions against Libya, announced a relaxation of its own sanctions regime, to allow sales of food and medicine on a case-by-case basis. Families of US victims of the Lockerbie bombing have insisted that the US sanctions should remain in place, while US business groups have sought to have them lifted. At the end of May the US Senate voted unanimously in favour of a non-binding resolution that urged President Clinton to block the lifting of sanctions against Libya. In early June the USA took part in official talks with Libya for the first time in 18 years. The meeting between the US and Libyan ambassadors to the UN was also attended by a British representative and the UN Secretary-General, and was held in an attempt to establish precise terms of reference for the formal lifting of UN sanctions. At the conclusion of the talks the USA stated that it could not support the complete lifting of sanctions until it received proof that Libya had complied with UN Security Council Resolution 1192 of August 1998.

In July 1999 the UN Secretary-General stated in a report to the Security Council that he was unable to recommend the permanent lifting of sanctions against Libya. Although the country had complied with many of the UN's demands, the Secretary-General reported that the USA required further evidence before it would agree to the formal lifting of sanctions. In a letter to the Security Council, Libya's ambassador to the UN subsequently condemned 'the politicization of this legal dispute', and declared that there could be no justification whatsoever for any opposition to the immediate lifting of sanctions. On 9 July the Security Council welcomed Libya's co-operation and reaffirmed its intention to end all UN sanctions 'as soon as possible'. The USA threatened to veto a resolution drafted by Namibia that urged the immediate lifting of sanctions, on the grounds that such a move was premature before the trial of the Lockerbie suspects was completed.

In May 1999 a British newspaper reported that it had seen evidence of Col Qaddafi's personal involvement in the Lockerbie bombing. However, the paper had not revealed the details, owing to a threat by the British Government to obtain a court injunction to prevent their publication. Lawyers representing the two Libyan suspects claimed that, as a result of the newspaper's allegations, the two men would not receive a fair trial. However, Scottish judges rejected this claim and ruled that the newspaper was not in contempt of court because the trial was taking place before a panel of judges, not a jury. In July the United Kingdom announced that it was resuming full diplomatic relations with Libya after a rupture of 15 years. The decision followed a statement by Col Qaddafi in which he accepted Libya's 'general responsibility' for the murder of a British policewoman outside the Libyan people's bureau in London in 1984 (see Qaddafi's attempts to quell opposition at home and abroad, above). Qaddafi expressed his 'deep regret' for the incident and offered to pay compensation to the policewoman's family. The Libyan leader also stated that Libya would co-operate with the

British police inquiry into the murder. A British ambassador to Libya was expected to be appointed before the end of 1999.

RUMOURS OF AN ABORTIVE ARMY COUP AND INTERNAL DISSENT, 1993–99

During the second week of October 1993 rumours began to circulate in the Western media that a revolt by a number of army units had been crushed by the Libyan air force which had remained loyal to Qaddafi. It was claimed that the most serious clashes had occurred around Misurata and Tobruk where there had been scores of casualties. There were unconfirmed reports that Libya had closed its borders and that after three days of unrest 2,000 people had been arrested and 12 officers executed. Qaddafi's Second-in-Command, Abd as-Salam Jalloud, was reported to have been placed under house arrest. There was speculation that the coup, described in the media as the most serious challenge to the Libyan leader since 1986, had arisen as a result of differences between Qaddafi and Jalloud over the handling of the Lockerbie crisis and that the armed forces may have divided along tribal lines. Throughout the Lockerbie affair, Jalloud, who belongs to the al-Megaha tribe, has been firmly opposed to surrendering the two suspects, both of whom are members of his tribe. The London-based daily *Al-Hayat* named Col Hassan al-Kabir and Col ar-Rifi Ali ash-Sharif as the leaders of the uprising and stated that while al-Kabir had been arrested, ash-Sharif had fled to Switzerland. However, doubts have been expressed that a major uprising did in fact occur. Qaddafi himself condemned the rumours of an army coup in a speech on 30 October describing them as a plot by the British intelligence services to humiliate the Libyan people. Nevertheless, it is perhaps significant that the government changes announced at the end of January 1994 placed men known for their personal loyalty to Qaddafi in key positions, suggesting that the Libyan leader felt the need to tighten his grip on power. Abu Zaid Omar Dorda, the Secretary-General of the General People's Committee and a close associate of Jalloud, was replaced by Abd al-Majid al-Qaoud. Ahmed Ibrahim was appointed Secretary for Information and Culture and Muhammad al-Hijazi became Secretary for Justice and Public Security; both were known to be members of Qaddafi's personal entourage.

Libyan opposition groups in exile remain weak and divided and there is little evidence that they command significant support within the country. In October 1993 Muhammad Megarief, the leader of the NFSL, Maj. Abd al-Moneim al-Houni of the Co-operation Bureau for Democratic and National Forces, and Mansour Kikhia of the Libyan National Alliance (LNA) are reported to have met in either Algiers or Geneva to discuss forming a united front against the Qaddafi regime. Abd al-Hamid al-Bakkush, the leader of the Libyan Liberation Organization, did not attend and the meeting appeared to have failed to resolve the differences between the various opposition groups. This was confirmed in February 1994 when some leading members of the NFSL announced that they had formed a breakaway movement and criticized the NFSL for failing to co-operate with other opposition groups in creating a united front against the Qaddafi regime.

Qaddafi has regularly demonstrated his intolerance of these opposition groups and has urged that his opponents abroad be hunted down and liquidated. Therefore in early December 1993, when Mansour Kikhia, a former Secretary for Foreign Liaison and, since the early 1980s, leader of the opposition LNA, disappeared while attending a meeting of the Alliance in Cairo, it was widely assumed that he had been abducted by Libyan security agents. The affair proved particularly embarrassing because Kikhia had been living in the USA, had an American wife and had only agreed to attend the meeting in Cairo after receiving personal assurances from senior Egyptian officials about his safety there. The Libyan Secretariat for Foreign Liaison and Libya's representative to the Arab League in Cairo, Ibrahim Beshari, denied Libyan involvement in the affair. Beshari stated that Kikhia presented no threat to the Libyan Government. Qaddafi himself told Egyptian journalists that Libya was co-operating with the Egyptian authorities to discover what had happened. Both US President Clinton and Dr Boutros Boutros-Ghali, the UN Secretary-General, appealed to President Mubarak of Egypt to investigate Kikhia's disappearance. However, although Mubarak dispatched one of his advisers to Tripoli he failed to make any progress and the Egyptian police admitted at the end of January that they had no information about Kikhia's whereabouts. Kikhia's wife continued to claim that her husband had been kidnapped by Libyan agents assisted by Egyptian security officers. In April 1995 the Arab Organization of Human Rights urged the Egyptian Government to investigate the matter and to punish those responsible for Kikhia's abduction. In late 1996 the LNA stated that it would continue to investigate Kikhia's disappearance, but many were convinced that he had been murdered. In September 1997 a report by the CIA stated that Kikhia had been kidnapped by Egyptian agents while in Cairo and extradited to Libya, where he was murdered. At the end of 1997 it was reported that an international legal committee had been formed to investigate Kikhia's disappearance and US allegations. In early 1999 the Cairo Court of Appeal criticized the Egyptian Ministry of the Interior for failing to ensure Kikhia's safety while he was visiting the country.

In early March 1994 Libyan television broadcast 'confessions' by three army officers and a student, all members of the Warfallah tribe, who had been arrested in the Bani Walid region during the army revolt in October 1993. It was the first official acknowledgement of the attempted coup. During their 'confessions' the men admitted to supplying information to the CIA, and to Muhammed Megarief, the leader of the NFSL, on military deployment, the Rabta plant, nuclear research and Col Qaddafi's own movements. The accused men stated that they had met Megarief in Zurich, Switzerland, and Madrid, Spain, in order to pass on information. The NFSL claimed that after calls for the execution of the four men, demonstrations erupted in the Bani Walid region where several protestors were arrested after setting fire to government buildings. The Libyan opposition abroad stated that 55 army officers arrested after the abortive coup had been condemned to death. At the beginning of 1996 it was reported that Col Qaddafi had overturned a court's ruling on 12 army officers of the Warfallah tribe accused of leading the abortive coup because the sentences were too lenient, and that the men had been condemned to death. According to one source, the death sentences had not been carried out in order not to antagonize the Warfallah, which had threatened retaliation if the men were killed.

Early in 1996 rumours circulated that Col Qaddafi had concentrated power within the armed forces almost exclusively in the hands of members of his own tribe and that the increasing involvement of two of his sons in government business, including financial and commercial affairs, had alienated tribal leaders, such as Cols Khalifa Ahneish, Masoud Abd al-Haft and Ahmad Qadhaf ad-Dam, who in the past had played key roles in internal security and foreign affairs. It was also claimed that the Libyan revolutionary committees were preparing to bring to trial those responsible for corruption and financial mismanagement in order to absolve Qaddafi and his immediate family of any responsibility for the country's economic problems and to provide a pretext for the elimination of opponents of the regime.

In addition to reports of continued dissent within the armed forces and the destabilizing effects of tribal rivalries, some observers argued that the Islamist opposition was the most dangerous threat to the Qaddafi regime. Despite being subjected to harsh repressive measures by the security forces for some years, Islamist opposition to the regime, strongly rooted in Cyrenaica, appears to have increased in strength, although little is known about the groups involved. In June 1995 there were a number of armed confrontations between police and Islamist militants in and around Benghazi, Libya's second city and economic capital. The regime blamed the unrest on 'extremist infiltrators' from Egypt and Sudan and independent sources confirmed that the large number of immigrants, mainly from Egypt and Sudan, seeking work in Benghazi, had created instability in the region.

There were reports of further clashes between the security services and Islamist militants in September 1995 in Benghazi, Darnah and al-Baida, in which a senior officer in the security services, Lt-Col al-Faydi, was ambushed and killed. Islamist militants calling themselves the Jama'ah al-Islamiyah al-Muqatila, or Militant Islamic Group, claimed responsibility for the September incidents and stated that it was the duty of all Muslims to overthrow the Qaddafi regime and impose *Shari'a* law. In response to these incidents, thousands of Sudanese

and Egyptian workers were expelled (see below), the regime tightened its control over the country's mosques and hundreds of suspected Islamist militants were arrested. The regime also made moves to re-Islamize Libyan society, adopting laws based on the *Shari'a*. In October 1995 the London daily newspaper, *The Independent*, claimed that Col Qaddafi was fighting an underground war against the Islamist militants who threatened the stability of his regime. An attack on the Abu Saleem prison in Tripoli in November, in which some 15 dissidents escaped, was also regarded as the work of Islamist militants. In February 1996 it was reported that militants from the Militant Islamic Group had attempted to assassinate Col Qaddafi in Sirte (Surt). After the assassination attempt, security forces carried out further arrests of suspected Islamist militants. In March, following a mass escape from the al-Kuwaifiyya prison near Benghazi during which police shot dead many of the prisoners, unrest erupted once again in and around Benghazi, Darnah and al-Baida, and there were reports of over 20 deaths in clashes between militants and the security forces. At the end of April, the Militant Islamic Group issued a statement claiming to have killed 15 security officers in Sirte during the previous month and to have seized weapons from police stations in Ras al-Hilal and al-Qubba. In May violent clashes were reported in Benghazi between security forces and supporters of a new opposition group, the Islamic Martyrs' Movement (IMM), which has claimed responsibility for the assassinations of a number of high-ranking government officials. The movement's leader, Muhammed al-Hami was killed in July in clashes with security forces, and was later replaced by Hamzah Abu Shaltilah. In March 1997 press reports stated that Shaltilah had been dismissed and replaced by a new leader, referred to as 'Khalifah'. In June a third Islamist group, the Libya Islamic Group, claimed responsibility for the murders of eight policemen during an attack on a police training centre in Derna. A fourth group, known as the Supporters of God, was formed in September. Claims by the Militant Islamic Group that they had carried out an assassination attempt on Col Qaddafi in November were denied by the authorities. Throughout the second half of 1996 there were reports of clashes between Islamist groups and government forces, especially in the eastern part of the country, where several hundred people were estimated to have been killed. Few details are available about the Islamist opposition, and the degree of popular support for the various militant groups that have emerged is difficult to estimate, though the Militant Islamic Group, which is believed to have links with the extremist Groupe islamique armé in Algeria, appears to be the most important. There is little evidence of co-operation between the different groups or between the Islamists and the secular opposition, and it is understood that the groups' resources are limited.

The threat from the growing number of militant Islamist groups was accompanied by continued unrest within the armed forces and the alienation of tribal support for the regime. In July 1996 it was reported that an attempted coup organized by Col Khalifa Haftar, an officer who had taken part in the overthrow of the monarchy in 1969, but who had later gone into exile, had been quashed after fierce fighting in the Jabal al-Akhdar, near Darnah. In the same month bodyguards of Qaddafi's son, Saadi, opened fire on crowds at Tripoli's football stadium, apparently after fans began to chant anti-Government slogans following a decision by the referee which ruled in favour of a team sponsored by Saadi Qaddafi. Official Libyan reports stated that eight people were killed and 39 injured as a result of the incident. However, Western reports citing diplomatic sources put the death toll at between 20 and 50, with many others injured. At the end of August another coup attempt was uncovered, involving some 45 army officers, and said to include members of the Libyan leader's own tribe, the Qadhadhifa. Three of the coup leaders were believed to have been executed. Tight security was maintained in and around Bani Walid, the home town of officers from the powerful Warfallah tribe purportedly accused of leading the abortive coup of 1993, who were put on trial at the Supreme Military Court at the end of the year. After being convicted of spying for the CIA and trying to overthrow the regime, six senior army officers and two civilians were executed at the beginning of January 1997. The eight remaining suspects were acquitted. US officials considered the reports to be a propaganda exercise by the Libyan Government. The executions took place against the wishes of the leaders of the Warfallah tribe, and were strongly condemned by several exiled opposition groups. Some members of the Warfallah tribe, however, continued to hold senior positions in the army. In March it was reported that Maj.-Gen. Abd as-Salam Jalloud had resumed an important government role, after being removed from office in 1993 and placed under house arrest.

In late 1996 there were reports that the two exiled opposition groups, the LNA and the NFSL, had once again agreed to co-operate to bring down the Qaddafi regime, and had rejected overtures from the Libyan leader to take part in negotiations. In January 1997 Muhammed as-Sanusi, the grandson of the late King Idris who was deposed in 1969, and the heir to the Libyan throne who was living in exile in Britain, claimed to have received death threats from Qaddafi's agents. He later condemned the regime for threatening Libyan exiles and accused the security forces of having used chemical weapons in attacks against insurgents in the Jabal al-Akhdar in August 1996. A new secular opposition group, the Libyan Patriots Movement, emerged in January 1997. The group claimed to have supporters among the Libyan armed forces and announced its commitment to overthrow the Qaddafi regime by force.

At its annual meeting at Sirte (Surt) in March 1997 the GPC approved legislation imposing collective punishment upon the families or tribal clans of Libyans convicted of crimes including sabotage, trafficking in arms, drugs smuggling and assisting 'terrorists, criminals, saboteurs and heretics'. Collective punishment was to include the possibility of denial of access to water, food supplies and fuel. The so-called 'Charter of Honour' was directed principally at opponents of the regime and was strongly condemned by the leading opposition group in exile, the NFSL.

Following the GPC meeting, a number of cabinet changes were made, involving the restructuring of two secretariats (or ministries). The most significant change was the division of the Secretariat of Justice and Public Security into two parts. Muhammad al-Hijazi retained the public security portfolio while Muhammed Belgacem Zwai, formerly Libya's representative at the UN, became Secretary for Justice. The Secretariat of Education, Youth, Scientific Research and Vocational Training, on the other hand, was divided in three. Mehdi Meftah Mediresh became Secretary for Education and Scientific Research, Maatouq Muhammed Maatouq retained the labour and training portfolio and Ali Chaari was appointed Secretary for Youth and Sports. Baghdadi Ali al-Hinshiri retired from his post as Secretary for Health and Social Security and was replaced by Suliman Muhammad al-Ghomari, while Nouri Hamad replaced Mahmoud Badi as Secretary for the Supervision of Public Accounting and Control. A further reorganization of the GPC took place in December, in which Muhammad Ahmad al-Manqush replaced Abd al-Majid al-Aoud as Secretary-General. Al-Aoud became Secretary for the GMR. In addition, the Secretariat for Planning, Economy and Trade was divided into two parts. Jadallah Azuz at-Talahi, formerly Secretary for the GMR, was appointed Secretary for Planning.

In June 1995 the regime passed a law forbidding foreign workers without contracts to remain in Libya, and in July began a programme of mass expulsions. Only a fraction of the Egyptian community, believed to number between 700,000 and 1m. was affected, with Sudanese and other African workers bearing the brunt of the deportations. According to the French daily newspaper *Le Monde*, by October some 40,000 Sudanese, out of a community of 400,000, had already been expelled from the country and almost half a million African workers were threatened with expulsion. The regime blamed Egyptian and Sudanese infiltrators for the outbreak of disturbances involving armed Islamist militants (see above) and justified the expulsions as a means of ridding the country of 'contagious diseases'. The expulsions were also regarded as a response to popular discontent over mounting unemployment, especially among young Libyans. However, it was the plight of Palestinian workers which caused international controversy. In a speech on 1 September Col Qaddafi repeated his threat to expel all 30,000 Palestinians resident in Libya. By the end of the month only 2,500 Palestinians had been issued with deportation orders, but their expulsion created a political crisis for the newly-formed Palestinian National Authority (PNA) in Gaza. Lebanon, Israel

and Egypt refused to receive the expelled Palestinians and many were stranded on ferries trying to cross the Mediterranean to Lebanon, and at Libya's border with Egypt, without adequate supplies of water or food. In the case of the expulsions of the Palestinians, Col Qaddafi stated that their ordeal demonstrated the weakness of the Oslo peace accords because the PNA lacked the power to assist them. At the end of October, after appeals from the Arab League, the Egyptian President and the PLO Chairman Yasser Arafat, Col Qaddafi temporarily suspended the expulsion of Palestinians. Most of those expelled were allowed to return to Libya but, according to the UN High Commissioner for Refugees, at the end of 1996 some 200 people remained stranded on the Libyan-Egyptian border, surviving in desperate conditions. The deportation of Sudanese workers continued. In January 1996 Libya announced that it had expelled some 70,000 Sudanese and that a further 200,000 would be expelled by the end of February. However, Libya stopped the expulsion of Egyptians after President Mubarak promised to strengthen his efforts to find a solution to the Lockerbie affair and to Libya's international isolation. According to a Libyan official, some 335,000 foreign workers had been expelled by the beginning of 1996. In May 1996 Qaddafi once again threatened to expel Palestinians living in Libya, despite a new appeal from President Mubarak of Egypt. However, by October the Libyan leader appeared to have reconsidered his decision, and in November Libya invited Arab workers to apply to live in that country, due to a reported labour shortage. In January 1997 the GPC formally revoked the expulsion order, though few Palestinians appeared willing to return to Libya, and there were reports that some Palestinians still living in Libya were trying to leave the country. Subsequent reports in April 1997 suggested that the Government had, in an unexpected move, forced Palestinians remaining in refugee camps to return to Libya, and had dismantled their camps.

The Islamist opposition remained active, especially in the mountains east of Benghazi, and a number of successful arms raids against army and police posts in 1998 led to speculation that the militant Islamist groups had infiltrated the security forces. Reports of an assassination attempt on the Libyan leader by Islamist extremists near Benghazi in late May were denied by the authorities, but in the weeks that followed the security forces mounted a major offensive against Islamist strongholds in the north-eastern part of the country. A serious hip injury, which Qaddafi sustained in July, may have resulted from another assassination attempt, although official reports maintained that he had suffered an accident while exercising. In early 1998 the London-based human rights organization, Amnesty International, published a new report on Libya listing human rights abuses, including the torture of Libyans suspected of nonviolent opposition activities. The GPC convened in Sirte (Surt) in mid-December, and, in addition to giving its approval to a trial in the Netherlands of the two Libyan suspects in the Lockerbie affair (see above), a number of government changes were also announced. The Secretariat for (Arab) Unity was abolished (see below) and its responsibilities assigned to the Secretariat for Foreign Liaison and International Co-operation. The Secretariats for Justice and Public Security were merged, as were the Secretariats for Education and Vocational Training. The Secretariat for Information, Culture and Jamahiri (Mass) Mobilization was divided into two separate bodies. In some cases the restructuring of secretariats reversed decisions taken only 18 months earlier. The former Secretary for Unity, Jumaa al-Mahdi al-Fazzani, was appointed Secretary for Culture, and Muhammad Mahmud al-Hijazi, formerly Secretary for Public Security, became Secretary for Youth and Sports. In early 1999 Qaddafi strongly criticized the GPC for enacting a new law on polygamy, which allows Libyan men to take a second wife without the permission of the first. At the same time, unconfirmed reports appeared of high-level corruption, involving the payment of large 'commissions' by foreign companies to secure contracts in Libya and implicating relatives of the Libyan leader.

ICJ RULING ON AOZOU STRIP

On 3 February 1994 the ICJ ruled against Libya's claim to the Aozou strip in northern Chad. Libya and Chad had agreed in 1989 to accept the ICJ's ruling over the disputed territory. Libya's border with its southern neighbour, Chad, had been defined in 1955 in an agreement between the newly-independent State of Libya and France, then the colonial power in Chad. However, in 1973 Libya unilaterally abrogated the treaty and annexed the Aozou strip. Libya based its claim to northern Chad on the fact that the area had been part of the vast domain of the Sanusi order which had ruled much of Libya before the Italian colonial conquest in 1911. Most of the disputed strip is desert and sparsely populated. Chad regained control of the area in 1987 with the exception of a large military base built by Libya at the oasis of Aozou. After the court's ruling was announced, Libya appeared unwilling to relinquish its claim to the disputed territory and the Government of Chad reported that Libya had strengthened its military forces there. When negotiations between the two countries did begin in March, Libya demanded the release of some 500 prisoners of war captured in Chad in 1987. Then, Qaddafi suddenly announced that Libya was willing to abandon its claim to the disputed territory and a draft agreement on the withdrawal of Libyan forces was signed in Sirte (Surt) on 5 April. Under the terms of the agreement the withdrawal was completed by the end of May 1994. In early June Libya signed a treaty of friendship and co-operation with Chad, but in January 1995 the President of Chad strongly denied reports in the Libyan press that plans for a union between Chad, Libya and Sudan had been agreed at a meeting of the leaders of the three countries held in Tripoli in October 1994. A communiqué issued at the end of the meeting had merely announced that a committee had been set up to study the question of integration. It was clear that neither Chad nor Sudan had any intention of forming a union with Libya, but had agreed to discuss integration in the hope of securing Libyan financial and military assistance. In January 1997 the Chadian Government announced its intention to protest to the UN Security Council against the appearance of an official Libyan publication which contained a map showing the Aozou strip within Libyan territory.

RELATIONS WITH THE ARAB STATES AND AFRICA

Although President Mubarak has consistently resisted Qaddafi's plans for Arab unity, relations between Libya and Egypt have continued to improve in recent years. Egypt firmly opposed the UN sanctions imposed on Libya and has made strenuous diplomatic efforts to mediate between Libya and the West over the Lockerbie affair. In November 1993 President Mubarak told the newspaper *Al-Ahram* that it was in Egypt's interest for 'stability' to prevail in Libya and that relations between the two countries should remain cordial. Qaddafi's regime is seen as a bulwark against the spread of militant Islamist movements in the region and offers the prospect of much needed economic opportunities for Egypt, especially the employment of Egyptian manpower. Libya has offered to resettle one million Egyptian farmers on lands to be irrigated by the GMR scheme. For Libya, which has become increasingly isolated internationally through the efforts of the USA and the United Kingdom, Egypt serves as a valuable intermediary with the outside world. The close relationship between the two countries appeared to have survived the embarrassment resulting from the disappearance of Libyan opposition leader Mansour Kikhia in Cairo in December 1994 (see above) and Libya's strong condemnation of the Israel-PLO accord signed in September 1993. Early in 1994 the Libyan press agency, JANA, declared that Libya and Egypt were continuing to co-operate in many areas and acknowledged Egyptian efforts to persuade the West to ease sanctions against Libya. In February the Egyptian Minister of Foreign Affairs, Amr Moussa, condemned the latest round of sanctions against Libya as 'unfair' and 'coercive' and reiterated his Government's commitment to seeking a peaceful solution to the Lockerbie affair. However, Egypt's close relations with Libya provoked strong criticism from the US media at the end of 1994. Egypt was accused of abusing US aid by defending a state involved in terrorism against the USA. The Libyan Secretary of Foreign Liaison and International Co-operation, Omar al-Muntasser, condemned the attacks as an attempt to build a 'Berlin Wall' between Libya and Egypt and argued that this was yet another US media campaign to denounce Libya as a 'terrorist state' just before UN sanctions became due for review. In November 1994 Libya supported Egypt's application to join the UAM. However, political differences emerged between the states during 1995, espe-

cially as a result of Libya's outspoken opposition to the normalization of relations between a growing number of Arab states and Israel. Col Qaddafi was critical of Egypt's role in promoting economic co-operation between Israel and its Arab neighbours. Libya's expulsion of Egyptian workers during the second half of 1995 further soured relations, although the Egyptian Government carefully avoided any public condemnation of Libya's actions. Moreover, in October 1995 Col Qaddafi made a number of public statements criticizing Egypt and President Mubarak for not doing enough to help Libya obtain the lifting of UN sanctions. In January 1996 the Libyan leader agreed to stop the expulsion of Egyptian workers after the Egyptian President agreed to step up his mediation efforts on behalf of Libya, although observers noted that Libya's outspoken opposition to Israel and the Middle East peace process had made Egyptian efforts at mediation over UN sanctions even more difficult. In March Col Qaddafi condemned the 'Summit of Peacemakers' held at Sharm esh-Sheikh, but carefully avoided any criticism of Egypt. In May Col Qaddafi held talks in Cairo with President Mubarak, but caused some embarrassment to his host by issuing a new threat to expel Palestinians living in Libya. In late June, however, the Libyan leader flouted the UN-imposed air embargo and flew to Cairo to attend the Arab League summit convened by President Mubarak in response to the election of a right-wing Government in Israel, while during Libya's debate with the USA over allegations that it was involved in the construction of a chemical weapons plant at Tarhuna (see above), Egypt refused to endorse the US claims. Recognizing Egypt as Libya's only real ally in the Arab world and as a vitally important intermediary, especially with the West, the Libyan leader continued to maintain close relations. Several meetings took place between Col Qaddafi and President Mubarak throughout the second half of 1996 and in early December the Egyptian President made an official visit to Tripoli, at the head of a large delegation. Co-operation in security, principally directed against militant Islamist groups, was agreed during the meeting. At the end of 1996 Col Qaddafi announced that after liquidating a number of investments in Europe, Libya was to reinvest in Egypt, where Libyan government holdings were believed to total some US $440m. However, differences between the two countries, particularly regarding Egypt's relations with Israel and Col Qaddafi's outspoken opposition to the Middle East peace process, continued to put their relationship under strain.

Egypt had also been suspicious of Libya's close relations with Sudan, which supports Libyan opposition to the peace process and offers shelter to Islamist militants from Egypt. In April 1995 a Libyan delegation attended the Popular Arab and Islamic Conference in Khartoum, along with representatives of Islamist opposition groups from Algeria, Morocco and Tunisia. The meeting avoided any criticism of the Libyan Government's harsh repression of its Islamist opposition and appealed for the lifting of UN sanctions against Tripoli. However, relations between Libya and Sudan became strained during the second half of 1995, owing to Libya's expulsion of large numbers of Sudanese workers (see above). Nevertheless, the Sudanese President, Omar Hassan al-Bashir, attended the 26th anniversary of the Libyan revolution in September 1995 as an honoured guest, and in early January 1996 Abu Bakr Yunes, the Libyan statesman responsible for defence, attended Sudan's independence celebrations. Early in 1996 Libya continued to mediate in disputes between Sudan and neighbouring Uganda and Ethiopia.

Although Libya joined the UAM and Col Qaddafi assumed the presidency of the organization on 1 January 1991 for a period of six months, the Libyan leader appeared to show little interest in further integration with his country's western neighbours and preferred to look east to Egypt. The union itself has made little progress and few of the agreements adopted have actually been ratified. At the sixth summit meeting, held in Tunis in April 1994, Libya, represented by Maj. Khoeldi al-Hamidi, threatened to leave the organization unless the other member states ceased to comply with the UN sanctions imposed against Libya. Of the UAM leaders, only the Algerian President, Lamine Zéroual, attended the celebrations marking the 25th anniversary of the Libyan revolution held in Tripoli in September 1994. At the beginning of 1995 Libya announced that it would not, in future, take over the presidency of the UAM nor chair any of its institutions. However, despite its threats to leave the organization, Libya continued to attend UAM meetings. It was suggested that renewed interest in the UAM may have been due to its desire to support Egypt's application for membership and its recognition that the UAM provided Libya with a rare opportunity for contact with the EU. In June the UAM expressed its solidarity with Libya by appealing for an end to UN sanctions. Early in 1996, however, Col Qaddafi's outspoken opposition to Israel strained relations with other members of the UAM. By the end of the year Libya had made some efforts to improve relations with its Maghreb neighbours and revive the UAM, largely in order to ensure their support for Libyan efforts to obtain the lifting of UN sanctions. Relations with Tunisia on the other hand, though often strained and sometimes hostile, have become friendly since the imposition of UN sanctions. Libya has come to depend increasingly on transit facilities through Tunisia as the air embargo imposed by the UN has tightened. Tunisia has profited greatly from this transit traffic, and the remittances from the 20,000 Tunisians working in Libya represent another valuable source of foreign exchange. Despite Tunisia's strict implementation of UN sanctions and the large profits that it has made out of its role as Libya's main transit route to Europe, relations remained friendly for most of 1995. In July Tunisia requested that the UN General Assembly lift sanctions against Libya, and Tunisia was among those countries which supported Libya's unsuccessful request to attend the EU summit in Barcelona, Spain, in November. During the second half of the year, Tunisians were not included in the mass expulsion of foreign workers from Libya. However, relations deteriorated at the beginning of 1996 after Tunisia agreed to establish low-level diplomatic relations with Israel, a move that was sharply condemned by Libya. Relations were further soured in February 1996, when Tunisia placed on trial an opposition leader, Muhammad Mouada of the Mouvement des démocrates socialistes. One of the charges against him was that he had links with the Libyan intelligence services. Relations, however, improved towards the end of 1996 when Col Qaddafi made two visits to Tunis and signed a number of bilateral co-operation agreements. The Libyan leader also declared that Tunisians were welcome to work and invest in Libya. Despite misunderstandings with Algeria over Col Qaddafi's attitude towards the Front islamique du salut (FIS), the Islamist opposition in Algeria, Algeria has continued to support Libya in the UN and the Arab League. In April 1995 Col Qaddafi visited Algeria for talks with President Lamine Zéroual. The talks were concluded with a joint statement reviewing bilateral and economic relations and urging the UN to end sanctions against Libya. Relations between the two countries were increasingly focused on co-operation over security and the containment of Islamist militancy, and these matters were discussed when the Algerian Minister of the Interior, Mustapha Benmansour, visited Tripoli in August 1995. In April 1996 the two countries signed a security agreement to co-operate in the struggle against the threat posed by militant Islamist groups, and shortly afterwards there was speculation that the Libyan authorities had handed over some 500 Algerian members of the FIS who had taken refuge in Libya. However, relations became strained in January 1997 when it was announced that the FIS had asked Libya to mediate in their conflict with the Algerian authorities, since Libya had ostensibly broken off all links with the FIS in 1994 when Col Qaddafi had pledged to cease all support for the Islamist opposition in Algeria. Morocco supported Libya in the UN by abstaining during the vote in the Security Council in November 1993 to impose tougher sanctions on Libya. After Libya criticized Morocco for its moves towards normalizing its relations with Israel, relations improved somewhat in 1995 when King Hassan, on a visit to Washington, DC, in March, urged the US Administration to re-examine its position on sanctions against Libya in the light of their impact on the Libyan people. During 1996 both countries called for a revival of the UAM. In November 1995, after Mauritania established diplomatic relations with Israel, Libya expelled some 10,000 Mauritanian workers, withdrew its ambassador to Nouakchott, severed economic links and threatened Mauritania's status as a member of the UAM and the Arab League. In March 1997 however, diplomatic relations between the two countries were restored, despite accusations by the Mauritanian

authorities earlier in the year that Libya had maintained links with a number of opposition leaders, ostensibly for the purpose of destabilizing the Mauritanian regime. Although all of Libya's neighbours remain deeply suspicious of the Qaddafi regime, they have more to fear from its collapse, an event that could have serious consequences for the stability of the whole of North Africa.

After some 30 years of promoting the virtues of Arab unity, Libya announced in October 1998 that it was downgrading its representation at the Arab League in Cairo, and in December the GPC abolished the Secretariat for (Arab) Unity. The official Libyan news agency emphasized that Libya belonged to the African continent, and from October the country's state-controlled radio station, 'Voice of the Greater Arab Homeland', changed its name to 'Voice of Africa'. Instead of his customary pan-Arab rhetoric, Qaddafi has begun to champion African self-determination, announcing that he wishes Libya to become a 'Black' country and urging Libyans to marry Black Africans. The change, which was regarded by some as merely a tactical move, reflected Qaddafi's growing frustration with Arab countries for not giving Libya stronger support on the Lockerbie issue, in marked contrast to the states of sub-Saharan Africa (see above). For some time Libya has been promoting closer relations with countries south of the Sahara, using financial assistance as an incentive, and in early 1998 initiated the Community of the Sahel-Saharan States (COMESSA), comprising Burkina Faso, Chad, Mali, Niger and Sudan, in order to promote economic, social and cultural exchanges. After years of tension over the disputed Aozou strip, Libya's relations with Chad have improved dramatically. A number of bilteral agreements have been signed, and at the beginning of May the Libyan leader made a much-publicized visit to the Chadian capital, N'Djamena. In his capacity as president of COMESSA, Qaddafi attempted to mediate in a number of African disputes, although most of these initiatives had more symbolic value than substance. In addition to his efforts to mediate in the border dispute between Ethopia and Eritrea, and between warring factions in Somalia, Sudan and Sierra Leone, Qaddafi was active in trying to end the war in the Democratic Republic of the Congo (DRC) between forces loyal to President Kabila and the rebel Rassemblement congolais démocratique, which is supported by Rwanda and Uganda. In late April 1999 it was announced that Qaddafi had brokered a peace agreement between Kabila and President Museveni of Uganda, which was intended to bring about a cease-fire, the deployment of an African peace-keeping force and the withdrawal of foreign troops from the DRC. Neither Rwanda nor the DRC rebels, however, were party to the agreement. At the end of May Libyan armed forces were deployed in Uganda, and in June Qaddafi made a visit to Zambia, where he and President Chiluba arranged a meeting between the DRC President and the Rwanda-backed rebels. After visiting Zambia, the Libyan leader made a state visit to South Africa for the first time since the lifting of the UN sanctions against Libya.

In early 1998 there was speculation that relations between Libya and Egypt had deteriorated, after the postponement of two visits to Cairo by the Libyan leader. In July, however, Egyptian President Mubarak, accompanied by a party of doctors and ministers, visited Col Qaddafi in hospital, where he was recovering from an injury to his hip. President Mubarak and his retinue had received special permission from the UN Security Council's Sanctions Committee to fly directly to Libya. In late October the Libyan leader spent three days convalescing in southern Tunisia at the invitation of President Ben Ali. In March 1999 Col Qaddafi travelled to Cairo for further talks with President Mubarak.

Economy

Revised for this edition by ALAN J. DAY

Petroleum has transformed Libya from the poorest country in the world in 1951 into the country with the highest living standards in Africa (according to World Bank figures). Before the discovery of oil in commercial quantities in the 1950s, agriculture was the basis of the economy and domestic revenue covered only about one-half of the Government's ordinary and development expenditure. Between 1962 and 1968, however, national income increased from LD 131m. to LD 798m. and gross national product (GNP) increased from LD 163m. to LD 909m. Exports of petroleum during this period increased by 835%, accounting for 51% of gross domestic product (GDP) in 1968. As a result of the dramatic rise in oil prices in the 1970s, the country's GNP, according to official estimates, rose to LD 3,534m. in 1974 before falling slightly to LD 3,497m. in 1975, when petroleum exports accounted for 46.3% of GDP. Oil revenues then rose steeply, reaching a peak of US $22,000m. in 1980, but fell equally sharply in the 1980s, as world oil prices declined rapidly. Estimated GNP fell from $25,984m. in 1985 to $22,300m. in 1987 and $18,400m. in 1988, before rising again, in 1989, to $23,333m., measured at average 1987–89 prices. The country's population increased at an average annual rate of 3.6% in 1985–95. During the greater part of the 1980s the petroleum sector accounted for 65% of GDP and 99% of export earnings, although it provided employment for less than 10% of the labour force. In 1989, according to estimates by the World Bank, Libya's GNP per head, measured at average 1987–89 prices, was $5,310. This was the highest level to be recorded among African countries, but represented an average annual decline, in real terms, of 9.2% over the period 1980–89. Libya's financial position deteriorated further in 1988–89, but then improved significantly following the Gulf crisis of 1990–91, when world oil prices rose sharply, albeit for a brief period, and generated an increase in Libyan oil revenues of nearly 25% in 1990, compared with 1989.

After the 1969 revolution, state intervention in the economy increased, in accordance with Col Qaddafi's ideas of 'Islamic socialism'. Apart, however, from the nationalization of distribution and marketing of petroleum in Libya in 1970, the Government refrained from directly taking over petroleum company assets until the dispute with British Petroleum (BP) in 1971. In September 1978 and the first two months of 1979, a large number of private companies were taken over by workers' committees. Similarly, in 1979, all direct importing business was transferred to 62 public corporations, and the issuing of licences was stopped. In March 1981, it was announced that all licences for shops selling clothes, electrical goods, shoes, household appliances and spare parts were to be cancelled, and that by the end of the year all retail shops would have to close. Retail activity became controlled by state-administered supermarkets. The whole private sector was to be completely abolished by the end of 1981, to be replaced by people's economic committees. These plans were never implemented according to schedule, and by the late 1980s Qaddafi was extolling the virtues of private enterprise.

Until the country's petroleum resources began to be exploited, not more than 25% of the population lived in the towns. This is no longer true: by 1990, according to the World Bank, the urban population comprised 70% of the total. Approximately one-half of the non-urban population is settled in rural communities, and the remainder are semi-nomads, who follow a pastoral mode of life. According to the results of the census carried out on 31 July 1984, Libya's population was 3.6m., compared with 2,249,237 at the census of July 1973; by mid-1996 the total was estimated by the UN to have risen to 5.6m. The country's labour force totalled an estimated 800,000 in 1981. By the end of 1982 it was estimated that there were 569,000 foreigners living in Libya, representing 18% of the total population. Egyptians accounted for 174,158 of these, while 73,582 were Tunisians

and 44,546 were Turkish. In July 1985, however, Col Qaddafi barred Egyptians (whose numbers in Libya had fallen by 20,000 since January) from working in Libya, in retaliation against a similar measure preventing Libyans from working in Egypt. Tunisia ordered 283 Libyans (the majority of Libya's diplomats and more than 250 other Libyan nationals), accused of spying, to leave the country in August 1985, after Libya decided to expel some 30,000 Tunisian workers from Libya. It was estimated that Libya expelled or laid off more than 120,000 foreign workers during 1985 (including workers from Mali, Mauritania, Niger, and 10,000–20,000 Syrians, between August and October). Col Qaddafi maintained that the expulsions were part of a policy to achieve self-sufficiency in Libya's labour force, and not the result of economic stringency. However, remittances by foreign workers to their own countries were a substantial drain on Libya's reserves of foreign exchange, totalling some US $2,000m. in 1983, when the number of expatriate workers was at its highest level. Libya began to reduce the number of these workers in 1984, and remittances in that year were estimated to have fallen to $1,500m. According to figures released by the International Labour Organization, there were 583,900 migrant workers in Libya in July 1985. In mid-1998 there were an estimated 144,400 non-nationals among Libya's estimated total population of 5,690,700.

Since 1980 planned mergers with Syria, Morocco and Algeria, and the military adventure into Chad, have had adverse effects on the economy. The latter episode resulted in diplomatic relations being broken off with a number of West African countries. In the economic sphere, for example, Nigeria cut off uranium sales to Libya, which amounted to 500 tons in 1980. The purge on corruption in February 1980 increased payment delays and so deepened the reluctance of foreign companies to invest in Libya. In practical terms, little progress was made towards the 'merger' with Syria, although Libya paid off all Syria's debts to the USSR, and appeared to be moving closer to the USSR.

Relations with the USA worsened, and in March 1982 President Reagan banned imports of Libyan petroleum to the USA, and halted all exports to Libya other than food and medical supplies. Libya's perceived interference in the affairs of other nations (notably Chad) and its alleged association with international terrorism had further significant economic repercussions in January 1986, when President Reagan 'froze' Libyan assets in the USA and banned all trade between the USA and Libya. However, the effectiveness of this action was vitiated by the unwillingness of the USA's allies in Japan and Western Europe to institute a complementary economic boycott of Libya, and by the fact that assets worth some US $1,000m.–$2,000m. would have been surrendered to Libya by the US oil companies operating there if they had ceased operations immediately. These companies were given until 30 June 1986 to sell their assets to Libyan concerns, but only tenuous agreements had been reached by the time the deadline arrived. The assets were not nationalized and the companies signed agreements with Libya giving them the right to negotiate their return when circumstances allowed.

The US sanctions, rather than harming Libya, had their greatest impact on the departing oil companies, which estimated their annual losses from the oil operations that they had transferred to Libya at US $2m.–$2.5m. The withdrawal of the US oil companies had a greater negative effect on Libya's ability to market its petroleum than on actual levels of production, which were lower than capacity, owing to weak world demand. Petroleum lifted by US companies was formerly guaranteed an outlet through their refineries, mainly in Europe. Following the US withdrawal, Libya had to compete with other countries for sales to refineries. In June 1986 the USA banned the export to third countries of goods and technology destined for use in the Libyan petroleum industry. A three-year 'standstill agreement' between the Libyan Government and the US oil companies officially expired at the end of June 1989, but continued to be observed by Libya, which confirmed in March 1991 that it had no plans to dispose of the US companies' Libyan areas to third parties. In January 1991 US sanctions were renewed for a further 12-month period, and in April the US Government published a list of 48 companies, based in various countries, which it believed to be acting as agents or 'fronts' for Libyan nationals and which were therefore to be subject to the US sanctions. A supplementary list published in August 1991 added 12 companies to the total. According to the US Department of the Treasury, the mid-1993 value of Libyan assets 'frozen' in the USA since 1986 was $903m.

In addition to Libya's increasingly isolated position among both African and Arab states, during the 1980s Libya's economy was severely restricted by the effect of the low prices for oil consequent on the global oil glut. Revenue from sales of petroleum declined from US $22,000m. in 1980 to $5,000m. in 1988. Decreasing revenues caused serious cash-flow problems and necessitated a major revision of the 1981–85 Development Plan. Although in January 1986 the Central Bank claimed that 80% of projects under the Plan were either completed or under way, the slump in the price of oil in 1986 led to the suspension or cancellation of almost all new development projects (an outstanding exception being the 'Great Man-made River' scheme (GMR)—see 'Agriculture', below). In the period 1980–89 GDP declined from $35,500m. to $23,000m. The crisis in the economy prompted Col Qaddafi to introduce a series of economic and political liberalization measures in March and April 1988. The state supermarket network, which was established in the early 1980s, was poorly organized and many basic commodities were usually unavailable, giving rise to a thriving black market. Subsequently, however, private shops were encouraged to reopen, and Col Qaddafi adopted measures to dismantle obstacles to trade and tourism with Libya's neighbours, closing customs and immigration posts along the borders with Egypt and Tunisia. Thousands of Tunisians entered Libya in 1988 to work on Libyan farms, while, along the border, a 'free zone' developed where Libyans could purchase items that were scarce in their own country. In September 1988 Qaddafi proposed an increase in 'privatization' and announced that Libyans would be able to import and export in complete freedom. In December the Government announced plans to reduce its budget deficit by removing subsidies on wheat, flour, sugar, tea and salt. However, controls on prices and on interest and exchange rates were maintained, and all important sectors of the economy remained under the effective control of the state (which in 1990 retained 70% of all Libyan salaried workers on its payroll).

At the second summit meeting of the Union of the Arab Maghreb (UAM, formed in February 1989 and comprising Algeria, Libya, Mauritania, Morocco and Tunisia), held in Algiers in July 1990, closer economic ties between the member states were proposed, including the establishment of a customs union before 1995. Moreover, a *rapprochement* with Egypt in October 1989 facilitated plans for wide-ranging economic integration and cross-border co-operation. This new relationship was one factor in Libya's decision ultimately to abide by the UN embargo that was imposed on Iraq in August 1990 because of its invasion of Kuwait (although Col Qaddafi opposed the US-led military action against Iraq). Another factor was Libya's need to take full advantage of the sudden rise in world oil prices, caused by the crisis. By increasing its output in the third and fourth quarters of the year, Libya recorded total oil revenues of US $9,700m. in 1990 (compared with $7,846m. in 1989) and achieved a 9.4% increase in GDP, to LD 7,816m. ($27,370m.). It also converted the 1989 current account deficit estimated at $940m. into an estimated surplus of $2,230m. in 1990. Libya thus emerged from the Gulf crisis of 1990–91 with its position enhanced both economically and diplomatically, notably in its relations with the EC, to which it was the second largest supplier of oil. The value of oil revenues in 1991 amounted to about $10,000m.

Libya's economic relations with the West nevertheless continued to be complicated by allegations of official Libyan involvement in international terrorism, including the 1988 Lockerbie airliner bombing and the destruction in 1989 of a French airliner over Niger (see History section, above). Under Resolution 748, adopted by the UN Security Council on 31 March 1992, Libya became subject to certain mandatory sanctions, in view of its failure to comply with Resolution 731 (of 12 January 1992) requiring Libyan co-operation in bringing those responsible for the terrorist actions to justice. As imposed from 15 April 1992, the sanctions included an arms embargo and the severance of air transport links with Libya, but did not, at that time, encompass a general trade embargo or any moves against Libya's exports of petroleum. Prior to their imposition, the Libyan

authorities took the precaution of transferring substantial Libyan assets from West European to Middle Eastern banks.

In response to Libya's continuing non-compliance with Resolution 731, the Security Council extended the existing provisions of Resolution 748 for successive 120-day periods. The extension agreed in August 1993 was accompanied by a warning from three Council members (the United Kingdom, France and the USA) that they would seek to extend the scope of the sanctions if the situation remained deadlocked at the end of September 1993. Libyan claims that the country had suffered direct and indirect revenue losses totalling US $2,200m. during the first year of the sanctions regime were generally believed to be greatly exaggerated, the main reported trade effect of the sanctions being an increase in imports of priority items (including inputs for development projects) as a safeguard against a future UN decision to widen the scope of the sanctions.

A law promulgated by the General People's Congress (GPC) in September 1992 formally authorized the privatization of Libyan industries and permitted 'individuals or groups to exercise the liberal professions and to invest freely in the private sectors'. In July 1993 the General People's Committee issued a decree ending state control of wholesale trade, which was opened up to partnerships and limited companies. In the previous month the Committee had banned state employees from concurrently engaging in private employment. The national debate on economic reform had, in 1992, been widened by Col Qaddafi to include the proposal that 50% of the state's oil revenues should be distributed directly to citizens, and that the 'very, very big octopus' of state administration should be cut back to a minimum by privatizing most educational and health-care facilities, shutting down unprofitable state economic enterprises and devolving many defence responsibilities to local administrative units. Other leading figures, including the Governor of the Central Bank, spoke out strongly in favour of a more orthodox transition to a mixed economy. (In 1995 the GPC approved a budget provision for a direct revenue distribution scheme. The first measures towards its implementation were reported in the following year.)

In May 1993 Col Qaddafi advocated the introduction of a law to guarantee foreign capital investment in Libya. In July 1993 representatives of some 250 Libyan and Tunisian companies met in Tripoli to discuss proposals for improving economic co-operation between the two countries, including the possible establishment of new joint ventures. Delegates stressed the desirability of standardizing investment laws, pointing out that any Libyan move to introduce laws on the current Tunisian model would be consistent with the liberalization policies of the Libyan leadership.

Following the August 1993 extension of UN Security Council Resolution 748 and the subsequent circulation by the USA, France and the United Kingdom of draft proposals for stronger international action against Libya, the Libyan Government stepped up its efforts to minimize its exposure to harsher sanctions. Libya's liquid assets overseas (estimated to total US $17,000m.), if not already located in financial 'safe havens', were constantly monitored to avoid unnecessary exposure to seizure. According to the Bank for International Settlements, Libya withdrew $2,800m. of its overseas deposits in the third quarter of 1993, including an estimated $430m. from OECD countries. The stockpiling of imported equipment for use in part-completed projects, and of spares for existing plants, was speeded up and carefully targeted on priority areas. The functions and ownership structures of Libya's fixed assets overseas (which had an estimated worth of up to $4,000m.) were analysed to assess their exposure to sanctions, and a number of deals were struck with foreign (predominantly Italian) equity partners whereby Libya relinquished control of high-profile companies.

In particular Oilinvest, the holding company through which Libya had controlled an extensive European oil refining and distribution network, was in September 1993 restructured with minority (45%) Libyan ownership, while Oilinvest's shareholding in its principal subsidiary company, Tamoil Italia, was in turn reduced to 45% and two Tamoil subsidiaries (Tamoil Transport and Chempetrol Overseas) were taken over by new owners.

The crucial Security Council vote on Libyan sanctions was delayed until 11 November 1993 because Russia (which was owed up to US $3,000m. for Soviet arms and other supplies to Libya in the 1970s and 1980s) was reluctant to endorse any measure that might prompt Libya to default on agreed payment obligations. This objection was dropped after the draft resolution was expanded to include an explicit reference to Libya's 'duty scrupulously to adhere to all its obligations concerning the servicing or repayment of foreign debt'.

Security Council Resolution 882 called on UN member states to 'freeze' all Libyan-controlled funds and financial resources abroad and to require the use of separate bank accounts for specified trade transactions; to prohibit the supply to Libya of specified items for use in the 'downstream' oil and gas sector; to shut down overseas offices of Libyan Arab Airlines and to ban the supply of civil aviation equipment and services and the renewal of aircraft insurance; and to reduce staffing levels at Libyan diplomatic missions.

The 'freeze' on Libyan funds prohibited withdrawals from, but not payments into, existing overseas bank accounts. The new 'external' bank accounts specified by the Resolution were to be set up to handle payments to foreign contractors and suppliers to the Libyan market, using revenue derived from Libyan exports of hydrocarbons and agricultural products. All transactions through such accounts had to be supported by evidence of compliance with the sanctions regulations. The oil and gas equipment specified in a detailed annex to Resolution 883 included pumps, loading equipment and various essential items of oil refining equipment.

The Resolution came into force on 1 December, but the complicated administrative arrangements meant that Libyan export revenues did not begin to reach the new 'external' accounts in overseas banks until mid-January 1994, delaying payments to many foreign contractors for some weeks beyond the due dates. Over-zealous actions by sanctions enforcers included the 'freezing' of the US assets of a Bahrain-based financial services company with a Libyan minority shareholder. This decision was rescinded in early February 1994. The UN Security Council renewed the terms of Resolution 883 for a further 120 days on 8 April.

In mid-1994 the current sanctions appeared to have had no effect on the functioning of Libya's established oil and gas production facilities or the progress of development projects which had been under way when the sanctions were imposed. Many hydrocarbon facilities were not dependent on embargoed items, while others were fully supplied with stockpiled equipment. Some future projects had to be shelved for the duration of the current sanctions because they required embargoed items, but all were low-priority schemes for which no firm contracts had been awarded. There was, nevertheless, a marked decrease in the overall tempo of economic activity in Libya, and it was estimated that the country's GDP declined by 7% in both 1993 and 1994, to stand at about US $26,000m. in the latter year.

The UN sanctions remained in force in August 1995 on the same terms that applied in December 1993, the USA having failed to win UN Security Council backing for a proposal (tabled at the March and July 1995 sanctions reviews) to tighten them by imposing a total embargo on Libyan oil exports. European opposition to the US proposal had been strongest in Italy (which obtained 28% of its crude oil supplies from Libya). The US Government announced in April 1995 that it would examine the scope for further tightening of the USA's own unilateral sanctions against Libya.

In August 1995 the Government launched a series of mass expulsions of foreigners accused of working illegally in Libya, those affected being mainly Sudanese, Egyptians and Palestinians (the latter apparently included to make a political point about the current status of the Middle East peace process). Libya's foreign workforce was estimated to number between 1m. and 2.5m. in 1995. Unemployment was believed to have become a significant problem (with some Western estimates putting it as high as 30%) and was known to have affected increasing numbers of Libyan nationals. The expulsion of Palestinians was suspended for six months in October 1995, after which time the main targets of the government crackdown were Sudanese workers. The Palestinian expulsion order was formally rescinded in January 1997.

Having risen slightly in 1995, Libya's oil output showed another small increase in the first half of 1996 as the country's principal export industry continued to demonstrate that the UN sanctions regime (which remained unchanged in mid-1996) posed no significant threat to the implementation of its normal production schedules. Nor were there any reports of a slowdown in the pace of work on the huge infrastructural project (the 'Great Man-made River') which accounted for a large proportion of government spending on economic development. The level of state investment on lower-priority projects remained depressed, however, with some delays being explicitly attributed to the effects of sanctions. In certain cases (e.g. a major desalination scheme) the Government said it was unable to proceed to the contract stage because sanctions had made it impossible to arrange satisfactory project financing. In other cases (e.g. an oil refinery upgrading scheme) implementation of completed plans was deferred because the import of essential equipment was directly blocked by UN sanctions. There were also instances of international companies modifying their Libyan contract bids to allow for non-standard items to be installed instead of embargoed equipment (one example being some of the automated equipment normally installed in cement plants).

In January 1996 President Clinton extended the duration of all existing US sanctions against Libya, including 1980s measures that would otherwise have expired. Some weeks earlier the US Senate had added Libya to a bill (previously applicable only to Iran) designed to inhibit hydrocarbon investments in these countries by non-US companies. In April 1996 EU Ministers of Foreign Affairs made a formal protest to the USA about the 'extra-territoriality' of the draft legislation, which the EU regarded as a formula for a 'secondary embargo' against the mainly European companies whose commercial freedom was under threat. The Ways and Means Committee of the US House of Representatives nevertheless failed to remove the most controversial aspects of the proposed legislation when it approved a modified draft in June 1996. The Iran and Libya sanctions act completed its passage through the US Congress in the following month and was signed into law by President Clinton on 5 August 1996. It specified six forms of sanction available to the US Government: denial of access to US Export-Import Bank facilities; denial of export licences in respect of goods ordered from the USA; imposition of a ceiling of US $10m. per year on company loans from US financial institutions; withholding of permission to conduct primary dealings in US government bonds; exclusion from bidding for US government contracts; and exclusion from the US import market. A non-US company was liable to have two of these sanctions (selected by the President) imposed on it if it invested $40m. (later revised to $20m.) or more in the hydrocarbons industries of Libya or Iran in any one year, or if it violated current UN embargoes on Libya. However, the US President could decide to waive sanctions if a company's home country had 'agreed to undertake substantial measures, including economic sanctions' to prevent Libya or Iran from supporting terrorism or acquiring weapons of mass destruction, or if it had encouraged Libya to comply with UN Security Council Resolution 731 on the bringing to justice of terrorist suspects.

A resolution calling for the repeal of the US legislation was adopted by the UN General Assembly in November 1996, with EU member countries abstaining. Following the inauguration of the second Clinton Administration in January 1997, US officials indicated that there was no early intention to issue detailed guidelines on the implementation of the August 1996 legislation. A formal EU challenge to US sanctions laws, alleging violations of World Trade Organization rules, was suspended in April 1997 in order to seek a compromise settlement through informal discussions. There was minimal US reaction to reports during the first half of 1997 that the Italian company Agip, which had signed a major gas development agreement with Libya's National Oil Co some weeks before the Iran and Libya sanctions act came into force, was continuing to move towards the detailed design stage of this project.

The multilateral UN sanctions on Libya were renewed in 1996, 1997 and 1998. The Libyan Government claimed in October 1996 that UN sanctions had cost the country US $19,000m. in lost revenue by the end of 1995 (including $5,900m. from potential agricultural exports) and had contributed to the deaths of up to 21,000 Libyans (including 16,000 patients unable to obtain urgent medical treatment abroad). Preliminary estimates of Libya's economic performance in 1996 indicated a return to positive GDP growth (at a rate of 3.5% per annum) for the first time since the imposition of UN sanctions in 1992. A 'purification' campaign against allegedly corrupt import-export traders led to the closure of many privately-owned small businesses in 1996.

A relaxation in May 1998 of the threat of US sanctions against countries whose companies invested in Iran was widely seen in Europe as also applying to dealings with Libya, although substantial opposition was evident in the US Congress to ending the US ban on investment in the Libyan oil industry. Following talks in Rome in July between the Italian and Libyan foreign affairs ministers, the Italian Government declared that normalization of relations between the two countries would assist Libya to return to 'co-operation with the international community', while also asserting that Libyan adherence to UN resolutions would assist the process. It was subsequently stated in Tripoli that Col Qaddafi had decreed that Italian companies should be 'given priority in all sectors' in the awarding of new government contracts.

According to unofficial estimates, Libya experienced real growth of 0.5% in 1997, the country's estimated GDP per head in that year being equivalent to about US $6,700 in terms of 'purchasing power parity'. In 1998 the economy was estimated to have declined by about 1% in real terms, reflecting the impact of a severe downturn in oil export prices. Libya joined other OPEC members in a programme of production cutbacks which helped to underpin an oil price recovery during the first half of 1999. The suspension of UN sanctions against Libya in April led to an immediate intensification of contacts with non-US companies wishing to restore or strengthen their business links with Libya. Bilateral US trade sanctions were not suspended (other than to permit the export of foodstuffs and medicines to Libya), while the USA used its position in the UN Security Council to prevent the permanent lifting of the UN sanctions when they next fell due for review in July. It was, however, generally accepted that there was no likelihood of a reimposition of UN sanctions or of any positive action being taken by the USA to block other countries' economic co-operation with Libya. The cumulative cost of UN sanctions to the Libyan economy was said by Libya to amount to more than $23,600m. up to the time of their suspension. Addressing an international oil and gas conference held in Geneva shortly after the suspension of UN sanctions, Libyan Government ministers and oil company officials invited foreign investors to take advantage of current and forthcoming opportunities for overseas participation in the hydrocarbons sector. Companies investing in gas development were promised negotiable commercial terms based on international pricing methods, while new incentives to invest in oil exploration and development were to be included in a revised petroleum law which was scheduled for enactment before the next round of bidding for oil rights in early 2000.

AGRICULTURE

Agriculture dominated the economy until the discovery of petroleum. Even now, the petroleum industry gives direct employment to less than 10% of the total labour force (800,000 in 1981) and the present Government regards the agricultural sector as of primary importance, with Col Qaddafi himself regularly stating that more emphasis must be put on agriculture. Nevertheless, by 1982, the percentage of the population employed in agriculture had fallen to 16% from around 50% in the early 1970s. It is ironic that, despite having regularly received one-fifth of all state investment since 1970 (totalling an estimated US $24,000m. in the period 1970–88), the contribution of the agricultural sector to GDP declined, in real terms, from 2.3% in 1975 to 1.9% in 1980, and Libya continued to be a major food importer. The appointment of the former Mayor of Tripoli, Abd al-Majid al-Aoud, as GPC Secretary for Agriculture, in March 1989, indicated the Government's determination to give support to the agricultural sector. This objective was reaffirmed in Col Qaddafi's decision to make 1990 the 'year of agriculture', but the aim of achieving self-sufficiency in food remained a distant prospect.

About 95% of Libya's land area is desert. Of the remainder, a high percentage is used for grazing, only 1.4% is arable, and 0.1% is irrigated. In mid-1970 all Italian-owned land and property in Libya, including 37,000 ha of cultivated land, was confiscated and plans were made to distribute the expropriated lands to Libyan farmers, with government credits for seed, fertilizers and machinery. Several very large contracts were awarded for reclamation and irrigation work in various scheduled areas. The best-known schemes, dating from the 1970s, are the Kufra oasis project to irrigate 10,000 ha; the Tawurgha project to reclaim 3,000 ha; the Sarir reclamation project; the Jebel al-Akhdar project; the Jefara plain project; and the Wadi Qatara reclamation project. The Wadi Jaref dam, one of the biggest in Libya, went into operation in 1976. All projects are meant to be fully integrated, providing for the establishment of farms, the building of rural roads, irrigation and drainage facilities and, in some cases, the introduction of agro-industries.

The Government invested a total of LD 700m. in agriculture over the 10-year period 1973–83. The Three-Year Plan, as revised in February 1975, provided LD 566.9m. for agricultural development and agrarian reform. The revised 1976–80 Development Plan provided LD 498m. plus LD 977m. for integral developments. Indeed, an important feature of Libya's economic planning in the 1970s was the high priority which was being given to agriculture. In 1975 agricultural development absorbed 21% of total budget expenditure whilst in 1976 it had risen to a corresponding 30%. In the 1978 financial year, the agricultural sector was allocated 18.9% of budgeted development expenditure and 14.6% of overall budget spending. In most other oil-rich countries, agriculture hardly received more than 10% of development funds. In 1979, however, investment in agriculture decreased, receiving only 6.4% of the general budget. In relative terms, the budget allocated to agriculture was expected to continue to decrease slightly during the 1980s, as the 1981–85 Five-Year Plan gave greater priority to industry. Nevertheless, the absolute level of expenditure on the agricultural sector was scheduled to increase. Thus, in the 1976–80 Development Plan LD 1,600m., or 21% of expenditure, were allocated to agriculture, whereas in the 1981–85 Plan the estimated expenditure on agriculture was LD 3,000m., representing about 20% of the total. This latest plan also envisaged that the proportion of the working population employed in agriculture would decline from 18.9% in 1980 to 16.8% in 1985. However, between 1983 and 1985, successive development budgets were underspent, and despite the official priority awarded to agricultural development, the agricultural sector was one of the most seriously affected, receiving 81.3% of budgeted investment in 1983, 86.9% in 1984, and only 66.7% in 1985.

In spite of the money invested in the sector, results in terms of production have been largely unsatisfactory. Climatic and soil factors will, it is hoped, cease to play such a large part in fluctuations of output, once irrigation schemes are operational and the distribution and use of fertilizers is well established. There have been signs in the production figures that this is indeed happening; according to the UN Food and Agriculture Organization (FAO), output of cereals increased from 62,000 metric tons in 1970 to 299,000 tons in 1988, while, over the same period, annual production of meat rose from 48,000 tons to 171,000 tons, root crops from 10,000 tons to 115,000 tons, oil crops from 20,000 tons to 31,000 tons and pulses from 2,000 tons to 12,000 tons. Nevertheless, in overall terms, the agricultural sector has not fulfilled expectations, and Libya continues to import around 80% of its food requirements, the value of which totalled US $1,117.3m. in 1987 (compared with $123.4m. in 1970). Problems, such as the lack of trained technicians and administrators and poor education among the farming communities, are not easily solved; Libya is obliged for the present to rely heavily on foreign expertise. The implementation of the various proposed agricultural projects has been particularly slow. In 1996 Libyan grain production amounted to some 360,000 tons, sufficient to supply about 20% of the country's cereal consumption.

Libya's most ambitious project is the so-called 'Great Man-made River' project (GMR), first announced in November 1983. Under the first stage of the irrigation and water-supply project, the Dong Ah Construction Industrial Co, from the Republic of Korea, was contracted to build a man-made river, at a cost of US $3,300m., to carry 2m. cu m of water per day along 2,000 km of pipeline from natural underground reservoirs at Tazerbo and Sarir, in the south-east Sahara desert, to Sirte (Surt) and Benghazi and agricultural projects and towns on the Mediterranean coast, via Agedabia. A total of 270 wells are being drilled in the Tazerbo and Sarir areas, with the aim of irrigating approximately 280,000 ha, on which some 37,000 model farms are to be established. This is possibly the largest single contract ever awarded in the Middle East, and its cost had risen to $4,200m. by 1986. The $5,300m. second stage of the GMR will eventually pipe 2m. cu m of water per day from Sawknah to Tripoli, a distance of 600 km. Three additional stages are planned, including the extension of the first phase southwards to Kufra oasis (doubling its capacity to 4m. cu m per day) and the construction of pipelines to serve the north-eastern coastal town of Tobruk (from Agedabia) and to link the eastern and western systems of the first two stages along the coast (Tripoli–Sirte), thereby creating a national water grid. If all phases are completed, there will be a total of 4,040 km of pipeline, with a water-carrying capacity of 6m. cu m per day. The eventual cost of the GMR, including agricultural infrastructure, could be as high as $25,000m., and it is thought that Libya may have difficulties in paying for it, particularly following Saudi Arabia's refusal to contribute aid. In September 1989 the Dong Ah Construction Industrial Co was also awarded the main contract for the second stage of the GMR, on which it began preparatory road construction in mid-1990.

With 25% of the first phase still to be completed, the entire project came under review in March 1991, owing to various unforeseen problems, including the production of heavily contaminated water from some test pumping, as a result of collapsing well screens. Nevertheless, at a grand ceremony held near Benghazi on 28 August 1991 and attended by various Arab and African leaders, the first phase of the GMR was inaugurated by Col Qaddafi, who turned on a tap starting the flow of water into one of the project's reservoirs. The increase in Libya's oil revenues in 1990–91 had eased the burden of financing this priority project, which continued to be supported by a consortium of Arab banks. The Government also remained committed to the original objective that 80% of the water supplied by the GMR would be allocated to agriculture (which already accounted for 85% of total water consumption), despite evidence that, taking into account the real unit cost of irrigation water, the cost of using it to cultivate cereals was currently some six times the prevailing world market price. Another problem was shortage of labour for the newly-created agricultural land, in the light of which the Government hoped to attract large numbers of Egyptian and Moroccan nationals to work on GMR farms. Other uncertainties surrounded the post-inauguration cost and practicalities of maintaining the GMR, it being suggested in some quarters that the weaknesses of Libya's socio-political system would result in the project falling into disrepair. Among the special projects being assisted by the GMR Water Utilization Authority in mid-1991 were joint horticultural ventures with both private and state bodies from the Netherlands, in which particular emphasis was to be placed on the development of potato production for the lucrative north European market.

In mid-1993 the Dong Ah Construction Industrial Co, which had thus far completed 33% of the engineering and 20% of the construction work on its phase-two GMR contract, was instructed to modify certain pipeline routes and specifications in its future work schedule in ways which indicated a shift of priorities away from agricultural development in favour of accelerating the supply of water to coastal towns. The modifications effectively brought forward about half of the work originally included in phase three of the GMR plans, and would route an initial flow of 1.166m. cu m of water per day to the towns of Misurata and Khoms by 2000. Dong Ah, which at that time employed 10,000 staff on GMR projects, expected the modifications (costing an estimated US $760m.) to add substantially to its labour requirement. At the Benghazi end of the GMR system, Dong Ah expected to link the Benghazi reservoir to the city's supply system by the end of the third quarter of 1993. The depletion rate of local groundwater sources in the Libyan coastal region was reported to be alarmingly high in 1993. By 1995 the GMR's phase-one transmission system was supplying Benghazi with 500,000 cu m of water per day, while

further well-drilling was in progress to increase the volumes of water extracted at Sarir and Tazerbo. There was, however, no prospect of full utilization of the eastern trunk pipeline's transmission capacity of 2m. cu m per day until a planned network of branch pipelines was built to feed irrigation schemes. In 1995, agricultural usage of GMR water was restricted to a few small pilot schemes.

In 1995 the GMR's status as the centrepiece of Libya's economic development programme was highlighted by the inclusion in the national budget of allocations of US $1,300m. for water transmission work and $300m. for associated irrigation projects. Dong Ah was now employing 13,000 people on GMR works in Libya, including 2,500 at a plant manufacturing the world's largest pipes (4 metres in diameter) and 4,000 involved in pipelaying activities. Tripoli received its first supplies of GMR water via the western (phase-two) pipeline system at the beginning of September 1996. Final completion of phase two of the GMR project was scheduled for 1999. In all, the phase-two project specification, as modified in 1993, involved a total of 1,287 km of pipeline (of which 85% had been manufactured and about 70% had been laid by the start of 1996) with a daily transmission capacity of 2.5m. cu m of water drawn from 484 desert wells. The $310m. contract to drill the last 247 of these wells was awarded to Dong Ah in April 1996 for completion within two years. In the same month Col Qaddafi informed Dong Ah that it would be awarded the contracts to build phases three and four of the GMR once designs were finalized. Phase three was intended to link Tobruk (500 km to the east) and Kufra (325 km to the south) to the phase-one supply system and to create a 180-km coastal link between the phase-one system serving Sirte (Surt) and the phase-two system serving Tripoli. Phase three had an estimated cost of $5,100m. and a target completion date of 2006. Phase four would involve the development of a new complex of desert wells at Waw al-Kabir, to be linked to Sirte via a 715-km pipeline system at an estimated cost of $4,900m. The total value of Dong Ah's past and existing GMR contracts amounted to $3,700m. for phase-one work and $6,700m. for phase-two work.

Despite having issued a letter of intent to Dong Ah in November 1996, Libya opened phase three of the GMR to international bidding in March 1997. The position was complicated by the severe difficulties experienced by Dong Ah's parent company in South Korea as a result of the Asian economic crisis. In December 1997 the French company Dumex was reported to be the lowest bidder for the first of seven contracts for phase three of the GMR project, involving construction of a water conveyance system from Sirte (Surt) to As-Sadadah linking phases one and two. However, the slump in world oil prices in 1998, and the consequential fall in Libyan oil revenues, served to delay the award of further GMR contracts. In mid-1999 the award of the first phase-three contract was still awaited. The Government was reported to be considering the employment of local rather than international contractors for future work on the GMR project.

Animal husbandry is the basis of farming in Libya and is likely to remain so until irrigation and reclamation measures really start to take effect. During the mid-1970s the breeding of cattle for dairy produce was expanded and livestock was imported on an increasing scale from a number of sources. Breeding cattle have been supplied by the United Kingdom, and stock-raising co-operation agreements signed with Argentina, Romania and Australia. There has also been a substantial expansion in camel and poultry numbers. In 1996 livestock farming contributed about half of the value of Libya's total agricultural output of US $1,100m.

In July 1990 FAO held a special conference to raise funds to launch an emergency programme to eradicate from Libya the screw-worm fly, a parasitic insect which attacks livestock and wildlife. The fly was reported to have made its first appearance outside the western hemisphere in Libya some two years earlier, and the extent of its spread had raised fears that it would quickly infest the whole of the African continent. In January 1991 IFAD launched a US $3m. pilot project as part of the programme, to which some $46m. had been pledged by February 1991. In October 1991 FAO was able to report that the screw-worm eradication programme in Libya had been successful and that the forecast continental infestation had been averted.

Of the cereal crops, barley, which is the staple diet of most of the population, is the most important, although, despite wide fluctuations from year to year in the yields of both crops, production of wheat now equals barley output. Olives and citrus fruit are grown mainly in the west of the country, and other important food crops are tomatoes, almonds, castor beans, groundnuts and potatoes, also grown mainly in the west. Dates are produced in oases in the south and on the coastal belt. As part of the Jebel al-Gharbi project, 1.5m. fig, olive and apple trees are to be planted, thus expanding the country's fruit production capacity. Esparto grass, which grows wild in the Jebel, is used for the manufacture of high-quality paper and banknotes and was formerly Libya's most important article of export.

The 1976–80 Development Plan envisaged an annual growth of 15.8% in domestic production, so that Libya would be self-sufficient in vegetables and dairy products by 1980 and would also be able to produce 92% of its fruit requirements and 75% of its meat and wheat consumption. However, these targets were too optimistic and were not achieved. In September 1984 Col Qaddafi said that, for climatic reasons, Libya had achieved only 66% self-sufficiency in wheat and barley and that 60% of meat and 40% of milk requirements were produced locally.

The Government is continuing to further land development and reform. Polish assistance has been used to develop new farms in eastern Libya and in 1986 the Government claimed that during the preceding 17 years the ownership of 14,853 farms had been transferred to farmers. An interesting development in the 1970s, and one that is practicable only in an oil-rich economy, was the growth of hydroponic farming.

Although the Government has attempted some desert reclamation and afforestation projects, many have proved to be based on over-optimistic estimates of long-term environmental potential and economic return. Government-financed irrigation projects, for example, have resulted in serious groundwater depletion in north-western Libya.

The offshore waters abound in fish, especially tunny and sardines, but most of the fishing is done by Italians, Greeks or Maltese. Of special importance are the sponge-beds along the wide continental shelf. These are exploited by foreign fishermen and divers, mainly Greeks from the Dodecanese. As part of the expansion of Libya's fishing industry, the Zliten fishing port was opened in October 1983 at a cost of US $16.8m. It is designed for use by 40 trawlers and provides storage for 200 tons of fish, together with refrigeration facilities for up to 20 tons of fish per day. In early 1990 the Arab Fund for Economic and Social Development (AFESD) agreed to lend Libya 11m. Kuwaiti dinars for the construction of two fish canning factories. An $18m. project to construct a fishing harbour at Susa was due to be undertaken by Greek contractors in 1993–94. A $20m.-project to establish a fishing port at Marsa Zuaga with a capacity for 10 trawlers and up to 70 smaller boats was at an advanced planning stage in 1996. The Marine Wealth Secretariat planned eventually to establish up to 24 new fishing ports along the Libyan coast. In 1997 the greater part of a $66.9m. loan from the Islamic Development Bank was allocated to fisheries projects.

PETROLEUM

That petroleum was present in both Tripolitania and Cyrenaica had long been suspected and, for several years after Libya became independent, a large number of the bigger oil companies carried out geological surveys of the country. In 1955 a petroleum law came into force setting up a petroleum commission, which was empowered to grant concessions on a 50–50 profit-sharing basis, with parts of each concession being handed back to the Government after a given period. Under this law, concessions were granted to many US companies and to British, French and other foreign groups.

Important petroleum strikes first began to be made in 1957, and 10 years later Libya was already the fourth largest exporter in the world. The initial expansion of the Libyan petroleum industry was particularly rapid, owing to political stability, proximity to the Western European markets, and to the petroleum's lack of sulphur, which made it especially suitable for refining. The closure of the Suez Canal in 1967 was also an important factor in the growth of the industry. Production rose from 20,000 barrels per day (b/d) in 1962 to a peak of 3.3m.

b/d in 1970, or 159.7m. metric tons in annual terms, equivalent to 13.6% of total output by OPEC members (then and future) and to 6.8% of world oil production. Output declined steadily to 71.3m. tons in 1975 (partly because of the reopening of the Suez Canal in 1974), rose again to 100.7m. tons in 1979, but then fell in the 1980s, reaching 47.9m. tons in 1987 (its lowest level since 1964), when Libya accounted for only 5% of OPEC production and 1.7% of world output. In 1988–89 a higher level of output was recorded, however. Production accelerated in 1990, as Libya took advantage of the rise in world oil prices caused by the 1990–91 Gulf crisis, and in mid-1993 the production level remained well above the depressed levels of the mid-1980s.

Oil is exported from five different sea terminals connected to the various fields by pipelines built by the five groups which have made the major finds. The pipeline system and the terminals are, however, available to other groups. The first of the five terminals to be opened was at Mersa Brega on the Gulf of Sirte (Surt), in 1961. The pipeline was built to Bir Zelten, in Cyrenaica, about 300 km south of Benghazi, where Esso Standard (Libya) had found oil in 1959. This group also operated a refinery at Mersa Brega and a gas liquefaction plant to prepare gas for shipment to Italy and Spain. The terminal for the Oasis group's Hofra field is at Ras as-Sidr, to the west of Mersa Brega. The Mobil/Gelsenberg group also found petroleum near Hofra, but built another pipeline to Ras Lanouf, just east of Ras as-Sidr. From a fourth terminal at Mersa al-Hariga, near Tobruk, a pipeline about 500 km long runs to Sarir, then the BP/Bunker Hunt concession. The terminal at Zuetina (az-Zuwaitinah) was opened in 1968 to serve the Augila and Idris fields. Here a US company, Occidental, which did not even obtain its concession until early in 1966, had found petroleum in large quantities. The Amoseas group, which produced petroleum from the Nafoora field, not far from Augila, had a pipeline connected to the Ras Lanouf terminal.

Libya has been a leader of those petroleum producers which demanded participation in petroleum activities, the National Oil Co (NOC) having been founded in 1968 for that express purpose. Extensive negotiations took place between the Libyan Government and the various petroleum producers in the early 1970s, with the result that, in 1973, the Libyan Government acquired a 51% share in the Libyan operations of Agip, Conoco/Marathon/Amerada Hess, Exxon, Mobil and Occidental, while it completely nationalized the holdings of Amoseas, BP/Bunker Hunt, Shell, Texaco, California Asiatic and Atlantic Richfield. Most outstanding claims by the companies were settled in 1977, following arbitration.

At the beginning of 1980, the experienced Secretary for Petroleum, 'Izz ad-Din Mabrouk, was replaced by Abd as-Salam Muhammad Zagaar, for failing to accelerate full Libyanization of the oil industry. In a restructuring of the management of state oil concerns during the previous year, the NOC's operational responsibilities had been devolved to specialist subsidiary companies, leaving the NOC as a holding company responsible for strategic planning and supervision of the state oil sector. By the end of 1982 the Libyan State had an 81% interest in the Libyan operations of Elf Aquitaine, 59.2% in Oasis, 51% in Occidental and 50% in Agip. All of Exxon's Libyan interests were taken over by the state when the company withdrew in 1981, and, after a year's prevarication, Mobil, which first began operating in Libya in 1955, announced its withdrawal from exploration and production activities at the end of 1982. In mid-1985 Occidental agreed to sell 25% of its oil production and exploration facilities in Libya to the Austrian state oil company ÖMV AG. These holdings provided about one-half of Occidental's net income in 1979 and 1980, but the proportion fell to less than 20% of the total in 1984. By 1988, following the withdrawal of US companies from their Libyan operations (see below), the overall state share in oil output was 82%, with Italian, German, Austrian and French operators producing the remaining 18%.

During 1979 Libya aligned itself with Iran as a 'hawk' in terms of the international oil market, and at the beginning of 1980 raised its oil price by 28% to US $30 per barrel, only to raise it to $34.50 two weeks later. A further increase in May brought the price to $36.12 per barrel. This aggressive pricing policy continued throughout 1980, and in January 1981, the price of top-grade Zuetina was raised to $41 per barrel. In 1979 Libya's export revenue from petroleum and derivatives totalled $16,000m., and in 1980 it amounted to a record $21,919m. With the world oil glut persisting, the price of Zuetina and Brega crude was lowered to $39.9 per barrel in mid-1981, but this was still higher than most other world oil prices. In the summer of 1981 BP suspended liftings of Libyan oil, owing to its high price, and the 'spot' market price of Libyan oil then fell rapidly to $33 per barrel. Total Libyan output declined to 58.7m. tons in 1981 (equivalent to 1.22m. b/d), while oil revenues fell to $15,500m.

During 1982 OPEC set Libya's production ceiling at 750,000 b/d but actual production averaged 1.135m. b/d (54.7m. tons in annual terms). At the end of 1982 spot prices for Libyan crude petroleum were as much as US $4 per barrel below the official price. The March 1983 OPEC agreement gave Libya a quota of 1.1m. b/d, which represented some recognition of Libya's determination to continue with relatively high levels of production. The meeting set prices for Libyan oil at $30.5 per barrel for Brega 40° crude and $29.2 for Amna 36°. During most of 1983 Libya was producing only slightly more than the set OPEC quota, and the Government's eventual petroleum revenues for the year were some $13,500m. The downward trend in oil prices on the spot market continued in 1984, during which Libyan production continued at just more than 1.1m. b/d. In October OPEC decided to reduce its collective production to 16m. b/d, as a result of which Libya accepted one of the largest quota reductions, of 990,000 b/d. The country dissociated itself from the OPEC agreement on a new price structure, which was reached in January 1985, and the cost of Libya's Brega blend was held at $30.40 per barrel. However, as a large proportion of Libyan sales at the time were accounted for by barter deals involving discounts, the fact that its official price remained unchanged was of limited significance. During 1985 Libya consistently exceeded its OPEC production quota (average output during the year was 1.11m. b/d), but petroleum revenues continued to decline, falling to about $10,000m. in 1985, from $13,000m. in 1984. As market prices fell in 1986, Libya, Iran and Algeria opposed OPEC's majority policy of abandoning production restraint and seeking a 'fair' share of the world market as compensation for lower prices, advocating instead reductions in production as a means to revive prices. Accordingly, Libyan production was reduced in 1986 to an average of 1.01m. b/d (49.9m. tons), effectively anticipating the reintroduction of an OPEC production ceiling in the last four months of the year, when Libya's quota averaged some 995,000 b/d. Nevertheless, a decline in spot prices to under $10 per barrel in mid-1986 led to a severe fall in Libya's oil revenues for the year, to about $5,000m.

Another important development in 1986 was the enforced withdrawal of US oil companies from Libya. Having banned imports of Libyan petroleum in 1982, the US Government complemented this with a ban on imports of petroleum products in November 1985. Then, in January 1986, convinced of Libya's involvement in international terrorism, President Reagan 'froze' Libyan assets in the USA, and ordered all commercial transactions between US companies and Libya to cease by the beginning of February. The instruction was modified in February to allow about one dozen US companies in Libya (including five oil companies with equity holdings there) to continue their operations for a transitional period, while they terminated their activities. The oil companies (Occidental, Conoco, Marathon, Amerada Hess and W. R. Grace) ceased operations in Libya on 30 June, the new deadline that President Reagan had set in May. A three-year 'standstill period' officially expired at the end of June 1989, but has continued to be observed by Libya as a means of exerting pressure for the repeal of the US sanctions. Amid reports of renewed negotiations between Libya and the US companies, the Libyan Secretary for Petroleum confirmed, in March 1991, that the Government had no plans to sell the US companies' assets in Libya, adding that the companies were free to resume operations at any time.

In December 1986 OPEC imposed a ceiling of 15.8m. b/d on collective production for the first half of 1987, incorporating a reduction of 7.25% in members' quotas, which, it was hoped, would support a fixed price for OPEC oil of US $18 per barrel, which was applied from 1 February 1987. Libya's quota was reduced to 948,000 b/d. In June 1987 OPEC decided to retain the $18 reference price but to increase collective production by

800,000 b/d, to 16.6m. b/d, during the second half of the year, giving Libya a quota of 996,000 b/d. Although quota violations by some member states and the non-participation of Iraq made the ceiling on output a purely notional one, Libya's production in 1987 was close to its quota, at about 975,000 b/d (47.9m. tons in the year, its lowest output since 1964), and revenues fell below $5,000m. At meetings of OPEC held in December 1987 and May 1988, it was agreed to retain the output ceiling of 16.6m. b/d and the reference price of $18 per barrel for two further periods of six months, despite widespread quota violations, which had contributed to a renewed decline in the price of petroleum on the spot market. The price of the Brent blend, a widely traded North Sea crude (to which the Libyan blends Zuetina, Brega, Sirtica, es-Sidr, Sarir and Amna were linked in July 1988), declined to $11.20 per barrel in early September 1988. Libya's production of crude petroleum during 1988 averaged 1.055m. b/d (50.6m. tons), slightly above its OPEC quota, again yielding revenues of less than $5,000m. In November 1988 OPEC agreed to an output ceiling of 18.5m. b/d, to be imposed from January 1989. Libya's share of the total was to be 1.037m. b/d. In June 1989 oil ministers from OPEC member states met and agreed a new production ceiling of 19.5m. b/d, of which Libya was allocated a quota of 1.093m. b/d. Actual Libyan production in 1989 averaged 1.145m. b/d (54.8m. tons), yielding revenues of $7,846m., according to Libyan data. At the OPEC meeting of November 1989, quotas for the first half of 1990 were redistributed within a raised production ceiling of 22m. b/d, Libya's share being set at 1.233m. b/d. Actual Libyan output was, however, raised to 1.65m. b/d in early 1990 (allegedly to test sustainable production capacity), before being reduced to 1.35m. b/d from mid-March. At the OPEC meeting of July 1990, Libya pressed for quota parity with Kuwait but was again allocated 1.233m. b/d within an overall production ceiling of 22.5m. b/d, designed to underpin a minimum reference price of $21 per barrel.

However, the situation was then transformed by the onset of the Gulf crisis in August 1990 and by a rapid rise in world oil prices to more than US $30 per barrel. Libya refused to attend an emergency OPEC meeting held in Vienna in late August, at which it was decided to suspend quotas to allow members to take advantage of the embargoes imposed on Iraqi and Kuwaiti oil production. While expressing opposition to this decision, Libya proceeded to raise its production as quickly as possible, to almost 1.5m. b/d by October, with the result that its total oil revenues in 1990 increased by 23%, compared with 1989, to $9,700m. The average production level for 1990 was 1.355m. b/d (the highest annual average since 1980). Following the end of the Gulf conflict in February 1991 and the stabilization of world oil prices at pre-crisis levels, OPEC reimposed quotas from the second quarter of 1991, Libya's allocation being 1.425m. b/d within an overall production ceiling of 22.3m. b/d. For 1992 Libya's OPEC quota was set at 1.409m. b/d, later reduced to 1.35m. b/d from 1 April 1993 and adjusted to 1.39m. b/d from 1 October 1993. Actual Libyan output averaged 1.54m. b/d in 1991 and 1.475m. b/d in 1992 (producing revenue of at least $10,000m. per year). During 1993 Libyan oil production averaged 1.4m. b/d, a level that was steadily maintained in the first half of 1994. The monthly average spot price of Brega crude, which had fallen from over $18 per barrel to under $14 per barrel during the course of 1993, had recovered to more than $16 per barrel by the second quarter of 1994. Libyan oil output averaged 1.43m. b/d in 1994, 1.44m. b/d in 1995 and 1.45m. b/d in 1996. Libya's proven oil reserves (the largest of any African country) rose by nearly 30% in 1995 to 29,500m. barrels, remaining at this level throughout the three succeeding years. At the end of 1998 these reserves were sufficient to last for 56.4 years at the current rate of production.

In March 1989 the Petroleum Secretariat was revived, after a three-year period in which control of the oil industry had been in the hands of the national companies. The revived Petroleum Secretariat then drafted plans to reorganize and develop Libya's oil sector, which were implemented following the appointment as Secretary for Petroleum, in October 1990, of Abdullah al-Badri, hitherto Chairman of the NOC. The changes involved a drastic reduction of the NOC's powers and the elevation to a dominant role of the Secretariat for Petroleum, to which all state oil companies were now required to report directly.

Although there was an increase in exploration activity in the early 1980s, sharp reductions in oil revenues from 1986 onwards resulted in a decline not only in exploration but also in development work on discovered fields. Moreover, the deficiencies in expertise and technology resulting from the withdrawal of US operators in 1986 (and compounded by the subsequent imposition of sanctions by the USA on Libya) were only partially compensated by European, Canadian and Asian companies. Over the decade as a whole, only some 20% of current output was replaced by new proven reserves, while, as a result of poor state management, several established fields fell substantially below their theoretical production capacity.

Against this background, the Libyan authorities have, in the light of the 1990–91 Gulf crisis, re-emphasized the need for an active exploration campaign, to which LD 200m. (US $700m.) were allocated in the NOC's 1991/92 budget.

In particular, the Government is keen to evaluate the oil potential of parts of the country outside the Sirte (Surt) basin in north-central Libya, where the commercial fields are currently grouped. There are two main areas of interest—western Libya (formerly Tripolitania) and offshore, with particular stress on the Tripolitanian offshore. Indeed, exploration interest in areas off the Tripolitanian coast has been stimulated in recent years by the discovery and successful development of the Bouri offshore oilfield, the largest so far discovered, in the Mediterranean, situated some 125 km north-west of Tripoli. Test production of 10,000 b/d at Bouri, Libya's first offshore oilfield (containing total reserves of up to 5,000m. barrels), began in August 1988, and output had risen to 75,000 b/d by mid-1990. In April 1989 Libya's NOC and the Tunisian state oil enterprise ETAP formed a Joint Oil Co (JOC) to exploit the '7 November' oilfield straddling the two countries' continental shelf boundary, but did not finalize a development programme until May 1997, when a production-sharing contract was awarded to a Saudi-Malaysian consortium. A subsidiary of Saudi Arabia's Nimr Petroleum Co held a 55% interest and was to act as operator. Nimr's partner in this venture was a subsidiary of the Malaysian state oil company Petronas. New exploration concessions awarded to, or under negotiations with, Canadian, British, Austrian, Yugoslav, South Korean and other companies in late 1990 and early 1991 included substantial offshore areas north-west of Tripoli.

Exploration also continues in other parts of the country, with some work being undertaken in the largely unexplored south. New finds continue to be made in the Sirte (Surt) basin, despite the intensive exploration of previous years. In 1976, Occidental brought the new Almas field into production and the Libyan Umm al-Jawaby company also had two commercial finds, one on the eastern side of the Sirte basin and one on the west. In 1984 an oilfield with reserves estimated at 624m. barrels was discovered north-west of the Abu at-Tifl field.

In the Murzuk basin, in south-western Libya, Rompetrol of Romania was the original foreign contractor for the development of a new field (NC-115) with estimated reserves of up to 2,000m. barrels, exploitation of which will involve the construction of extensive oilfield storage facilities, some 900,000 barrels of new coastal storage facilities at Zawia, a new refinery at Sebha and a pipeline network to connect the new facilities. By 1993 implementation of this US $1,000m. project (originally approved in 1989) was seriously behind schedule because of financial constraints, prompting Rompetrol to sell its stake in the NC-115 field to Spain's Repsol Exploración, which subsequently opened negotiations with the NOC on the terms of a formal transfer of development rights. Also being given priority were water-injection projects to increase output from certain established fields. These included the giant Sarir field in the Sirte (Surt) basin, where production has seldom exceeded one-half of its capacity since nationalization but which was scheduled to be raised from a current output of 200,000 b/d to 600,000 b/d by 1994; the field was also to supply associated gas to power stations driving the GMR irrigation project (see Agriculture, above). In June 1992 ÖMV of Austria announced a promising new oil discovery in a block some 350 km south of Benghazi. It was officially claimed in 1994 that Libya was currently investing 23% of its oil revenues in oil exploration, production and development operations. In mid-1996 seven seismic crews were actively exploring for oil in Libya, compared with three or four crews in

the previous year. Development of the Murzuk basin field NC-115 was meanwhile proceeding under the management of a consortium led by Repsol Exploración, which started commercial production in December 1996 and was expected to reach an output level of 200,000 b/d by the end of 1998. In June 1996 a 5,000-sq km concession in the Sirte basin was awarded to a consortium led by PanCanadian Petroleum, which undertook to spend $17m. on exploration over a period of five years.

In February 1998 UK operator Lasmo announced that a strike the previous year in the Murzuk basin was possibly the largest oil discovery in Libya since the mid-1980s. Designated the Elephant field, the discovery was thought to contain possible reserves of over 500m. barrels, it being hoped that production would begin in 1999 via the existing pipeline from Murzuk to the coast. Further finds were announced by Petrofina of Belgium in February 1998 and by Lundin Oil of Sweden in April. Elf Aquitaine announced an offshore oil discovery in an area close to the Tunisian border in early 1999.

Libya's 1997 oil output averaged 1.48m. b/d, somewhat above the country's existing OPEC quota of 1.39m. b/d. At the start of 1998 Libya's OPEC production ceiling was raised to 1.52m. b/d, this quota being subsequently reduced to 1.44m. b/d from April 1998 and to 1.32m. b/d from July 1998 as the OPEC members reacted to a sharp decline in world oil prices. Overall, Libya's 1998 oil output averaged 1,445,000 b/d (2.3% less than the 1997 average), while its estimated oil revenue declined by more than 30% from around US $8,300m. in 1997 to less than $5,800m. in 1998. With effect from April 1999 Libya further reduced its official oil production ceiling to 1,227,000 b/d within the framework of a new OPEC quota agreement designed to reinforce a recent strengthening in world oil prices (which by mid-1999 had recovered to their highest level for 18 months).

Libya's reserves of natural gas at the beginning of 1999 were estimated at 1,310,000m. cu m. Marketed gas output (excluding gas flared or reinjected into the oilwells from which most Libyan gas is derived) totalled 6,780m. cu m in 1992—its highest level since 1979. Output in 1998 was 6,200m. cu m. Inaugurated in 1971, a liquefaction plant at Mersa Brega was the world's first scheme to convert flared gas into liquefied natural gas (LNG), annual exports of which, mainly to Italy and Spain, reached more than 4,000m. cu m in the mid-1970s, although they fell to under 1,500m. cu m in the 1980s, as Italy switched to cheaper Algerian supplies by gas pipeline. Further trade with Italy became impractical in 1990, when the Italian LNG import terminal was converted to accept normal-grade LNG. Spain, which still has import facilities for the high-calorie LNG currently exported by Libya, now takes the greater part of Libya's LNG exports; a new 20-year contract, for the supply of at least 1,000m. cu m per year, was signed with Enagás of Spain in March 1991. Exports to Spain totalled 1,800m. cu m in 1992 and were predicted to reach 2,500m. cu m by 2000. A contract to supply Turkey with 1,500m. cu m of LNG over 25 years was signed in 1988, but implementation awaits the completion of a terminal at Marmara Ereglisi. Libya announced plans in 1993 to convert the Mersa Brega plant (which has a nominal daily capacity of 10.8m. cu m) to produce normal and low grades of LNG, rather than the high-calorie grade produced hitherto. However, when contractors who had submitted bids for this $200m.-project studied the latest UN sanctions on Libya, it was clear that it would be impossible to carry out the work without importing equipment included on the list of embargoed items. Eager to link its own gas network with that of Algeria, Libya, in 1990, initiated preparatory studies to extend its existing 670-km Mersa Brega–Homs coastal pipeline westward to the Tunisian border, with the eventual aim of linking up with the Algeria–Sicily pipeline running through Tunisia. The existing coastal pipeline had been completed by a Soviet company in 1988 and had opened in September 1989, with a capacity of 4m. cu m per year. At the same time, the concept of a direct pipeline linking Libya to Italy remained under consideration, despite previous assessments that its cost would be prohibitive. In December 1990 it was confirmed that Agip of Italy and the NOC were engaged in feasibility studies for a direct pipeline, which could form part of a massive gas development programme in Libya, costing up to US $13,000m. Meanwhile, the NOC's priority plans included the development of the Kabir gas field close to the Tunisian border, at an estimated cost of $80m., and the use of gas output from other fields to fuel the GMR irrigation project. In mid-1992 the French company Total signed a contract to take 300,000 tons of liquefied petroleum gas from Libya starting in 1993 (the personal authorization of President Mitterrand was needed in view of the current UN sanctions against Libya). Agip revealed in March 1996 that it had drawn up plans to build a sub-sea pipeline to transport 8,000m. cu m of gas per year from Libya to Italy. In June 1996 (shortly before the implementation of the US 'secondary sanctions' legislation) Agip signed an addendum to a 1974 agreement with the NOC to cover gas development in onshore and offshore fields, the onshore gas to be marketed within Libya and the offshore gas to be piped to Italy. It was estimated that the export project would entail an investment of $3,500m. and would take four years to complete. Agip said in January 1997 that it had concluded 20-year sales agreements with Italian buyers for the full 8,000m. cu m which it planned to export each year. In June 1997 detailed feasibility studies were on schedule for completion within six months. Because its development rights stemmed from agreements dating back to 1974, Agip said that it did not consider its Libyan gas development programme to be open to challenge as a 'new investment' under US sanctions laws.

In February 1999 Agip Gas (a Dutch-registered joint venture between Agip and the Libyan Government) appointed the gas division of the Italian energy group ENI as a project manager for the sub-sea gas export pipeline scheme. Engineering and design bids were invited for five of the seven main components of the project, whose estimated construction costs were as follows: US $500m. for an oil and gas gathering network at Wafa; $890m. for a compressing station, pipeline, treatment plant and storage facility at Melita; $850m. for a production platform for the sub-sea link; $200m. for a sea to shore pipeline link; and $800m. for an onshore treatment plant at Melita. (The two other main project components were a $150m. compressing station to pump gas to Italy and the $600m. pipeline link to Italy.)

In August 1998 Sirte (Surt) Oil Co awarded a contract for the construction of a 142-km gas pipeline from Zuetina to Benghazi, while in early 1999 it awarded a contract for a 160-km pipeline between Homs and Tripoli. The latter contract included the installation of compressor stations to supply gas to a cement factory and a power station. These projects formed part of a programme to expand the use of gas for power generation within Libya. In mid-1999 Sirte Oil Co was evaluating bids for development of a gas field at Attahaddy, 90 km north of Mersa Brega, which was to be brought into production with a daily processing capacity of 9.8m. cu m.

On the marketing side, Libya has concluded various agreements involving the exchange of crude petroleum for specific goods or services. During recent years, France, Italy, Poland, the USSR, Yugoslavia and a number of other countries concluded barter deals with Libya, involving purchases of petroleum. Libya also has special petroleum arrangements with Brazil and Greece, and, together with Algeria, Nigeria and Gabon, remains theoretically committed to reserve 4% of its output for delivery to African states. Libya's attempts to establish itself in the 'downstream' marketing of oil products in developed countries have included the purchase, in 1986, of a 70% stake in the Italian Tamoil group, which subsequently provided an important overseas marketing outlet when the international oil glut developed in the late 1980s. Such overseas marketing investments are directed by the state-owned Oil Investments International Co (Oilinvest), established in 1988, while sales are effected through Chempetrol, a wholly-owned subsidiary, based in Malta.

Zawia refinery was opened in 1974, enlarged in 1977, and has a capacity of 120,000 b/d. An upgrading programme was in preparation in 1993. The other main refinery locations are at Tobruk, where a refinery with a capacity of 20,000 b/d was opened in 1986, and Ras Lanouf. Previously supplied by tanker with crude petroleum shipped from Mersa Brega, the Zawia refinery will eventually draw all of its materials from fields near the Algerian frontier. The country's largest oil refinery, at Ras Lanouf, which was begun by Italian contractors in 1978, finally started production in February 1985 and had a capacity of 201,000 b/d at 1 January 1988, compared with planned capacity of 220,000 b/d. At the end of 1989 Libya had a total installed refinery capacity of 380,000 b/d, having achieved an

output of refined products in 1988 of 255,600 b/d, of which 110,000 b/d were consumed domestically. Plans were announced in 1991 to build a refinery at Hymed, to be supplied from the Bouri offshore field. In the following year plans were announced for a 20,000 b/d refinery at Sebha to process crude from oilfields under development in the Murzuk basin.

In the petrochemical sphere, NOC has built one ammonia plant and one ethanol plant, each with a capacity of 1,000 tons per day, at Mersa Brega. These came into production in September 1977. In 1978 NOC awarded a contract worth US $150m. to an Italian company for the construction of a new ammonia plant, with a capacity of 1,000 tons per day, at Mersa Brega. A further $150m. contract has been granted at Mersa Brega for a urea plant with a capacity of 1,000 tons per day. (Most of the urea currently produced in Libya is exported to China, India, Turkey and Italy.) Sited near Exxon's LNG plant, the new units will process natural gas and are expected to make Mersa Brega the country's foremost centre for the production of petrochemicals. Local methanol production capacity, most of which is located at the Mersa Brega complex, was supplemented by the inauguration in September 1987 of a factory at al-Burayqah with a capacity of 2,000 tons per day. Libyan methanol production totalled 660,000 tons in 1987. In 1980 an Italian firm received a contract worth $60m. for the construction of an ethylene plant with a capacity of 330,000 tons per year at the Ras Lanouf refinery and petrochemical complex, and this, comprising, with the refinery, the first phase of the Ras Lanouf development, began production in 1987. A US company signed a contract for a monoethylene glycol plant at the same refinery. In addition, the contract for a 1,750 tons-per-day urea plant was won by a joint Federal German/Italian venture. The Abu Kammash chemical complex was opened in September 1980. Reductions in government revenues from petroleum in the 1980s necessitated some rationalization of the plans for the Ras Lanouf project, which is co-ordinated by the Ras Lanouf Oil and Gas Processing Co (Rasco). In early 1993 a $130m. second-phase development contract, awarded in 1990 to a consortium from former Yugoslavia, was cancelled on grounds of non-performance and the work reopened to new tenders. Rasco's third-phase development project, involving the construction by South Korea's Hyudai Engineering and Construction Co of two 80,000 tons-per-year units to produce high-density and low-density polyethylene, was 20% complete by mid-1993. Plans were also in hand to build a 68,000 tons-per-year polypropylene plant.

INDUSTRY

Manufacturing in Libya has been largely confined to the processing of local agricultural products and such traditional crafts as carpet weaving, tanning and leather working and shoe making. Plans were made several years ago for a whole range of factories to make such diverse articles as prefabricated construction materials, cables, glass, pharmaceuticals, woollen and synthetic textiles, among others. Most of these factories did not get past the tendering stage, but efforts have been made, in successive development plans since the 1970s, to diversify the non-oil sector of industry and to increase its contribution to GNP.

Contracts for industrial plants have in the past been awarded mainly to Western European and US companies, but Japanese firms are becoming more active in Libya. Under the 1981–85 Development Plan, LD 1,200m. (of the total investment figure of US $62,500m.) were allocated to light industry. Notwithstanding its support for smaller projects, the Government has given more attention, and resources, to a few major ventures in heavy industry and in infrastructure development. In January 1975 Col Qaddafi announced that Libya had plans for the establishment of a heavy industry sector involving vehicle and tractor assembly plants, shipbuilding and iron and steel works. In this context the master plan for the Misurata industrial city, due to house 180,000 people at a cost of $1,290m., was submitted in September 1979.

According to the OPEC news agency, some US $62,500m. were spent by Libya between 1970 and 1983 to develop industry and reduce the country's dependence on the petroleum sector. The result has been that the value of non-oil production activities rose from $1,610m. in 1970 to $15,280m. in 1983, and their contribution to GDP from 37% to 50%, reducing the share of the petroleum sector from 63% to 50%. An economic report covering the years 1970–86, which was released by JANA, the Libyan news agency, in September 1986, claimed that investment in the industrial sector during the period totalled LD 3,959.8m., enabling 139 projects to reach the production stage (52 food industry projects; 23 chemical and petrochemical industry factories; 17 mineral and engineering industry factories; 16 textile, clothing and leather goods factories; eight wood and paper industry factories). However, as oil revenues declined in the 1980s, the industrial sector, in common with other parts of the economy, suffered from underspending compared with budgeted figures. Although heavy industry traditionally attracts the largest proportion of total development investment, actual spending in this sector in 1983, 1984 and 1985 was, respectively, 96.2%, 84.4% and 83.4% of the budgeted allocation. Light industry was even more seriously affected, with expenditure on the sector in the three years in question reaching only 74.6%, 76.5% and 75% of the budgeted level. (No official figures have been issued in recent years.)

Iron ore reserves, estimated at over 700m. metric tons, were discovered in 1974 at Wadi Shatti, in southern Libya, and plans for their exploitation are under way. Work was initially planned to begin in November 1979 on the construction of a steelworks at Misurata for completion in 1985 at a cost of some US $1,000m. However, it was not until 1981 that Libya started awarding contracts for the Misurata steelworks. Kobe Steel of Japan was awarded a contract worth $751m. for a section mill and a rod mill; a consortium of Korf Engineering of the Federal Republic of Germany and Voest Alpine of Austria won a $540m. contract for a steel production plant, while a $674m. contract for a second production plant was won by Friedrich Krupp of Federal Germany; and two consortia, both led by Voest Alpine, won contracts for hot and cold rolling mills. In 1982 the Hyundai Engineering and Construction Co of South Korea won a contract worth $520m. to build a 480-MW power station and a desalination plant, with a capacity of 31,500 cu m per day, to serve the steel complex. However, the repeated deferment of payments to contractors, caused by declining oil revenues, seriously delayed work on the project, which did not start full operations until September 1990. A 900-km railway is also to be built, linking the iron ore mines in the south to Misurata. The contract for a port to handle imports of iron ore was won by Sezai Türkes Feyzi of Turkey. It was originally planned that subsequent developments would increase production at Misurata to 5m. and 7m. tons per year (by 2005). However, in view of the shortage of revenue from petroleum to fund this expansion, these plans were deferred. The proposals to build a town to house 50,000 people at Misurata were scaled down, envisaging an initial phase to house 20,000 people, with possible later stages bringing the population to 40,000. In late 1990 all the production units at the Misurata steel plant were reported to be operating, employing 3,500 Libyan nationals and 1,000 expatriate workers.

In 1991 the Misurata complex operated at about two-thirds of design capacity, producing an estimated 800,000 tons of steel during that year. A US $224m.-contract to add a 650,000 tons-per-year direct reduction plant, which would increase total capacity at Misurata to nearly 2m. tons per year, was awarded in January 1993 to a consortium led by Voest Alpine, but it was not until October 1994 that the consortium secured a down-payment which enabled it to schedule the start of construction for early 1995. Most of the new plant's output of hot briquetted iron was to be exported to Italy and Spain. In the first nine months of 1993 raw steel output at Misurata totalled 709,000 tons, nearly one-third more than in the corresponding period of 1992. A contract to build a 400,000 tons-per-year reinforcing bar mill was awarded in early 1994 to an Italian company which planned to begin construction before the end of 1995 if acceptable payment arrangements were in place at that time. In March 1997 the technical director of the Libyan Co for Iron and Steel announced that Libya was seeking foreign joint-venture partners for the development of iron-ore mining at Wadi Shatti.

In 1983 plans were announced for the construction of a 120,000 tons-per-year aluminium smelter complex at Zuwara, 120 km west of Tripoli, at a cost of US $1,250m. to be run by a joint company, Libal, formed by Yugoslavia's Energoinvest and Libya's heavy industries secretariat. Eventually it is hoped that a petroleum coke plant and an associated industrial port will

be built at Zuwara. Under an agreement signed by Algeria and Libya in July 1987, Algeria was to have constructed a pipeline, via Tunisia, to supply an 800-MW power station forming part of the Zuwara smelting complex. However, the smelter project was postponed in 1987, pending a revival in Libya's revenues from sales of oil, on which it depends to finance industrial development. At the end of 1982 plans were revived to build a $1,000m. fertilizer complex at Sirte (Surt) in two stages. Talks with the USSR on the construction of the delayed first stage began at the end of 1984, and it was hoped that it would come into production by the end of 1987. However, the second stage of the Sirte complex was postponed in April 1986, and the first stage was itself postponed in 1987, owing to the decline in oil revenues. The contractors (from the United Kingdom, Italy, Spain, the Federal Republic of Germany and the Republic of Korea) blamed the postponement on the abrupt fall in the price of oil, and the consequent shortage of funds. A second urea plant capable of producing 1,850 tons of fertilizer per day was opened at the new town of al-Brega in September 1984.

The construction work carried out under the development programme gave rise to a rapidly increasing demand for cement. In 1987 cement production rose by 30%, compared with 1986, to 2.7m. tons, some 2m. tons less than the domestic requirement and more than 3m. less than rated capacity. In 1995 Libyan cement production exceeded local demand, with the surplus being exported to Egypt and Algeria. In November 1995 plans were announced to add 3,300 tons per day of new production capacity to a cement works at Zliten in order to meet an expected growth in demand when the GMR project entered its next phase. The Danish company FLOTEC was awarded a contract in October 1985 to build a gypsum factory. The gypsum, which is used in cement production, will be exported to Europe. The project includes the establishment of a natural gas energy plant at the factory and terminal facilities at the port of Tripoli. Other industrial diversification projects signed in 1991–92 included one with Candy Elettrodomestici of Italy for a refrigerator construction plant at Zuwara with a projected capacity of 80,000 units a year, and another with Gold Star of South Korea for a video-cassette recorder factory at Benghazi with a capacity of 70,000 recorders a year. A truck assembly plant at Tripoli, owned 75% by the Libyan Government and 25% by Iveco Fiat of Italy, produced 2,961 vehicles in 1993. Investment of $120m. was planned to increase the proportion of locally manufactured components to 40% by 1997 and to achieve a production volume of 4,000 vehicles in that year. Over 20,000 passenger cars were scheduled to be imported into Libya from South Korea and Japan in 1995. Daewoo Corpn (the South Korean supplier) was believed to have examined the feasibility of establishing a Libyan assembly plant and found that it would not be possible to match the current prices for imported cars. In mid-1997 Libya was involved in separate talks with prospective Egyptian and Moroccan partners, with a view to establishing car assembly plants. A large pharmaceuticals plant, built by a Libyan state company in co-operation with Egyptian and Moroccan companies, opened at Rabta in September 1995.

Many of the contracts at the peak of the construction boom in the 1970s were awarded to Turkish firms. In 1981 there were 102 Turkish companies operating in Libya, with an estimated 80,000 Turkish workers. Falling oil revenues, though, forced Libya to inform Turkey early in 1982 that it wanted to deduct US $70m. in oil debts from $100m. owed to various Turkish firms. By early 1991 debts owed to Turkish contractors had reached some $600m., adversely affecting Libyan–Turkish relations, which remained strained until the following year, when a schedule of oil deliveries in lieu of debt payments was agreed in bilateral talks. By January 1995 (previously the target date for full repayment) Libya's outstanding debts to Turkish contractors were reported to have been reduced to $180m. In October 1996 Turkish government officials said that total payments arrears totalled $600m. (of which $160m. was principal and the remainder interest charges and other costs), for which the Libyan Government had issued promissory notes after a visit to Tripoli by the Turkish Prime Minister. These notes were to be honoured within three months, although it was not clear whether all payments would be made in convertible currency. The Turkish Contractors Association said in October 1996 that its members had so far carried out a total of $6,880m. worth of work in Libya and were currently contracted to work on projects worth $1,650m. South Korean companies, such as the Daewoo Corpn, have also been involved in the implementation of new contracts in Libya. In May 1981 100 South Korean dockers were used to clear severe congestion at Benghazi port. The Daewoo Corpn was awarded a $337m. contract in 1985 to build sewer and water facilities, roads, pumping stations and a telephone system in Benghazi. The employment of Indian workers in Libya declined from 40,000 in the early 1980s to around 10,000 in the early 1990s, many Indian contractors having pulled out after disputes over non-payment for work carried out. In April 1995 the Libyan authorities agreed to settle $100m. of claims by Indian companies (most of them state-owned) over the next 12 months and to increase the recruitment of Indian workers in the future. At the end of 1996, when the contract to expand cement capacity at Zliten (see above) was awarded to an Iranian company, it was reported that Iranian companies were involved in negotiations for several other Libyan contracts, including reservoir and water pipeline building, railway and tramway schemes and a cattle-rearing project.

Infrastructure expenditure has put great emphasis on power generation. Since 1974 the Government has awarded several large contracts for power stations, some in association with desalination plants. During the 1976–80 period US $3,195m. were spent on power schemes. Installed generating capacity rose from 879 MW in 1975 to 1,700 MW in 1979. Under the 1980–85 plan, capacity was projected to increase from 1,950 MW to 3,878 MW. However, there have been delays in power station construction schemes, owing to lack of finance, and, according to the UN, installed capacity had declined to 1,460 MW in 1985. In 1982 an agreement was concluded with the USSR, designed to help to establish a national electricity grid by 1995. A 10-MW Soviet nuclear research reactor became operational at Tajura, near Tripoli, in 1982, but subsequent plans to develop a major nuclear generating plant were shelved in the mid-1980s. Work was expected to start in late 1993 on a three-year project to add more than 1,000 MW of new gas-turbine generating capacity at five Libyan power stations, several of them scheduled for expansion since the mid-1980s. The AFESD announced a $107m. loan package in April 1996, partly to finance improvements in Tripoli's power distribution system and partly to finance the construction of a connection to the Egyptian electricity grid. In November 1998 contracts were awarded for the construction of an AFESD-funded link between the Libyan and Tunisian electricity grids, scheduled for completion in 2001. In early 1999 contracts were awarded for the installation of four 160-MW gas turbines for a power plant at Zawia, west of Tripoli.

Scarcity of water is a continuing problem, and in 1982, in addition to the GMR project (see 'Agriculture', above), plans were announced for a 462,000 cu m-per-day desalination plant (Tripoli 1) to provide Tripoli with drinking water. Plans for a further 150,000 cu m-per-day desalination plant at Janzour, 20 km west of Tripoli, were also announced at the end of 1982. The site of Tripoli 1 was moved to Janzour in mid-1984. A water purification plant in Tobruk, with a daily capacity of 5,000 cu m for agricultural purposes (from 13,000 cu m of sewage), was inaugurated in April 1988. Plans for the power and water complex at Zuetina, initially due to have been completed in 1987, have now been scaled down from a planned capacity of 40,000 cu m of water per day to 20,000 cu m, although still maintaining a power capacity of 720 MW. Bids for a further desalination plant, at the Zawia oil refinery, were submitted in October 1991 by Italian, Dutch and German companies. In 1993 the Hyundai Engineering and Construction Co signed a letter of intent to build Libya's largest power and desalination complex at Sirte (Surt). Costing an estimated US $1,600m. and designed to provide 1,260 MW of generating capacity and 20,000 cu m per day of desalination capacity, this project had formed part of Libya's development plans since the early 1980s, when its intended location was Mlita, west of Tripoli. Having failed to finalize a contract on the basis of the 1993 letter of intent, the Libyan Government invited fresh bids for the Sirte complex in 1997. In mid-1999 this project remained at the bidding stage.

In November 1995 the Government announced its intention to commission comprehensive five-year 'infrastructural master-plans' for several regions of Libya from international consul-

tancy firms. In March 1996 Russia (which was currently negotiating terms for the settlement of debts owed by Libya) declared a willingness to participate in infrastructural joint-venture projects worth a total of more than US $10,000m., particular areas of interest being railway building, power generation and transmission, gas pipeline repair and the upgrading of industrial plants.

TRANSPORT AND COMMUNICATIONS

As might be expected, the large and increasing volume of imports has led to severe congestion at the main ports of Tripoli and Benghazi. Worsening port conditions have resulted in increases in surcharges. In addition, Darnah and Misurata ports are being reconstructed. Tripoli, Mersa Brega and Benghazi are undergoing large-scale expansion. In 1986, according to the Libyan news agency, JANA, the handling capacity of the nation's ports was 9.5m. tons.

Port expansion is necessarily a long-term process and the development of rail, road and to some extent air freight is very important. There is an extensive road-building programme, and a number of large road-building contracts, such as the Sebha-Wadden road and the Mirzuk link, were awarded to Egyptian companies. In 1980 an Indian company won a US $129m.-contract for the construction of desert roads at a variety of locations throughout the country. The road from Tripoli to Sebha was opened at the end of 1983, providing 770 km of metalled surface. In September 1986 the Government claimed to have built 10,990 km of paved roads, and 6,250 km of rural roads during the preceding 17 years. There have been no railways in Libya since 1964, when the Benghazi-Barce line was abandoned. In 1998 plans were announced to construct 2,178 km of track running east to west and 992 km running north to south. The first phase of the project would be a 700-km rail link between Ras Jedir on the Tunisian border and Sirte (Surt) on the Mediterranean coast, followed in the second phase by a line between Sirte and Omsaad on the Egyptian border. In mid-1998 talks were in progress between Libyan, Tunisian and Egyptian officials regarding the feasibility of cross-border links to the proposed Libyan railway.

The UN ban on international flights to Libya, which in April 1992 effectively shut down the international operations of the national carrier, Libyan Arab Airlines, led to increased use of airports in neighbouring countries. Following the suspension of UN sanctions in April 1999, regional and international airlines began to reintroduce services to Libya, while Libyan Arab Airlines opened discussions with other Middle East-based airlines with a view to leasing aircraft for international routes.

As part of Libya's aim to create a comprehensive telecommunications network, in mid-1991 Swedish companies were awarded contracts for new installations in the south-west of the country; however, other parts of the programme, notably plans for 20 new exchanges and 182,000 extra lines in Tripoli and Benghazi, were not finalized until mid-1993.

EXTERNAL TRADE

Until production of oil began, Libya's exports consisted almost entirely of agricultural products, and its imports of manufactured goods. In 1960, for instance, imports were valued at LD 60.4m. and exports at LD 4.0m., leaving an adverse balance of LD 56.4m. (although LD 21m. of the total value of imports in 1960 was accounted for by goods imported for the account of the petroleum companies). Petroleum was first exported in the autumn of 1961, and by 1969, according to IMF data, imports totalled LD 241.3m. and exports LD 937.9m., of which LD 936.5m. was officially accounted for by crude petroleum. Although there were fluctuations within the overall trend, petroleum exports rose from LD 2,109.5m. in 1974 to LD 4,419.2m. in 1979, when they represented 99% of all Libyan exports by volume. The minute proportion of remaining exports were mainly hides and skins, groundnuts, almonds, metal scrap and re-exports.

Imports consist of a wide variety of manufactured goods, such as textiles, motor vehicles and luxury consumer goods. In the last few years imports of timber, chemicals and raw materials and, in particular, cement and building materials, have been stepped up. In addition, many foodstuffs have to be imported, for example tea, sugar, coffee and, in years of drought, wheat and flour. The value of imports increased by over 500% betweeen 1971 and 1979, from LD 250.4m. to LD 1,572m., whereas over the same period exports by value grew by 400%.

Since petroleum has been exported, Libya has experienced a considerable trade surplus. In 1971 exports f.o.b. (including re-exports) were valued at LD 962.5m., and imports c.i.f. at LD 250.4m., leaving a trade surplus of LD 712.1m. The general trend of increasing surpluses continued during the 1970s, and in 1980, when Libya's imports totalled LD 2,006.2m., and its exports LD 6,489.2m., a trade surplus of LD 4,483m., was recorded. Declining demand and lower prices for petroleum reduced the trade surplus to LD 2,129.8m. in 1981, and to LD 2,006.7m. in 1982. The value of exports fell to LD 3,283m. in 1983 (imports LD 1,989.5m.), and stabilized at LD 3,295.4m. in 1984 (imports LD 1,811.8m.), but fell to LD 3,235.2m. (US $10,841m.) in 1985 (imports LD 1,444.7m.), of which exports of crude petroleum accounted for LD 3,234.2m. The value of imports declined to LD 1,279m. in 1986, rising slightly, to LD 1,293.2m., in 1987. Estimated exports in 1989 totalled $7,320m., surpassing imports of $6,460m., a pattern which continued in 1990 (exports $11,530m., imports $7,250m.) and was forecast to be maintained in 1991 (projected exports $10,260m., projected imports $7,970m.). Libya had an estimated trade surplus of $3,300m. in 1993 (exports $10,000m., imports $6,700m.); $1,400m. in 1994 (exports $7,700m., imports $6,300m.); $3,600m. in 1995 (exports $10,100m., imports $6,500m.) and $4,700m. in 1996 (exports $11,400m., imports $6,700m.).

In 1982 Italy (with 25.4% of total imports by value) was Libya's main supplier, followed by the Federal Republic of Germany (14.4%) and the United Kingdom (8%). In 1981 the USA (with 27.4% of Libyan exports by value), Italy (23.8%), the Federal Republic of Germany (10.3%) and Spain (6.7%) were the principal customers for Libyan exports (almost exclusively, crude petroleum). In 1977 the USA took 25% of Libya's oil exports. The USA and Western Europe together accounted for almost 90% of total oil exports from Libya. However, in 1982 all imports of Libyan petroleum to the USA were banned. Libyan imports from the USA fell by US $500m. from the level of $831m. in 1981. In January 1986, convinced of Libya's involvement in promoting international terrorism, President Reagan banned all trade between the USA and Libya. The USA succeeded in persuading some of its allies to reduce sharply their purchases of Libyan oil after the bombing of Tripoli and Benghazi in April 1986, but Italy, by far the largest customer for Libyan oil, actually increased its imports. The US embargo on bilateral trade with Libya reduced Libyan imports from the USA to $46.2m. in 1986, while Libyan exports to the USA amounted to a mere $1.6m.

As Libyan debts accumulated, imports from West European countries were also much reduced. Italian companies claimed outstanding credits of about US $500m. from Libya in 1984. An agreement between Libya and Italy in August 1984 failed to solve the credits issue, and a new agreement was signed in Rome in July 1985. Several countries, including India, Turkey and Uganda, have accepted oil as payment for goods or debts owed to them by Libya. The Swedish export credit agency reached an agreement in 1991 under which it had recovered approximately $30m. through oil purchase arrangements by mid-1994. Libya agreed in July 1995 to settle $48m. of official debt to Bulgaria and to work towards a formula for the settlement of claims of $300m. by Bulgarian companies. Bulgarian trade with Libya had declined from $360m. in 1990 to $8m. in 1994. The Hungarian Government was reported in mid-1995 to be preparing an official approach to Libya on behalf of Hungarian companies which were owed $45m. for work carried out and goods supplied.

In the late 1980s imports from Japan showed a rapid rise, from US $296m. in 1987 to $602m. in 1988, while exports to Japan rose from virtually zero in 1987 to more than $600m. in 1989. Libya remained Italy's largest regional trading partner in 1990, supplying exports (mainly oil) of $4,700m. and taking Italian exports of $1,083m. Following the Gulf crisis of 1990–91, Libya's efforts to improve relations with Western Europe were encouraged by the visit of the Italian Prime Minister in June 1991 (the first by an EC Head of Government for more than 10 years), when an agreement was signed with the objective of increasing bilateral trade and Italian participation in Libyan

development projects, such as the GMR irrigation scheme (see 'Agriculture', above). After Italy, Libya's most important trading partners are Germany (to which Libyan exports in 1990 increased to $2,186m., compared with imports of $1,622m.), Spain (Libyan exports in 1990 of $1,163m., imports of $776m.) and France (Libyan exports in 1990 of $762m., imports of $466m.). By 1996 Libyan exports to Italy had reached $6,987m., while imports from Italy totalled $1,567m. In 1997 French imports from Libya were valued at $476m. and exports to Libya at $352m.

FINANCE

Before the 1969 coup most Libyan banks were subsidiaries of foreign banks. However, among the first decrees issued by the Revolution Council was one which required 51% of the capital of all banks operating in Libya to be owned by Libyans; the majority of directors, including the chairman, of each bank had to be Libyan citizens. Under the monarchy the Government had followed a similar policy without compulsion, and a number of foreign banks had accordingly already 'Libyanized' themselves. In December 1970 all commercial banks were nationalized, with government participation set at 51%.

In March 1993 legislation was passed authorizing Libyan citizens and companies to establish privately owned commercial banks with a minimum capitalization of LD 10m. (US $37m.). Under the same law, Libyan nationals were permitted to apply to the Central Bank of Libya for authorization to hold foreign currency in local bank accounts and to make unrestricted use of such holdings. The heavily overvalued Libyan dinar was currently being unofficially traded for convertible currencies at about one-sixth of its official exchange rate (which had been pegged to the IMF's special drawing right since 1986). Speaking in May 1993, Col Qaddafi said that he favoured a move towards full convertibility of the Libyan dinar at such time as 'there was adequate production' in the Libyan economy to prevent 'catastrophic' consequences.

In early November 1994 the Central Bank devalued the official exchange rate by 15.5%, from US $1 = LD 0.299 to $1 = LD 0.354, this being the fourth change in the official rate since 1992. The currency remained heavily overvalued, as its unofficial exchange rate was currently about $1 = LD 3. Later the same month the Central Bank introduced a second-tier official rate of $1 = LD 1.019 'for use by local companies'. Also in November 1994 a consortium of seven local banks set up a new financial services company in Tripoli to meet the foreign currency requirements of travellers, using exchange rates 'set by supply and demand'. In early 1995 it was reported that a widening gap between official and unofficial exchange rates in Libya was pushing up the rate of price inflation, which, according to some estimates, was as high as 50%, compared with an estimated 15% in 1994. In late 1995 the unofficial exchange rate was reported to be averaging about $1 = LD 3.40. Price inflation affected mainly the growing range of 'non-essential' items whose importation was now handled by private-sector companies with little or no access to foreign exchange at the official rate. The officially recorded rates of price inflation were 4.5% in 1994 and 6% in 1995. The estimated rate of inflation in 1996 was 5.8%. In an address to the GPC in March 1997, Col Qaddafi acknowledged that the unofficial exchange rate at that time, of about $1=LD 3, represented a 'realistic' basis for foreign exchange transactions. However, the Central Bank's main official exchange rate was not devalued at that stage and it stood at $1=LD 0.38 in September 1997. In early October 1998 Col Qaddafi strongly urged traders and shopkeepers to reduce their prices and announced a country-wide campaign to maintain pressure for price cuts. In November the Central Bank's main official exchange rate was devalued to $1 = LD 0.45. The unofficial exchange rate stood at around $1 = LD 3.20 in early 1999, when it was estimated that one-fifth of all currency transactions were carried out on an unofficial basis.

The growth in petroleum revenue in the 1970s allowed the Government to devote about one-half of its income to development expenditure, although this proportion declined in the 1980s, as oil revenues fell. Libya also gave generous aid abroad, in particular to the People's Democratic Republic of Yemen (PDRY), Egypt, Syria and Jordan, although the Government was somewhat capricious in implementing aid agreements. Aid was cut off from the Jordanian Government in September 1970 when it attacked the Palestinian guerrillas. Egypt was criticized over its conduct of the war with Israel and in 1974 Libya demanded the return of a loan to Sudan. Aid to Egypt was suspended as a result of Egypt's signing the peace treaty with Israel in March 1979. There is no comparable organization in Libya to the Kuwait Fund for Arab Economic Development (KFAED), but in 1974 Libya made a contribution to the Islamic Development Bank. In 1980 Libyan aid to developing countries was US $281m., equivalent to 0.92% of GNP. This compares with the $261m. that was given in 1975, which then represented 2.3% of GNP.

Developments in the Libyan banking sector included the establishment of joint development banks with Algeria and Turkey and an agreement to establish a joint Libyan-Mali bank. In 1977 the Libyan Arab Foreign Bank (LAFB)—effectively the 'offshore' arm of the Central Bank of Libya, and a key institution in Libyan trade finance—bought a 15.2% stake in the equity of Fiat, the Italian motor car company, for US $400m. The deal was backed by a loan to Fiat from the LAFB of $105m. repayable over 10 years (with two years' grace). Until this purchase the LAFB had pursued a cautious and selective policy of putting Libyan capital into banking, hotels and tourism in many countries, as well as joint-stock ventures in agriculture, fishing and forestry projects in some African countries. Libya appeared to regard the Fiat purchase as the vanguard of its investment in industrial countries' manufacturing bases. Libya's holdings in Italy were enlarged at the end of 1981 when the LAFB bought the bankrupt Italian sugar and steel concern, Malradi, for $450m. In September 1986, however, Libya sold its shares in Fiat for $3,000m. The Libyan ambassador to Rome denied that the sale had been prompted by the collapse of oil prices and the consequent shortage of foreign exchange. Other Libyan assets in Italy were frozen in mid-1986 as guarantees for Italian companies awaiting payment of millions of dollars from Libya in debt arrears. In December 1979 Kuwait and Libya signed a $1,000m. agreement to set up an Arab investment company, and in April 1980 Libya, together with Kuwait and the United Arab Emirates, decided to establish a new international insurance company. This was finally established with a capital of $3,000m. in October 1981. In September 1987 the Bankers' Trust Co of New York was ordered by a British High Court judge to release $292m. of Libyan assets placed with the bank's London branch, that were 'frozen' by order of President Reagan in January 1986.

The LAFB increased its paid-up capital to LD156m. in the 1991/92 fiscal year, during which it made a pre-tax profit of LD15m. Its paid-up shares in international affiliates (including 28 international banks outside Libya) totalled LD169.3m. In mid-1993 a proposal by the LAFB to increase its shareholding in the Athens-based Arab Hellenic Bank from 30% to 86% (thereby opening the way to the establishment of Libyan-controlled bank branches in other EC countries) was effectively halted by the Greek banking authorities. In 1992/93 the LAFB reported an increase in paid-up capital to LD 192m., an increase in net profits to LD 18.3m. and a 25% increase in total assets to LD 1,398m. The Bank's assets abroad were frozen in December 1993 under the terms of UN Security Council Resolution 883. In 1993/94 the LAFB increased its paid-up capital to LD 222m. In November 1997 the LAFB acquired a 5% stake in the newly-privatized Banco di Roma, the governor of the Libyan Central Bank subsequently stating that the LAFB would seek a seat on the board of the Italian bank. The appointment of the Central Bank governor as a member of the Banco di Roma board was formally announced in April 1999.

Although Libya enjoys a substantial trade surplus, it also experiences a considerable deficit on 'invisibles' (services and transfer payments). This deficit increased from US $1,450m. in 1973 to $2,265m. in 1977. In the early 1970s this deficit partly offset the trade surplus, leaving a fluctuating surplus on the current account, but in 1975 (when the trade surplus was reduced) the current account was pushed into deficit. Aid payments and purchases of military equipment (in 1986 Libya was estimated to owe the USSR $4,000m.–$5,000m. for sales of arms) tended to bring about a substantial outflow on capital account—so that Libya's basic balance of payments often yielded a deficit. Government debts were estimated at $7,000m. in 1989,

and the practice of paying debts in petroleum has become more common. International reserves totalled $4,208m. at 31 December 1978, compared with $2,131m. at the end of 1973, and by the end of 1979 the figure had risen to $6,449m. At mid-1981 foreign exchange reserves amounted to $13,444m. They declined to $3,266m. at the end of 1984, recovered to $5,465m. at the end of 1985, but had fallen to an estimated $3,923m. by May 1990. By May 1991, however, reserves were estimated at $4,635m. In 1980 the current account showed a surplus of $8,240m. but this was followed by a deficit of $2,978m. in 1981, and further deficits in 1982, 1983 and 1984. However, Central Bank figures show that a surplus of $2,016m. was recorded in 1985, following a decline of 33% in the value of merchandise imports and substantial reductions in capital expenditure (see Development). The Central Bank reported a deficit of $252m. in 1986. A deficit of $800m. in 1987 was followed by further deficits of $1,260m. in 1988 and $940m. in 1989. In 1990, however, the increase in oil revenues, due to the Gulf crisis of 1990–91, produced a current account surplus of $2,200m., but in 1991 the current account was roughly in balance as world oil prices reverted to their pre-crisis level. According to World Bank figures, Libya had gross international reserves of $7,225m. at the end of 1990. Recent Libyan initiatives to increase non-oil foreign currency earnings have included the abandonment of ideological objections to the development of a mass tourism industry. However, by mid-1995 no practical steps had been taken to attract the necessary foreign investment, there being very little scope for forward planning in this area while Libya remained subject to UN sanctions. In May 1996 the General Tourism Board released statistics predicting revenue of $3m. from tourism in that year. Despite the shutdown of its international air links, Libya was visited by 80,000 tourists in 1994 and 85,000 tourists in 1995. The Board said that the Government intended to invest $1,700m. over the next five years 'to rehabilitate the tourism infrastructure' with the aim of attracting up to 1.5m. visitors to Libya by 2000. In 1997 international consultants were appointed to draw up a plan for tourism development.

The Central Bank reported in early 1994 that Libya's foreign exchange reserves totalled US $5,972m. at 31 March 1993; that external earnings in the year ending 31 March 1993 had totalled about $7,000m. (some 13% less than forecast) and that public debt stood at an estimated $20,818m. on that date. The Bank for International Settlements (BIS) said in early 1994 that Libyan funds in banks reporting to the BIS totalled $1,159m. on 30 September 1993. Libya had an estimated current-account deficit of $325m. in 1994 and an estimated external debt of $4,844m. at the end of that year. By the end of 1996 Libya had an estimated external debt of $4,200m. and estimated foreign exchange reserves of $4,900m. There was an estimated current-account surplus of $450m. in 1995 and $1,000m. in 1996. In September 1998 Libya had debts to banks abroad of $247m. and non-bank trade credits of $279m., whereas its deposits in Western banks totalled $7,628m.

DEVELOPMENT AND BUDGET

Libyan planning dates back to the 1960s, with the first Development Plan running from 1963/64 to 1967/68. The second Plan ran from 1969/70 to 1973/74, and the third Plan, with an investment of LD 2,200m. (of which 34% was for industry, petroleum and electricity), from 1973 to 1975. Development budgets in the 1970s favoured agriculture, and the 1976–80 Development Plan, known as the Economic and Social Transformation Plan, involved a total investment of LD 9,250m. with priority again given to agriculture. The Plan aimed at an annual increase of 10.5% in GNP and a 26% rise in industrial production. In 1978 GDP increased by 11%, which was above the planned rate of 10.7%, but the average growth for the period 1976–79 was only 9.5% a year. In 1978 the allocations of most sectors of the budget were increased, but it appears that by the end of the Plan only 80% of planned expenditure had been used. The overall aims of the Plan were to achieve diversity of production, thus reducing dependence on oil, to develop the economic and social infrastructure and to achieve a more equitable distribution of income and wealth.

The 1981–85 Five-Year Plan was regarded as part of a major 20-year development programme, aiming at structural change in the economy to reduce its dependence on petroleum. Expenditure was initially set at LD 18,500m., more than double the allocation for the previous Plan, and it was forecast that by 1985 the non-oil sector would contribute 53% of national income, compared with 35% in 1980. Industry was to be allocated 23% of investment, and rapid growth was planned for electricity, transport, communications and housing. Agriculture was to receive 16%. The overall annual growth rate was intended to be 9.4%, compared with the last Plan's achieved rate of 7.6%, but industry's annual growth rate was projected at 21.6%. Agriculture's annual growth rate, on the other hand, was forecast at 7.4%. By 1983, owing to the abrupt reversal in Libya's petroleum revenues, the targets of the Five-Year Plan for 1981–85 were not being met and major reassessments, involving substantial reductions in expenditure, had to be undertaken. The building of roads and houses worth US $1,000m. was cancelled, and plans for a $4,200m. Soviet-made nuclear power plant were shelved.

The decline in government revenues curtailed budget expenditure throughout the 1980s. For 1982 the administrative budget was endorsed at LD 1,255m., and the development budget at LD 2,600m. (5% less than in 1981). The development budget for 1983, at LD 2,370m., was a further LD 230m. less than that of 1982. The 1984 budgets reflected this continuing trend. The administrative budget of LD 1,440.2m. represented a cut of 7.1% on the allocation for 1983, while development projects in 1984 were allocated LD 2,110m., a decrease of 11%.

Further reductions in projected spending were recorded in the budget allocations for 1985. The administrative budget totalled LD 1,200m. and the development budget LD 1,700m., representing reductions of 16.7% and 19.4%, respectively, compared with the previous year. In the event, actual capital expenditure on development was well below the planned allocation. During 1985 actual spending on development was LD 1,211m., 28.8% less than the budgeted figure of LD 1,700m., continuing the trend established in 1983 (when actual spending was LD 2,096.3m., a shortfall of 11.5%, compared with planned spending of LD 2,370m.) and 1984 (actual spending: LD 1,824.8m.; planned spending: LD 2,110m.—a shortfall of 13.5%). Owing to the loss of revenue as a result of the decline in oil prices, the budget for 1986 was deferred. The development budget for 1987 represented a reduction of 14.7% compared with the allocation for 1985, to LD 1,450m.

The budget for 1988 projected total expenditure of LD 2,300m. (administrative budget LD 1,243.5m.; development budget LD 1,056.5m.), an increase of 6%, compared with 1987. For 1989 there was a draft operational budget of LD 1,174m., together with a draft changeover budget of LD 900m. Few details of the 1990 budget were made available. It was reported that expenditure on defence and subsidies was to be reduced to LD 600m., compared with LD 750m. in 1989, in order to restrict the total budget deficit to LD 322m. With regard to expenditure on capital projects, LD 300m. was to be provided for the GMR project (see 'Agriculture', above). An estimated LD 380m. was to be allocated for the purchase of food imports and the hiring of foreign labour. As a result of the unexpected increase in income from oil exports in 1990, Libya's GDP increased by 9.4%, in comparison with 1989, to the equivalent of US $27,370m., thereby enabling the Government to allocate additional funds for the development of the oil industry and other sectors during the 1990s.

The broad outlines of the Government's 1992/93 budget were revealed in February 1993 (the penultimate month of that fiscal year). Expenditure totalled LD 2,823m. (US $9,700m.) and revenue LD 2,251m. ($7,735m.), leaving a deficit of LD 572m. ($1,965m.). Of the expected revenue, LD 1,284m. (57%) was derived from oil exports and the balance from taxes and duties. The total national oil revenue (including funds not earmarked for budgetary use) was expected to be about LD 3,000m. ($10,300m.). It was announced in January 1994 that Libya's budget year would henceforth coincide with the calendar year and that no budget had been in force in the nine months following the end of the last April–March budget year in 1993. No details of the 1994 budget were published, although the Government indicated that 'several billion dollars' of cutbacks had been made to take account of the impact of UN sanctions.

In July 1995 the Libyan authorities released details of the budget for that calendar year, stated partly in US dollars and partly in Libyan dinars. The foreign-currency part of the budget provided for revenue of US $8,280m. and expenditure of $9,260m., leaving a deficit of $980m. The expenditure categories included $1,600m. on water-transmission and irrigation; $700m. on the oil industry; $1,260m. on imported goods; $1,700m. on 'operating costs'; $250m. on payments to foreign companies; and $750m. on membership of international organizations. The remaining $3,000m. was earmarked for the direct distribution of grants to local families. The dinar section of the budget provided for domestic revenue of LD 1,660m. and domestic recurrent expenditure of LD 2,000m. (including LD 1,155m. on public-sector salaries), leaving a deficit of LD 340m. The 1996 budget, approved by the GPC in February of that year, provided for revenue of LD 4,518m. ($12,709m.) and expenditure of the same amount, this being Libya's first non-deficit budget for many years. The Government stated that the previous three years' budget deficits had been financed by drawings on the country's foreign reserves. The final size of the 1995 budget deficit was not revealed, although it was known that the Government had not implemented its plan to distribute lump-sum grants to Libyan families. In September 1996 the official Libyan news agency reported that 50,000 families were each to receive grants worth $5,000, under the Government's wealth redistribution programme. In March 1997 the Governor of the Central Bank told the GPC that Libya's foreign currency budget had a surplus of $680m. in 1996, when revenue on the foreign currency account had totalled $9,573m.

The sequence of balanced budgets was continued in 1997 and 1998, that for the latter year providing for a 1.3% reduction in expenditure and revenue to LD 5,311m. (US $13,760m. at the official exchange rate). It was officially stated that the 1998 budget included the allocation of LD 1,133m. ($2,935m.) to the GMR project (see 'Agriculture', above). Figures released by the Government at the end of 1997 showed that Libya was owed some $3,273m. by various debtor nations. Debt rescheduling agreements had recently been concluded with Guinea, Guinea-Bissau and Burkina Faso, while negotiations were in progress with Pakistan and Sudan and were being sought with other debtors, including Algeria, Benin, Ethiopia, Madagascar, Mozambique, Nicaragua, Tanzania and Uganda. Libya's 1999 budget, approved by the GPC in December 1998, provided for total expenditure of LD 4,900m. It was forecast in the budget that oil revenue would total LD 3,268m. in 1999. The Secretariat of Finance estimated the Government's actual 1998 oil revenue as LD 2,363m., nearly 35% less than the original 1998 budget forecast of LD 3,633m. (which had been based on 1997 oil export prices). After taking account of emergency spending cutbacks made during 1998 (notably in non-oil investment programmes), it was expected that the final 1998 accounts would show an overall deficit of some LD 650m.

Olive oil ('000 metric tons): 11 in 1996; 11 (FAO estimate) in 1997 (Source: FAO, *Production Yearbook*).

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units
1,000 dirhams = 1 Libyan dinar (LD).

Sterling, Dollar and Euro Equivalents (30 April 1999)
£1 sterling = 756.7 dirhams;
US $1 = 469.3 dirhams;
€1 = 497.3 dirhams;
100 Libyan dinars = £132.15 = $213.09 = €201.08.

Average Exchange Rate (US $ per Libyan dinar)

1995	2.8894
1996	2.7653
1997	2.6210

Note: In March 1986 the value of the Libyan dinar was linked to the IMF's special drawing right (SDR). Between November 1994 and November 1998 the official mid-point exchange rate was SDR1 = 525 dirhams (LD1 = SDR 1.90476). In early 1999 a rate of LD1 = SDR 1.577 (SDR1 = 634.1 dirhams) was in operation.

BUDGET (projections, LD million)

	1998*	1999
Total revenue	5,311	n.a.
Petroleum revenue	3,633	3,268
Total expenditure	5,311	4,900

* In December 1998 it was reported that petroleum revenue for the year was expected to be LD2,363 million, and that there would be an overall budget deficit of LD650 million.

INTERNATIONAL RESERVES (US $ million at 31 December)

	1990	1991	1992
Gold	152	152	152
IMF special drawing rights	409	461	383
Reserve position in IMF	346	348	439
Foreign exchange*	5,084	4,885	5,361
Total*	5,991	5,847	6,334

* Estimates.

1993 (US $ million at 31 December): IMF special drawing rights 417; Reserve position in IMF 438.
1994 (US $ million at 31 December): IMF special drawing rights 474; Reserve position in IMF 466.
1995 (US $ million at 31 December): IMF special drawing rights 520; Reserve position in IMF 474.
1996 (US $ million at 31 December): IMF special drawing rights 538; Reserve position in IMF 459.
1997 (US $ million at 31 December): IMF special drawing rights 538; Reserve position in IMF 430.
1998 (US $ million at 31 December): IMF special drawing rights 600; Reserve position in IMF 449.

Directory

The Constitution

The Libyan Arab People, meeting in the General People's Congress in Sebha from 2–28 March 1977, proclaimed its adherence to freedom and its readiness to defend it on its own land and anywhere else in the world. It also announced its adherence to socialism and its commitment to achieving total Arab Unity; its adherence to the moral human values; and confirmed the march of the revolution led by Col Muammar al-Qaddafi, the Revolutionary Leader, towards complete People's Authority.

The Libyan Arab People announced the following:

(i) The official name of Libya is henceforth The Socialist People's Libyan Arab Jamahiriya.

(ii) The Holy Koran is the social code in The Socialist People's Libyan Arab Jamahiriya.

(iii) The Direct People's Authority is the basis for the political order in The Socialist People's Libyan Arab Jamahiriya. The People shall practise its authority through People's Congresses, Popular Committees, Trade Unions, Vocational Syndicates, and The General People's Congress, in the presence of the law.

(iv) The defence of our homeland is the responsibility of every citizen. The whole people shall be trained militarily and armed by general military training, the preparation of which shall be specified by the law.

The General People's Congress in its extraordinary session held in Sebha issued four decrees:

The first decree announced the establishment of The People's Authority in compliance with the resolutions and recommendations of the People's Congresses and Trade Unions.

The second decree stipulated the choice of Col Muammar al-Qaddafi, the Revolutionary Leader, as Secretary-General of the General People's Congress.

The third decree stipulated the formation of the General Secretariat of the General People's Congress (see The Government, below).

The fourth decree stipulated the formation of the General People's Committee to carry out the tasks of the various former ministries (see The Government, below).

In 1986 it was announced that the country's official name was to be The Great Socialist People's Libyan Arab Jamahiriya.

The Government

HEAD OF STATE

Revolutionary Leader: Col MUAMMAR AL-QADDAFI (took office as Chairman of the Revolution Command Council 8 September 1969; he himself rejects this nomenclature and all other titles).

Second-in-Command: Maj. ABD AS-SALAM JALLOUD.

GENERAL SECRETARIAT OF THE GENERAL PEOPLE'S CONGRESS

(September 1999)

Secretary-General: AZ-ZINATI MUHAMMAD AZ-ZINATI.

Assistant Secretary-General: ABD AL-HAMID AS-SA'ID AZ-ZINTANI.

Secretary for Women's Affairs: NURA RAMADAN ABU SEFRIAN.

Secretary for Affairs of the People's Congresses: AHMAD MUHAMMAD IBRAHIM.

Secretary for Affairs of the People's Committees: AL-BAGHDADI ALI AL-MAHMUDI.

Secretary for Affairs of the Trade Unions, Syndicates and Professional Associations: ABDALLAH IDRIS IBRAHIM.

Secretary for Foreign Affairs: ABD AR-RAHMAN SHALGAM.

GENERAL PEOPLE'S COMMITTEE

(September 1999)

Secretary-General of the General People's Committee: Eng. MUHAMMAD AHMAD AL-MANQUSH.

Secretary for Finance: Dr MUHAMMAD ABDALLAH BAIT AL-MAL.

Secretary for Foreign Liaison and International Co-operation: OMAR MUSTAFA AL-MUNTASIR.

Secretary of the General Provisional Committee for Defence: ABU BAKR JABER YUNES

Secretary for Justice and Public Security: MUHAMMAD ABU AL-QASIM AZ-ZUAI.

Secretary for Energy: ABDALLAH SALIM AL-BADRI.

Secretary for the Economy and Trade: Dr ABD AL-HAFIZ MAHMUD AZ-ZILITNI.

Secretary for Planning: Eng. JADALLAH AZUZ AT-TALAHI.

Secretary for Culture: JUMAA AL-MAHDI AL-FAZZANI.

Secretary for Industry and Mines: Dr MUFTAH ALI AZUZA.

Secretary for Education and Vocational Training: MAATUQ MUHAMMAD MAATUQ.

Secretary for Youth and Sports: MUHAMMAD MAHMUD AL-HIJAZI.

Secretary for Information and Jamahiri (Mass) Mobilization: FAWZIYA BASHIR SHALABI.

Secretary for Marine Wealth: BASHIR RAMADAN BUJENAH.

Secretary for Agriculture: Dr ALI YOUSUF JUM'AH.

Secretary for Animal Resources: Dr MASUD SA'ID ABU SUWA.

Secretary for Transport and Communications: Eng. 'IZZ AD-DIN MUHAMMAD AL-HINSHIRI.

Secretary for Health and Social Security: Dr HUTAYWISH FARAJ AL-HUTAYWISH.

Secretary for Housing and Utilities: MUBARAK ABDALLAH ASH-SHAMIKH.

Secretary for the Great Man-made River (GMR) Project: ABD AL-MAJID AL-AOUD.

Secretary for the Supervision of Public Accounting and Control: ABD AR-RAHMAN AL-ABARI.

Secretary for Tourism: Eng. AL-BUKHARI SALIM HAWDAH.

As part of a radical decentralization programme undertaken in September 1988, all General People's Committee secretariats (ministries), except those responsible for foreign liaison (foreign affairs) and information, were relocated away from Tripoli. According to diplomatic sources, the former Secretariat for Economy and Trade was moved to Benghazi; the Secretariat for Health to Kufra; and the remainder, excepting one, to Sirte (Surt), Col Qaddafi's birthplace. In early 1993 it was announced that the Secretariat for Foreign Liaison and International Co-operation was to be moved to Ras Lanouf.

Legislature

GENERAL PEOPLE'S CONGRESS

The Senate and House of Representatives were dissolved after the *coup d'état* of September 1969, and the provisional Constitution issued in December 1969 made no mention of elections or a return to parliamentary procedure. However, in January 1971 Col Qaddafi announced that a new legislature would be appointed, not elected; no date was mentioned. All political parties other than the Arab Socialist Union were banned. In November 1975 provision was made for the creation of the 1,112-member General National Congress of the Arab Socialist Union, which met officially in January 1976. This later became the General People's Congress (GPC), which met for the first time in November 1976 and in March 1977 began introducing the wide-ranging changes outlined in the Constitution (above).

Secretary-General: ABD AR-RAZIQ SAWSA.

Political Organizations

In June 1971 the Arab Socialist Union (ASU) was established as the country's sole authorized political party. The General National Congress of the ASU held its first session in January 1976 and later became the General People's Congress (see Legislature, above).

The following groups are in opposition to the Government:

Ansarollah Group: f. 1996.

Fighting Islamic Group: claimed responsibility for subversive activities in early 1996; seeks to establish an Islamic regime.

Islamic Martyrs' Movement (IMM): Spokesman ABDALLAH AHMAD.

Libyan Baathist Party.

Libyan Conservatives' Party: f. 1996.

Libyan Democratic Movement: f. 1977; external group.

Libyan Democratic Authority: f. 1993.

Libyan Democratic Conference: f. 1992.

Libyan Movement for Change and Reform: f. 1994; based in London, United Kingdom.

Libyan National Alliance: f. 1980 in Cairo, Egypt.

Movement of Patriotic Libyans: f. 1997.

National Front for the Salvation of Libya (NFSL): e-mail visitor@nfsl-libya.com; internet http://www.nfsl-libya.com; f. 1981 in Khartoum, Sudan; aims to replace the existing regime by a democratically-elected govt; Leader MUHAMMAD MEGARIEF.

Yemen: POB 4839, Sharia Ubei ben Ka'ab 36, Tripoli; tel. (21) 607472; Ambassador: ALI AIDAROUS YAHYA.

Yugoslavia: POB 1087, Sharia Turkia 14–16, Tripoli; tel. (21) 3334114; Ambassador: RADOMIR BOGDANOVIĆ.

Judicial System

The judicial system is composed, in order of seniority, of the Supreme Court, Courts of Appeal, and Courts of First Instance and Summary Courts.

All courts convene in open session, unless public morals or public order require a closed session; all judgments, however, are delivered in open session. Cases are heard in Arabic, with interpreters provided for aliens.

The courts apply the Libyan codes which include all the traditional branches of law, such as civil, commercial and penal codes, etc. Committees were formed in 1971 to examine Libyan law and ensure that it coincides with the rules of Islamic *Shari'a*. The proclamation of People's Authority in the Jamahiriya provides that the Holy Koran is the law of society.

Attorney-General: SALIM MUHAMMAD SALIM.

SUPREME COURT

The judgments of the Supreme Court are final. It is composed of the President and several Justices. Its judgments are issued by circuits of at least three Justices (the quorum is three). The Court hears appeals from the Courts of Appeal in civil, penal, administrative and civil status matters.

President: MUHAMMAD ALI AL-JADI.

COURTS OF APPEAL

These courts settle appeals from Courts of First Instance; the quorum is three Justices. Each court of appeal has a court of assize.

COURTS OF FIRST INSTANCE AND SUMMARY COURTS

These courts are first-stage courts in the Jamahiriya, and the cases heard in them are heard by one judge. Appeals against summary judgments are heard by the appellate court attached to the court of first instance, whose quorum is three judges.

PEOPLE'S COURT

Established by order of the General People's Congress in March 1988.

President: ABD AR-RAZIQ ABU BAKR AS-SAWSA.

PEOPLE'S PROSECUTION BUREAU

Established by order of the General People's Congress in March 1988.

President: ABD AS-SALAM ALI AL-MIZIGHWI.

Religion

ISLAM

The vast majority of Libyan Arabs follow Sunni Muslim rites, although Col Qaddafi has rejected the Sunnah (i.e. the practice, course, way, manner or conduct of the Prophet Muhammad, as followed by Sunnis) as a basis for legislation.

Chief Mufti of Libya: Sheikh TAHIR AHMAD AZ-ZAWI.

CHRISTIANITY

The Roman Catholic Church

Libya comprises three Apostolic Vicariates and one Apostolic Prefecture. At 31 December 1997 there were an estimated 50,000 adherents in the country.

Apostolic Vicariate of Benghazi: POB 248, Benghazi; tel. (61) 96563; fax (61) 34696; Vicar Apostolic Mgr SYLVESTER CARMEL MAGRO, Titular Bishop of Saldae.

Apostolic Vicariate of Darna: c/o POB 248, Benghazi; Vicar Apostolic (vacant).

Apostolic Vicariate of Tripoli: POB 365, Dahra, Tripoli; tel. (21) 3331863; fax (21) 3334696; Vicar Apostolic Mgr GIOVANNI INNOCENZO MARTINELLI, Titular Bishop of Tabuda.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Libya forms part of the diocese of Egypt (q.v.).

Other Christian Churches

The Coptic Orthodox Church is represented in Libya.

The Press

Newspapers and periodicals are published either by the Jamahiriya News Agency (JANA), by government secretariats, by the Press Service or by trade unions.

DAILIES

Al-Fajr al-Jadid (The New Dawn): POB 2303, Tripoli; tel. (21) 3337106; telex 20235; f. 1969; since January 1978 published by JANA; circ. 40,000.

INSURANCE

Libya Insurance Co: POB 2438, Osama Bldg, Sharia 1 September, Tripoli; tel. (21) 4444151; telex 20071; fax (21) 4444178; POB 648283, Zawia; tel. (23) 29768; fax (23) 29490; f. 1964 (merged with Al-Mukhtar Insurance Co in 1981); cap. LD30m.; all classes of insurance; Chair. Dr MUHAMMAD LUFTI FARHAT.

Trade and Industry

There are state trade and industrial organizations responsible for the running of industries at all levels, which supervise production, distribution and sales. There are also central bodies responsible for the power generation industry, agriculture, land reclamation and transport.

GOVERNMENT AGENCY

Great Man-made River Authority (GMRA): Tripoli; supervises construction of pipeline carrying water to the Libyan coast from beneath the Sahara desert, to provide irrigation for agricultural projects; Sec. for the Great Man-made River Project ABD AL-MAJID AL-AOUD.

DEVELOPMENT ORGANIZATIONS

General National Organization for Industrialization: Sharia San'a, Tripoli; tel. (21) 3334995; telex 200990; f. 1970; a public org. responsible for the devt of industry.

Kufra and Sarir Authority: Council of Agricultural Development, POB 50651, Benghazi; f. 1972 to develop the Kufra oasis and Sarir area in south-east Libya.

CHAMBERS OF COMMERCE

Benghazi Chamber of Commerce, Trade, Industry and Agriculture: POB 208 and 1286, Benghazi; tel. (61) 95142; telex 40077; fax (61) 80761; f. 1956; Pres. Dr SADIQ M. BUSNAINA; Gen. Man. YOUSUF AL-JIAMI; 45,000 mems.

Tripoli Chamber of Commerce, Industry and Agriculture: POB 2321, Sharia Najed 6–8, Tripoli; tel. (21) 3336855; telex 20181; fax (21) 3332655; f. 1952; Pres. ABDALLAH AL-BARONE; Dir-Gen. RAMADAN A. ZEREG; 60,000 mems.

STATE HYDROCARBONS COMPANIES

Until 1986 petroleum affairs in Libya were dealt with primarily by the Secretariat of the General People's Committee for Petroleum. This body was abolished in March 1986, and sole responsibility for the administration of the petroleum industry passed to the national companies which were already in existence. The Secretariat of the General People's Committee for Petroleum was re-established in March 1989 and incorporated into the new Secretariat for the General People's Committee for Energy in October 1992. Since 1973 the Libyan Government has entered into participation agreements with some of the foreign oil companies (concession holders), and nationalized others. It has concluded 85%–15% production-sharing agreements with various oil companies.

National Oil Corporation (NOC): POB 2655, Tripoli; tel. (21) 4446180; telex 61508; f. 1970 as successor to the Libyan General Petroleum Corpn, to undertake joint ventures with foreign cos; to build and operate refineries, storage tanks, petrochemical facilities, pipelines and tankers; to take part in arranging specifications for local and imported petroleum products; to participate in general planning of oil installations in Libya; to market crude oil and to establish and operate oil terminals; Chair. HAMUDA AL-ASWAD.

Agip North Africa and Middle East Ltd—Libyan Branch: POB 346, Tripoli; tel. and fax (21) 3335135; telex 20282; Sec. of People's Cttee A. M. CREUI.

Arabian Gulf Oil Co (AGOCO): POB 263, Benghazi; telex 4440033; Sec. of People's Cttee H. A. LAYASS.

Az-Zawiyah Oil Refining Co: POB 6451, Tripoli tel. (21) 605389; telex 30423; and POB 15715, Zawia; tel. (23) 20125; fax (23) 605948; f. 1973; Gen. Commr HAMUDA M. AL-ASWAD.

Brega Petroleum Marketing Co: POB 402, Sharia Bashir as-Saidawi, Tripoli; tel. (21) 4440830; telex 20090; f. 1971; Sec. of People's Cttee Dr DOKALI B. AL-MEGHARIEF.

International Oil Investments Co: Tripoli; f. 1988 with initial capital of $500m. to acquire 'downstream' facilities abroad; Chair. MUHAMMAD AL-JAWAD

National Drilling and Workover Co: POB 1454, 208 Sharia Omar Mukhtar, Tripoli; tel. (21) 3332411; telex 20332; f. 1986; Chair. IBRAHIM BAHI.

Ras Lanouf Oil and Gas Processing Co (RASCO): POB 1971, Ras Lanouf, Benghazi; tel. (21) 3605177; telex 50613; fax (21) 607924; f. 1978; Chair. MAHMUD ABDALLAH NAAS.

Sirte Oil Co: POB 385, Tripoli; tel. (21) 602052; telex 30120; fax (21) 601487; f. 1955 as Esso Standard Libya, taken over by Sirte Oil Co 1982; absorbed the National Petrochemicals Co in October

1990; exploration, production of crude oil, gas, and petrochemicals, liquefaction of natural gas.

Umm al-Jawaby Petroleum Co: POB 693, Tripoli; Chair. and Gen. Man. MUHAMMAD TENTTOUSH.

Waha Oil Co: POB 395, Tripoli; tel (21) 3331116; telex 20158; fax (21) 3337169; Sec. of People's Cttee SALEH M. KAABAR.

Zueitina Oil Co: POB 2134, Tripoli; tel. (21) 3338011; telex 20130; fax (21) 3339109; Chair. of People's Cttee Dr N. A. ARIFI.

TRADE UNIONS

General Federation of Producers' Trade Unions: POB 734, Sharia Istanbul 2, Tripoli; tel. (21) 4446011; telex 20229; f. 1952; affiliated to ICFTU; Sec.-Gen. BASHIR IHWIJ; 17 trade unions with 700,000 mems.

General Union for Oil and Petrochemicals: Tripoli; Chair. MUHAMMAD MITHNANI.

Pan-African Federation of Petroleum Energy and Allied Workers: Tripoli; affiliated to the Organisation of African Trade Union Unity.

Transport

Department of Road Transport and Railways: POB 14527, Sharia Az-Zawiyah, Secretariat of Communications and Transport Bldg, Tripoli; tel. (21) 609011; telex 20533; fax (21) 605605; Dir-Gen. Projects and Research MUHAMMAD ABU ZIAN.

RAILWAYS

There are, at present, no railways in Libya. In mid-1998, however, the Government invited bids for the construction of a 3,170 km-railway, comprising one branch, 2,178 km in length, running from north to south, and another, 992 km in length, running from east to west. The railway may eventually be linked to other North African rail networks.

ROADS

The most important road is the 1,822-km national coast road from the Tunisian to the Egyptian border, passing through Tripoli and Benghazi. It has a second link between Barce and Lamluda, 141 km long. Another national road runs from a point on the coastal road 120 km south of Misurata through Sebha to Ghat near the Algerian border (total length 1,250 km). There is a branch 247 km long running from Vaddan to Sirte (Surt). A 690-km road, connecting Tripoli and Sebha, and another 626 km long, from Ajdabiyah in the north to Kufra in the south-east, were opened in 1983. The Tripoli–Ghat section (941 km) of the third, 1,352-km long national road was opened in September 1984. There is a road crossing the desert from Sebha to the frontiers of Chad and Niger.

In addition to the national highways, the west of Libya has about 1,200 km of paved and macadamized roads and the east about 500 km. All the towns and villages of Libya, including the desert oases, are accessible by motor vehicle. In 1996 Libya had 47,590 km of paved roads.

SHIPPING

The principal ports are Tripoli, Benghazi, Mersa Brega, Misurata and as-Sider. Zuetina, Ras Lanouf, Mersa Hariga, Mersa Brega and as-Sider are mainly oil ports. A 30-inch crude oil pipeline connects the Zelten oilfields with Mersa Brega. Another pipeline joins the Sarir oilfield with Mersa Hariga, the port of Tobruk, and a pipeline from the Sarir field to Zuetina was opened in 1968. A port is being developed at Darnah. Libya also has the use of Tunisian port facilities at Sfax and Gabès, to alleviate congestion at Tripoli.

At 31 December 1997 Libya's merchant fleet consisted of 151 vessels, with a combined displacement of 686,160 grt.

General National Maritime Transport Co: POB 80173, Sharia Ahmad Sharif 2, Tripoli; tel. (21) 3333155; telex 20208; fax (21) 6361664; f. 1970 to handle all projects dealing with maritime trade; Chair. SAID MILUD AL-AHRASH.

CIVIL AVIATION

There are four civil airports: Tripoli International Airport, situated at ben Gashir, 34 km (21 miles) from Tripoli; Benina Airport 19 km (12 miles) from Benghazi; Sebha Airport; Misurata Airport (domestic flights only).

Jamahiriya Libyan Arab Airlines: POB 2555, ben Fernas Bldg, Tripoli; tel. (21) 602083; telex 20845; fax (21) 602085; f. 1989 by merger of Jamahiriya Air Transport (which in 1983 took over operations of United African Airlines) and Libyan Arab Airlines (f. 1964 as Kingdom of Libya Airlines and renamed 1969); passenger and cargo services from Tripoli, Benghazi and Sebha to destinations in Europe, North Africa and the Middle East; domestic services throughout Libya; Chief Exec. MUHAMMAD SAAD AISSA.

Tourism

The principal attractions for visitors to Libya are Tripoli, with its beaches and annual International Fair, the ancient Roman towns of Sabratha, Leptis Magna and Cyrene, and historic oases. There were 1.3m. visitor arrivals in 1996, when receipts totalled some US $6m.

Department of Tourism and Fairs: POB 891, Sharia Omar Mukhtar, Tripoli; tel. (21) 3332255; telex 20179; fax (21) 4448385; Head of Fairs MUHAMMAD ELGADI.

Defence

Commander-in-Chief of Armed Forces: Brig. ABU-BAKR YOUNIS JABER.

Chief of Staff of Armed Forces: Brig. MUSTAPHA KHARROUBI.

Commander of the Navy: ABD AL-LATIF AHMAD SHAKSHOUKI.

Estimated Defence Budget (1998): US $1,300m.

Military Service: selective conscription; 1–2 years.

Total Armed Forces (August 1998): 65,000: army (estimated) 35,000; navy 8,000; air force 22,000.

People's Militia: 40,000.

Education

A steady increase in educational facilities has taken place since 1943 and, according to UNESCO estimates, the average rate of adult literacy was 76.2% in 1995 (males 87.9%, females 63%), compared with 60.1% in 1984. In 1992 the number of pupils attending primary and secondary schools was 1,564,798, compared with 1,042,917 (including kindergartens) in 1982/83. The number of teachers rose similarly, from 67,246 in 1982/83 to an estimated 121,636 in 1991. In 1985 there were 4,164 primary schools with 63,122 teachers and 1,011,952 pupils. By 1991 the total number of students at all educational establishments was 1,527,393. Education is officially compulsory for nine years between six and 15 years of age. Primary education begins at the age of six and lasts for nine years. Secondary education, beginning at 15 years of age, lasts for a further three years. In 1992 primary enrolment included 97% of the relevant age-group (males 98%; females 96%). In that year secondary enrolment was equivalent to 97% of pupils in the relevant age-groups. The teaching of French was abolished in Libyan schools in 1983.

In 1958 the University of Libya opened in Benghazi with Faculties of Arts and Commerce, followed the next year by the Faculty of Science near Tripoli. Faculties of Law, Agriculture, Engineering, Teacher Training, and Arabic Language and Islamic Studies have since been added to the University. In 1973 the University was divided into two parts, to form the Universities of Tripoli and Benghazi, later renamed Al-Fatah and Ghar Younis universities. The Faculty of Education at Al-Fatah University became Sebha University in 1983. There is a University of Technology (Bright Star) at Mersa Brega and the Al-Arab Medical University at Benghazi.

MOROCCO

Physical and Social Geography

The Kingdom of Morocco is the westernmost of the three North African countries known to the Arabs as Jeziret al-Maghreb or 'Island of the West'. It occupies an area of 458,730 sq km (177,117 sq miles), excluding Western (formerly Spanish) Sahara (252,120 sq km or 97,344 sq miles), a disputed territory under Moroccan occupation. Morocco has an extensive coastline on both the Atlantic Ocean and the Mediterranean Sea. However, owing to its position and intervening mountain ranges, Morocco remained relatively isolated from the rest of the Maghreb and served as a refuge for descendants of the native Berber-speaking inhabitants of north-west Africa.

According to census results, the population at 2 September 1994 was 26,073,717. About 35% of the total were Berber-speaking peoples, living mainly in mountain villages, while the Arabic-speaking majority was concentrated in towns in the lowlands, particularly in Casablanca (which was the largest city in the Maghreb, with a population of 2,940,623 at the 1994 census), Marrakesh, the old southern capital (population 745,541), Fez (population 774,754), and Rabat (population 1,385,872, including Salé), the modern administrative capital.

PHYSICAL FEATURES

The physical geography of Morocco is dominated by the highest and most rugged ranges in the Atlas Mountain system of north-west Africa. They are the result of mountain-building in the Tertiary era, when sediments deposited beneath an ancestral Mediterranean Sea were uplifted, folded and fractured. The mountains remain geologically unstable and Morocco is liable to severe earthquakes.

In Morocco the Atlas Mountains form four distinct massifs, which are surrounded and partially separated by lowland plains and plateaux. In the north, the Rif Atlas comprise a rugged arc of mountains that rise steeply from the Mediterranean coast to heights of more than 2,200 m above sea level. There, limestone and sandstone ranges form an effective barrier to east–west communications. They are inhabited by Berber farming families who live in isolated mountain villages and have little contact with the Arabs of Tétouan (estimated population, including Larache, 878,000 at mid-1993) and Tangier (579,000) at the north-western end of the Rif chain.

The Middle Atlas lie immediately south of the Rif, separated by the Col of Taza, a narrow gap which affords the only easy route between western Algeria and Atlantic Morocco. They rise to about 3,000 m and form a broad barrier between the two countries. They also function as a major drainage divide and are flanked by the basins of Morocco's two principal rivers, the Oum er-Rbia which flows west to the Atlantic and the Moulouya which flows north-east to the Mediterranean. Much of the Middle Atlas consists of a limestone plateau dissected by river gorges and capped here and there by volcanic craters and lava flows. The semi-nomadic Berber tribes spend the winter in villages in the valleys and move to the higher slopes in summer to pasture their flocks.

To the south the Middle Atlas chain merges into the High Atlas, the most formidable of the mountain massifs, which rises to about 4,000 m and is heavily snow-clad in winter. The mountains extend from south-west to north-east, and rise precipitously from both the Atlantic lowland to the north and the desert plain of Saharan Morocco to the south. There are no easily accessible routes across the High Atlas, but numerous mountain tracks allow the exchange of goods by pack animal between Atlantic and Saharan Morocco. A considerable Berber population lives in the mountain valleys in compact, fortified villages.

The Anti-Atlas is the lowest and most southerly of the mountain massifs. Structurally it forms an elevated edge of the Saharan platform which was uplifted when the High Atlas was formed. It consists largely of crystalline rocks and is joined to the southern margin of the High Atlas by a mass of volcanic lavas which separates the valley of the river Sous, draining west to the Atlantic at Agadir, from that of the upper Draa, draining south-east towards the Sahara. On the southern side of the chain, barren slopes are trenched by gorges from which cultivated palm groves protrude.

Stretching inland from the Atlantic coast is an extensive area of lowland, enclosed on the north, east and south by the Rif, Middle and High Atlas. It consists of the Gharb plain and the wide valley of the River Sebou in the north and of the plateaux and plains of the Meseta, the Tadla, the Rehamna, the Djebilet and the Haouz farther south. Most of the Arabic-speaking people of Morocco live in this region.

CLIMATE AND VEGETATION

Northern and central Morocco experience a 'Mediterranean' climate, with warm, wet winters and hot, dry summers, but to the south this gives way to semi-arid and eventually to desert conditions. In the Rif and the northern parts of the Middle Atlas mean annual rainfall exceeds 75 cm and the summer drought lasts only three months, but in the rest of the Middle Atlas, in the High Atlas and over the northern half of the Atlantic lowland rainfall is reduced to between 40 cm and 75 cm and the summer drought lasts for four months or more. During the summer intensely hot winds from the Sahara, known as the Sirocco or Chergui, occasionally cross the mountains and desiccate the lowland. Summer heat on the Atlantic coastal plain is tempered, however, by sea breezes.

Over the southern half of the Atlantic lowland and the Anti-Atlas semi-arid conditions prevail and rainfall decreases to 20 cm–40 cm per year, becoming very variable and generally insufficient for the regular cultivation of cereal crops without irrigation. East and south of the Atlas Mountains, which act as a barrier to rain-bearing winds from the Atlantic, rainfall is reduced still further and regular cultivation becomes entirely dependent on irrigation.

The chief contrast in the vegetation of Morocco is between the mountain massifs, which support forest or open woodland, and the surrounding lowlands, which tend to be covered only by scrub growth of low, drought-resistant bushes. The natural vegetation has been depleted, and in many places actually destroyed, by excessive cutting, burning and grazing. The middle and upper slopes of the mountains are often quite well wooded, with evergreen oak dominant at the lower and cedar at the higher elevations. The lowlands to the east and south of the Atlas Mountains support distinctive species of steppe and desert vegetation, among which esparto grass and the argan tree (which is unique to south-western Morocco) are conspicuous.

NEWLY-ANNEXED TERRITORY

After independence the Moroccan Government claimed a right to administer a large area of the western Sahara, including territory in Algeria and Mauritania, and the whole of Spanish Sahara. The claim was based on the extent of Moroccan rule in medieval times. The existence of considerable deposits of phosphates in Spanish Sahara and of iron ore in the Algeria-Morocco border region further encouraged Moroccan interest in expansion. After Spanish withdrawal from the Sahara in 1976, Morocco and Mauritania divided the former Spanish Sahara (now known as Western Sahara) between them, with Morocco annexing the northern part of the territory, including the phosphate mines of Bou Craa. In August 1979 Mauritania renounced its share, which was immediately annexed by Morocco and incorporated as a new province, Oued ed-Dahab.

The current population of Western Sahara are of Moorish or mixed Arab-Berber descent with some negro admixture, who depend for their existence on herds of sheep, camels and goats which they move seasonally from one pasture to another. The main tribes are the R'gibat, Uld Delim, Izargien and Arosien. At the census of September 1982 the population of Western Sahara was estimated at 163,868; at the census of September 1994 the population had increased to 252,146. The principal towns in the area are el-Aaiún, es-Smara (formerly Smara) and Dakhla (Villa Cisneros).

The relief of most of the area is gentle. The coast is backed by a wide alluvial plain overlain in the south by extensive sand dunes aligned from south-west to north-east and extending inland over 250 km (155 miles). Behind the coastal plain the land rises gradually to a plateau surface broken by sandstone ridges that reach 300 m in height. In the north-east, close to the Mauritanian frontier, isolated mountain ranges, such as the Massif de la Guelta, rise to over 600 m. There are no permanent streams and the only considerable valley is that of the Saguia el-Hamra which crosses the northernmost part of the area to reach the coast at el-Aaiún north of Cape Bojador. The whole region experiences an extreme desert climate. Nowhere does mean annual rainfall exceed 100 mm and over most of the territory it is less than 50 mm. Vegetation is restricted to scattered desert shrubs and occasional patches of coarse grass in most depressions. Along the coast, summer heat is tempered by air moving inland after it has been cooled over the waters of the cold Canaries current which flows offshore from north to south.

History

Revised for this edition by RICHARD I. LAWLESS

EARLY HISTORY

The Phoenicians and Carthaginians established trading posts on Morocco's coasts, and later the Romans established the province of Mauritania Tingitana in the north of the country. Muslim warriors made raids in AD 684–85 and had conquered Morocco by the eighth century. The Berber tribes of Morocco rallied to Islam, but adopted Kharijite heresies, which, together with Berber particularism, led to a great rebellion in 739–40 and the subsequent fragmentation of Morocco into small Muslim principalities.

Idris, a descendant of the Prophet Muhammad, founded the first of the great ruling Muslim dynasties in Morocco. The regime lasted from 788–89 to 985–86 but, after the death of Idris' son (828–29), it fell into decline. There followed two centuries of internal conflict and tribal revolt, as well as pressures from the Umayyad Caliphate in Spain and from the Fatimid Caliphate in Ifriqiya (Tunisia and eastern Algeria) in 908–69. Subsequently, Morocco entered a glorious era, with the rise of the Almoravid religious movement among the nomadic Berbers of Sanhaja descent. The Almoravids declared Holy War (Jihad) and established control, under Yousuf ibn Tashufin (d. 1106), over all Morocco and much of Algeria, and also annexed Muslim lands in Spain. After the death of Tashufin's successor in 1142, however, Almoravid power declined rapidly.

A new religious force emerged after the death in 1130 of Muhammad ibn Tumart, a religious teacher who had gathered Berber adherents, called Almohads, around himself in the High Atlas. One of his disciples, Abd al-Mumin, led the Almohads in their conquest of the Maghreb as far east as Tripolitania and Cyrenaica in 1151–59. The Almohads prospered in the reign of al-Mansur (1184–98), who brought Muslim Spain under his control, but in 1212 they suffered a serious defeat at the hands of the Spanish Christians, and thereafter the Almohad empire began to decline. A new Berber house, the Merinids, became prominent, and by the mid-13th century they had eclipsed the Almohads. Their influence lasted for about 100 years but their attempts to reconstitute the Almohad empire were largely unsuccessful.

Nomadic tribes of Arab origin had penetrated the Maghreb in the 11th and 12th centuries, along with other Badawi elements during the later Almohad period. With the disintegration of the Merinid state, the Badawi tribes invaded, contributing greatly to the Arabization of the Maghreb. Until 1465 Morocco was prey to internal discords, which persisted until the emergence of the Wattasids, another Berber regime. Their pre-eminence was, however, short-lived, and they failed to halt the Portuguese and the Spaniards, who were establishing outposts along the Moroccan coasts.

A new movement of resistance to the Spaniards and Portuguese was born among the religious confraternities who now led the Jihad against the Christians. The Saadian regime arose, originating in a line of Sharifs from the Saharan side of the Atlas mountains. Ahmad al-Mansur (1578–1603) reorganized the Saadian regime under a system which exempted various Arab tribes from taxation, in return for armed services to the State. Under this system, much depended on the character of the Sultan, as tribal rivalries erupted whenever the central government was weak or ill-directed. The period of Saadian rule, which ended in 1668, was, however, one of considerable prosperity.

Yet another wave of popular religious feeling brought to power the house of Alawi (Hasani or Filali), which originated among the Saharan Berbers and continues to reign in Morocco. Rashid II (1664–72) and Mulai Ismail (1672–1727) firmly established the regime, under which Morocco was more peaceful and united than it was ever to be again until French occupation. Mulai Ismail successfully repelled the Sanhaja Berbers, but a period of uncertainty followed his death, in the course of which one of his sons, Abdullah, was dethroned four times. His son, Sharif Muhammad ibn Abdallah (1757–90), and his immediate successors strove to maintain their power in the face of tribal dissidence and the threat of foreign intervention. However, the French conquest of Algiers in 1830 had repercussions in Morocco. Mulai Abd ar-Rahman, who was then Sultan of Morocco, gave military assistance to Abd al-Qadir, the Algerian Amir who led Muslim resistance to France, and Moroccan troops were later defeated by a French force at Wadi Isly in 1844.

A dispute over the limits of the Ceuta enclave, which had been under Spanish rule since 1580, led to a brief war between Morocco and Spain in 1860. Spanish troops defeated the Moroccans and, under the terms of the peace settlement, the Ceuta enclave was enlarged and Spain was given indemnities. Morocco also granted to Spain a territorial enclave on the Atlantic coast opposite the Canaries (Santa Cruz de Mar Pequeña, now Ifni). In 1884 Spain claimed a protectorate over the coastal zone to the south of Morocco, from Cape Bojador to Cape Blanco, the future Spanish Sahara. The borders between this territory, known as the Río de Oro, and the French possessions to the south and east were agreed between France and Spain in June 1900. A convention between France and Spain in October 1904 assigned to Spain two zones of influence, one in northern and the other in southern Morocco. The southern border of Morocco was set at 27° 40'N, beyond which were Spain's Saharan territories. The Germans now sought to intervene in Moroccan affairs and, at the conference of Algeciras in 1906, they secured the agreement of the Great Powers to the economic 'internationalization' of Morocco. A crisis in 1911, precipitated by the appearance of a German gun-boat off Agadir, ended in a Franco-German settlement whereby the Germans recognized Morocco as a French sphere of influence. In March 1912 Morocco became a protectorate of France, with a French Resident-General empowered to direct foreign affairs, control defence and introduce domestic reforms.

FRENCH RULE

Under an agreement of 1912, Spain retained its zones of influence (somewhat reduced), but these were now granted by France as the protecting power rather than by the Sultan. Gen. Lyautey, the first French Resident-General in Morocco, established effective control, before 1914, over the plains and lower plateaux of Morocco from Fez to the Atlas mountains south of Marrakesh; then, before 1918, over the western Atlas, the Taza corridor as far as Algeria and some areas of the northern highlands. French troops helped Spain to subdue a formidable rebellion (1921–26) of the Rif tribe under Abd al-Krim. This resulted in the subjugation of the northern mountains and allowed the French to concentrate on gaining control of the Middle Atlas and the Tafilalet—a task that was accomplished by 1934, when the pacification of Morocco could be regarded as complete.

From this time, nationalist sentiment began to make itself felt in Morocco. A 'comité d'action marocaine' asked for a limitation of the protectorate. This 'comité' was dissolved in 1937, but nationalist propaganda against the French regime continued. Morocco supported France in 1939 and the Free French movement in 1942. A Party of Independence (Istiqlal), formed in 1943, demanded independence for Morocco, with a constitutional government under Sultan Muhammad ibn Yousuf, who supported the nationalist movement. Although Istiqlal had a large following in the towns, the party had little support among the conservative tribes of Morocco, who favoured Thami al-Glawi, the Pasha of Marrakesh. As a result, tension between the new and the old ideologies in Morocco increased in 1953. Sultan Muhammad ibn Yousuf had quarrelled with the French administration, and in May 1953 a number of Pashas and Cadis, led by al-Glawi, asked for his removal. The Berber tribes began to converge in force on the main urban centres in Morocco, and on 20 August 1953 the Sultan agreed to go into exile in Europe, but not to abdicate. Muhammad ibn Arafa, a prince of the Alawi house, was subsequently recognized as Sultan. The situation remained tense, with assassination attempts on the Sultan in 1953 and 1954, outbreaks of violence throughout Morocco in 1954–55 and intense nationalist fervour.

INDEPENDENCE—1956

Sultan Muhammad ibn Arafa renounced the throne and withdrew to Tangier in 1955. Muhammad ibn Yousuf, on 5 November in that year, was recognized once more as the legitimate Sultan. A joint Franco-Moroccan declaration of 2 March 1956 stated that the protectorate agreement of 1912 was obsolete and that the French Government now recognized the independence of Morocco. A protocol of the same date covered the transitional phase before new agreements could come into effect. The Sultan would now have full legislative powers in Morocco. Henceforth a high commissioner was to represent France in the new State. France also undertook to assist Morocco in the organization of its armed forces and the reassertion of Moroccan control over the zones of Spanish influence. On 12 November 1956 Morocco became a member of the UN.

In August 1956 Istiqlal proclaimed the need to abrogate the Convention of Algeciras (1906), which had 'internationalized' the economic life of Morocco, and also to secure the withdrawal of all foreign troops from the land. Following an international conference in October, Tangier was restored to Morocco. A royal charter of August 1957 preserved the former economic and financial system in force at Tangier, which included a free money market, quota-free trade with foreign countries and a low level of taxation. In 1959 Tangier lost its special status and was integrated financially and economically with Morocco, but a royal decree of January 1962 made it once more a free port. In 1956, prior to independence, Istiqlal had envisaged the creation of a 'Great Morocco' which would include certain areas in south-west Algeria, the Spanish territories in north-west Africa and also Mauritania, together with the French Sudan (i.e. the Republic of Mali). These claims were to be reiterated by Morocco in the following years, beginning in 1960, with an intensive propaganda and diplomatic campaign against Mauritania.

The problem of the Spanish territories in north-west Africa also came to the fore at this time. Spain had recognized the independence of Morocco and had renounced the northern zone of the protectorate assigned to it in Morocco under the terms of the Franco-Spanish convention of 1912. No agreement was reached, however, on the enclaves of Ceuta and Melilla in the north, the enclave of Ifni in the south, or the Spanish territories to the south of Morocco. Since 1934 these territories had been divided in two parts—the northern Saguia el-Hamra and the southern Río de Oro—both administered jointly with Ifni, and separately from the contiguous southern zone of Spain's protectorate in Morocco. Raids on Ifni and the western Sahara by Moroccan irregular forces (the 'Armée de libération du Grand Sahara') caused serious internal unrest during 1956–58, although the Moroccan Government denied responsibility. Negotiations between Morocco and Spain, held in Portugal, led in April 1958 to an agreement whereby Spain, in accordance with the settlement reached in April 1956, relinquished the southern zone of its former protectorate. Spain retained possession of the enclaves and of Saguia el-Hamra and Río de Oro, which were renamed Spanish Sahara and separated from Ifni.

KING HASSAN II AND ROYAL DOMINANCE OF GOVERNMENT

After independence, Istiqlal remained the dominant political force and obtained a majority in the Government. At the same time Sultan Muhammad strengthened the position of the monarchy. In July 1957 Prince Moulai Hassan was proclaimed heir to the throne and in August the Sultan assumed the title of King. Istiqlal's efforts to curb the power of the monarchy were hampered by internal division. Tension between the conservative and radical wings culminated in December 1958, when a Government was formed by Abdullah Ibrahim, a leader of the radical tendency. In the following months Ben Barka led a movement to establish a radical party organization independent of the conservative Istiqlal leadership of Allal al-Fassi. In September 1959 this new organization became an independent party, the Union nationale des forces populaires (National Union of Popular Forces—UNFP). Although the UNFP supported Ibrahim's Government, it was subjected to repressive measures by the police and the army who were under the control of the King or of 'King's men' in the Cabinet. In May 1960 a new Government was formed with the King himself as Prime Minister and Prince Hassan as his deputy. Consequently the UNFP went into opposition. On the death of King Muhammad in February 1961 the Prince ascended the throne as King Hassan II, and also became Prime Minister. In December 1962 a new Constitution, which established a constitutional monarchy and guaranteed personal and political freedoms, was approved by referendum. In January 1963 a cabinet reshuffle deprived the Istiqlal leaders of their posts in the Government, and when elections for the Chamber of Representatives were held in May, both Istiqlal and the UNFP appeared as opposition parties. The King was represented by the newly formed Front pour la défense des institutions constitutionnelles (FDIC). The election, by universal direct suffrage, failed to produce the expected clear majority for the government party, the results being: FDIC 69 seats; Istiqlal 41 seats; UNFP 28 seats; independents six seats. In the following months repressive action was taken against both opposition parties. Several Istiqlal deputies were arrested for protesting against corruption and mismanagement of the election, leading the party to boycott further elections later in the year. Almost all the leaders of the UNFP were arrested in July in connection with an alleged coup attempt. Many of them were held in solitary confinement, tortured and eventually sentenced to death. In November the King relinquished the premiership and installed an FDIC Government to represent his interests.

RELATIONS IN THE MAGHREB

In July 1962 Moroccan troops entered the region south of Colomb-Béchar in Algeria—a region never officially demarcated. The Moroccan press also launched a strong campaign in support of the view that the Tindouf area in the extreme south-west of Algeria should belong to Morocco—a claim of some importance, since the area contained large deposits of high-grade iron ore and also considerable resources of petroleum and natural gas.

An arbitration commission was established by the Organization of African Unity (OAU), and Algeria and Morocco submitted evidence in support of their respective territorial claims. In February 1964 an agreement was reached to establish a demili-

tarized zone. Subsequently there was a swift improvement in relations between the two countries.

Relations between Morocco and Mauritania also became more amicable. The Ministers of Information of the two States met at Cairo in July 1964 during an African Summit Conference. An understanding was reached to bring an end to the 'war' of radio propaganda and criticism hitherto conducted between Morocco and Mauritania.

INTERNAL UNREST

In August 1964 the Moroccan Government was reorganized, although it remained composed largely of FDIC members. The reshuffle was part of an attempt to attract the opposition parties back into a coalition government, since the FDIC had an inadequate majority in the Chamber of Representatives and was itself split into two factions, the Parti socialiste démocratique and the mainly Berber Mouvement populaire (MP). The weakness of the Government contributed to the tension which developed in early 1965, as unemployment and rising prices generated discontent among the urban working class. In June King Hassan proclaimed a state of emergency, whereby he himself assumed full legislative and executive powers. Fresh elections, it was stated, would be held after the Constitution had been revised and submitted to a referendum. In October the UNFP leader, Ben Barka, disappeared in France, never to be seen again. At a subsequent French trial, Gen. Oufkir, one of the King's sturdiest supporters, was found guilty *in absentia* of complicity in Ben Barka's disappearance. Relations between Morocco and France became very strained and there were anti-government protest strikes in Morocco.

In July 1967 King Hassan relinquished the post of Prime Minister in favour of Dr Muhammad Benhima, and in 1967 and 1968 there were eight major cabinet reshuffles. Considerable student and trade union unrest continued during this period, but the King won some approval for extensive nationalization measures and a degree of land redistribution.

There was a gradual return to normal political activity in 1969, albeit under royal direction. Communal elections were held in October, although these were boycotted by opposition parties, and the successful candidates were mostly independents. Following these elections, Benhima was replaced as Prime Minister by Dr Ahmad Laraki, formerly the Minister of Foreign Affairs. A national referendum on a new Constitution was held in July 1970; official figures claimed that over 98% of the votes were affirmative, despite general opposition from the main political parties, trade unions and student organizations. Elections for a new unicameral legislature were held in August. Of the 240 members, 90 were elected by direct suffrage, 90 by local councils and 60 by an electoral college. The results were that 158 elected members were independents, 60 were from the MP and 22 were from opposition parties.

In July 1971 there was an unsuccessful attempt, apparently engineered by right-wing army officers, to overthrow the King and establish a republic. A series of talks ensued between the Government and members of Istiqlal and the UNFP, who had united to form a National Front in July 1970, but the parties refused to compromise on government policies.

In March 1972 a new Constitution was promulgated, under which executive power was vested in the King. Legislative power was held by the Chamber of Representatives, with two-thirds of its members elected by universal suffrage, compared with one-half under the previous Constitution. In late April, however, King Hassan announced that the Chamber would remain dissolved, and that elections for a new Chamber would be postponed until new electoral lists had been prepared.

In August 1972 King Hassan, after surviving another attempt on his life, assumed command of the armed forces and responsibility for defence. He again appealed to opposition parties to co-operate in supervising general elections and to collaborate with the Government. However, both Istiqlal and the UNFP demanded extensive reforms, which were unacceptable to the King. The elections were postponed indefinitely, and a new Cabinet was formed in November without opposition participation.

FOREIGN RELATIONS 1967–72

Morocco continued to press its claim to Spanish-held territories in north-west Africa. In December 1967 the UN General Assembly adopted a resolution urging Spain to hold a referendum in Spanish Sahara to allow the population to determine its future. Spain accepted the principle of self-determination, but in June 1970 progress was halted, after the violent repression of riots in the Saharan town of el-Aaiún resulted in numerous deaths. Further UN resolutions in support of decolonization were adopted, and Morocco, Mauritania and Algeria each supported a rival Saharan liberation movement. In contrast, the question of Ifni was settled amicably in June 1969, when Spain ceded the small coastal enclave to Morocco.

Morocco abandoned its claim to Mauritania in 1969. Full diplomatic recognition and an exchange of ambassadors followed in 1970, and the two countries signed a treaty of solidarity and co-operation in June. Relations with France improved, and in December 1969 the diplomatic missions in Paris and Rabat were returned to full ambassadorial status for the first time since the Ben Barka affair in 1966.

In May 1970 a final agreement (ratified in May 1973) was reached in the frontier dispute with Algeria, and a joint commission agreed to maintain the boundaries of the colonial period. The disputed region of Gara-Djebilet, rich in iron ore deposits, thus became the property of Algeria, but Morocco was to be a partner in a joint company to be established to exploit the deposits.

HASSAN IN CONTROL

In March 1973 the King announced plans for the Moroccanization of sectors of the economy within two years. He also reinforced his traditional support in the rural areas by ordering the confiscation of foreign-owned lands and their redistribution among the peasantry. Since most of the landowners were French, relations between France and Morocco deteriorated again and French aid was suspended for a year, pending an agreement on compensation. In the same month relations with Spain became strained when Morocco announced the extension of its territorial waters from 12 to 70 nautical miles; in January 1974 the two countries concluded an agreement allowing a limited number of Spanish vessels to fish in Moroccan waters. Hassan's new nationalist policy also led Morocco to take a more active part in the Arab-Israeli conflict. In February 1973 troops were dispatched to the Syrian front, and during the October War further detachments were sent to Egypt; this resulted in a partial *rapprochement* between Morocco and the more extremist Arab states.

Political trials continued in early 1974. Further arrests followed the discovery, in February, of a plot to free prisoners in Kénitra jail. The King, however, made some conciliatory gestures: in March he announced plans for university and judicial reforms, and in April several imprisoned UNFP leaders were released.

Meanwhile, Morocco pursued its claim to Spanish Sahara. The development of phosphate mining in the territory presented a threat to the Moroccan economy, which was itself dependent on revenue from phosphate exports. In July 1974 the King held consultations with military chiefs, ministers and leaders of all the political parties to prepare an international campaign for the annexation of the Sahara. Discussions with Spain in August were inconclusive, and Morocco and Mauritania rejected Spain's proposal to hold a referendum in the Sahara under UN supervision. In October the issue was debated in the UN General Assembly at the initiative of Morocco. Two months later the Assembly formally approved Morocco's suggestion that the matter be brought before the International Court of Justice (ICJ) in The Hague, and the UN Special Committee on Colonialism was instructed to send a mission to the territory. The referendum that Spain had proposed was to be postponed.

In the atmosphere of national unity produced by the Sahara issue in the second half of 1974 there was a revival of political activity. New parties were formed and existing parties reorganized. Most notably the split in the UNFP (which occurred in mid-1972) was confirmed, as the Rabat section of the party became the Union socialiste des forces populaires (USFP). King Hassan again promised elections for the following year, and once more postponed them indefinitely, but even the opposition

were content to give priority to the Sahara dispute. Although some political prisoners were released, harassment of opposition parties continued and they remained unrepresented in the Government.

SAHARAN TAKE-OVER

After Spain reiterated its readiness to withdraw from Spanish Sahara, it became clear that the chief conflict was between the rival North African countries and liberation movements. In October 1974 Morocco and Mauritania reached a secret agreement on the future division of the territory, which came to light in July 1975. Meanwhile, Algeria became the main target of Moroccan invective for its support of the Frente Popular para la Liberación de Saguia el-Hamra y Río de Oro (Popular Front for the Liberation of Saguia el-Hamra and Río de Oro—the Frente Polisario or Polisario Front), a Saharan liberation movement, founded in 1973, which aimed to establish an independent, non-aligned state in Spanish Sahara.

In October 1975 a UN investigative mission reported that almost all the people whom it had consulted in the territory were 'categorically for independence and against the territorial claims of Morocco and Mauritania'. Two days later the ICJ ruled in favour of self-determination for the Sahrawi people. King Hassan immediately ordered a march of 350,000 unarmed civilians to take possession of Spanish Sahara. The Green March, as it was called, began on 6 November. The Spanish authorities allowed the marchers to progress a short distance across the border before halting their advance. On 9 November Hassan abandoned the march, and on 14 November a tripartite accord was signed in Madrid, whereby Spain agreed to withdraw from Western Sahara (as the territory was redesignated) in 1976 and transfer the territory to a joint Morocco-Mauritanian administration. Algeria reacted angrily, increasing its support for the Polisario Front and making veiled threats of direct military intervention. Moroccan armed forces swiftly occupied the territory, and entered the capital, el-Aaiún, on 11 December. They encountered fierce resistance from Polisario guerrillas, and many Sahrawis fled to the Algerian border to avoid the Moroccan advance. The last Spanish troops left in January 1976, a month before they were due to depart under the terms of the tripartite agreement.

The Moroccan Prime Minister, Ahmad Osman, visited France in January 1976, and French deliveries of military equipment to Morocco were increased. In late January Algerian and Moroccan forces clashed at Amgalla, inside Western Sahara, and there was further fighting in February. On 27 February the Sahrawi Arab Democratic Republic (SADR) was proclaimed, a Saharan government-in-exile was formed in Algeria and in March Morocco severed diplomatic relations with Algeria. The prospect of outright war between the two countries receded, however, as Algeria contented itself with arming and training Polisario guerrillas for raids into Western Sahara and providing camps for civilian refugees from the area, believed to number some 60,000.

In April 1976 Morocco and Mauritania reached agreement on the division of Western Sahara. The greater part of the territory, containing most of the known mineral wealth, was allotted to Morocco, which subsequently divided it into three provinces and absorbed it into the kingdom. By placing strong army garrisons in the territory's few scattered urban settlements, the Moroccans were able to secure them against guerrilla attacks, but incursions by forces of the Polisario Front into the surrounding desert areas could not be prevented. The conveyor belt from the important Bou Craa phosphate mines to the sea was sabotaged, and clashes between the Moroccan army and Polisario forces resulted in heavy casualties on both sides. Polisario units were too strong for Mauritania's very limited armed forces in the south, and Morocco took increasing responsibility for the defence of that region. The two countries formed a joint defence committee in May 1977, following a successful Polisario raid on the Mauritanian mining town of Zouérate, in which two French nationals were killed and six captured. In November King Hassan warned Algeria that Moroccan troops would pursue Polisario forces into Algerian territory if necessary; the Algerian Government retorted that any such incursion would result in war between the two countries.

Tension was increased when France, following the release of the French captives in December 1977, launched three air attacks on the Polisario Front. Although the French Government maintained that its action was for the protection of French nationals working at the Saharan mines, and had been undertaken at the request of Mauritania, it was clear that France favoured the expansion of Moroccan interests in the area rather than those of Algeria, for both economic and strategic reasons. During 1978 intermittent fighting continued, and there was a further French air-raid in April. Proposed meetings of the OAU to discuss the issue were postponed on three occasions, revealing an apparent unwillingness on the part of many African leaders to commit themselves. The intransigence of both Morocco and Algeria was partly due to the fact that their Governments relied to a great extent on their respective Saharan policies for domestic popular support. In Morocco the various opposition parties remained united in support of the King in this respect, despite the enormous expense of the war, which accounted for at least one-quarter of the 1979 budget, and the cost of confirming Morocco's control over the Saharan provinces by installing schools, hospitals and housing for those inhabitants remaining in the area. In January 1978 the Government had announced a Sahara Development Programme, involving proposed expenditure of US $292m., and envisaging the settlement of Saharan nomads and the creation of a sedentary economy.

The war was having an even more severe effect on the Mauritanian economy, and this was the chief reason for the coup which took place there in July 1978. The Polisario Front immediately announced a suspension of its hostilities against Mauritania; it was soon clear that the new President, Lt-Col (later Col) Moustapha Ould Salek, would be willing to renounce the Saharan province altogether, were it not for the 10,000 Moroccan troops still stationed in Mauritania. Salek's coup was followed by renewed diplomatic activity, in which France played an important role. President Félix Houphouët-Boigny of Côte d'Ivoire offered to act as mediator, proposing the creation of a Saharan Republic in the Mauritanian sector of Western Sahara alone, a suggestion which was rejected by all parties. In September King Hassan accepted the proposal by the President of the OAU, President Gaafar Mohammed Nimeri of Sudan, that the Heads of State of six African countries (Guinea, Côte d'Ivoire, Mali, Nigeria, Tanzania and Sudan) should form a committee of 'wise men' to mediate in the dispute. Spain also became increasingly involved, although it had to safeguard its fishing rights in Moroccan waters and, more importantly, its claim to the enclaves of Ceuta and Melilla. Nevertheless, in December 1980, following harassment of Spanish fishing boats by Polisario forces, the Spanish Government gave official recognition to the Polisario Front (though not to the SADR itself) and declared its support for Saharan self-determination.

Fighting continued, and in January 1979 Polisario forces attacked the town of Tan-Tan, some distance inside Morocco's pre-1975 borders. In March the Chamber of Representatives approved the formation of a National Defence Council to formulate defence policy. This council included members of all the main political groups: independents, Istiqlal, the MP, the USFP, the Mouvement populaire constitutionnel et démocratique (MPCD), and the Parti du progrès et du socialisme (PPS). This suggested that the King was seeking to strengthen support for the war by enlarging the number and the variety of those responsible for its direction. At the same time, the Chamber of Representatives showed that its attitude was still belligerent by reaffirming Morocco's right to its Saharan territory, and recommended that the right of pursuit into foreign (i.e. Algerian) territory should be exercised.

In July 1979 Polisario forces broke their cease-fire agreement with Mauritania, and the OAU summit conference passed a resolution urging the holding of a referendum on self-determination in Western Sahara. Mauritania withdrew from the war, signing a peace treaty with the Polisario Front in August and renouncing its territorial ambitions in Western Sahara. King Hassan immediately claimed the former Mauritanian sector, and proclaimed it a Moroccan province, to be known as Oued ed-Dahab. In May 1981 elections were held for representatives from the province to the Moroccan Chamber of Representatives. Nevertheless, outside the towns, only a small area of this newly-annexed territory could strictly be said to be under Moroccan control, and, as a result, Morocco's military resources were considerably stretched. Polisario forces swiftly retaliated, and

numerous battles took place during the next 18 months, often within Morocco's original borders and particularly around the garrison town of Zak. In 1980 Morocco resorted to defensive tactics, concentrating on the *triangle utile* between the towns of el-Aaiún, Bou Craa and es-Smara. This area, containing most of the population and the chief phosphate mines, was to be protected by a line of defences about 600 km long, which was completed in May 1982, and the sand wall was further extended, from Zak to the Mauritanian frontier, in 1984.

In early 1981 there were reports that Polisario, previously based only in Algeria, had established bases in Mauritania, while in March the Mauritanians blamed Morocco for an attempted coup and suspended diplomatic relations. In April Col Muammar al-Qaddafi, the Libyan leader, proposed that Mauritania and Western Sahara should unite, and the two countries issued a joint condemnation of Morocco's occupation of the territory.

DIPLOMATIC INITIATIVES

During the early years of the Western Sahara conflict, the international community gradually recognized the SADR. In November 1979 the UN General Assembly adopted a resolution confirming the legitimacy of the Polisario Front's struggle for independence, and a year later it urged Morocco to end its occupation of Western Sahara. By February 1981, the fifth anniversary of the declaration of the republic, the SADR had been recognized by about 45 Governments. Earlier, at the OAU's annual summit meeting in July 1980, a majority (26 out of 50 countries) approved the admission of the SADR. Morocco, however, argued that a two-thirds majority was necessary, and threatened to leave the OAU if the SADR was admitted. The decision was referred to the committee of 'wise men', who recommended that a cease-fire be established by December, followed by a referendum, to be supervised jointly by the OAU and the UN. In June 1981, at the OAU summit conference, King Hassan agreed for the first time to a referendum, to be held according to OAU recommendations. However, Morocco still refused to negotiate directly with the Polisario Front, and insisted that the proposed referendum be based on the 1974 Spanish census of the area, which enumerated only 74,000 inhabitants. The Polisario Front stipulated that, before the poll could take place, Morocco must withdraw its troops and administration to a considerable distance inside its original borders, and allow refugees living in Algeria to return and participate in the referendum; and that an interim international administration be established. However, the conditions of the referendum were never finally agreed by all the parties concerned.

In October 1981 Moroccan aircraft were shot down near Guelta Zemmour by what Morocco claimed to be Soviet-built SAM-6 missiles. Mauritania was accused of allowing Polisario forces to establish bases on its soil, and of taking part in the attack itself. In response, King Hassan asked the USA for increased military assistance. In February 1982 talks were held between the Moroccan Government and Alexander Haig, then US Secretary of State, as a result of which US military aid to Morocco was tripled. In May the USA and Morocco signed a military co-operation accord providing for the establishment of US military aircraft bases on Moroccan territory in the event of crises in the Middle East or Africa. The accord, initially for six years, was to be automatically renewed unless either country gave two years' notice of cancellation.

The situation deteriorated further during that month, when the SADR delegation was admitted to a meeting of the OAU Council of Ministers in Addis Ababa, Ethiopia. The Moroccan delegation withdrew in protest, and was followed by representatives of 18 other countries. Observers considered this to be the most serious crisis within the OAU since its inception, and it was feared that the organization's very future might be at risk. Subsequent OAU meetings often had to be postponed, since no quorum could be reached. However, in June 1983 the SADR delegation agreed not to attend an OAU summit meeting in Addis Ababa, thus ending the Moroccan boycott. The issue of the continuing conflict in Western Sahara was considered again at this summit, and the meeting adopted a resolution appealing for an immediate cease-fire; for direct negotiations to be held between the Polisario Front and the Moroccan Government; and for the proposed referendum on the issue of self-determination to be held in Western Sahara before the end of the year. Morocco refused to hold talks with the Polisario Front, but once again agreed in principle to a referendum, although King Hassan stated that he would not necessarily consider Morocco to be bound by its result. Morocco and the Polisario Front failed to agree on who should be allowed to vote, and the referendum, scheduled for December 1983, did not take place.

PROGRESS TOWARDS DEMOCRACY

King Hassan won great domestic prestige and popularity from the Saharan take-over. The staging of the Green March had particularly captured the imagination of the Moroccan people. At last, Hassan felt himself secure enough to hold the long-awaited elections. With the exception of the UNFP, the opposition parties agreed to participate, despite the continuation of political trials arising from the March 1973 uprising, which resulted in heavy prison sentences for many of the accused in early 1977. Municipal elections were held in November 1976, followed by provincial elections in January 1977 and elections for professional and vocational chambers in March. At each election, independents, mostly pro-government and conservative, won more than 60% of the seats. Istiqlal and the USFP protested against electoral irregularities and administrative interference. On 1 March four party leaders, including Muhammad Boucetta of Istiqlal and Abd ar-Rahim Bouabid of the USFP, agreed to join the Government as Ministers of State without portfolio, in the hope of ensuring that the national elections would be fairly conducted. Prior to the national elections, press censorship was abolished. In June a new Chamber of Representatives was elected, signifying a return to parliamentary democracy after 12 years of direct rule. Of the Chamber's 264 members, 176 were directly elected on 3 June and 88 chosen by an electoral college on 21 June. Independents won 141 seats (including 60 by indirect election), while Istiqlal and the MP won 49 and 44 respectively, the USFP won 16 and other opposition parties 14. The new Government, announced in October, included former opposition members, notably Muhammad Boucetta as Minister of Foreign Affairs, with seven other members of Istiqlal, four members of the MP and Maati Bouabid of the UNFP, whose party, however, subsequently disowned him. Thus, the King gained the co-operation of the major part of the opposition, and appeared to have succeeded in his plan to combine democracy with strong royal authority.

Among the Moroccan people support for the war appeared solid, but there were signs of discontent which could be partly attributed to the heavy cost of the fighting. During early 1979 there were strikes by many different sections of the work-force, demanding higher wages. On 21 March the Prime Minister, Ahmad Osman, resigned, ostensibly to devote himself to the organization of the newly-formed Rassemblement national des indépendants (RNI; in 1980 the rural branch of this party seceded to form the Parti des indépendants démocrates (PID), which included several Cabinet ministers). He was replaced by Maati Bouabid, the Minister of Justice and a former trade union leader. The new Prime Minister held talks with union leaders, after which wage rises were announced, including an increase of 40% in the minimum wage. Although this provided a temporary respite from social unrest, it could only add to the burden on the economy.

During 1980 attempts were made to cut spending on education, which accounted for nearly one-quarter of the current budget. Student strikes ensued, supported by the USFP and the PPS, and unrest continued in 1981–83. In June 1981 at least 66 people were killed in Casablanca during a general strike against reductions in food subsidies. The USFP and the trade union organization, the Confédération Démocratique du Travail (CDT), were accused of fomenting this unrest. All CDT offices were closed, and union activists were arrested. Following USFP criticism of government Saharan policy in September, its leader Abd ar-Rahim Bouabid, and other senior officials were sentenced to terms of imprisonment, and the two USFP newspapers were suspended.

Further opposition was aroused in October 1981 by the implementation of the constitutional changes approved by referendum in May 1980, particularly the clause extending the maximum period between elections to the Chamber of Representatives

from four to six years: the next parliamentary elections were thus postponed until 1983. The opposition parties were angered by the prolonged life of a body which, they maintained, had been irregularly elected, and in which the majority parties were guilty of absenteeism and passivity. Consequently, all 14 USFP deputies withdrew temporarily from the Chamber of Representatives, and in November all RNI ministers lost their portfolios in a cabinet reshuffle.

Abd ar-Rahim Bouabid was pardoned in March 1982, and CDT and USFP offices were allowed to reopen in April. However, many CDT activists remained in prison and the ban on USFP newspapers was not withdrawn until 1983, when the USFP commenced publication of a new newspaper.

The result of the June 1983 municipal elections, decisively won by pro-government centre-right parties, was challenged by the opposition parties on the grounds of electoral irregularities. A general election for a new Chamber of Representatives was due to take place in September 1983 but was postponed until after the proposed referendum on Western Sahara. However, as the date of the referendum remained uncertain, legislative elections were eventually announced for September 1984. The existing Government reached the end of its six-year mandate in November 1983 and was replaced by a caretaker 'Government of national unity', formed by King Hassan. The new Government was headed by Muhammad Karim Lamrani, an administrator chosen for his lack of party affiliation (who had also been Prime Minister in 1971–72), and included representatives of the six main political parties. It was to be responsible for organizing the general election and for drafting an economic programme for 1984.

In January 1984 the Government announced imminent increases in the prices of basic foodstuffs and in education fees, prompting violent street riots in several northern towns. Troops were summoned to quell the disturbances and, in several instances, opened fire on demonstrators. Unofficial estimates of the number of civilians killed in the riots were as high as 110. The rioting eventually subsided after King Hassan announced the suspension of the planned price increases. An estimated 1,800 people were detained during the riots, many of whom subsequently received prison sentences of up to 10 years.

TEMPORARY IMPROVEMENTS IN REGIONAL RELATIONS

Relations between Morocco and Algeria improved considerably in early 1983, following a summit meeting in February between King Hassan and President Ben Djedid Chadli of Algeria. This meeting resulted in the opening in April of the Morocco-Algeria border to Moroccans resident in Algeria and Algerians resident in Morocco. The *rapprochement* continued in April with a meeting in Tangier of political parties from Morocco, Algeria and Tunisia, at which representatives appealed for the creation of a Great Arab Maghreb—a political and economic union in north-west Africa.

In August 1984 King Hassan and Col Qaddafi of Libya signed the Arab-African Federation Treaty at Oujda, Morocco, which established a 'union of states' between their countries as the first step towards the creation of a Great Arab Maghreb. The Oujda Treaty, as it became known, provided for close economic and political co-operation between Morocco and Libya, and for mutual defence in the event of attack. The treaty was to take effect only after approval by the peoples of each country. A referendum was therefore held in Morocco on 31 August, and the treaty was approved by 99.97% of voters. Libya's General People's Congress backed the agreement unanimously. Following the alliance of Algeria, Tunisia and Mauritania, through the Maghreb Fraternity and Co-operation Treaty, initiated in March 1983, and Mauritania's recognition of the SADR in February 1984, Morocco had found itself isolated in the Maghreb. By signing the treaty of union with Libya, Morocco not only gained an ally (though an unlikely one, considering the contrast between Morocco's pro-Western stance and Libya's radicalism under Qaddafi), but also persuaded Col Qaddafi to end Libyan aid to Polisario.

Polisario responded to the *rapprochement* with Libya by launching the 'Greater Maghreb Offensive', a major military initiative which resulted in widespread fighting in southern Morocco. At the same time, Muhammad Abd al-Aziz, President of the SADR, undertook an extensive African tour to gather support prior to the November 1984 summit of the OAU in Addis Ababa. As a result, the SADR delegation was seated at the summit with few objections from other states. However, Morocco resigned from the OAU in protest, thus becoming the first State to leave the organization.

Although Polisario claimed to have killed 5,673 Moroccan soldiers during 1982–85, decisive victories proved elusive, owing to Morocco's defensive strategy of building a 2,500-km wall of sand, equipped with electronic detectors, to surround Western Sahara. At the UN General Assembly in October 1985, Morocco announced a unilateral cease-fire in Western Sahara on the condition that there was no aggression against territories under its jurisdiction, and that it would be ready to hold a referendum in the territory in January 1986. However, the latter offer was withdrawn in November, after the UN Decolonization Committee supported a settlement of the conflict through direct negotiations between Morocco and the Polisario Front. The Moroccan Minister of Foreign Affairs, Abd al-Latif Filali, announced that Morocco would boycott all UN discussions on Western Sahara, as the Government considered such discussions to be futile. In April and May 1986 a series of proximity talks between Morocco and Polisario took place through the UN and OAU, but failed to reach a resolution. By the end of 1985, Morocco appeared to be increasingly isolated, as 64 countries had officially recognized the SADR, and US-Moroccan relations remained uneasy, following Morocco's signature of the Oujda Treaty with Libya.

DOMESTIC AFFAIRS

About 67% of the electorate participated in elections to the Chamber of Representatives on 14 September 1984. Despite widespread gains by the USFP (which won 36 seats), the legislature was again dominated by the centre-right parties, which together controlled 206 of the 306 seats. In October King Hassan invited the leaders of the six main parties to submit their planned programmes to enable him to choose a coalition Government. Meanwhile, the previous 'Government of national unity' remained in office. King Hassan finally named a new Government in April 1985. The Government, again led by Muhammad Karim Lamrani, was a coalition of four centre-right parties: the Union constitutionnelle (UC), the RNI, the MP and the Parti national démocrate (PND, as the PID had been renamed). It did not include any members of Istiqlal or the USFP, which had participated in the previous Government. The new Government's programme included increased privatization, the decentralization of health and education, and reforms of the civil service and the education system. In September 1986 Lamrani resigned, owing to ill health, and was replaced by the Deputy Prime Minister and Minister of Education, Az ad-Dine Laraki.

Meanwhile, the Government mounted a campaign of repression against organizations which it deemed to pose a threat to internal security. In August 1985 26 members of a left-wing movement, Jeunesse Islamique (Islamic Youth), were charged with plotting to overthrow the monarchy and to establish an Islamic state; in September 14 were sentenced to death. A further 28 people were charged in October with membership of a clandestine fundamentalist group, the Moudjahedine Movement, and with subversive activities. In February 1986 27 left-wing activists were imprisoned for subversion. At their trial, the prosecuting counsel had claimed that the defendants were financed by the Polisario Front. Following Arab antipathy to the Morocco-Israeli initiative in July (see below), the Government introduced anti-terrorist measures in August, including entry restrictions for visitors from Arab countries. In the same month, four foreigners were arrested on charges of possessing explosives and plotting to bomb a synagogue in Casablanca. In November three people were imprisoned for membership of an illegal Marxist-Leninist organization, al-Kaaidiyine, and for disturbing public order.

In late 1986 and early 1987 King Hassan granted a series of pardons to both political and non-political detainees. In October 1987 the authorities announced that the family of Gen. Oufkir, who had staged an abortive coup attempt in 1972, would be allowed to emigrate, after 15 years in detention. However, the family were not released until mid-1996 (see below), although

Muhammad Ait Kaddour, who had been involved in one of the attempts to shoot down the King's aircraft, was pardoned after his return to Morocco.

In 1988 Morocco joined the UN Human Rights Commission and subsequently attempted to improve its reputation concerning human rights. For several years, political prisoners had held sporadic hunger strikes to focus attention on poor prison conditions, and in January 1988 the Paris-based Moroccan human rights group, the Association des Droits de l'Homme au Maroc (ADHM), organized demonstrations in France, Belgium, the Netherlands and the Federal Republic of Germany against alleged abuses of human rights in Morocco. The ADHM also drew attention to clashes between students and government forces in Fez earlier that month. The Moroccan authorities had claimed that one person died and 21 were wounded during the disturbances, but the ADHM alleged that casualties had been much more numerous, and that more than 400 subsequent arrests had been made. In May it was reported that about 12 suspected members of Ilal Amam, who had been arrested during the previous two months in a government campaign against Ilal Amam activists, had been released, along with Abdullah Zaidy, a lawyer whose arrest in December 1987 and sentence to three years' imprisonment for attacking 'sacred institutions' had attracted condemnation from the International Commission of Jurists. In the same month living conditions for political prisoners were reported to have been improved. However, the first meeting of the newly-formed human rights association, the Organisation Marocaine des Droits de l'Homme (OMDH), scheduled for late May, was postponed until the end of June, owing to government objections that some of its members were also members of 'banned extremist groups'. In August 1988 King Hassan ordered the release of 341 detainees to commemorate the 25th anniversary of the exile of Sultan Muhammad ibn Yousuf. The release of political prisoners continued, and about 2,000 were freed in the first six months of 1989. The most notable were 50 extremists, including 31 of those who had been imprisoned in February 1977 for complicity in the alleged scheme to establish a republic under the Jewish mining engineer, Abraham Serfaty. The others, some of whom were religious fundamentalists, had been arrested after the Marrakesh riots of 1984.

The question of political prisoners in Morocco attracted considerable international attention during 1989 and early 1990. Between June 1989 and April 1990 a total of 2,163 political prisoners were released, despite the authorities' denial that any such prisoners existed. In June 1989 six of the Ilal Amam prisoners in Rabat jail went on hunger strike in an abortive attempt to gain the status of political prisoners. They were transferred to hospitals, where one of them died after 64 days.

The imprisonment of Islamist activists provoked condemnation from other quarters, including the Iranian Government, which had seemed unconcerned about the fate of left-wingers. As far back as 1974 Abd as-Salam Yassin had criticized the State for failing to observe Islamic precepts, and later he was imprisoned several times. It was not until 1989, however, that his followers, who had formed a group called Al Adl wa-'l Ihsan (Justice and Charity), seemed to alarm the Government, although the group had been refused official registration in 1982. In November 24 of its members were charged with belonging to an unauthorized organization, holding illicit meetings and possessing documents which threatened state security. The conviction of 17 of the accused and the placing of Sheikh Yassin under house arrest led to demonstrations by the organization's followers and further arrests. Although the King denounced the intolerance of 'non-progressive' fundamentalists and, in particular, their attitude to women, militant fundamentalists dominated the universities. In January 1990 the Government ordered the dissolution of Al Adl wa-'l Ihsan, arrested five of its members who were presumed to be its executive committee and sentenced them to terms of imprisonment ranging from nine months to two years. Four were released on appeal, while the fifth had his sentence commuted. In May thousands of Islamists demonstrated in Rabat; an estimated 2,000 were reportedly arrested, and later released.

In April 1988, prompted in part by World Bank pressure, the King told the Chamber of Representatives that the State should retain sole control of strategic industries and sell the remainder, including sugar refineries, bus services and possibly water and electricity. There was considerable debate over which industries should be retained in the public sector, while the trade unions were concerned about job losses resulting from privatization of state companies. Thus, it was not until October 1989 that real progress was made, following the appointments of a new Governor of the Central Bank and of a minister in charge of privatization. In December the Chamber of Representatives approved a list of 113 enterprises to be privatized, including four leading banks, 37 hotels, the Nador steelworks and the tea and sugar monopolies. The legislation ensured that the monopolies would not fall under foreign control and that there would be opportunities for employees to buy shares in their firms; the process was expected to take six years. While foreign capital would be welcomed, the Government's priority was to create a larger national share-owning class. The moribund Bourse at Casablanca was revived. Morocco already had one of the most liberal economies in the developing world, and there were emerging plans for free-trade zones.

In late 1988 the country suffered a period of industrial unrest, as strikes took place in mines, flour mills, the petroleum refinery at Mohammadia and Air Maroc, until a series of pay settlements restored order. Mahjoub Ben Seddiq, who had led the largest trade union, the Union Marocaine du Travail (UMT), since its foundation in 1955, was re-elected Secretary-General. After the King's Throne Day speech in March 1990 (in which he appealed to the people to accept austerity because of the economic situation), demands for a general strike were ignored, following Government promises that food subsidies would be retained and that grievances would be discussed. On May Day the minimum wage was raised by 10%.

In December 1989 Hassan proposed a two-year postponement of the forthcoming general election, in order to accommodate the referendum to be held in Western Sahara. A referendum which showed that only 0.05% opposed the plan demonstrated the lack of popular interest in party politics at a time when no members of the Cabinet were party politicians. In May 1990, for the first time in the 26-year history of the Chamber of Representatives, the opposition proposed a motion expressing 'no confidence' in the Government, criticizing its record on human rights and the revised budget. Although the motion was defeated by 200 votes to 82, it remained a significant precedent.

In December 1990 more than 20 people were alleged to have been killed in Fez during a general strike, the first in Morocco since 1984. Demonstrators demanded a wage increase commensurate with rapidly rising prices; following two days of rioting, security was increased in Fez and Rabat, where tanks patrolled the streets and security forces guarded government buildings. The Government announced that a commission was to be established to ascertain the number of persons who had been killed and the circumstances of their deaths. In late December more than 100 people were accused of rioting, and received prison sentences. In March 1991 it was estimated by a prominent human rights organization, Amnesty International, that more than 1,500 people had been detained in connection with the riots. It was widely accepted that rising frustration at the country's socio-economic problems had precipitated these events. This was confirmed when the commission published its report, which showed that the outbreak could not be attributed to organized subversion.

Industrial unrest continued throughout 1991 and into 1992. There were numerous strikes by government employees, health workers, teachers, the post office and nationalized industries. There was also violence as in June 1991, when 104 workers were injured in a clash with police at a textile factory. Despite the establishment of a National Council for Youth and the Future (which aimed to provide 300,000 new jobs), the problem of youth unemployment was highlighted in October, when 100,000 out-of-work graduates established a national association to present their case. Wage rises failed to keep pace with inflation, and a government announcement in early 1991 that the minimum wage would be raised by 15% was rejected by two of the trade unions, which demanded that it be doubled to 2,000 dirhams (about US $250) per month. In January 1992 three trade union militants received prison sentences ranging from five to 10 months.

As in other Maghreb countries, many of the unemployed saw their salvation in Islamic fundamentalism. Some of the leaders of the banned group Al Adl wa-'l Ihsan, including Sheikh Yassin, remained in detention, and in April 1991 eight other members were arrested (although subsequently released). In May Adl and other opposition groups participated in a rally in Casablanca, in which some 100,000 demonstrators demanded measures to enshrine the sovereignty of the people and reduce the powers of the King. At the same time, they denounced the proposed referendum in Western Sahara, asserting that the territory should simply be annexed to Morocco. The repression of the Front islamique du salut in Algeria was welcomed by the Government, despite apprehension that local militants might conclude that their aims were not to be achieved by the democratic process. In September the Government approached the imprisoned Adl leaders, offering recognition as a legitimate party on certain conditions, including acceptance of the monarchy and a petition for pardon. However, the leaders made their release a precondition of any negotiations, and the initiative foundered.

Despite the creation (in May 1990) of the Consultative Council on Human Rights, humanitarian organizations continued to criticize the Government. In May 1991 the OMDH, headed by Khalid Nauri, held its inaugural conference, at which speakers denounced the arbitrary treatment, and even torture, of prisoners, and the lack of contact with their families. In July the Government refused to defend its record before a UN panel in Geneva, Switzerland, because of the presence of French television cameras. In March 1991 Amnesty International claimed that 1,500 people had been detained in the previous few months, many for demonstrating against the dispatch of troops to the Gulf War. In September Abraham Serfaty, the longest-serving political prisoner in Africa, was freed and expelled from the country. In the same month 119 prisoners were released, bringing the total for the year to more than 5,000, and the notorious Tazmamart jail, whose existence the Government never admitted, was destroyed. During the winter of 1991–92 most of the remaining prisoners who had been condemned for the attempts on the King's life in 1971 and 1972 were freed. In December representatives of 23 political and humanitarian organizations, meeting in Casablanca, demanded the release of political prisoners and an amnesty for exiles.

AN ACTIVE PERIOD IN FOREIGN AFFAIRS: 1986–92

In 1986 and 1987 Morocco made determined efforts to improve its relations with the USA and other Western nations, in order to increase military and diplomatic support for its policy in Western Sahara. In April 1986 King Hassan, as chairman of the Arab League, suspended a summit meeting, following Libya's insistence that the US raids on Libya in April should be the sole topic on the agenda. In June King Hassan proposed the foundation of a 'Maghreb Community Consultative Committee', comprising Algeria, Morocco and Tunisia, thus isolating Libya.

In July 1986 King Hassan held talks with Shimon Peres, the Israeli Prime Minister, at Ifrane, in Morocco, in an effort to salvage the peace initiative in the Middle East; he thus became the first Arab Head of State to meet an Israeli leader since the late President Anwar Sadat of Egypt. However, the meeting merely highlighted the divisions between Israel and the moderate Arab states on means of resolving the conflict in the Middle East. Arab reaction was mixed: Syria immediately suspended diplomatic relations with Morocco; Libya condemned Morocco; while Egypt, Kuwait and Jordan supported the initiative. Following criticism of the meeting, King Hassan resigned as chairman of the Arab League. In August Libya attempted to improve relations with Morocco by reaffirming support for the Oujda Treaty, but this was abrogated by Hassan at the end of the month. The Moroccan-Israeli initiative and the abrogation of the Oujda Treaty resulted in a dramatic improvement in US-Moroccan relations by September. The two countries held joint military exercises in November, and in July 1987 the US Defense Department approved the sale to Morocco of 100 tanks, suitable for use in desert terrain, along with other military equipment. Morocco re-emphasized its status as a moderate pro-Western Arab state by re-establishing diplomatic relations with Egypt in November, and in January 1988 the USA announced that Morocco was willing to allow US forces to resume 'partial activities' on Moroccan territory.

In the hope of gaining wider European support for its policy in Western Sahara and improved trading links, Morocco applied to join the European Community (EC) in July 1987. In August an accord was reached with the EC, whereby Morocco extended, for a further five months, the 1983 fishing treaty with Spain, which was due to expire at the end of the month. During this period, negotiations on a new fishing agreement were held with the EC, as Spain had joined the Community in 1986. In October, however, the EC rejected Morocco's application for membership, on the grounds that Morocco was not a European country.

King Hassan insisted that the movement towards a unified Maghreb did not preclude Morocco's ambition to join the EC. The European Parliament had on several occasions criticized Morocco for its policy in Western Sahara and for domestic repression, but in May 1988 the West German Minister of Foreign Affairs stated that the reforms which were to be implemented in 1992 would provide Morocco with great opportunities for trade and, consequently, EC aid was substantially increased to US $392m. During a visit to Morocco in March 1989 the British Prime Minister, Margaret Thatcher, said that there was no realistic possibility of Morocco's joining the EC, and in the following month, in Luxembourg at a meeting of the EC's Moroccan Co-operation Council, the Moroccan Minister of Foreign Affairs, Abd al-Latif Filali, blamed Europe for protectionism which had damaged Moroccan exports.

In January 1987 King Hassan proposed the creation of a 'reflection cell' to consider the future of the Spanish African enclaves of Ceuta and Melilla, but Spain showed no willingness to discuss their sovereignty. In July, however, the Spanish Minister of Foreign Affairs visited Rabat and agreed to further discussions on the future of the enclaves. In June 1988 a bilateral trading agreement was signed; in July discussions were held over the installation of an electric cable under the Strait of Gibraltar, and in September an agreement was signed for the construction of a pipeline across Moroccan territory, connecting the petroleum fields of Algeria with consumers in Europe. Although Spain refused to allow Polisario to reopen its office in Madrid, in October it voted against Morocco at the UN debate on Western Sahara; in protest Hassan cancelled an official visit scheduled for November. Morocco could not, however, afford to pursue the quarrel, when Spain was about to assume the presidency of the EC and a visit by Prime Minister Felipe González in May 1989 showed that amicable relations had been restored. In September King Hassan visited Spain and signed accords on defence, including joint military exercises, technology transfers and bilateral summits to be held annually.

Hassan has also played a prominent role in Arab relations. The Arab League summit meeting, held in Casablanca in May 1989, was a considerable triumph for Moroccan diplomacy since it brought Syria, with which diplomatic relations had been restored through the mediation of the Saudi Arabian Crown Prince in January, together with Iraq, while Col Qaddafi of Libya consented to meet President Muhammad Hosni Mubarak of Egypt. The meeting itself was less successful, for there was acrimonious disagreement over Lebanon. However, consensus was reached on the Palestinian *intifada*, which had evoked strong emotions in Morocco. The King was appointed, together with King Fahd of Saudi Arabia and President Chadli of Algeria, to head a Tripartite Arab Committee on Lebanon in order to seek a solution to the Lebanese conflict and to advocate the Palestinian case to the world. In practice the work was realized by their respective Ministers of Foreign Affairs. In April 1990, following a meeting with the King, Yasser Arafat announced Hassan's intention to request the Heads of State Committee to work towards the convening of an international conference on the plight of Palestinians. He also stated that the King intended to visit the capitals of the five permanent members of the UN Security Council to draw their attention to the growing number of Soviet Jews settling in Israel. As Chairman of the Organization of the Islamic Conference (OIC), Hassan was also expected to try to persuade the US Government not to recognize Jerusalem as the capital of Israel.

THE WESTERN SAHARA CONFLICT: 1986–87

During 1986 Polisario forces attacked several foreign fishing vessels in the Atlantic, off the Western Saharan coast, which the Polisario Front terms a 'war zone'. After an outbreak of

fighting between Moroccan troops and Polisario forces in February 1987, Morocco claimed to have repelled a major Polisario offensive near the Algerian border. In the same month the SADR representative in Algiers claimed that an attempted assassination of the SADR President, Muhammad Abd al-Aziz, had been foiled, and alleged that the Moroccan Minister of the Interior was implicated in the plot.

Tension in Western Sahara increased in April 1987, when Morocco completed the construction of its defensive wall on the southern border of the territory, parallel with the Mauritanian frontier. Mauritania protested that its neutrality was threatened, since Polisario troops might have to pass through Mauritanian territory to reach the Atlantic; Algeria expressed concerns and confirmed its support for Mauritania.

A *rapprochement* between Morocco and Algeria was effected in May 1987, at a summit meeting attended by King Hassan and President Chadli of Algeria, under the auspices of King Fahd of Saudi Arabia. The two leaders discussed the conflict in Western Sahara and issued a joint communiqué stating that they would remain in consultation. Before the meeting, Polisario urged Morocco to enter into direct dialogue, and attacked King Fahd's role as mediator. Later in the month, 102 Algerian prisoners in Morocco were exchanged for 150 Moroccan prisoners in Algeria, and King Hassan sent an emissary to President Chadli with proposals to establish two joint commissions to settle various bilateral disputes.

TOWARDS A SOLUTION IN WESTERN SAHARA

Meanwhile, the UN and the OAU made a concerted effort to settle the conflict in Western Sahara. In July 1987 UN missions visited Morocco, Algeria and the Congo to examine the possibility of organizing a UN-sponsored referendum on the question of self-determination in Western Sahara. In the same month there were signs of a *rapprochement* between Polisario and Morocco, following indirect talks in Geneva, under the auspices of the UN and the OAU. Afterwards, King Hassan announced that he would be willing to accept the results of the referendum, and Polisario issued a statement which welcomed some of Hassan's proposals. However, after the talks, there were clashes between Moroccan and Polisario forces near the Mauritanian border.

Polisario announced a three-week truce in November 1987 to coincide with a visit by a UN-OAU technical mission to Morocco, Western Sahara and Polisario refugee camps in Algeria, in order to assess conditions for holding a referendum. Although both Morocco and Polisario agreed on the need for a referendum, Morocco rejected Polisario's demand that the Moroccan armed forces and administration should withdraw from Western Sahara, and that the territory should be placed under an interim UN administration before the referendum. Morocco also refused to hold direct talks with Polisario representatives (a Polisario precondition of negotiations), as officially it continued to view Polisario as a front organization for Algerian mercenaries. In January 1988 Polisario renewed attacks on Moroccan positions in Western Sahara. Meanwhile, the UN announced that it was drafting detailed proposals for a cease-fire and a referendum. In April the President of the OAU, Dr Kenneth Kaunda of Zambia, visited Morocco, Western Sahara and Polisario refugee camps to discuss the conclusions of the UN technical mission. By mid-1988 a total of 71 countries had granted diplomatic recognition to the SADR.

RESTORATION OF DIPLOMATIC RELATIONS WITH ALGERIA AND MOVES TOWARDS MAGHREB UNITY

The conflict in Western Sahara was regarded by the other Maghreb nations as an obstacle to regional unity, and in late 1987 and 1988 they attempted to isolate Morocco, with the aim of forcing the kingdom to negotiate with the Polisario Front. Meanwhile, Morocco reiterated its commitment to Maghreb unity, at meetings with President Chadli of Algeria in November 1987 and with President Zine al-Abidine Ben Ali of Tunisia in February 1988, and took no part in attempts by Algeria, Libya, Mauritania and Tunisia to create a four-country Great Arab Maghreb. However, the emergence of such a power bloc was forestalled by Libya's refusal to sign the Maghreb Fraternity and Co-operation Treaty without the addition of several conditions, and in May King Hassan received the Algerian deputy leader with an invitation from President Chadli for Morocco to attend the Arab League summit in June. Hassan promptly dispatched two of his senior advisers to Algiers to hold further discussions with Chadli, and in mid-May both countries announced the re-establishment of full diplomatic relations. In May 1989 a 1972 treaty with Algeria, on the demarcation of the joint border, was ratified by Morocco. These developments were considered to be a victory for Morocco and an apparent retreat by Algeria from its previous position that diplomatic relations could be resumed only if Morocco held direct talks with Polisario. Following the *rapprochement* with Algeria, Morocco became fully involved in regional efforts to establish a Great Arab Maghreb, and in June 1988 attended the first Maghreb summit.

Diplomatic relations improved further, as it became clear that Hassan and Chadli shared similar views on Maghreb unity. They rejected the Libyan concept of a vast 'superstate' but agreed on practical steps such as the abolition of visas, harmonization in economic, cultural and technical matters and joint ventures, which had been discussed at a bilateral meeting of Algeria and Morocco in October 1988. In February 1989, at a meeting in Marrakesh, of North African Heads of State, the Union of the Arab Maghreb (UAM), grouping Morocco with Algeria, Libya, Mauritania and Tunisia, was inaugurated. The new body aimed to promote unity by allowing free movement of goods, services and labour. King Hassan was appointed the first President of the UAM for the 1989/90 year. In October, at the first meeting of delegates from each national legislature, the former Prime Minister and brother-in-law of King Hassan, Ahmad Othman, was elected President of the UAM Assembly. In the same month the respective Ministers of Foreign Affairs met in Rabat and agreed to establish committees to discuss food, security, economic affairs, human resources and infrastructure. In January 1990 the national employers' organizations discussed closer co-operation, and in February a committee was created to co-ordinate petroleum policies. Plans were also drafted for the introduction of a common identity card which would serve as a travel document within the UAM. The Moroccan Chamber of Representatives endorsed two accords with Algeria, providing for the establishment of joint ventures to consider creating a second gas pipeline to transport Algerian gas through Morocco to Europe, and for closer economic and industrial relations. Morocco also increased its ties with Tunisia and Libya, which the King had visited for the first time in September 1989.

During late 1989 and early 1990 the renewal of the Polisario campaign provoked criticism of the Government within Morocco. Meanwhile, King Hassan stressed that the new alignment would not preclude Morocco's membership of the EC. Further divisions in the UAM surfaced in August 1990, following the invasion of Kuwait (see Kuwait and Iraq chapters). Whereas the other UAM members were slow to react, Morocco issued a vehement condemnation of the invasion, voted for the resolutions at the Arab summit denouncing Iraq's action and agreed to contribute to the pan-Arab force defending Saudi Arabia. In September Hassan was host in Rabat to King Hussein of Jordan and President Chadli of Algeria in an attempt to launch a new peace initiative and avoid armed conflict. Although they failed to persuade the Iraqi President, Saddam Hussain, to withdraw his troops from Kuwait, in October the Iraqi President sent his Minister of Foreign Affairs, Tareq Aziz, and a Deputy Prime Minister, to Rabat in an attempt to find a resolution. When these discussions failed, King Hassan attempted unsuccessfully to convene a summit meeting of the Arab League in November. By December some 1,500 Moroccan troops were stationed in Saudi Arabia, as part of the multinational alliance attempting to enforce Iraq's withdrawal from Kuwait.

However, in late January 1991, after pro-Iraqi demonstrations in Morocco, the Government gave implicit support to a one-day general strike (in an apparent attempt to ease domestic political pressure), organized by the principal Moroccan trade unions to express solidarity with the Iraqi people. Other members of the anti-Iraq alliance expressed concern that the Moroccan Government was not fully committed to the military campaign. In February an estimated 300,000 people demonstrated in Rabat, where they denounced the war against Iraq and demanded that the Moroccan contingent withdraw from the multinational force. The Government stressed that its troops were in the

region to defend Saudi Arabia and not to force the withdrawal of Iraq from Kuwait. By late February the multinational force had liberated Kuwait from Iraqi occupation, and shortly afterwards Morocco, together with its fellow members of the UAM, demanded that the sanctions which the UN had imposed on Iraq in August 1990 be repealed immediately.

UN PEACE PLAN FOR WESTERN SAHARA

In August 1988 the UN Secretary-General, Javier Pérez de Cuéllar, who had visited Morocco in May, announced that a detailed peace plan for Western Sahara had been drafted and appealed for its prompt approval by Morocco and Polisario. The plan contained proposals for a cease-fire and a referendum to determine the status of Western Sahara, while a UN representative with wide-ranging powers and a 2,000-strong UN monitoring force were to oversee their implementation. Prior to the referendum, Morocco was to reduce its presence in Western Sahara from 100,000 to 25,000 troops, who would then be confined to barracks, while Polisario forces (totalling an estimated 8,000) were to withdraw to their bases. Eligibility to vote in the referendum was to be decided by a UN team and was expected to be limited to those enumerated in the 1974 Spanish census of the then Spanish Sahara and to those born in Western Sahara. The referendum was to offer a choice between complete independence for the territory and its integration into Morocco; it was hoped that a further option would be added, offering a large measure of autonomy for the Sahrawi people under the Moroccan crown. On 30 August Morocco and the Polisario Front formally accepted the UN peace plan, although both sides expressed reservations.

However, the UN's expectation that a cease-fire could be secured within a month, and the referendum held within six months, seemed increasingly optimistic. Moreover, the belief that the UN proposals had been unconditionally accepted by both parties was undermined when in early September 1988 the Polisario Front declared that the UN could arrange a cease-fire by the end of 1988 if Morocco was prepared to hold direct talks with its representatives. In mid-September Polisario forces attacked Moroccan troops at the Oum Dreiga section of the defensive wall, near the Mauritanian border. Polisario was reported to have deployed 2,500 men, and there were more than 200 Moroccan casualties. There was speculation that Polisario had launched the offensive to demonstrate its ability to inflict substantial damage on Morocco without Algerian support, and to emphasize the need for Morocco to hold direct negotiations before a solution could be reached. Polisario representatives maintained that all Moroccan troops, administrators and colonists must be withdrawn before the proposed referendum, but two cabinet reshuffles within a month suggested serious differences within their leadership. Meanwhile, the Moroccan Minister of Foreign Affairs, Abd al-Latif Filali, stated that, since both sides had accepted the UN proposal for a cease-fire, there was no need for direct talks. In October the UN General Assembly agreed, by 87 votes to nil with 58 abstentions (which included Morocco and the USA), that direct talks should be held, followed by a cease-fire and a referendum. Pérez de Cuéllar appointed a personal representative, Héctor Gros de Espiel (a Uruguayan), to visit the area in November or December.

In December 1988 there was a significant change in Morocco's stance on Western Sahara, when King Hassan agreed to meet officials of Polisario and the SADR. The meeting, held in Marrakesh in January 1989, was the first direct contact for 13 years and was reported to have been limited to exchanges of goodwill; no negotiations took place. In February Polisario announced a unilateral cease-fire. A second meeting, scheduled to take place in February, was postponed by King Hassan. Polisario put further pressure on Morocco for full negotiations by threatening to take fresh military action. By mid-March no more discussions had taken place, and Polisario resumed hostilities, bringing the six-week cease-fire to an end. In May the Polisario politburo, meeting in Tindouf, sent a message to the King complaining that the projected second round of talks had not been held and asking him to assist the peace process; at the same time it dismissed two of its members for 'infantile attitudes'. At the seventh Polisario Front Congress, held in May, Polisario reiterated its own willingness to pursue direct dialogue, and announced that, as a gesture of goodwill, 200 Moroccan soldiers would be released. Their release, however, was postponed 'for technical reasons'.

In June 1989 Pérez de Cuéllar, who had held talks with the King and the Polisario leadership in Tindouf, and visited Algeria and Mauritania, declared himself 'confident of progress in the near future'. The UN established a technical commission to expedite the peace plan which both sides had formally accepted in August 1988. The issue of entitlement to vote in any referendum on the future of Western Sahara remained unresolved, however, owing to the ambiguous status of the Moroccan settlers in the area, who now outnumbered the original inhabitants by three to two.

King Hassan's vacillation was probably due, in part, to the defection, in August 1989, of Omar Hadhrami (one of the six founders of the Polisario Front), two leading guerrilla commanders and the chief propagandist in Algiers. This seemed to underline splits in the movement between authentic Sahrawis and new members from Algeria and Mauritania. In addition, mass arrests had taken place in the camps, aid from Eastern Europe had ceased, and assistance from other Maghreb states was diminishing, with the result that rationing had been introduced. Hassan welcomed these 'lost sheep' back into the fold, and other defections followed. The Moroccan Government let it be known that it was ready to consider any approach from oil companies seeking concessions to prospect for petroleum deposits in Western Sahara.

In October 1989 Polisario forces launched a series of major attacks, which continued unabated for more than a month. During the offensive, 15 km of the defensive wall facing the Mauritanian border was reportedly destroyed and hundreds of Moroccan soldiers were killed. The Government claimed that only 45 soldiers had been killed. The extent of the onslaught suggested that it could not have been launched without Algerian support. During the campaign the Polisario Front demanded direct talks with the Government, but the King refused to 'negotiate with his own subjects' and announced his readiness to order his troops across international borders in pursuit of Polisario forces.

In March 1990 Pérez de Cuéllar commented that he was pleased to find 'a more propitious atmosphere' than he had encountered during his June 1989 visit, but expressed caution over any practical outcome. In mid-1990 a special UN technical commission visited Western Sahara and the neighbouring states to investigate the practical difficulties of conducting a referendum on the territory's future. In April 1991 the UN Security Council approved a resolution (No. 690) which authorized the establishment of a UN Mission for the Referendum in Western Sahara (MINURSO, see p. 230), which was to implement the plan for a referendum on self-determination, proposed by the UN Secretary-General in 1988. A UN peace-keeping force, comprising contingents from 36 countries (including the five permanent members of the UN Security Council), was to supervise the operation. In May 1991 the Security Council approved plans for a referendum in the disputed territory, which was scheduled to take place in January 1992.

In May 1991 King Hassan visited Western Sahara (his third visit to the region since 1976), where he was met by approximately 100,000 people. In recognition of the contribution of local tribes in the conflict between Moroccan forces and the Polisario Front, the King created a new province, Assa-Zag, on the Algerian border. The royal visit coincided with the preparations for the referendum. It was announced that a peace-keeping force of 200,000 Moroccan troops would be stationed in the area in the interim. In the same month Pérez de Cuéllar met King Hassan to discuss the UN peace plan for Western Sahara. In June Hassan granted an amnesty to all Sahrawi opponents, including members of Polisario and refugees abroad. A further unspecified number of prisoners, including left-wing leader Abraham Serfaty, were released in the following months. It was believed that the amnesty extended to refugees abroad was part of a campaign to persuade Sahrawis who were disillusioned with the Polisario Front to vote for integration into Morocco.

In July 1991 it was announced that a cease-fire in Western Sahara would come into effect on 6 September, from which date the UN special representative, Johannes Manz, would supervise the preparations for a referendum. The Moroccan presence would be reduced from about 190,000 to 65,000 troops, and

MINURSO would commence operations. Morocco rejected any role for the OAU in the area, while Istiqlal and other political parties declared the referendum futile, as the return of the Saharan provinces was irreversible. The Polisario Front promised to abide by the result. Morocco, however, continued a building programme to develop the Saharan provinces—a motorway from Tangier to Nouadhibou (Mauritania), a university and housing at es-Smara.

In August 1991 a significant increase in hostilities developed, with the Polisario Front denouncing Moroccan air strikes, while the Moroccan Government stated that it was engaged in clearing 'no man's land': each side was trying to intimidate rival elements into leaving the area before the cease-fire. In addition, Polisario demanded the release of men allegedly held as prisoners of war: Morocco denied that there were any, but some 200 detainees were nevertheless released.

The main obstacle to holding the referendum was that Manz had prepared an electoral roll of about 74,000, based on the Spanish census of 1974. The Moroccans presented an alternative list of about 120,000 who, they claimed, were natives of the area or their children who had been omitted from the census because, at the time, they were refugees. The UN representatives ruled that, while applications from individuals could be considered, a block list could not. Morocco used this dispute as a pretext to prevent the deployment of MINURSO; the Polisario Front countered by repeating its former claim that the total population was 207,000, of whom 167,000 were in 'liberated areas' or in refugee camps in Algeria and Mauritania. King Hassan appealed for a postponement of the referendum, but, after meeting Polisario representatives, Pérez de Cuéllar insisted that it should go ahead.

The first 100 members of MINURSO flew into el-Aaiún, and the cease-fire took effect, as planned, on 6 September 1991. Within a fortnight, however, each side had accused the other of violating the cease-fire, while the Polisario Front alleged that the Moroccan Minister of the Interior, Driss Basri, was organizing a 'second Green March' of 170,000 people for whom temporary accommodation was being built. There were few signs that Morocco was reducing its military presence. Algerian support for the Polisario Front effectively ceased, and there were important defections from its ranks. Both sides also complained of UN bias. By the end of November MINURSO had only 240 men in the territory. Manz resigned from his post in December. The Polisario Front complained that Morocco was planting mines in 'no man's land' and arresting its supporters. Pérez de Cuéllar appeared to side with Morocco by recommending that a vote be given to anyone whose father had been born in the territory or who had had intermittent residence there for 12 years before 1974. However, this proposal was delayed in the UN Security Council and on 1 January 1992 his successor, Dr Boutros Boutros-Ghali, was asked for a report within two months; it became clear that the vote could not take place before September 1992.

In March 1992 Boutros-Ghali's report concluded that, unless there were progress by the end of May, the whole UN policy should be reconsidered. He also stated that, of the 77 violations of the cease-fire reported by MINURSO, Morocco had been responsible for 75. It was not until the end of the month that a veteran Pakistani diplomat, Yaqub Khan, was appointed as successor to Manz. He visited the area in April, and in May Boutros-Ghali announced that the two sides were to hold indirect talks under his auspices. These took place in Geneva, but proved inconclusive.

In June 1992 Driss Basri visited Western Sahara to encourage the population to enroll on the electoral register. This message was repeated by Ibrahim Hakim, who, as a former Minister of Foreign Affairs of the SADR and ambassador to Algeria, was a significant defector to Morocco in August. Hakim claimed that the Algerian Government was no longer committed to the foundation of an autonomous state in Western Sahara. He was subsequently appointed as the King's itinerant ambassador. Polisario threatened to resume hostilities if the Moroccan referendum on constitutional reform, in September, were extended to Western Sahara. In the event, however, the Ministry of the Interior announced a 100% participation of the electorate in the area, unanimously in favour of the amendments. King Hassan stated that Western Sahara would receive priority in the allocation of development funds and also that Morocco would abide by the result of the UN referendum. Polisario claimed that demonstrations in Western Sahara against the communal elections in October had been forcibly suppressed, but once more the Moroccan Ministry of the Interior announced an overwhelming rate of voter participation in the region.

Following the assassination of Muhammad Boudiaf, the Algerian Head of State, in June 1992, relations between Morocco and Algeria were strained, and the latter was reported to be increasing its aid to Polisario. In December two groups of Sahrawi notables, composed of equal numbers of representatives from within the wall and from the camps at Tindouf in Algeria, travelled to Geneva for a meeting under the chairmanship of Yaqub Khan. The Tindoufis, however, refused to negotiate, claiming that the other delegation had altered its composition. In January 1993 a *rapprochement* between Morocco and Algeria was reported.

The President of the SADR accused the UN Security Council of losing interest in the Western Sahara dispute, and in January 1993 Boutros-Ghali reported that there was little prospect of success from continuing talks on their present basis. In March he suggested three alternatives to the Council: efforts to organize talks could continue; the UN could impose the Pérez de Cuéllar list; or there could be an entirely fresh initiative. Under Resolution 809, the Council decreed that the referendum should take place before the end of 1993, with or without Polisario co-operation, that further efforts should be made to compile a satisfactory electoral list, and that Boutros-Ghali should undertake a new round of negotiations. Morocco accepted the resolution at once and, after some delay, Polisario agreed to do likewise.

In April 1993 Yaqub Khan held talks in Algiers with senior Algerian officials before meeting King Hassan in Rabat in order to prepare a report on the situation in Western Sahara. In May a senior UN diplomat, Erik Jensen, was appointed to begin work on registering voters prior to the referendum. Morocco nevertheless included its 'Saharan provinces' in the kingdom's general election, held in June. Talks in July at el-Aaiún were the first to be held in the disputed territory itself, but proved inconclusive. Morocco had enjoyed a propaganda success on the eve of the talks when a notable Sahrawi chief defected.

According to a communiqué issued by Polisario in Algiers in September 1993, the SADR President, Muhammad Abd al-Aziz, nominated a new Government for the region in that month. Bouchraya Hammoudi Bayoun was appointed to lead the Government, with the uncompromising Grahim Ghali as his Minister of Defence. In the same month it was reported that, of 1,600 UN military personnel appointed to Western Sahara, only 360 were stationed in the territory.

In November 1993 Boutros-Ghali informed the UN Security Council that, because of unresolved differences as to voter eligibility, the referendum could not take place before mid-1994. In March 1994 he announced a new approach, involving three options: to proceed with the referendum by the end of 1994, even if one or both sides in the dispute disgreed; to cancel the referendum and withdraw most of the UN peace-keeping force; or to continue with talks between Morocco and the Polisario Front in order to compile acceptable voter lists. In April Jensen stated that Polisario, after some initial misgivings, had accepted a voter registration plan proposed under Security Council Resolution 907, and that voter registration would begin in June.

In May 1994 Jensen and Driss Basri issued a joint statement that voter registration would start in el-Aaiún in early June; however, the registration of voters did not begin until late August. Morocco had adopted familiar blocking techniques and at first refused to allow the presence of observers from the OAU at the process of identification of voters. After registration began it proved to be a slow process. In November, the date set for the completion of voter registration, the UN announced that plans to hold the referendum in February 1995 would have to be delayed because of problems of identifying potential voters. During a visit to the region at the end of November, Boutros-Ghali warned Morocco and Polisario of serious consequences if progress was not achieved in preparations for the referendum. At a meeting with Muhammad Abd al-Aziz, Boutros-Ghali tried to persuade him of the importance of encouraging voter registration. In December the UN Secretary-General stated that the

referendum could be held in October 1995 but told the Security Council that a major reinforcement of UN personnel was essential if identification and registration of the large number of applications already received were to be completed in time. By February 1995 the UN had identified about 11,000 eligible voters, but differences between Morocco and Polisario over exactly who was eligible to vote remained. Polisario claimed that Morocco had settled large numbers of Moroccans in the disputed territory in order to influence the outcome of the referendum. There were violent clashes between Sahrawis and Moroccans in February during voter registration at the town of Ksabi. Although a delegation from the UN Security Council visited the territory in June to try to resolve the problems concerning voter registration, new disputes resulted in the announcement that the referendum would be delayed until January 1996. Meanwhile, during June and early July Polisario stopped co-operating with the UN commission identifying voters after a Moroccan court sentenced eight young Sahrawis to lengthy terms of imprisonment for organizing a demonstration in support of independence for Western Sahara. The sentences were subsequently commuted after the intervention of King Hassan, and Polisario resumed co-operation over voter identification. In August it was reported that Morocco had opened 40 new voter identification centres, not only in Western Sahara but also in some Moroccan towns and in its embassies abroad.

Muhammad Abd al-Aziz, who was re-elected as Polisario's Secretary-General at the organization's ninth congress held in Tindouf in August 1995, repeated that the struggle for sovereignty and independence would continue whatever the result of the referendum. Algeria reaffirmed its support for Polisario by sending three ministers to the congress but, preoccupied with its own political and economic crises, seemed unlikely to offer much practical assistance. In September it was reported that the SADR Government had been reshuffled and in the following month the first elected Saharan National Assembly, comprising 101 members elected by secret ballot, was inaugurated in Tindouf under the chairmanship of Abd al-Aziz. Polisario persisted with its campaign against Morocco by urging Spanish fishermen to ignore warnings from Morocco not to operate in Atlantic waters off Western Sahara, claiming that the fishing zone belonged to the Sahrawi people.

Progress towards a peaceful solution to the dispute was hampered by the deterioration in relations between Morocco and Algeria. Liamine Zéroual, the Algerian President, appeared to adopt a less flexible position on Western Sahara, and in August 1994 angered Morocco by referring to the territory as 'an illegally occupied country'. In December 1995, after Algeria objected to UN proposals to expedite voter registration in Western Sahara, Morocco responded angrily by obstructing the activities of the UAM of which Algeria currently held the presidency.

At intervals the UN Security Council voted to extend MINURSO's mandate on a short-term basis, although it did not set a new date for the referendum, which failed to take place in January 1996. Meanwhile, the registration process continued to be hampered by disputes between Morocco and Polisario on the identification of voters. In May 1996 the Security Council agreed to renew MINURSO's mandate until the end of November, although it voted to reduce its personnel in the territory. By November MINURSO's military component had decreased from 288 to 230, and the civilian police from 91 to nine. As the identification process remained suspended, the number of civilian posts was reduced from 410 to 170. Despite Polisario's threat to resume the armed struggle, the cease-fire remained in force, although MINURSO reported a number of violations on both sides. Both the Moroccan army and Polisario's forces conducted live-fire exercises, suggesting that they were preparing for combat when MINURSO's mandate expired. Although some progress was made on the exchange of prisoners of war, the identification process did not resume. MINURSO's mandate was extended in November (and again in March and September 1997), and in that month King Hassan confirmed that senior-level direct talks between his representatives and Polisario had taken place in August and September but had failed to reach any conclusive agreements.

In March 1997 the new UN Secretary-General, Kofi Annan, appointed James Baker (a former US Secretary of State) as the UN's special envoy to Western Sahara. Between June and September Baker chaired a series of direct talks between the Moroccan Government and representatives of Polisario in Lisbon (Portugal), London (United Kingdom) and Houston (USA), which he admitted had been difficult, but in mid-September a compromise agreement was reached on the highly contentious issue of who would be eligible to vote in the long-delayed referendum, which was scheduled to be held in December 1998. He appeared to have persuaded Morocco to accept a lower figure for the number of eligible voters than they had originally demanded. Agreement was also reached on the reduction of military forces of the two sides in the disputed territory, the repatriation of refugees and the release of detainees. Prime Minister Filali subsequently declared that the referendum would merely reaffirm Moroccan sovereignty over the Western Sahara, which he insisted would always remain an integral part of the kingdom. In March 1998 King Hassan referred to 'an affirmative referendum', that would put an end to 'an artificial problem' that had prevented Morocco from achieving its 'territorial unity'. Morocco also continued its campaign to weaken support for Polisario in the OAU, and by September 1997 10 member states had withdrawn recognition of the SADR in return for financial assistance from Morocco. In January 1998 changes to the SADR Government appeared to strengthen the position of intransigent members of the Polisario leadership and possibly pointed to a greater control over the movement by Algerian military intelligence. Some observers, however, predicted that if Polisario failed to win the referendum, the movement would split, with much of its leadership defecting to Morocco.

Morocco's new opposition-led Government, which took office in March 1998, declared that its overriding priority was to close the dossier on 'the Moroccan Sahara' by ensuring unambiguous international recognition of the kingdom's sovereignty over this part of its territory. Responsibility for the Western Sahara, however, remained firmly with the palace. In spite of the agreement brokered by James Baker in 1997, voter registration continued to be impeded by disputes, and the process had not been completed by 31 May, the date set by the UN Secretary-General for finalizing electoral lists. In June it was reported that the referendum scheduled for December 1998 had been postponed once again. Following a visit by Kofi Annan to North Africa in December, the UN set out new proposals to clarify the process of identifying which Sahrawis are eligible to vote, and set a new date for the referendum, December 1999. By October 1998 some 147,000 voters had been identified as eligible to take part in the referendum and accepted by both Morocco and Polisario. However, Morocco also insisted on the registration of a further 65,000 members of three contested tribes, on the grounds that they were Sahrawis who had migrated to southern Morocco in the late 1950s in order to escape Spanish colonial rule. Polisario accused Morocco of attempting mass registration and electoral fraud. It was reported that the new UN proposals on voter identification had been accepted by Polisario, but that Morocco had raised a number of objections. During a three-day visit to the territory in December 1998, Prime Minister Youssoufi pledged that the Western Sahara would remain part of Morocco whatever the result of the referendum and announced a series of new infrastructure projects for the territory.

In mid-January 1999 the European Parliament adopted a resolution on the Western Sahara which expressed concern that the peace process was being prolonged and urged Morocco to accept the proposals put forward by the UN Secretary-General to implement the peace plan. Later in January Morocco and Polisario reached an agreement which allowed the recording of tribal groups not already included in the identification process to resume, but the UN Security Council warned Morocco that if it did not co-operate fully MINURSO's mandate would not be renewed and the UN would withdraw from the region. Polisario declared that if the referendum did not take place, the alternative was war. In March King Hassan declared that Morocco remained committed to the UN peace plan for the territory and that the planned referendum would confirm 'the Moroccan nature of our Sahara'. Later in the year it was announced that the referendum would be delayed until July 2000. William Eagleton, a former US ambassador to Syria, replaced Charles Dunbar as head of MINURSO, and Eduardo Vetere assumed responsibility for voter identification.

FOREIGN POLICY IN THE 1990s

Morocco has determined to play a full part in world affairs in the 1990s, and in the first two years of the decade it established diplomatic relations with Namibia, South Africa (the first Arab country to do so), Viet Nam, Estonia, Ukraine and Kyrgyzstan. In August 1990 the Minister of Foreign Affairs, Filali, visited all five permanent members of the UN Security Council, and in the same month, at a meeting in Turkey of OIC Ministers of Foreign Affairs, Morocco presented proposals to increase the group's international scope. In September Morocco and the People's Republic of China signed an agreement on co-operation in energy and mining. In the following year Crown Prince Sidi Muhammad became the most important Moroccan to visit Beijing since the establishment of diplomatic relations in 1958. The visit was returned by the Chinese President, Yang Shangkun. In December 1998 China and Morocco concluded several bilateral economic and cultural agreements during a visit to Beijing by Prime Minister Youssoufi. In October 1991 Morocco was elected to the UN Security Council for a two-year term beginning on 1 January 1992 (it had previously been a member in 1962–63).

Morocco was quick to capitalize on the goodwill that it had generated in the USA by its strong support during the Gulf War. It benefited from both bilateral aid and credits from US-dominated agencies, receiving more from the World Bank than any other country in the Middle East or North Africa. Wheat and vegetable oil were provided on credit, and Morocco acquired 20 used F-16 military aircraft for US \$250m. In return, it supported the US peace initiative in the Middle East, and the King offered Morocco as a venue for the Arab-Israeli peace conference and expressed willingness to receive Prime Minister Itzhak Shamir of Israel. In August 1991 the Chairman of the Palestine Liberation Organization (PLO), Yasser Arafat, and the US Secretary of State, James Baker, visited Morocco within a few days of each other. The King made a fruitful visit to Washington, DC, in September, establishing closer relations with President George Bush, and apparently securing US support for Morocco's policy on Western Sahara. He announced that a US university, specializing in science, would be established in Ifrane, with financial support from the USA and Saudi Arabia. The former US President Ronald Reagan visited the King, to the outrage of Col Qaddafi, who was even more enraged when Morocco, as a member of the UN Security Council, did not veto the imposition of sanctions on Libya for its refusal to surrender the suspects wanted for trial in connection with the 1988 Lockerbie bombing. In August 1992, after Yasser Arafat had visited Rabat to discuss the forthcoming round of Middle East peace negotiations, Filali held talks with Baker in the USA. In December Morocco sent a contingent of 1,250 troops to support 'Operation Restore Hope' in Somalia. Five Moroccan soldiers were killed during incidents in Mogadishu, Somalia, in June 1993. In April 1994 King Hassan held talks with the US Vice-President, Albert Gore, during meetings culminating in the signing of the Final Act of the Uruguay Round of the General Agreement on Tariffs and Trade (GATT), which took place in Marrakesh. Morocco's relations with the USA have remained close. King Hassan strongly condemned the bomb attacks on US embassies in Kenya and Tanzania in August 1998 and Morocco did not protest when the USA carried out retaliatory missile attacks against Afghanistan and Sudan. Criticism was voiced mainly by the CDT and in the left-wing press. During the second half of 1998 visiting US officials included the Secretary of Defense, William Cohen, and the Under-Secretary of State for Economic, Business and Agricultural Affairs, who sought to promote economic integration between Morocco and its neighbours.

As expectations of the UAM diminished, Morocco intensified its efforts to become, if not a full member, at least a 'separate partner' of the EC. In September 1991 a proposal of the European Parliament to send observers to monitor the cease-fire and referendum in Western Sahara was officially denounced in Rabat as 'shameful blackmail'. In January 1992 the European Parliament voted against a four-year programme of aid, worth US \$600m., for Morocco, in protest against alleged human rights abuses. Morocco responded by refusing to renegotiate its fishing agreement with the EC, which was due to expire in February. There were separate visits to Rabat by the EC Commissioners for European Integration and for Mediterranean Policy, to discuss a new relationship based on a free-trade zone. A new fishing agreement was signed in May, whereby Morocco would receive annual compensation of ECU 102m. In December the European Commission approved loans worth \$590m. to Morocco over four years, and the European Investment Bank made a loan to improve the telecommunications system. In March 1993 the EC announced that negotiations on a form of partnership, which would include permanent political dialogue, economic co-operation, financial aid and progressive moves towards a free-trade zone, should start within a year. In December the EC Ministers of Foreign Affairs gave their approval for the European Union (EU), as the EC had become, to negotiate with Morocco on a new Europe-Maghreb association agreement. In February 1996 Morocco signed an economic association agreement as part of the EU's plan for a 'Euro-Mediterranean partnership', leading to the gradual introduction of free trade in manufactured goods with the EU. (When the European Parliament ratified the agreement in June, it insisted on inserting a clause allowing for the accord's suspension should concerns arise regarding the violation of human rights in Morocco.) In November 1995 Morocco participated in the first Euro-Mediterranean conference held in Barcelona, Spain, at which there were appeals for greater EU investment in the Maghreb countries in order to create jobs and provide housing, thus stemming emigration and the growth of Islamist militancy. Morocco offered to host the next conference planned for 1997. Yet despite Morocco's desire for closer ties with Europe, and a series of high-level ministerial visits from EU member states during 1997, drugs-trafficking and fisheries remained sources of friction. Morocco also expressed concern that Eastern Europe rather than the countries of the southern Mediterranean had become the EU's main priority. The commitment to stronger inter-Maghreb relations, Arab-Islamic co-operation and the success of the Middle East peace process that Morocco's first opposition-led Government expressed in March 1998 was little more than formulaic. Its attention was focused primarily on Morocco's relations with the EU. Later in the year a special committee was established to address the problem of illegal immigration to Europe, and tough measures, including much longer prison sentences, were introduced for those convicted of smuggling Moroccan migrants into Europe.

Morocco continued to rely on France for diplomatic support in the UN Security Council and within the EC. In August 1991 Filali visited Paris, and in November 1992 Pierre Bérégovoy became the first French Prime Minister to visit Morocco since 1986. He promised to support Moroccan interests in the EC as far as he could without prejudice to French farmers. His visit was followed by that of the Minister of Foreign Trade, who announced a 50% increase in French aid. In July 1993 Edouard Balladur, the new French Prime Minister, made an official visit to Morocco, where he met King Hassan. In January 1994 the French Minister of the Interior, Charles Pasqua, visited Rabat for talks, which were believed to have covered the crisis in Algeria, Islamist terrorism, immigration, and an offer by the French Government to mediate in the dispute between Morocco and the Polisario Front. Pasqua made a private, but nevertheless controversial, visit to el-Aaiún, the first time that a senior French minister had visited the disputed territory.

After the murder of two Spanish tourists in Marrakesh in August 1994 (see below), the search for suspects spread to France, and in September French police arrested several Islamist activists, including Moroccan, Algerian and French nationals, who were alleged to have been implicated in the incident. It was claimed that they were part of Islamist terrorist cells operating on both sides of the Mediterranean. In October France expelled two Moroccan religious leaders for allegedly collecting funds for arms purchases by Islamist militant groups. In late August Morocco imposed visa requirements on Algerian nationals and others of Algerian origin, including French nationals. However, the visa requirement for French nationals of Algerian origin was quickly withdrawn, following protests from the French authorities. Filali (at that time Prime Minister and Minister of Foreign Affairs and Co-operation) visited Paris in October. An agreement on military co-operation was signed, and France promised to support Morocco in its negotiations with the EU on a partnership accord. In July 1995, moreover,

the new French President, Jacques Chirac, visited Morocco. This was his first official foreign visit in his capacity as Head of State. Chirac emphasized the good relations that existed between the two countries and pledged to assist Morocco in combating Islamist extremism. The Chirac administration subsequently strengthened relations further by assisting with Morocco's external debt and by increasing project aid. In May 1996 King Hassan made a successful state visit to Paris where he was granted the rare honour of addressing the National Assembly, an invitation criticized by France's left-wing parties because of Morocco's questionable record on human rights. After a socialist Government assumed office in May 1997, the new administration sought to show that Morocco remained an important partner in France's Mediterranean strategy. The Minister of Foreign Affairs, Hubert Védrine, visited Rabat in July, followed by the Prime Minister, Lionel Jospin, accompanied by the Minister of the Economy, Finance and Industry, in late December. In March 1998 the Minister of the Interior, Jean-Pierre Chevènement, held talks with his Moroccan counterpart on security issues, notably illegal immigration and drugs-smuggling. Chevènement again emphasized the great importance that France attached to its relations with Morocco which he referred to as a country 'firmly on the path of progress and modernization'. Later in the year, following a strike by several hundred Moroccan seasonal workers in Marseilles, French officials announced that visa requirements for Moroccans who work in France would be simplified. During Prime Minister Youssoufi's visit to Paris in October Morocco and France signed several co-operation agreements and the French Government announced an extra aid package of US $765m. and plans for a second debt-swap agreement between the two countries (see Economy). Youssoufi's visit was generally regarded as a success, but it was reported that some Moroccan ministers had hoped that France's socialist Government would offer more generous financial assistance to Morocco's first 'gouvernement d'alternance'.

Discussions continued with the Spanish Government on a proposed bridge or tunnel link across the Strait of Gibraltar, and official relations remained good. In July 1991, during a visit to Rabat by King Juan Carlos, the two countries signed a treaty of friendship. The sources of former conflict over fishing and immigration remained, but Spain seemed no longer to be concerned about its former colony of Western Sahara. Economic links between Morocco and Spain were strengthened, and Spain overtook France as the principal foreign investor in the kingdom. In July 1992 the two countries signed a 25-year agreement to build and operate the second trans-Mediterranean gas pipeline, extending from Algeria to Spain, via Morocco. In March 1993 the Ministers of Energy of Spain, Morocco and Algeria met in Rabat to discuss details, and a joint Moroccan-Spanish company, the Société pour le Pilotage de la Construction du Gazoduc Maghreb-Europe (Metragaz), was founded, with its headquarters in Casablanca. Despite improving economic links, diplomatic relations became strained in 1994, primarily because of Spanish intransigence over improved access to EU markets for Moroccan agricultural products. Morocco countered with demands for drastic reductions in EU fishing quotas, which largely affect Spanish fishermen, who hold most of the fishing licences for Moroccan waters (see Economy). Relations were not improved when, in September, Morocco criticized Spain at the UN General Assembly for its autonomy plans for the Spanish enclaves of Ceuta and Melilla. Morocco intensified its diplomatic campaign to obtain sovereignty over the territories following the final approval by the Spanish Parliament, in February 1995, of the statutes of autonomy for the two enclaves. In April responsibility for two bomb explosions in Ceuta was claimed by the Organización 21 de Agosto para la Liberación de los Territorios Marroquíes Usurpados, a group which had apparently remained inactive during the previous two decades, and which, the Spanish Government suspected, was now receiving clandestine support from the Moroccan authorities. Relations remained strained through much of 1995, partly because of the prolonged dispute over Spanish fishing rights, but improved in early 1996, following a visit by Prime Minister González of Spain in February. Spain offered financial credits and proposed a joint committee on bilateral disputes, including the sensitive issue of Ceuta and Melilla. Later in the year the new Spanish Prime Minister, José María Aznar, visited Morocco for his first overseas engagement. Crown Prince Sidi Muhammad made a state visit to Spain in May 1997 and was received by King Juan Carlos. In June a ministerial delegation, led by Prime Minister Filali, visited Madrid where talks focused on economic relations. However, the issue of Spanish fishing vessels operating in Moroccan territorial waters remained a source of friction between the two countries and in July Morocco detained a Spanish vessel, claiming that it was fishing illegally. Morocco indicated that it would not review the EU fisheries accord in 1999, an issue primarily affecting Spain. In January 1998 a joint commission was established with Spain to examine security issues, particularly illegal immigration and drugs-smuggling. The Spanish Prime Minister visited Morocco in April for talks with Prime Minister Youssoufi who was keen to emphasize that Morocco and Spain would never go to war over Ceuta and Melilla. Spanish concern over illegal immigration from Morocco was one of the subjects discussed when the Spanish Minister of the Interior, Jaime Mayor Oreja, held talks with his Moroccan counterpart, Driss Basri, in Tangier in August. Meanwhile, relations with Portugal were strengthened following a visit by Aníbal Cavaco Silva, the Portuguese Prime Minister, in May 1994, and the signing of a friendship and co-operation agreement. Cavaco Silva offered his support for Morocco in its negotiations with the EU. Co-operation agreements dealing with civil defence, organized crime, narcotics and visas were signed during a state visit by the Portuguese Prime Minister, António Guterres, in late 1997. Economic co-operation was the key topic under discussion when the Portuguese President, Jorge Sampaio, visited Morocco in May 1998,and Youssoufi's first overseas visit after becoming Prime Minister in March was to Lisbon. Youssoufi made a second visit to Portugal in November when six new co-operation agreements were signed. In February Morocco and Italy signed a security accord covering issues such as illegal immigration, drugs-smuggling and organized crime. In July Italy's Minister of Foreign Affairs, Lamberto Dini, visited Rabat for talks with King Hassan and Prime Minister Youssoufi on economic co-operation. During his visit a new agreement on immigration was concluded.

The UAM itself made halting progress towards its avowed goal of economic union. The Casablanca summit meeting of September 1991 was dominated by the need to agree a common policy for the forthcoming Madrid peace conference, to which it sent a joint delegation. The summit also advocated the creation of a charter of rights for UAM citizens working in Europe. Headquarters of the various UAM institutions were allocated, with Morocco hosting the General Secretariat, Algeria the Consultative Assembly, Mauritania the Supreme Court, Tunisia the Investment Bank, and Libya the Maghreb University and Academy of Science. In December the ministers responsible for foreign affairs, the economy and agriculture met to discuss the co-ordination of policies: there were agreements on the Maghreb Autoroute, and trade union representatives from the five countries presented a joint plea for a social charter. In February 1993, however, Filali announced that, at a recent meeting of the ministers of foreign affairs within the UAM, it had been decided that there should be a 'pause' in the development of a closer union; it was noted that, of the 15 conventions signed since the inauguration of the UAM, none had as yet been fully applied. The organization was further weakened during 1994 by the sharp deterioration in relations between Morocco and Algeria, including the closure of the border between the two countries, and tensions between Morocco and Tunisia over Tunisia's expulsion of several hundred alleged illegal Moroccan immigrants. The Moroccan Government protested that some of its nationals had been maltreated by the Tunisian authorities and there were mutual recriminations. In December 1995 Morocco threatened to obstruct UAM activities, accusing Algeria of interfering in the Western Sahara dispute (see above). Morocco condemned a meeting in January 1996 between the Tunisian and Mauritanian foreign ministers and Liamine Zéroual, who continued to hold the UAM presidency. The meeting had been convened to resolve the dispute with Morocco. Morocco was especially critical that the UAM's Secretary-General, Mohamed Amamou, was present. As Libya did not attend, some observers believed that there was the possibility of renewed polarization in the region if the current UAM crisis was not resolved. The

UAM has been virtually moribund since 1994. However, following the election of Abdelaziz Bouteflika as President of Algeria in April 1999 and the suspension of UN sanctions against Libya in the same month, efforts were made to resuscitate the organization. In May Morocco sent a representative to a meeting of the UAM's 'follow-up' committee, the first to be held for three years. Representatives of all five member states attended the meeting and the first UAM summit meeting for five years is planned to take place before the end of 1999.

Morocco and Algeria restored diplomatic relations in 1988, and the two countries maintained particularly strong links during early 1992, while Muhammad Boudiaf, who had lived in Morocco for more than 20 years, was Algerian Head of State. The two states collaborated on security matters, and the Algerian Government urged the Polisario Front to make peace. Following the assassination of Boudiaf, relations deteriorated, the frontier was closed and Algerian supplies to Polisario were resumed. In January 1993, however, there was a reconciliation. Ambassadors were exchanged and the border was reopened. Relations deteriorated again in 1994, reaching their lowest ebb for many years. When the alleged leader of the Algerian Groupe islamique armé (GIA), Abd al-Hak Layada, stood trial in Algiers, he stated that, before being extradited from Morocco in September 1993, senior Moroccan army officers had asked him to eliminate certain members of the Moroccan opposition living in Algeria, together with the Polisario Secretary-General, Muhammad Abd al-Aziz. In August, after the murder of two Spanish tourists at Marrakesh (see below), the Moroccan Ministry of the Interior issued a public statement alleging that two of the suspects sought for the killings were in the pay of the Algerian secret services, which it accused of sponsoring terrorism to destabilize the kingdom. During a massive security alert following the incident Moroccan police targeted the country's Algerian community in its search for terrorists. The Algerian Government strongly denied that it was sponsoring terrorism against its neighbour, and sealed its border with Morocco. By mid-September, however, the tension between the two countries had eased somewhat, and in a gesture of goodwill Algeria appointed a permanent ambassador to Rabat. In October the Moroccan Minister of Energy and Mines visited Algeria to attend the ceremony marking the formal start of work on the Maghreb–Europe gas pipeline. However, the frontier remained closed and visa requirements for Algerian nationals continued to be enforced. Talks between King Hassan, the Algerian Prime Minister, Mokdad Sifi, and Abd al-Latif Filali, during the OIC summit held in Casablanca in December, failed to make any significant progress. Relations remained strained throughout 1995 and at the end of the year deteriorated sharply as Morocco accused Algeria of interfering in the Western Sahara dispute. Differences between the two countries seriously threatened the future of the UAM (see above). It was widely believed that the appointment of a former Moroccan minister to the presidency of the African Development Bank in August 1995 had also angered Algeria, which regarded the appointment as a further attempt by Morocco to increase its international influence. In December 1996 the Algerian Minister of the Interior held talks in Rabat with his Moroccan counterpart. This was the first meeting of senior ministers since the border was closed in August 1994. The Western Sahara remained a source of tension between the two countries and in February 1998 Gen. Khaled Nezzar, a former Algerian Minister of Defence and a powerful figure in the regime, accused Morocco of demanding that Algeria end its support for Polisario in return for the extradition of Abd al-Hak Layada. Gen. Nezzar also accused the Moroccan authorities of providing covert assistance to armed opposition groups in Algeria and allowing weapons to be smuggled across the border. Morocco strenuously denied the allegations and later in the year, as relations remained tense, the Moroccan Minister of the Interior, Driss Basri, accused Algeria of attempting to destabilize Morocco as preparations were made for the UN referendum on the Western Sahara. In July it was alleged in the Moroccan press that Algerian troops had opened fire in one of the border regions. Prime Minister Youssoufi attempted to achieve a reconciliation by publicly urging that the border between the two countries should be reopened. Morocco's Minister of Territorial Administration subsequently met the leaders of Algeria's principal political parties in Tunis, and in August a meeting took place in Oran between Prime Minister Youssoufi and his Algerian counterpart. Algeria's strong support for Polisario, however, continued to obstruct any significant improvement in relations. The election of Abdelaziz Bouteflika as President of Algeria in April 1999 raised hopes of a *rapprochement*. King Hassan sent a message of congratulations to the new Algerian President and Prime Minister Youssoufi reiterated his appeal that the countries' mutual border should be reopened. President Bouteflika attended the funeral of King Hassan (see below) at the end of July.

In the Arab world as a whole Morocco benefited both from the personal prestige of its monarch as an experienced statesman and from its support for the liberation of Kuwait. In January 1992 Arab Ministers of Foreign Affairs met in Marrakesh to agree a common strategy for the Moscow session of the Middle East peace talks. In October, just before the seventh round of the talks (held in Washington, DC), King Hassan made his most extensive tour of the Islamic world in 30 years, visiting Jordan (for the first time), Syria, Saudi Arabia, the Gulf states and Egypt. In December 1994 Morocco hosted a summit of the OIC at the request of Saudi Arabia, but King Hassan failed to engender any reconciliation between Iraq and Saudi Arabia and Kuwait, despite lengthy negotiations. King Hassan made an official visit to Egypt in May 1998 in order to strengthen bilateral relations. The King and President Mubarak signed a number of economic agreements and, in a joint statement, expressed support for the Palestinian people and urged the USA to continue its efforts to revive the Middle East peace process. In July Morocco again hosted a meeting of the OIC's Jerusalem committee, convened in Casablanca to discuss the stalled Middle East peace process.

In September 1993, following the mutual recognition and signature of a peace accord between Israel and the PLO, the Israeli Prime Minister, Itzhak Rabin, and the Minister of Foreign Affairs, Shimon Peres, visited Rabat for talks with King Hassan. Apart from Egypt, Morocco was the only Arab state to receive the two Israeli leaders. In October a group of Moroccan industrialists, including King Hassan's economic consultant, visited Israel to attend a business conference, the first official Moroccan delegation to visit the Jewish state. Commercial links developed rapidly, and tourism was expected to expand. The Moroccan-Jewish community constitutes more than 10% of the Israeli population, and large numbers visit their country of origin every year. After talks with King Hassan in June 1994, Shimon Peres announced that the two countries had agreed to establish telecommunications links and, at a later date, to establish 'representations of some kind'. In September, as the peace process gained momentum, Morocco and Israel agreed to open 'liaison offices' in Rabat and Tel-Aviv. King Hassan had maintained discreet contacts with Israeli leaders since the 1970s. The latest move towards Israel was criticized by the opposition parties, which urged caution until a comprehensive Middle East peace settlement had been achieved. Morocco also became the first Arab state to announce that it would open a 'liaison bureau' in the Gaza autonomous area. In October 1994, during an historic appearance on Israeli television, King Hassan declared that the peace process would lead to the establishment of full diplomatic relations between Morocco and Israel, but carefully avoided stating when this would take place. He repeated Morocco's position on the restoration of Arab lands and rights, while insisting that the unconditional recognition of Israeli sovereignty within internationally agreed borders was essential. In early 1995 Morocco opened a bureau in Tel-Aviv, making it the third Arab country after Egypt and Jordan to have a representative office in Israel. However, King Hassan continued to stress that full normalization of relations between the two countries would only be achieved after the conclusion of a comprehensive Middle East peace settlement. In May King Hassan hosted talks between Shimon Peres and Yasser Arafat. In February 1996 an Israel-Moroccan chamber of commerce was opened in Tel-Aviv. King Hassan did not attend the emergency Arab League summit in Cairo in June, convened by President Mubarak of Egypt after the new Israeli Prime Minister, Binyamin Netanyahu, and his right-wing Government rejected the 'land for peace' policies of the previous administration. It was reported that the King had taken umbrage when he was not consulted about the planning of the conference. In February

1997, as the Middle East peace process seemed close to collapse, King Hassan indicated that visits to Morocco by either Prime Minister Netanyahu or Israel's Deputy Prime Minister and Minister of Foreign Affairs, David Levy, would not be appropriate. In March the King organized a meeting in Rabat of the OIC's Jerusalem committee, of which he was the Chairman. The committee demanded that the Israeli Government stop construction of the controversial Jewish settlement at Har Homa on the outskirts of Arab East Jerusalem, and appealed to Arab states that had begun to establish relations with Israel to reconsider these links. A threat by Morocco in April to close the Moroccan-based Bureau for Economic Development in the Middle East, established to promote economic relations between the Arab states and Israel, was withdrawn in May after US intervention. Morocco did not close its liaison office in Tel-Aviv despite King Hassan's continued refusal to have any contact with the Netanyahu administration. Although two Euro-Mediterranean summits were scheduled to be held in Marrakesh to discuss co-operation between the EU and Mediterranean countries, including Israel, the meeting planned for October was cancelled by the Moroccan Government; nevertheless, the second went ahead as scheduled in November. Along with most Arab League members, Morocco boycotted the fourth US-sponsored Middle East and North Africa Economic Conference held in Qatar in November, arguing that while the Middle East peace process remained deadlocked there was little to be gained from discussing economic co-operation with Israel. Notwithstanding, commercial and business links between Morocco and Israel remained strong. Bilateral relations remained virtually frozen throughout 1998. In May the Moroccan legislature strongly condemned Israel, and Israel's Minister of Culture, Itzhak Levi, was refused permission to travel through Morocco when he visited the Spanish enclave of Melilla. In October Morocco refused to allow the Israeli Prime Minister to make a stopover in Rabat after attending peace negotiations in the USA. In contrast, King Hassan extended a warm welcome to Palestinian President, Yasser Arafat, who made a short visit to the Moroccan capital on his return from the USA. At the end of July, the new Israeli Prime Minister, Ehud Barak, attended the funeral of King Hassan in Rabat, where he also held informal talks with a number of Arab leaders including Yasser Arafat. Relations between Morocco and Israel were expected to improve under Israel's new Labour-led Government.

THE 1993 GENERAL ELECTION

In October 1991 various opposition parties allied to form the Mouvement national populaire (MNP), an opposition grouping under a veteran Berber politician, Mahjoubi Aherdane; in November Istiqlal and the USFP formed a united front, demanding a separation of powers, a reduction in the minimum voting age to 18 years, new electoral lists and constituency boundaries, and improvements in civil rights. The USFP was, however, weakened by the death of its veteran leader, Abd ar-Rahim Bouabid. His successor, Abd ar-Rahman Youssouf, did not have the same close links with the monarchy. In April 1992 a 16th political party, the Parti de l'avant-garde démocratique socialiste (PADS, a breakaway from the USFP), was legalized. In March a trade union official and USFP politburo member, Nubir Amaoui, was sentenced to two years' imprisonment for his public criticism of the Government. In late 1992 trade union activists demonstrating to demand Amaoui's release were forcibly dispersed. Meanwhile, a prominent member of the ADHM, Ahmad Belaichi, was sentenced to three years' imprisonment for making derogatory remarks about the armed forces. In February 1993 the ADHM alleged that as many as 750 political prisoners were being detained in Morocco. However, in July, following the legislative elections, Amaoui was released, along with the leader of another, pro-Istiqlal, union, Driss Laghnimi.

In April 1992, in an address to a conference of local government bodies, the King declared that parliamentary elections would be preceded by those for regional and local councils. There was disagreement on the text of the electoral law, and the opposition parties (Istiqlal, the USFP, the PADS and the PPS) refused to enter discussions, complaining that their previous recommendations had always been ignored. Hassan, fearing that these parties would boycott the poll (rendering it meaningless), asked them to negotiate with his close associate, Reda Guedira. It was agreed that a new Constitution should be submitted to a referendum. Declaring that his status as a religious, as well as a national, leader empowered him to arbitrate, King Hassan announced the establishment of two committees: one to draft the law and the other to monitor the electoral process. In May he chaired a conference of three ministers and the leaders of five pro-government and four opposition parties, allowing them 10 days to agree on an electoral law. A law comprising 99 articles was approved, and Hassan reiterated his promise of 'transparency'. A commission, chaired by a judge and consisting of members of local authorities and party representatives, was established, with direct access to the King or to Guedira.

In June 1992 the Chamber of Representatives adopted a new electoral law, in spite of a boycott by all opposition parties. The law reduced the minimum voting age to 20 years and the minimum candidate age to 23 from 25. It also made provision for equal funding and media exposure for all parties, and was approved by 162 votes in favour, with two abstentions. The opposition parties had earlier formed the Bloc démocratique (or Koutla Dimocratya), whose expressed aims were: a minimum voting age of 18 years; a minimum age of 21 for candidates; a two-tier voting system; and an independent chairman of a new body to supervise elections.

In July 1992 King Hassan announced preparations for elections to the Chamber of Representatives, and by the end of the month registration had taken place, increasing the electorate from 7m. to 11.7m. voters. In mid-August an interim Government was appointed to ensure the fairness of the political process. The new Prime Minister, Karim Lamrani, had held the office on two previous occasions. Lamrani's Government contained just one member with party political affiliations, although the major portfolios were unchanged.

In an address to the nation in August 1992 King Hassan stated that the revised Constitution would give more responsibilities to the legislature, but emphasized that this did not mean a reduction in the sovereign's prerogatives. Under the proposed changes, ministers would be chosen by the Prime Minister but appointed by the King. A new Constitutional Council of eight members, one-half of them appointed by the King, would be created to arbitrate at the request of one-quarter of the parliamentary deputies. The revised Constitution also reaffirmed the King's commitment to human rights.

On 4 September 1992 the revised Constitution was endorsed by the Moroccan electorate. According to official results, 99.96% voted in favour (increasing to 100% in main cities, and three of the four 'Saharan provinces') and 97.25% of the 11.7m. registered voters participated. The opposition claimed that the results destroyed all credibility in the democratic process. The revised Constitution required the government to reflect the composition of the Chamber of Representatives and to submit its programme to a vote. New legislation would be promulgated automatically one month after approval by the Chamber.

Despite protests over the result of the referendum, the Bloc démocratique contested the communal elections that took place in October 1992. The RNI became the largest party in local government, winning 18.1% of the votes cast and 21.7% of the 22,282 seats contested. The independent list, Sans appartenance politique, which, despite its name, was loyal to the Government, obtained 13.8% of the votes, and the UC 13.4%. Istiqlal emerged as the largest opposition party (with 12.5% of the votes cast), followed by the USFP, which confirmed its strength in Casablanca and Rabat. The opposition parties, however, failed to improve on their performance in the previous communal elections, despite contesting many more seats, and complained of widespread malpractice by local authorities in favour of 'loyalist' parties.

In December 1992 it was announced that the long-awaited national legislative election, the first since 1984, would not be held until 30 April 1993, to allow time for the compiling of new electoral registers. The opposition demanded that the lists should be radically revised, and the boundaries of constituencies redrawn. The authorities stated that the registers would include newly-eligible voters but rejected proposals for any other changes. In February 1993 the four leading opposition parties that formed the Bloc démocratique—Istiqlal, the USFP and two smaller parties, the PPS and the Organisation de l'action

démocratique et populaire (OADP)—withdrew from the multi-party national commission responsible for overseeing the election, and threatened to boycott the poll unless the Government agreed to changes in the electoral law and register, and responded to their demands for the release of all political prisoners. In late March King Hassan announced that the election would be postponed until 25 June, to allow more time to update electoral lists and to redefine electoral boundaries. The opposition parties welcomed the King's decision and now agreed to participate in the election. Following boundary revisions (completed in late April), the Government announced that the number of seats in the Chamber of Representatives had been increased from 306 to 333. Of the total, 222 would be elected by universal adult suffrage, and the remainder by local councils and professional organizations.

At the general election, on 25 June 1993, the two main opposition parties, Istiqlal and the USFP, substantially increased the number of their seats in the Chamber (from 57 in 1984 to 91) to become the leading parties at the end of the first stage of the electoral process. The parties of the Bloc démocratique won a total of 99 seats. Although the five loyalist parties won more seats overall, the UC and the RNI secured fewer seats than in 1984. The UC had been the largest single party at the 1984 election, with 55 seats, but won only 27 seats in 1993. The MP emerged with 33 seats, two more than in 1984. According to official figures, 62.8% of the electorate voted, but observers suggested that the level of participation may have been even lower. Despite reports of abuses by local officials, polling was judged to have been fairer than in previous elections. Nevertheless, the opposition parties demanded that the election of four cabinet ministers be annulled. In the second stage of the election, held on 17 September 1993, the loyalist parties made significant gains, winning 79 of the 111 seats contested. The UC alone won 27 seats, making it the second largest party in the new Chamber (after the USFP). The USFP and Istiqlal gained only 17 seats, and accused the authorities of 'falsifying the popular will.' Abd ar-Rahman el-Youssoufi, the USFP leader, resigned in protest at the attitude of the administration during the election. At the end of the second stage the five loyalist parties had 195 seats in the new Chamber, while the Bloc démocratique had 120 seats, with independents holding the remaining 18 seats.

After the election it was reported that King Hassan had agreed that the USFP and Istiqlal, as the main components of the Bloc démocratique, could form a government on condition that he appointed three principal ministers. The two parties rejected the offer and announced that they would not participate in the new Government. On 9 November 1993 the King therefore asked Karim Lamrani, who had led the interim Government appointed in August 1992 to oversee the election, to form a new Government. This was the fourth occasion on which the 74-year-old Lamrani, one of the most trusted members of the King's inner circle, had been named Prime Minister. Lamrani announced a Government largely composed of technocrats and independents. None of the ministers from the previous administration who had stood for election in June were included. Ten new ministers and five new junior ministers were appointed. Muhammad Saghou replaced Muhammad Berrada as Minister of Finance, a post that Berrada had held for eight years, and Serge Berdugo, appointed Minister of Tourism, became the first Jewish minister since 1957. Omar Azziman, a co-founder of the OMDH, was appointed to the new post of Minister-delegate responsible for Human Rights. The appointment was welcomed by Amnesty International, a persistent critic of Morocco's record in observing human rights. Amnesty appealed to the Government to release all prisoners of conscience, and presented a list of 80 Moroccans and 485 Sahrawis, whom it claimed had 'disappeared.' In late November 1993 the Chamber of Representatives adopted the Government's new programme, promising economic reforms and greater social justice.

In February 1994 there were clashes between radical Islamist and leftist students at Fez University, and courses were suspended indefinitely after the security forces intervened. At the end of the month the Government banned a 24-hour general strike (planned for 25 February), organized by the CDT to protest against declines in the standard of living. On 24 February, after 11 of its activists had been arrested in Casablanca, the CDT announced its decision to postpone the strike. The banning order was condemned by most opposition parties and by the three national trade unions. A number of parliamentary by-elections were held in April, following a judicial decision to reorganize polling after complaints of irregularities during the 1993 legislative election. Of the 14 seats contested by 88 candidates in the by-elections, the USFP won two, and Istiqlal three. The RNI, which had won five of the seats in June 1993, retained only two. Nevertheless, the opposition parties again complained of irregularities during the voting.

FILALI BECOMES PRIME MINISTER AND EFFORTS TO DRAW THE OPPOSITION INTO GOVERNMENT FAIL

On 25 May 1994 Lamrani was replaced as Prime Minister by Abd al-Latif Filali, formerly the Minister of Foreign Affairs and Co-operation and another member of the King's inner circle. Filali, a former diplomat, had first held government office in 1968. The new Prime Minister was expected to promote economic liberalization more vigorously and, within a few days of his appointment, announced that he had begun consultations with all the political parties with members in the Chamber of Representatives about the political, economic and social situation of the country. After a week of consultation, however, Filali made no changes to the list of ministers presented to the King in early June. The Prime Minister retained control of the Ministry of Foreign Affairs and Co-operation. However, Ali Yata, the Secretary-General of the PPS, stated that Filali had proposed the formation of a Government of national consensus within three or four months. In July 1994 King Hassan again appealed to the opposition to join a 'government of change and renewal'. After less than a year in office, the Minister of Finance, Muhammad Saghou, was dismissed in July, for a budget policy deemed to be too lenient, and replaced by Mourad Cherif, hitherto Minister of Foreign Trade. In October Hassan continued his efforts to draw the parliamentary opposition parties into a coalition government by announcing his intention to select a Prime Minister from the ranks of the opposition. He held separate discussions with Muhammad Boucetta, the Secretary-General of Istiqlal, and with Abd al-Wahed Radi of the USFP. The two main opposition parties agreed to the King's proposal in principle and looked to the RNI and to one of the two Berber groups as potential partners in an alternative government. However, talks between the palace and the opposition parties collapsed over the appointment of the Minister of State for the Interior and Information in the new Government. The King insisted on retaining the long-serving Driss Basri in this sensitive post, but the opposition demanded that they be allowed to make their own appointment to the ministry. The King had also insisted that the opposition should support the economic liberalization measures agreed with the IMF, implementing the privatization programme and reducing the budget deficit. In December the opposition parties rejected the Government's 1995 budget, claiming that it would adversely affect living standards and increase unemployment. They also criticized the Government for placing too great a dependence on the private sector in economic development. However, support from the loyalist parties ensured that the budget was accepted by the Chamber of Representatives.

In late January 1995 King Hassan reappointed Filali as Prime Minister and Minister of Foreign Affairs and Co-operation, and once again chose a Government drawn from loyalist parties. In February he approved a new Cabinet drawn from three of the main centre-right parties, the UC, the MP and the PND. The other two main centre-right parties, the RNI and the MNP declined an offer to join the administration but confirmed that they would continue to support the Government in the Chamber of Representatives. Of the 35 cabinet posts, 20 portfolios were allocated to political parties, the rest to palace-appointed technocrats. Yet, despite an attempt to give the political process greater legitimacy by drawing more than one-half of the ministers from elected political parties, the King retained control of appointments to important cabinet posts. Driss Basri remained at the Ministry of the Interior and although he ceded the information portfolio—a new Ministry of Communications was created headed by Driss Alaoui M'Daghri—the King could be assured that internal security would remain tightly controlled. Abd ar-Rahman Saaidi was retained as head of the Ministry of

Privatization, and the politically sensitive posts of housing and education also went to non-party palace appointees. Nine of the portfolios given to political parties went to the UC including tourism, human rights and the important post of finance and foreign investments. The MP received eight posts of which the most important were the portfolios of agriculture and foreign trade, and the PND three posts.

In June 1994 Prime Minister Filali announced that the national television service would begin broadcasting news bulletins in Tamazight, the Berber language. Since August a short news programme has been broadcast on Moroccan television with a different presenter for each of the three main Berber dialects, Tarifit (spoken in the Rif), Tamazight (centre-east) and Tachlahit (south). A few days before the broadcasts began King Hassan declared that Berber 'dialects' were an integral part of Morocco's authenticity and history and would soon be taught in state schools, at least at elementary level. He stressed, however, that Arabic remained the official language as detailed in the Moroccan Constitution. Nevertheless, these developments appeared to mark a major change in policy towards the Berber-speaking minority which constitutes more than one-third of the country's population. Berber cultural associations have flourished in recent years, attracting many young activists. Six of these associations had signed the Agadir charter in August 1991 deploring the marginalization of the Berber language and culture, appealing for the teaching of Tamazight in Moroccan schools and for Tamazight to be given national status in the Constitution alongside Arabic. By 1994 some 11 associations had signed the charter. In May 1994, after a peaceful Berberist demonstration by the Tilelli (Liberty) association at er-Rachidia demanding official recognition of Tamazight, and for the Berber language to be taught in schools, seven supporters were arrested and charged with threatening state security. The authorities claimed to have discovered documents implicating the President of Tilelli in links with 'foreign organizations'. Three of those arrested were given prison sentences, but they were released in July when King Hassan granted an amnesty to 424 prisoners following appeals by international and local human rights groups.

The regime remained nervous of any challenge to its authority and determined to act against organized labour, students and other dissenting groups. In June 1994 several unemployed graduates were given two-year prison sentences after holding an unauthorized demonstration to protest against corruption in local government. The penal code was also revised so that trade unionists involved in strike action over pay would be subject to prison sentences or fines. In August, after gunmen shot and killed two Spanish tourists in Marrakesh, a massive security operation was launched amid fears that the vitally important tourist industry was being targeted as part of a wider attempt to destabilize the country. Within days, two French nationals of North African origin, Algerian-born Stephane Ait-Idir and Moroccan-born Redouane Hammadi, were arrested and charged with the murders, and in the following months several hundred suspects, most of them Algerian-French or Moroccan-French, were arrested and accused of terrorist activities. In France French police arrested alleged associates of the two men charged and claimed that they belonged to Islamist terrorist cells. Seven main suspects were brought to trial in early 1995 for the Marrakesh murders. The Moroccan authorities alleged that they formed three terrorist groups: the Marrakesh group led by Ait-Idir and Hammadi, the Casablanca group led by Hamel Marzouk, and the Fez group which included a French-Algerian and three Moroccan nationals. Ait-Idir, Hammadi and Marzouk were condemned to death, the first death sentences given for political or security offences since the early 1970s, and three of the other main defendants were sentenced to life imprisonment. Twelve other suspects received prison sentences ranging from six months to 10 years. At their trial the three main defendants admitted to belonging to an Islamist terrorist group and being converted to *jihad* by a Moroccan known as Abdelilah Ziad. In August Ziad was extradited from Germany to stand trial in France on charges of involvement in terrorist acts in both Morocco and France. Tarek Falah, also accused of taking part in the Marrakesh murders, had been extradited from Germany to France in July. The incident at Marrakesh had a damaging effect on Morocco's relations with Algeria after Morocco accused the Algerian security forces of financing terrorist groups in Morocco with the aim of destabilizing the country (see above). At his trial in Paris in December 1996 Ziad claimed that his terrorist group (the outlawed Mouvement de la jeunesse islamique marocaine), based in Paris, was responsible for organizing the Marrakesh operation and had also smuggled arms to the Armée islamique du salut in Algeria, the armed wing of the banned Front islamique du salut.

In mid-1995 the Minister of Higher Education, Driss Khalil, admitted publicly for the first time that Islamist militants were gaining strength among university students. The authorities announced their intention to continue to target the ringleaders, while they would encourage other student organizations in order to counter the Islamist threat. In October 12 Moroccans and five Algerians were arrested near the Algerian border and charged with smuggling arms to the Algerian GIA. In January 1996 they received prison sentences of up to 14 years. In December 1995 Abd as-Salam Yassin, the leader of the banned Islamist movement Al Adl wa-'l Ihsan, was released after spending six years under house arrest. A week later, after addressing worshippers at a mosque and denouncing certain aspects of government policy, he was placed once again under house arrest; the authorities insisted that he was under 'police protection'. Some observers argued that this episode illustrated the Government's ambivalent attitude towards the Islamist opposition: a measure of tolerance was displayed towards the more moderate Islamist opposition (although they were refused permission to form a political party), while armed Islamist groups were severely repressed. Although small extremist Islamist groups certainly exist and are supported in particular by young militants, since the 1980s the main currents of the Islamist movement have evolved towards an 'Islamism of compromise' with the Government. Islamist groups such as Al Adl wa-'l Ihsan and Al Islah wa Attajdid (Reform and Renewal) insist that they wish to be integrated into the political system, rejecting violence and favouring the peaceful re-Islamization of society. They conduct a range of socio-cultural activities, including charitable work in the most disadvantaged areas of the major cities, and seek to gain influence in trade unions and in major political parties, such as the USFP and Istiqlal. Poor employment prospects (especially among young people), low pay, redundancies owing to the privatization of state companies, declining living standards and a severe drought not only provided fertile ground for the Islamist movement but also led to widespread strike action by many, including teachers and workers in the phosphate industry and on the railways. Although the Government attempted to promote dialogue between employers and workers, several trade unionists were imprisoned, and, amid allegations of police brutality, both unions and human rights groups condemned the Government's repressive policy in labour disputes. In mid-1995 the police presence in major cities was heightened to combat increasing levels of robbery and violence. Opposition parties accused the police of exceeding their authority by making arbitrary arrests and intimidating suspects, and in September both the police and the judiciary were strongly criticized when 26 unemployed graduates staging a peaceful demonstration at El Jadida were arrested and sentenced to six months in prison. At the end of the year the King warned that the civil service and national and local administration would have to be reformed to enable the country to confront the challenges of the next century. Conscious that retrenchment and redundancies would be strongly opposed, he appealed for dialogue with political parties and trade unions to discuss potential reforms. In December 1996 senior officials reiterated the King's message, insisting that the country could not become a modern market economy unless its bureaucracy was reformed.

In June 1995 charges against Muhammad Basri, former leader of the USFP, who had lived in exile for some 28 years after being sentenced to death (*in absentia*) for plotting against the State, were dropped, allowing him to return to Morocco. Abd ar-Rahman el-Youssoufi, who had resigned as Secretary-General of the USFP in 1993, agreed to resume the post in July. In the same month the PPS held its first congress for four years, at which Ali Yata was re-elected as Secretary-General.

In August 1995 King Hassan announced plans to hold a referendum to decide whether to create a second parliamentary

chamber. The referendum, held on 13 September 1996, confirmed overwhelming support for the new parliamentary system, under which all members of the Chamber of Representatives would be directly elected and their term of office reduced from six to five years. A new upper house, the Chamber of Advisers, was to be established and its members chosen by electoral colleges, representing mainly local councils, with the remainder selected from professional associations and trade unions. The Chamber of Advisers would be competent to initiate legislation, issue 'warning' motions to the government and, by a two-thirds' majority vote, force its resignation. Moroccan officials denied that the role of the new upper house was to neutralize the Chamber of Representatives. The USFP and Istiqlal, together with the PPS, gave a guarded welcome to the reforms, but the OADP, their partner in the Bloc démocratique, condemned them. The USFP had either boycotted or urged its supporters to vote against the four previous revisions of the Constitution. After the referendum the OADP split when a group of officials left to form the Parti socialiste démocratique (PSD). The Ministry of Information reported that 10.17m. people had voted in favour of the King's proposal, representing 99.56% of the votes cast. Some 82.95% of the electorate participated in the referendum. In early December the Government announced that it was beginning to reform electoral procedures in preparation for the forthcoming elections; a commission, on which all officially recognized political parties were allowed representation, commenced examining electoral lists to identify irregularities. Within days the commission had identified more than 400,000 voters whose names appeared twice on the electoral lists. In mid-December a draft law was approved, providing for the establishment of elected councils in 16 new regions, including the disputed Western Sahara. Each regional council would be elected for a six-year period and would have responsibility for tax collection and the construction of schools and hospitals.

In February 1997 11 political parties, including five from the opposition, signed a political pact with the Minister of State for the Interior, Driss Basri, with the aim of 'strengthening the democratic regime based on the monarchy'. All the signatories agreed to abide by the law. The authorities conceded that they would treat all political parties equally and ban illegal practices. For their part the political parties promised to mobilize their supporters in 'a positive spirit' and not to contest, in advance, the integrity of future voting. After lengthy negotiations the authorities and the opposition parties agreed that new electoral lists would be prepared, and a national commission established to oversee the elections. The scale of irregularities in previous elections was revealed when the Moroccan press published figures indicating that 4.5m. voter registrations out of an electorate of 12m. were unreliable. The authorities appeared to have entered into the pact because they calculated that the successful integration of Morocco into the world economy required political reforms, if only to satisfy international organizations such as the World Bank and the IMF. While the official media welcomed the pact with enthusiasm, some leading members of the opposition expressed caution. There were also doubts as to whether the task of reviewing and correcting all the electoral lists could be completed in time for the general election. The Bloc démocratique announced that it would present joint candidates in some 25,000 municipal districts. The 'loyalist' parties (including the UC, the MP and the PND), which held a majority of seats in the current Chamber of Representatives, also formed a common front, the Entente nationale (or Wifaq), and adopted the same strategy. However, the small parties of the radical left felt excluded from the political process as did the Islamists. Several radical Islamist groups demanded the right to form political parties and to contest the forthcoming elections. However, although Al Islah wa Attajdid gained legal status in January 1997 after its merger with the MPCD, the authorities rejected Al Adlwa-'l Ihsan's claim for recognition as a political party.

The Moroccan authorities strongly condemned the publication of a report by the Observatoire géopolitique des drogues (based in France) presented to the EU in October 1995 on the Moroccan drugs trade, which implicated members of the royal family, former cabinet ministers, members of parliament and local government officials. Nevertheless, as part of the Government's campaign against drugs-trafficking, action was taken against several officials allegedly involved in the trade; however, some observers argued that this was merely an attempt to divert attention away from others close to the King. In April 1996 some 30 drugs-traffickers were sentenced to up to 10 years' imprisonment by a court in Salé after the country's biggest drugs trial. Other drugs trials were held in Casablanca, Tétouan, Tangier and Al-Hoceima. In the following months the Government intensified its campaign against drugs-trafficking and a record number of arrests were made. In January 1996 the Ministry of the Interior launched its largest campaign against smuggling, which targeted corrupt customs officials and resulted in the prosecution of the head of the customs and excise department and his predecessor. The campaign against the smuggling trade, believed to be extensive in Tangier and around the Spanish enclaves of Ceuta and Melilla, provoked strong criticism from opposition parties and human rights organizations for being arbitrary and unduly harsh. It also led to the resignation of the Minister-delegate to the Prime Minister, in charge of Human Rights, who described the Government's tactics against smugglers as 'collective lynching'. In June, in an attempt to placate the business community, the Government promised the employers' association that future campaigns against smuggling would be less disruptive to business. Also in June there was renewed criticism of Morocco's human rights record in the French media after three members of Gen. Oufkir's family escaped to France (see above). The family was released from detention in 1991, but had been placed under surveillance and forbidden to travel abroad. Following the much publicized escape, passports were issued to the remaining family members, including Oufkir's widow.

In early 1996 there was renewed labour unrest leading to strikes and demonstrations by public-sector employees demanding better working conditions. The unrest culminated in a general strike in June, the first since 1990, during which there were serious clashes between demonstrators and the security forces. The strike was organized by the Union Générale des Travailleurs Marocains (UGTM) and the CDT, which urged the Government to increase the minimum wage and to establish a national fund for the unemployed. Fearing more violence, the Government made concessions, and in July concluded a new accord on labour relations with employers' associations and trade unions. The accord was signed by representatives of the UGTM, the CDT, the Confédération Générale des Entreprises du Maroc and Driss Basri. The UMT indicated that it accepted most of the points in the accord, but rising unemployment continued to provoke demonstrations against the Government, especially by unemployed graduates. In January 1997 three unemployed graduates were arrested and sentenced to six months' imprisonment after participating in a small, peaceful protest in Marrakesh. After further demonstrations by unemployed graduates in May, Prime Minister Filali met their representatives in June and promised to address their grievances. Nevertheless, further protests were staged in August. Although the July 1996 accord on labour relations was confirmed in July 1997, some state-sector workers expressed dissatisfaction at the new pay levels, and in September public-sector health workers went on strike for the fifth time since the beginning of the year to demand an increase in their salaries. In January 1998 the police forcibly dispersed a march by miners who were protesting about the proposed closure of a coal mine at Jerada; trade unionists accused security forces of attacking their headquarters in Jerada.

In March 1996 clashes occurred at Casablanca University between Islamist undergraduates and students affiliated to the USFP; the latter accused the Islamists of trying to 'assassinate democracy in Morocco'. There was speculation that the rift between the two student groups may have been instigated by the authorities in an attempt to weaken the Islamists' position on the campus. In January 1997 Islamist students protesting against poor facilities on campus clashed with security forces at Casablanca University and the violence quickly spread to other universities. Many students were injured in the rioting and numerous arrests were made. Some 50 undergraduates, most of them members of Al Adl wa-'l Ihsan, were later sentenced to between three months and two years in prison for their part in the disturbances. (In March the Court of Appeal substantially reduced the sentences of 25 of the students.) However, a strike in late January organized by the Union

Nationale des Etudiants du Maroc, which is controlled by Al Adl wa-'l Ihsan, to protest against Government repression, did not precipitate further clashes with the security forces. In February the authorities tried to prevent Islamist students at Casablanca University from holding Friday prayers on the campus; the incident did not escalate, thanks to the intervention of the Minister of Higher Education. The Government blamed the campus unrest on poor staff–student relations, and in late January King Hassan dismissed eight university rectors and replaced them with his own appointees. In November there were further clashes between Islamist students and the security forces after the students tried to organize a strike at Casablanca and Mohammadia universities. In January 1998 supporters of Al Adl wa-'l Ihsan appealed to the Government to release the movement's leader, Abd as-Salam Yassin, who remained under house arrest.

THE 1997 LOCAL AND LEGISLATIVE ELECTIONS

The political pact signed in February 1997 (see above) was first tested in local elections held in June. A national commission, chaired by the President of the Supreme Court and including members of political parties as well as government representatives, was established to monitor the election process. Despite some complaints of irregularities, the elections for 24,253 seats on municipal councils and communes were judged to have been relatively fair with the turn-out officially estimated at 75.0%. Although the opposition Bloc démocratique achieved a much better result than in the 1992 elections, winning 31.7% of the seats, overall control of local councils was retained by the right-wing Entente nationale and the centrist grouping led by the RNI, which took 30.3% and 26.4% of the seats, respectively. During the election campaign the Bloc démocratique outlined for the first time its economic programme in an attempt to reassure the business community. In addition to the three main political groupings, five other political parties presented candidates and there were many independent contenders. The MPCD refused to take part in the elections on the grounds that it was not represented on the national election commission; however, there were claims that the authorities had put pressure on the party to withdraw because they feared that there would be strong support for radical Islamists. Notwithstanding, Al Islah wa Attajdid presented a number of independent candidates. Prior to the elections more than 100 left-wing activists were arrested, including 67 members of the PADS, for campaigning for a boycott of the electoral process. Some 26 PADS supporters were subsequently sentenced to short terms of imprisonment, having been found guilty of violating electoral and press codes.

In mid-August 1997 King Hassan appointed a new Cabinet (in which several portfolios were merged) primarily comprising technocrats, after ministers with formal party affiliation resigned at his behest in order to concentrate on their electoral campaigns for the forthcoming legislative elections. Significantly, Driss Basri retained his post as Minister of State for the Interior. Legislation promulgated later in the month detailed the composition of the future bicameral parliament: the Chamber of Representatives would comprise 325 members, directly elected for a five-year term: the Chamber of Advisers would have 270 members, selected by indirect election, of whom 162 would represent local authorities, 81 trade chambers, and 27 employees' associations. The King again appealed for legislative elections free of irregularities and repeated that his goal was to include members of opposition parties in the Government. In September the Assistant Secretary-General of Istiqlal stated that the parties of the Bloc démocratique planned to present joint candidates in the legislative elections. However, observers noted that deep rivalries still existed between its two main parties, the USFP and Istiqlal. One of the Bloc's smaller parties, the PPS, which performed poorly in the local elections, lost 40 of its members in June when they established the Front des forces démocratiques (FFD), a rival grouping. In August the PPS suffered another reverse when its leader, Ali Yata, died in a car accident.

Elections to the country's 16 new regional councils, established in December 1996 (see above), took place in October 1997. Centrist parties won control over nine of the councils. Members of the councils, elected for six years, were chosen indirectly by an electoral college comprising local provincial and prefectoral councils, salaried workers and chambers of commerce and industry, agriculture, artisans and fisheries.

Voting for the wholly-elected 325-member Chamber of Representatives in the new bicameral parliament took place on 14 November 1997. The legislative elections were considered to have been fairer than previous polls, although some complaints were registered. Of the country's legalized political parties, only the extreme left-wing PADS boycotted the elections, but the rate of voter participation was officially estimated at only 58.3% of the electorate. The Bloc démocratique, which had been widely predicted to dominate the new Chamber, won only 102 seats, 57 of which went to the USFP, while Istiqlal secured only 32 seats. The Bloc démocratique hardly improved on the number of seats it gained by direct voting in the 1993 elections and won fewer seats overall. The Entente nationale secured 100 seats, one-half of which were won by the UC, and parties of the centre-right took 97 seats (including 46 obtained by the RNI). Right-wing and centre-right parties performed much better than in direct voting in the 1993 elections. The Bloc démocratique won 34.3% of the vote, compared with 27.3% by the centre-right parties and 24.8% by the Entente nationale. The MPCD won nine seats and the leader of Al-Islah wa Attajdid, Abdelilah Benkiarane, stated that the party was opposed to violence and would use its presence in the Chamber of Representatives to defend Islamic values and oppose corruption. The newly-formed FFD won nine seats, equal to the number obtained by the PPS, from which the new party had split. In an attempt to appeal to young voters, many political parties presented young candidates, with the result that 43% of deputies in the new lower chamber were under 45 years old, compared with only 14% in the previous parliament. Relatively few women stood as candidates and, as in the previous assembly, only two were elected.

Indirect elections for the new Chamber of Advisers took place on 5 December 1997. As predicted, the right and centre-right parties gained a dominant position in the upper house, winning 166 of the 270 seats. Centrist parties secured 90 seats, with the RNI emerging as the largest single party in the Chamber with 42 seats, while the Entente nationale took 76 seats. The Bloc démocratique obtained only 44 seats, of which 21 were won by Istiqlal. Smaller parties made significant gains, winning 33 seats, of which 13 went to the Parti de l'action and 12 to the FFD. Some observers anticipated that the King would use the Chamber of Advisers (which has the power to dismiss the Government) to control the Government and thereby avoid the need to intervene directly, which might damage the country's new democratic credentials. The new bicameral parliament met for the first time in January 1998 when Abd al-Wahed Radhi of the USFP was voted President of the Chamber of Representatives, and Muhammad Yalal Esaid (UC) was chosen as President of the upper chamber.

KING HASSAN APPOINTS MOROCCO'S FIRST OPPOSITION-LED GOVERNMENT

With the three main political groupings gaining roughly the same number of seats in the Chamber of Representatives, on 4 February 1998 King Hassan named Abd ar-Rahman el-Youssoufi, the veteran leader of the USFP, as Prime Minister. This was the first time that the King had chosen an opposition politician as premier. In mid-March, after weeks of difficult negotiations, Youssoufi formed a coalition government in which 23 of the 41 members were from the opposition Koutla Dimocratya (14 from the USFP, six from Istiqlal, and three from the PPS), three from two small opposition splinter parties, the FFD and the PSD, and nine from two centre-right parties, the RNI (six) and the MNP (three). Istiqlal, which had been the dominant political force in the early years of Moroccan independence, had not been represented in government since the early 1960s. After Istiqlal's poor performance in the legislative elections, the party's first national congress for nearly 10 years, convened in February, had chosen Abbas el-Fassi as leader in place of Muhammad Boucetta. El-Fassi had immediately reversed the party's earlier decision not to participate in the new coalition Government. Parties of the right-wing Entente nationale were not represented in the Cabinet. Although hailed as the country's first 'gouvernement d'alternance', with opposition parties taking

charge of key areas of economic and social policy, the five ministers with responsibility, respectively, for the interior, foreign affairs, justice, religious endowments and Islamic affairs, together with the Secretary-General of the Government and the Minister-delegate in charge of the Administration of National Defence, were appointed directly by the King. Driss Basri, the long-serving and powerful Minister of the Interior, retained his portfolio and the former Prime Minister, Abd al-Latif Filali, remained in charge of foreign affairs and co-operation. Some opposition activists were quick to point out that not only the security services but also important networks of economic influence were outside the new Prime Minister's control, restricting his room to manoeuvre.

King Hassan formally approved the new Cabinet, but warned the political parties represented in the Government that they had a duty to control their supporters in the interest of social stability. The new Government's programme, presented to parliament in mid-April 1998, was adopted by a comfortable majority. Prime Minister Youssoufi and his senior ministers outlined ambitious plans, but stressed that they did not underestimate the gravity of the problems or the constraints confronting them and that there were no easy solutions. Youssoufi stated that his mission was to promote the democratization of the country's social and political life and pledged to raise standards of morality in public life, to promote transparency and openness in government, respect for the rule of law and for human rights, and to seek solutions through negotiation and consensus. He proposed a range of measures to tackle urgent social problems, in particular unemployment, illiteracy, acute deficiencies in basic healthcare, schooling and housing, and to combat social inequalities and exclusion. Reform of public administration and the justice system was also to be undertaken. A special effort was made to reassure the private sector and to establish a 'climate of confidence' between the new Government and the business community. However, this was not to be fostered at the expense of dialogue with organized labour and employees' rights.

Perhaps inevitably, the achievements of the new Government during its first year in office fell short of expectations. On assuming the premiership, Youssoufi immediately ordered all civil servants, cabinet ministers and legislators to disclose their wealth and private interests. The Minister of Justice, Omar Azziman, began the enormous task of reforming the country's justice system, initiating disciplinary proceedings against some 30 magistrates, mainly on grounds of corruption. His campaign targeted in particular the Tangier courts, which regularly hear drugs-related cases. By the end of the year nine judges had been dismissed and others suspended. In order to root out corruption and promote transparency at local government level, the King approved the creation of 16 regional courts. In the new Government's first budget, allocations to the ministries of solidarity and employment, health, housing, youth and sport, and culture were increased substantially, and for the first time there was a small reduction in that of the interior ministry. Some progress was also achieved on human rights, a personal priority of Prime Minister Youssoufi. Mary Robinson, the UN Commissioner for Human Rights, visited Morocco in April 1998 and signed a memorandum to open a North Africa and Middle East centre in Rabat to promote and protect human rights in the region. She stated that Rabat had been chosen as the location for the new centre because of Morocco's efforts to address human rights issues. In October King Hassan declared that it was his firm determination that all outstanding human rights issues should be resolved within six months. Shortly after the King's statement, the Conseil consultatif royal des droits de l'homme (CCDH), the country's official multi-party human rights advisory council, reported that the commission investigating the fate of opponents of the regime who 'disappeared' in the 1960s, 1970s and 1980s had examined 112 cases. Some 56 of these missing persons were dead, but no details were given of how they died. Although the CCDH had examined the circumstances of 45 prisoners who had died in custody, the chairman stated that in certain cases it had been decided not to bring charges against those responsible. No names of those who had died in custody were published, with the exception of Hocine Manouzi, a militant leftist, and Abdelhak Rouissi, a trade union activist. At the same time, the CCDH reported that having examined the cases of 48 'political' prisoners, some 28, many of them members of the banned Al Adl wa-'l Ihsan, had been released, but the rest would remain in prison because they had been convicted of murder and sabotage. Independent human rights organizations, such as the Association marocaine des droits humains (AMDH), criticized the CCDH for releasing so little information about the cases they had examined and insisted that the files of those who had disappeared or died could not be closed until those responsible were brought to trial. There were calls for an independent and impartial committee to be set up to deal with these issues. Particular concern was expressed that the CCDH had not even considered two outstanding cases, that of the exiled dissident, Abraham Serfaty, and that of Abd as-Salam Yassin, the leader of Al Adl wa-'l Ihsan, who remains under house arrest. In late October, when riot police were deployed to disperse a demonstration by unemployed graduates, the Government was widely criticized in the press for its heavy-handed tactics, while the AMDH denounced the police action as a flagrant violation of free expression. Demonstrations by unemployed graduates had become commonplace outside ministries in Rabat as government efforts to improve employment prospects for graduates have met with little success. The Minister of the Interior was reported to have given the order to deploy riot police on instructions from the King and with the support of the Cabinet. Earlier in the year human rights groups had accused the authorities of 'repression' after clashes between Islamist students and security forces at Casablanca University.

In March 1999 King Hassan praised the new Government, declaring that Morocco's experience of 'alternation' was an example to others and adding pointedly that it provided a new élite with the opportunity to experience 'the hard reality of government'. In April Muhammad Benaissa, Morocco's outgoing ambassador to the USA, replaced Abd al-Latif Filali as Minister of Foreign Affairs and Co-operation. Filali had occupied the post for 14 years and no reason was given for his removal. There was speculation that dissatisfaction with Filali's handling of recent talks on the Western Sahara may have precipitated the change. In June Prime Minister Youssoufi was admitted to hospital where he underwent surgery for a blood clot.

Towards the end of 1998 the PPS and the PSD, which had been co-operating within the legislature, announced that from early 1999 they had decided to merge. The MPDC, which has been giving critical support to the Youssoufi Government, changed its name to the Parti de la justice et du développement (PJD) in order to improve its image and to distinguish itself from right and centre-right parties with similar names but very different policies. The party gained another seat in the lower house of the Legislature when its leader, Abdelilah Benkirane, won a by-election in Salé. Adb al-Latif Samlali, a former Minister of Youth and Sports, was elected secretary-general of the UC.

DEATH OF KING HASSAN

King Hassaan died of a heart attack on 23 July 1999, shortly after being admitted to a hospital in Rabat. He had been in poor health for some years. His eldest son, who succeeds him as Muhammad VI, announced his father's death to the nation on state television after members of the royal family, government ministers and senior members of the armed forces had made the oath of allegiance to the new monarch. In his television address the new King appealed to the Moroccan people for 'calm and patience'. Hassan's funeral was attended by many world leaders, including US President Bill Clinton, President Chirac of France and the newly-appointed Israeli Prime Minister, Ehud Barak. Muhammad is a little-known figure who, as Crown Prince, had always remained in his father's shadow. Although Hassan had groomed his eldest son to succeed him, he had been reluctant to let him share power or play a role in the armed forces despite his status as a four-star general. He was never given administrative responsibilities of any importance and his public appearances were largely ceremonial. It has been reported that in recent years King Hassan's close advisers have promoted an image of the Crown Prince as a democrat at heart, generous and uncomplicated, in the style of King Juan Carlos of Spain. Other observers, however, have portrayed him as self-obsessed, autocratic and eager to wield power. There is little evidence to support either view.

Economy

ALAN J. DAY

Revised for this edition by RICHARD I. LAWLESS

By the late 1970s, Morocco was seriously in debt and had a current account deficit on its balance of payments equivalent to nearly 17% of gross domestic product (GDP). In 1978 the Government introduced a three-year stabilization programme, but external factors (such as the petroleum price rise in 1979, increasing international interest rates, and a decline in revenues from phosphate exports and from migrant workers' remittances), combined with a continuing commitment to heavy expenditure on the war in Western Sahara and on subsidies for basic goods, ensured that the programme was largely ineffective. In early 1983 the Government imposed emergency import controls and reduced its expenditure. Inflation was high in the early 1980s, with increases in food prices and rising levels of unemployment particularly aggravating the living conditions of the urban poor. Reductions in public expenditure exacerbated mounting discontent, and in 1981 and 1984 provoked major strikes and violent street demonstrations.

With the support of the World Bank and the IMF, the Government introduced policies of structural adjustment in 1984 and was able to reschedule its debts towards the end of 1985. Despite good harvests in 1985 and 1986, and the fall in petroleum prices, the trade balance deteriorated. At the beginning of 1986 the World Bank expressed concern about the underlying structural weakness of the Moroccan economy and argued that stronger corrective measures were needed, including reductions in public expenditure and food subsidies. The IMF was equally concerned by the Government's fiscal and economic performance. Measures that were adopted during late 1986 and 1987 renewed confidence in Morocco's economic prospects. A firm commitment to a radical reform of the economy, involving a new emphasis on export production, trade liberalization, attraction of foreign investment and development of tourism, together with a domestic programme of privatization and encouragement of the private sector, was expressed in the 1988–92 Development Plan (see Development below). Between 1988 and 1990 new IMF and World Bank support arrangements were negotiated, and debt rescheduling agreements were reached with the 'Paris Club' of creditor governments and the 'London Club' of official creditors (see Banking and Finance). In May 1989 the text of the proposed law on privatization was published, committing the Government to the transfer of the majority of state enterprises to the private sector, and in October a Ministry of Privatization was created. The law came into effect in January 1990.

In November 1991 the Minister of Finance stated that policies of structural adjustment, introduced since 1983, had produced a significant upturn in the economy. He forecast that the rescheduling cycle would end by 1993, by which date the dirham would be made convertible and Morocco would return to international capital markets. In February 1992 it was announced that the IMF had approved a further credit in support of the Government's economic programme for the following year, which, according to the IMF, aimed at promoting investment, increasing productivity, strengthening the budgetary position and reorientating credit towards the private sector. The programme aimed at annual growth of 4% in GDP, a decline in inflation to 5% per year and a reduction in the current account deficit. The World Bank's vice-president for the Middle East and North Africa visited Rabat in April and stated that the Bank would give full support to the country's adjustment programme. He emphasized that high priority should be given to the development of the capital and financial markets, and expressed concern about some social indicators, notably the high rates of infant mortality and illiteracy. In that month the Minister in charge of Planning maintained that the number of poor people in Morocco had declined from 6.6m. to 3.9m. between 1985 and 1991, and that there had been a significant reduction in the gap between rich and poor. The opposition parties disputed these claims, and argued that liberalization had widened the gap. A survey by the United Nations Development Programme and Morocco's Direction de la Statistique in 1993 estimated that 6.3m. Moroccans (almost one-quarter of the population) lived below the poverty line.

A study compiled by the IMF and released in late 1994 concluded that financial balances had been restored and the economy's structural weaknesses substantially resolved in 1993, a year which it stated 'marked a watershed for the Moroccan economy'. According to the IMF, inflation fell from 8.7% in 1986 to 5.2% in 1993, there was an overall balance of payments surplus of US $378m. in that year and the current account deficit was equivalent to 2.5% of GDP. However, growth was constrained in 1992 and 1993 as a result of drought and external pressures. The study stated that the Moroccan economy still faced significant challenges that needed to be addressed in order to move to a higher sustainable growth path, which in turn would reduce chronic unemployment and raise living standards. It identified four policy priorities: strengthening the fiscal system and accelerating financial sector reforms to free more private sector resources for investment; further liberalizing the trade and payments system and accelerating privatization to promote competition and improve resource allocation; improving the legal and regulatory environment; and elaborating a medium-term strategy to alleviate poverty and provide social protection.

In his first statement on economic policy on his appointment as Prime Minister in May 1994, Abd al-Latif Filali pledged to expedite Morocco's ambitious programme of privatization. At that time it was estimated that the debt owed by state enterprises was equivalent to about one-third of total public debt. During 1994 receipts from the sale of state assets reached 3,700m. dirhams. This was 200m. dirhams above target, and included the showpiece of the privatization programme, the holding company Société Nationale d'Investissement, which was sold for 1,669m. dirhams. In an interview that month, the Minister of Privatization, Abd ar-Rahman Saaidi, insisted that the divestment process had the support of the general public and that it had caused minimum social upheaval. Investors in privatized companies had to agree not to dismiss workers for a period of five years, and Saaidi claimed that employees, for their part, had mostly co-operated, purchasing shares and accepting management changes. He did admit, however, that problems might arise in the future as the Government proceeded to sell less profitable companies. In December 1994 Saaidi stated that out of a total of 112 companies set aside for sale to the private sector by the end of 1995, 37 had already been sold.

In March 1995 the Ministry of Privatization announced that the privatization schedule had been extended beyond 1995 and that new companies would be added to the list, including those previously considered as 'strategic' and excluded from the programme. During that month the first privatizations in the mining sector were announced (see Mining), and in April the Government and the Office Chérifien des Phosphates (OCP) stated that they were working on plans to bring private capital into Morocco's important phosphate industry (see Industry). Receipts from privatization in 1995 were estimated at 3,500m. dirhams. In January 1996 the Government launched its first issue of a new privatization bond, which was oversubscribed and raised 1,700m. dirhams (see Banking and Finance). The bonds could be converted into shares in newly-privatized companies. A second tranche of bonds was issued the following May. In November it was reported that Morocco was the market leader in Arab privatizations, although its programme had been affected by wrangles between the Ministry of Privatization and the Evaluation Organization, established to set a minimum price for privatizations. Government efforts to accelerate the privatization programme during 1997 met with some success, notably the sale of the state's remaining 62% holding in the

national steel company, the Société Nationale de Sidérurgie (SONASID). Following the appointment of a new Government in March 1998, the new Minister of the Economy and Finance, Fathallah Oualalou of the left-wing Union socialiste des forces populaires (USFP), stated that privatization would continue as an important source of income and might eventually raise enough to cover some 15% of government spending. It was announced that a new programme would be launched in which the major element would be the sale of a share of the state telecommunications company, Itissalat al-Maghrib, created following the dismantling of the Office National des Postes et Télécommunications. When the new Prime Minister Abd ar-Rahman el-Youssoufi (the USFP leader) presented his Government's policy plan to parliament in April he stated that the privatization programme would be completed 'in transparency and speed' in order to raise funds for investment in infrastructure. However, progress proved very slow and the new Government, many of whose members were drawn from the public sector, faced accusations that it was opposed to privatization. By the end of 1998, when the programme was to have been completed, only 58 of 114 firms originally listed for privatization had been sold since the programme began in 1993. While some ministers were clearly hostile to privatization on ideological grounds, the Government had little alternative but to continue the sale of state assets in order to help cover the budget deficit. Unfortunately, some of the enterprises that remain to be sold are considered unattractive to investors. Early in 1999 the Government announced that it planned to sell 30 of the remaining 56 companies and proposed that the programme be extended until the end of 1999. Among the companies to be sold were the telecommunications monopoly, Itissalat al-Maghrib, the mining company SACEM, three sugar refineries, the fertilizer company Fertima, and the Banque Nationale pour le Développement Economique. Legal and financial complications had prevented the Government from including the other 26 enterprises in the revised programme. By mid-January 1999 the Government had raised only 600m. dirhams of the 2,000m. dirhams of revenues forecast from privatization in the 1998–99 budget. The proposed extension of the privatization programme was rejected by the upper house of the legislature and was to be reconsidered by the Chamber of Representatives. At the same time, official figures revealed a sharp fall in foreign direct investment and private foreign investment during the first nine months of 1998. To address this problem the Government launched a campaign to attract increased investment from the Gulf States, in particular from Saudi Arabia.

On a visit to Rabat in late April 1998 to open the World Bank's first resident mission in the Maghreb, the Bank's Vice-President, Kemal Dervis, stated that he expected Morocco to register significantly stronger economic growth over the following decade—averaging 6% in real terms—but emphasized the need to divide the profits of that growth more equitably. Morocco is currently a major borrower from the World Bank, with loans totalling US $8,100m.

Having grown by 10.4% in 1994 after a good harvest, Morocco's economy suffered a sharp downturn of 7.0% in 1995 primarily because of a severe drought. GDP growth of 12.0% was recorded in 1996, but the economy was again adversely affected by poor rainfall in 1997 when GDP contracted by 2.2%. According to official figures, real GDP grew by 6.3% in 1998 and was projected to grow by 4% in 1999.Average inflation fell from 6.1% in 1995 to 3.0% in 1996 and 1.0% in 1997, but rose to 2.9% in 1998. Unemployment, which according to official figures was 17.8% at the end of 1997, remains one of the Government's most urgent problems. Some trade union sources insisted that unemployment stood at 23%. The problem of unemployment was given priority by the new opposition-led Government which took office in March 1998, and its first budget provided for the creation of 12,000 new jobs during 1998–99. In December 1998 the Government announced a US $76m. programme to promote employment. However, with an estimated 300,000 new additions to the labour force every year, the task of reducing the unemployment rate remains extremely difficult.

AGRICULTURE AND FISHERIES

About 55% of the Moroccan population live in rural areas, and in 1997 some 40% of the working population were employed in agriculture, livestock-raising and fishing. In 1997 the agricultural sector (including forestry and fishing) accounted for an estimated 17.7% of GDP. The principal crops are cereals (especially wheat, barley and maize), citrus fruit, as well as olives, beans, chick-peas, tomatoes and potatoes. Canary seed, cumin, coriander, linseed and almonds are also grown. Sugar beet and cane are cultivated on a large scale to substitute for imports; sugar is one of Morocco's principal food imports owing to the high level of domestic consumption. Changing climatic conditions cause substantial year-to-year variations in agricultural output. These variations, moreover, have a significant impact on the economy, affecting the level of GDP growth or decline. Severe drought in 1981—the worst for 35 years—caused cereal production to fall by 50% from 4.5m. metric tons in 1980. In 1985, when rainfall was good, cereal production increased by 41%, compared with the previous year, and in 1986 production rose again by about 47% to a record 7.7m. tons. The 1987 harvest was very disappointing, with cereal production reaching only 4.2m. tons. However, 1988 was another record year, with a bumper harvest of nearly 8m. tons. Production declined from 7.4m. tons in 1989 to 6.3m. tons in the following year. After good rains in 1991, it rose to 8.5m. tons, of which 2.2m. tons was durum wheat, 2.7m. tons soft bread wheat, 3.3m. tons barley and 335,000 tons maize. The cereal harvest decreased to 2.7m. tons in 1992, following a severe drought. It was estimated that as much as 4m. tons of wheat and barley needed to be imported as a result. In 1993 the harvest was again depleted by drought, with rainfall 60% below average. It was forecast that production of wheat, barley and maize would total approximately 2.5m. tons in that year. A record 9.4m. tons of cereals were produced in 1994 but severe drought struck again in 1995. In March 1995 it was reported that there had only been one-third of the normal rainfall and that only 60% of acreage had been planted. In May King Hassan announced that wheat production would reach only 1.6m. tons, one-quarter of the normal figure. He appealed to the public to contribute some US $200m. to a solidarity fund of $441m. to finance wheat imports. A record cereal harvest of 10m. tons was reported in 1996 when the agricultural sector grew by 78.8% in real terms, but poor rains in 1997 resulted in cereal output of only 3.4m. tons and caused a fall of 24% in agricultural value added. Grain imports between June 1997 and May 1998 were expected to total 3.3m. tons. In addition, the Caisse Nationale de Crédit Agricole was forced to reschedule the debts of some 250,000 farmers during 1997. After heavy rains, cereal production in 1998 was expected to be above average, with estimates varying between 6m. and 11m. tons. In early 1998 the King admitted that agricultural policies would have to be revised if Morocco was to achieve self-sufficiency in food and provide stable incomes for the country's farmers. After fears of a drought, heavy rainfall in January 1999 suggested that cereal production in 1999 would be good.

In 1987 Morocco produced 2.8m. metric tons of sugar beet and 848,000 tons of cane, resulting in total sugar output of 412,000 tons. In 1988 sugar production rose to nearly 500,000 tons, which covered more than two-thirds of domestic requirements in 1989. By 1993 production of beet was 3.2m. tons, and cane production was 946,000 tons. A slight decline in production was recorded in 1994. Brazil and Thailand have been the main suppliers of sugar imports, which by 1998 accounted for about one-half of domestic consumption. In October 1997 the Ministry of Privatization offered for sale three state sugar producers for the second time. The first attempt at sale failed in 1994 because investors balked at government fixing of sugar prices. However, the sugar regime has since been liberalized, with reforms culminating in the abolition of price controls in January 1997. It is envisaged that Morocco's seven other sugar companies, one of which owns two plants, will also be privatized in due course.

Morocco is also a major food exporter. Agricultural produce accounted for 59% of total export revenue in the period 1969–73, but its importance was later eclipsed by phosphate earnings. During the late 1980s agricultural products accounted for about 25% of total exports. The main agricultural exports are citrus fruit (mainly oranges), tomatoes, and fresh and processed vegetables. A fruit processing industry is being developed, and exports of preserved fruit, jam and fruit juice contribute to foreign exchange earnings. In 1988 citrus production rose by

35% from the 1987 level, reaching a total of around 1.2m. tons, about one-half of which was exported. Other crops, including legumes, vegetables, grapes and industrial crops (sugar beet, cane and cotton), all performed well in 1988. In 1989/90 citrus fruit production increased slightly, with exports totalling 436,500 tons. In 1990/91 record exports of citrus fruits and vegetables were reported, with citrus sales rising to 648,500 tons. Maroc late oranges represented about one-half of the total citrus sales. Tomato exports increased from 91,400 tons in 1989/90 to 132,000 tons in 1990/91, potatoes from 60,500 tons to 110,000 tons, and vegetables from 9,400 tons to 9,500 tons. Morocco exports approximately 40% of its citrus products, of which about 70% goes to the European Union (EU, formerly the European Community, EC). In 1990/91 France was the largest importer, accounting for almost 250,000 tons. However, it is feared that Morocco's agricultural exports may be adversely affected by growing competition from other Mediterranean countries in the EU, in particular Spain and Portugal. Under the terms of the free-trade agreement with the EU, initialled in November 1995 and signed in February 1996 (see also Balance of Payments and Trade), both parties agreed to increase trade in agricultural products; however, the controversial question of free movement of agricultural products will not be discussed until 2000. Morocco won some concessions, and the EU agreed to raise import quotas and loosen restrictions on trading periods for tomatoes, oranges and other products, but in return EU agricultural exporters are to receive favourable tratment in Morocco. Morocco also sought financial assistance from the EU to eradicate the cultivation of cannabis in the Rif mountains by creating alternative forms of employment for the rural population in an isolated and poorly-developed part of the country. In February 1998 the EU allocated US $10m. for pilot projects to encourage the cultivation of almond trees, apiculture and livestock-rearing in this region.

Livestock numbers remained relatively static until the mid-1980s, when they increased from 24.2m. in 1986 to 28.6m. in 1989. Subsequently, however, numbers have declined and in 1996 they totalled an estimated 25.0m. Numbers of sheep—the most numerous species—rose from 14.6m. in 1986 to 17.5m. in 1989 before declining in the early 1990s and totalling 16.3m. in 1996. Meat and dairy production have been increasing accordingly; meat production rose from 293,000 tons in 1987 to 474,000 tons in 1996. Morocco produces virtually all of its national meat requirements. Output of dairy products totalled 1,015,600 tons in 1987, increasing to 1,127,000 tons in 1996. In February 1992 the Ministry of Agriculture and Agrarian Reform announced a US $50m. emergency programme to save some 22m. cattle, sheep and goats that were threatened by the severe drought. Some 60,000 tons of livestock feed was distributed to those areas worst affected, and a further 100,000 tons was distributed to farmers at half the price. A further drought-related rescue plan for local farmers, launched in early 1995, involved importing 70,000 tons of barley for livestock consumption.

Financial assistance was secured for the first phase of the Upper Abda-Doukkala irrigation scheme, south-west of Casablanca, from the African Development Bank (ADB), the European Investment Bank (EIB) and the Arab Fund for Economic and Social Development (AFESD), which pledged US $181m., $74.8m. and $130m., respectively. The new scheme aimed eventually to irrigate a total of some 64,000 ha in the Doukkala region, and to increase food production for Casablanca and Rabat; all four phases were estimated to cost some 6,000m. dirhams ($705m.).

In July 1991 it was reported that work had started on the Wahada dam scheme, to irrigate 100,000 ha in the Sebou and Ouerrgh valleys. Financial support is being provided by Italy, the AFESD and the Kuwait Fund for Arab Economic Development (KFAED). In January 1996 it was announced that the AFESD had agreed to lend US $56.2m. to help finance the dam's construction. The OPEC Fund for International Development agreed in February 1992 to provide a loan of $7.5m. for the Massaouat project, which involves irrigating 44,000 ha with a new canal system and the rehabilitation of existing irrigation canals. Financial support is also being provided by the AFESD, the Saudi Fund for Development, the KFAED and the EU. In December 1992 King Hassan inaugurated the $195m. Matmata gallery project, designed to channel 600m. cu m of water per year, to irrigate 25,000 ha of the Gharb valley. In August 1993 Japan agreed to provide a loan of $127m. to the Caisse Nationale de Crédit Agricole for agriculture and fisheries projects. In February 1994 the World Bank announced that it would lend $34.7m. to provide irrigation services to some 200,000 small farmers in order to raise production in irrigated areas. In May, in one of the last major allocations from the EU's fifth financial protocol, the EIB agreed to provide $24.7m. for a five-year project to irrigate 23,000 ha in the Haouz region. The KFAED was to lend $66m. towards the project which was part of a government plan to irrigate an additional 250,000 ha by 2000. The Ministry of Agriculture reported that at the end of 1997 the total area of irrigated farmland had increased to 1m. ha, just over 10% of the country's total cultivated area of 9.3m. ha. In July 1994 the World Bank provided a $121m. loan, repayable over 20 years, to support the Government's agricultural investment programme (estimated at $993m. in 1994–97) and to be used for projects in poorer regions of the country. A loan agreement was signed with the AFESD in September to provide $10m. towards the total cost of remaining works on a project for agricultural development in the Loukos basin. In November 1997 the EU approved a loan of $13.5m. to combat soil erosion in the Middle Atlas as well as credits worth $4.5m. to increase agricultural production in the Doukkala plain.

Fishing has become increasingly important. A separate Ministry of Fisheries, formerly the responsibility of the Ministry of Commerce, Industry and Tourism, was established in April 1981. Special financial concessions were granted to the fishing industry in 1984 to improve its export potential; in addition, state control over exports was removed. Since 1984 annual landings have surpassed 400,000 metric tons; about one-half of the fish caught are sardines, which are mainly canned for export. In 1988 exports of fish and fish products totalled 179,000 tons and accounted for 50% of all food exports and 11% of total exports. In 1990 the volume of fish available for canning decreased by an estimated 8%, largely as a result of reductions in sardine catches landed at Agadir. In 1983 the Government signed a treaty with Spain, granting Spanish vessels certain rights in Moroccan waters in exchange for finance for infrastructural development. Bilateral agreements with Spain were renegotiated in 1987 as accords with the EC, following Spanish accession to the Community in 1986. An agreement reached in February 1988 restricted EC vessels to a catch of 95,000 tons annually in Moroccan waters, in return for licence fees and compensation worth US $48.3m. a year. Morocco also gained improved access to the European market for its canned sardine exports, the annual volume of which was to rise to 17,500 tons, compared with 14,000 tons in 1988. In February 1992, however, it was reported that the Moroccan Government had suspended talks with the EC about fishing rights for EC fleets, in retaliation for the EC's refusal to approve Morocco's fourth financial protocol in January. The 1988 agreement expired in March 1992. After lengthy negotiations, a new three-year accord came into force in May 1992, allowing 650 Spanish, 50 Portuguese and 36 other trawlers into Moroccan waters, in return for increased compensation of 102m. ECUs ($131m.). The accord also envisaged new conservation measures, the expansion of port facilities and the creation of joint marketing companies. Negotiations with the EU began at the end of March 1995 to renew the three-year fisheries agreement due to expire on 30 April. The Moroccan Government pressed for a reduction in the number of European fishing vessels allowed to operate in Moroccan waters in order to allow fish stocks to recover and for the local fishing industry to take a greater part in the industry, including European fishing boats landing catches at Moroccan ports. No agreement had been reached when the accord lapsed, but a new round of talks began in Brussels, Belgium, in May. The accord is the EU's most important external fisheries agreement and sustains an estimated 28,000 people working in the Spanish fishing and fish processing industry. Moroccan demands met with strong resistance from the Spanish fishing industry, which holds most of the fishing licences for Moroccan waters. Spanish fishermen attempted to block imports of Moroccan fish at several ports. After lengthy negotiations, a new fisheries accord was initialled with the EU in November. The four-year agreement came into effect in December, when European (mainly Spanish) fishing boats were allowed back into Moroccan waters for the first time

since the end of April. Morocco won substantial concessions from the EU, which it claimed would boost the country's fishing industry and safeguard endangered fish stocks. Catches by EU fishing vessels are being reduced by up to 40% for certain species, and European trawlers must unload part of their catches of squid and octopus at Moroccan ports—the proportion will rise to 30% after four years. Total compensation payments from the EU were set at $355m. over four years, and payment during the first year was increased to $162.5m., compared with $133m. under the previous agreement. In order to deal with the increase in business expected as a result of the accord, the Government announced a $233m. investment programme in April 1996 to enable fishing ports to meet additional demand. In addition, the Government embarked on a $151m. investment programme to renew the country's fishing fleet over the next four years. The programme aims to replace up to 400 fishing boats with more powerful vessels with better refrigeration equipment, enabling them to operate in the open sea and to remain at sea for longer periods. Most of the investment is expected to be provided by the private sector, although the Government agreed to contribute $23.3m. in the form of grants to finance 10%–20% of the cost of each new boat and to provide bank loan guarantees to ship-owners. In February 1996 it was reported that $7.2m. in aid from Japan would be invested in equipment to improve fishing conditions and warehouses in the provinces of Agadir and El-Hoceima. By the end of 1997 some $21m. had been spent on upgrading 320 refrigerated fishing vessels to meet EU standards. In November of that year the Government announced that it planned to invest $315m. to develop fishing off its southern coasts. In April 1998 the Ministry of Public Works began evaluating bids for a $46m.–$51m. fishing harbour at Boujdour in the disputed Western Sahara. After the fish catch declined significantly in 1997, the Moroccan Government acted to combat the depletion of fish stocks in its territorial waters by banning all fishing for two two-month periods during the year. By 1999 the Ministry of Fisheries planned to have a new satellite surveillance system in place to improve monitoring of fishing activities in Moroccan waters and help prevent foreign boats fishing in forbidden areas. Despite the 1996 EU fisheries accord, tensions between the Moroccan authorities and the mostly Spanish vessels fishing in Moroccan waters continued. Morocco indicated that it did not intend to renew the EU accord when it expires at the end of 1999, seeking instead to exploit the fish stocks in its territorial waters through joint ventures with foreign companies. In early 1998 it was reported that talks about joint ventures had begun with France and Japan. At the end of the year the Minister of Fisheries confirmed that the EU accord would not be renewed and highlighted the serious problem of overfishing in Moroccan territorial waters.

In June 1992 ONA, Morocco's largest private company, signed an agreement with the Union des Coopératives de Pêcheurs de France to establish a fish-canning and marketing enterprise to market canned sardines and mackerel. In August 1995 Morocco and Russia renewed a three-year fishing accord, permitting Russian vessels to catch fish in the coastal waters off Western Sahara. The accord allows 28 Russian trawlers to fish some 200,000 tons in these waters in the first year, a substantial increase on 1994 when 17 trawlers were given permission to fish 80,000 tons. Fishing quotas for the remaining two years were to be determined by the size of fish stocks. Under the agreement all Russian catches would be marketed by a joint Russian-Moroccan company. In February 1997 Morocco signed a fisheries accord with Canada.

MINING

The mining sector accounted for 2.6% of GDP in 1989 and almost one-third of Morocco's total exports, but there has been a progressive decline in the relative importance of the sector, which only accounted for an estimated 1.9% of GDP in 1996. There has also been a shift from the export of minerals to mineral derivatives. In 1997 phosphates accounted for about 95% of the total volume of mineral output.

Morocco has about two-thirds of the world's known reserves of phosphate rock. Proven reserves are 10,600m. tons, and probable reserves 57,200m. tons. Major deposits are located at Khouribga, Youssoufia and Ben Guerir. Morocco also controls production at Bou Craa in Western Sahara, which was reopened in July 1982. With the opening of mines at Ben Guerir in 1981 and at Sidi Hajjaj in 1984, annual output capacity has gradually increased and there are long-term plans to exploit large phosphate deposits at Meskala. A new open-cast mine opened at Sidi Chennane, south of Khouribga, in 1995 will eventually be capable of producing 12m. tons of phosphate rock a year. In March 1995 the OCP stated that it had the capacity to produce 30m. tons of phosphate rock a year from four open-cast mines. Morocco is the world's largest exporter of phosphate rock, and its exports account for about one-third of world trade. As a result of high phosphate prices in the early to mid-1970s, there was a decline in demand, and the volume of Moroccan exports of phosphate fell by 22% between 1979 and 1982. In the early 1980s there was a slow recovery in world demand, but international phosphate prices fell from US $49.50 per ton in 1980 to less than $40 by 1983, to $34.80 in 1986 and to $31.95 in 1987, before rising in 1988 and 1989 to $40.50. Morocco, as a result, invested heavily in the 'downstream' phosphate derivatives industry, to increase the value of its exports (see Industry). Phosphate rock production increased from 20.9m. tons in 1996 to 23.1m. tons in 1997, while prices rose from $39.00 per ton to $40.83 per ton. Some 11m. tons of phosphates were exported in 1997 when the OCP reported that Morocco had become the world's leading exporter, overtaking the USA and accounting for almost one-third of world trade. The OCP forecast an increase in exports in 1999 as a result of stronger demand from Asian countries. A five-year plan was launched by the OCP in 1998 to modernize infrastructure and technology, improve productivity and reduce costs.

Between 1982 and 1986 coal production ranged between 735,000 and 835,000 metric tons a year, but declined in 1988 and 1989 to 640,000 tons. Production declined further in the early 1990s, to 550,800 tons in 1991, but then increased steadily to reach 603,800 tons in 1993. From 1983 the Jerrada anthracite mine in north-east Morocco was expanded, with the aim of increasing total annual production to 1m. tons by 1992. Output, however, has failed to meet these targets and consequently coal and coke imports have grown dramatically. Diversification into coal represents an attempt to become less heavily reliant on petroleum imports.

Production of crude petroleum is negligible, reaching at most around 23,000 tons a year. Exploration for hydrocarbons intensified following the creation of the Office National de Recherches et d'Exploitations Pétrolières (ONAREP) in 1981. By mid-1986 agreements had been reached with numerous foreign oil companies for exploration both onshore and off shore. However, the collapse in oil prices in 1986 prompted many of these companies to relinquish their interests; in any case, no major discovery had been made, apart from a gasfield owned by ONAREP in the Essaouira area. Even this, which was originally expected to satisfy 40% of Morocco's energy needs, proved, during 1985, to be more limited than anticipated. In 1991 incentives for international companies to explore for oil and gas were approved by the Chamber of Representatives, following the revision of laws which reduced the state's minimum share in agreements with international companies to 35% from 50%, reduced the minimum size of an exploration permit to 2,000 sq km from 5,000 sq km and reduced the minimum duration of an accord to eight years from 15. Two US oil companies, Ashland Exploration and Santa Fe Energy Co, were the first to sign an exploration and production-sharing agreement with ONAREP under the revised hydrocarbons code, which came into force in April 1992. The companies are exploring in a 6,000 sq km area off shore of Essaouira and Agadir, with each company holding 50% in its part of the venture and with Ashland Exploration as operator. Renewed efforts have been made to attract foreign investment in oil exploration and in early 1998 ONAREP signed agreements with Enterprise Oil Exploration of the United Kingdom, Shell Prospecting Africa, the Roc Oil Co of Australia and Lasmo Overseas Nederland covering offshore areas in southern Morocco. Between June 1997 and June 1998 ONAREP signed exploration agreements with seven prospecting companies involving total investments of US $7.5m. Later in 1998 new exploration agreements were signed with the US firm Vanco, and Saudi Arabia's Aramco. Extensive deposits of oil-bearing shale are known to exist, with a potential output of 100,000m. tons (15% of world reserves). In February 1995 the Office

National de l'Electricité (ONE) signed an agreement with Pama of Israel to test oil shale from the Tarfaya deposit for power generation. Preliminary estimates suggested that the Tarfaya deposit contains some 80,000m. tons of oil shale. Gas production in the early 1980s ranged between 78,800m. cu m in 1982 and 86,600m. cu m in 1985. Four major gasfields are in production, with two others, including the Meskala field in the Essaouira area, being developed. Gas treatment facilities have been developed at Meskala. In October 1997 ONAREP announced that it had discovered reserves of some 300m. cu m of natural gas in the Gharb region near Kénitra and that after the drilling of a second well, production might reach 75,000 cu m a day. Also in October Lasmo of the United Kingdom signed an agreement to carry out surveys in the Essaouira basin in southern Morocco, which currently produces small quantities of oil and gas but where known reserves are almost exhausted. In late 1998 Cabre Maroc of Canada announced that several exploratory wells drilled in the Gharb region had produced low-sulphur gas and that additional wells would be drilled during 1999.

In August 1991 Gaz de France (GdF) signed two agreements with Morocco's Ministry of Energy and Mines and the Société Nationale des Produits Pétroliers (SNPP), in preparation for the second trans-Mediterranean pipeline to carry Algerian natural gas across Morocco to Europe. The SNPP, Algeria's state energy company SONATRACH, Spain's Enagas, GdF, and Germany's Ruhrgas were each to have a 19% interest, while Gás de Portugal was allocated the remaining 5%. In July 1992 Morocco and Spain signed a 25-year agreement to build and exploit the new Maghreb–Europe gas pipeline to run from Hassi R'Mel in Algeria across Morocco and the Strait of Gibraltar to Spain. The first phase of the project was to supply 6,000m. cu m of natural gas to Spain, 1,300m. cu m to Morocco, with another 1,000m. cu m being used in Algeria. The cost of the entire pipeline was estimated at US $2,500m. Enagas was to provide an estimated $1,300m. to finance the 525-km Moroccan section. In January 1994 the pipeline's capacity had reportedly been increased by 30% to 10,000 m. cu m per year because of a new contract to supply 2,500m. cu m per year to Portugal. Following widespread reports that the work on the project was delayed and might even be cancelled because of the security situation in Algeria and rising tensions between Morocco and Algeria, the Ministers of Energy of Morocco, Spain, Portugal and Algeria met in September 1994 and reaffirmed their governments' commitment to completing the pipeline. In October 1994 the Moroccan Minister of Energy and Mines visited Algeria to attend a ceremony marking the formal start of work on the pipeline. In March 1996 it was reported that Enagas had acquired total control of Sagane, the company responsible for the construction and operation of the Moroccan section of the pipeline, by purchasing the 91% stake from the Spanish public-sector Sociedad Estatal de Participaciones Industriales for $513m. The Maghreb–Europe gas pipeline became operational in November 1996 when the first gas supplies were delivered to Spain, and the link to Portugal was completed in early 1997. The pipeline's initial capacity of 7,000 cu m a year was expected to be expanded to 10,000 cu m a year by 2000.

Production of iron ore, mainly from mines in the north-east of Morocco, was as high as 1.5m. metric tons in 1958, but during the next 20 years annual output declined considerably. After 1982 there was an increase in production and in 1987 total output reached 280,000 tons, although it slumped in 1988 to 156,000 tons. Production in 1990 was 149,500 tons, but by 1994 had declined to 63,500 tons. There are plans to open new mines in the Rif mountain area. Production of iron ore is currently undertaken by the Société d'Exploitation des Mines du Rif.

Other minerals produced include barytes, lead, copper, zinc and manganese. Production of most other, non-ferrous ores had been falling, but there were signs of a recovery by the late 1980s. Apart from a sharp decline in estimated output in 1986, production of lead ore has generally increased, and the capacity of the lead smelter at Oued Heimer, operated by the Société des Mines de Zellidja, was to be expanded, following studies which indicated a high lead content in nearby deposits. Zinc production has also been increasing. In 1991 Morocco's total output of zinc ore concentrate was 47,709 tons, with exports worth US $13.3m. Production of zinc ore concentrates increased dramatically in 1993, totalling 125,700 tons, and in 1994 output was 147,200 tons. Production of fluorspar at el-Hammam, near Meknès, and of barytes and cobalt concentrate also increased. Another barytes mine was opened at Zelmou, with a production capacity of 100,000 tons a year. Production of barytes rose to 322,000 tons in 1988 from 127,000 tons in 1987; output increased to 434,700 tons in 1991, but subsequently declined, totalling 264,500 tons in 1994. In the late 1980s and early 1990s output of lead averaged around 100,000 tons, and that of copper around 40,000 tons. The production of silver rose from 76 tons in 1987 to 132 tons in 1988. In an attempt to increase copper production, which had fallen in the 1980s, a major mine was developed at Bleida. Interest has been shown in the possibility of recovering uranium from the phosphate rock reserves, and exploration by the Bureau de Recherches et de Participation Minières (BRPM) has revealed traces of uranium in the upper Moulouya valley, east of Zeida, in the High Atlas. In late 1987 the BRPM signed an agreement with its French counterpart for survey work on deposits of copper, zinc and lead in the Anti-Atlas region. As a result of a recent project by the US Agency for International Development (USAID), US and Moroccan researchers have identified traces of nickel, cobalt and gold in the Foum Zguid region of the Anti-Atlas. There were also reports from OPEC sources that deposits of up to 20m. tons of bauxite had been discovered in Morocco. The Guemassa polymetallic mine in the High Atlas was officially opened in December 1992. In July 1993 ONA (formerly Omnium Nord Africain), which owns and operates the mine, was seeking a $100m. loan to increase annual production to 130,000 tons of zinc, 32,000 tons of copper and 12,000 tons of lead. In May 1994 BRPM signed an agreement with Placer Outokumpu Exploration, a Canadian/Finnish company, which will invest $2m. in mineral exploration work and drilling in the Marrakesh region where the Guemassa mine is located. In November 1995 the BRPM announced that it was to appoint a contractor to develop a gold mine at Iourirn and that it was evaluating bids from international companies. In May 1998 the BRPM signed a convention with Odyssey Resources of Canada, granting the firm a four-year lease for copper exploration in Alous, a town in the southern province of Taroudant. Also in May the BRPM signed a preliminary joint venture agreement with Ennex International of Ireland to develop zinc production in the Middle and High Atlas. Early in 1999 it was reported that a 10-year geological mapping project is planned to identify the country's mineral deposits for potential foreign investors. The project will be undertaken with French, British and South African assistance at a cost of some $200m. Only 20% of Morocco has currently been mapped for foreign mining operators. In March 1995 the Ministry of Privatization announced its intention to sell the state's shareholdings in five mines: the Compagnie de Tifnout et Tighanimine, producing cobalt, in which the government holds 40% of shares; the Société Minière de Bougaffer (SOMIFER), producing 35,700 tons of copper a year, in which the state's shareholding is 34.2%; the Société Métallurgique d'Imiter (SMI), producing 236,000 tons of silver ore a year, in which the state's holding is 69.07%; the Société Anonyme Chérifienne des Etudes Minières (SACEM), producing 42,600 tons of manganese a year, in which the state's holding is 42.99%; and the Société Anonyme d'Entreprise Minière (SAMINE), producing 70,100 tons of fluorite a year, in which the state's holding is 35%. The sale, which represented the first privatization in the mining sector, had been timed to take advantage of rising international metal prices. However, the Ministry of Privatization failed to sell its shares to ONA (which holds a minority stake in the companies), after they were unable to agree on a sale price during 1995. Thus, in March 1996 the Government announced that it had put all mining companies on its privatization list on the market and was planning to sell its shares in the SMI, the Compagnie de Tifnout et Tighanimine, the SAMINE and the SOMIFER to a single bidder at a minimum price of 648.8m. dirhams ($75.3m.). The SMI, in which two-thirds of its shares were sold to ONA in 1996, recorded profits of 83.4m. dirhams in 1997, compared with 43.2m. dirhams in 1996. In 1999 the Government announced that it hoped to sell a 42% stake in SACEM by the end of the year.

INDUSTRY

In the 1980s the Government made particular efforts to promote industrial development, in order to reduce Morocco's dependence

on agriculture and phosphate-mining, to create employment and to reduce imports. Official policy has been to promote export-oriented industry and to encourage private-sector investment; this has been supported by the World Bank. As a result of the investment code promulgated in 1983, and amended in 1988, which provided attractive incentives for both national and foreign investors, investment rose considerably. In 1987 investment in the industrial sector increased by 32%, following growth of 25% the previous year. Investment then rose by 23% in 1988, by 39% in 1989 and by about 35% in 1990. Three-quarters of the invested funds were from private Moroccan investors; foreign investors accounted for 16% of the total in 1987 and 20% in 1988. Foreign investment (principally from France, followed by Spain and Italy) fell markedly in the early 1990s, mainly as a result of recession in Europe. Investment recovered in 1995, growing by 26%. Industrial growth slowed during 1996 to 2.6%, compared with 3.7% in 1995, but recovered in the first half of 1997 to 5.2%. However, industrial growth during the first quarter of 1998 fell to 1%. The main industry, in terms of investment and foreign exchange earnings, is the processing of phosphates, which continues to be undertaken by the state-controlled OCP. The phosphate sector was originally excluded from the government's privatization programme, but in early 1995 plans were being considered to open this strategic sector to private capital (see below). Other industries, in order of importance, are petroleum refining, cement production, food processing, textiles and chemicals. Manufacturing remains a relatively small sector, and is primarily concerned with the processing of export commodities and the production of consumer goods. A number of state-owned industrial concerns were among the first to be offered for sale in the privatization programme. Among these were the Société des Dérivés du Sucre, in late 1992, and the Cimenterie de l'Oriental (Cior) and the Société Nationale d'Electrolyse et de Petrochimie, in early 1993. In March 1994 it was announced that three sugar companies would be offered for privatization: Sucrerie de Beni Mellal, SUTA and Sucrerie du Tadla (see also Agriculture and Fisheries). The Minister of Privatization announced that the state's remaining 22.2% share in the General Tire and Rubber Co would be sold, along with the Société Nationale de Sidérurgie (SONASID, the national steel company), the Société Marocaine de Constructions Automobiles (SOMACA) and the Société Marocaine des Fertilisants, a subsidiary of the OCP. The Government sold its remaining stake in the General Tire and Rubber Co in October, and in late September announced the privatization of the Société des Industries Mécaniques et Electriques de Fès, which makes diesel and electric motors. In January 1995 the General Tire and Rubber Co raised its capital by 20% in a stock market offering, the first newly-privatized company to do so. In February the privatization programme was expanded to incorporate some of the so-called strategic industries, including the country's two oil refineries (see below). The possibility of opening the key phosphate industry to private investment was also announced. The privatization programme experienced its first reverse in February 1995, when the Government failed to find a buyer for SONASID; however, in 1996 a 35% share was floated on the Casablanca stock exchange, and in October 1997 the state's remaining 62% holding was sold to a consortium of local financial institutions, notably the Société Nationale d'Investissement (SNI), and Marcial Ucin, a Spanish steel company. The divestment of other less profitable industries has continued to prove troublesome. In late 1997 the Government made a new attempt to sell part of the state-owned sugar refineries, which were first offered for sale in 1994. In April 1996 the Government invited private investors to develop three new industrial zones at Tangier, Jorf Lasfar and Nouasser. International developers were asked to equip the zones and take responsibility for attracting companies to them, with the Government providing infrastructure. Total investment of some US $186m. was sought. Priority was given to the Tangier industrial zone in order to attract jobs to a deprived area. There were plans to develop a 200-ha site at an estimated cost of $87m., and to attract 1,100 enterprises, one-third of them international companies. The Nouasser zone was to cover 200 ha and Jorf Lasfar 135 ha. However, the state-owned Office de Développement Industriel failed to attract international developers and in mid-1997 the Government announced that it had asked local financial institutions to establish the Tangier and Nouasser zones on a non-commercial basis. In July three privately-owned institutions, the Banque Marocaine de Commerce Extérieur (BMCE), Banque Commerciale du Maroc (BCM) and the SNI announced that they would finance the Tangier zone which would be located near the airport and cover some 120 ha. Construction work was scheduled for completion within two years. The consortium hoped to attract foreign investment in manufacturing and warehousing. The same institutions, together with Al-Wataniya and Mutuelle Centrale Marocaine d'Assurances, two local insurance companies, were also to develop the Nouasser zone, covering 270 ha.

Following the conclusion of a new EU association agreement in February 1996 (see Balance of Payments and Trade), the Ministry of Trade, Industry and Handicrafts published a report which claimed that some 45,000m. dirhams (US $5,287m.) would be needed over the next five years if local industries were to survive competition from EU markets after the free-trade accord became effective in 1997. Under the accord, Morocco agreed to phase out protective customs barriers on all its manufactured products over a 12-year period, with the most sensitive industries being given the longest time to adjust. The report recommended reducing energy prices, liberalizing road transport, opening public services to the private sector (so as to lower production costs for local industries), developing professional training better adapted to the needs of the private sector, reforming further the financial system, and simplifying bureaucratic procedures for manufacturers. Morocco, along with other signatories of this type of agreement, will receive EU funds to help its industries adapt to increased competition. In April 1996 the EU pledged ECU 450m. ($570m.) in grants to help Moroccan industries restructure to meet the challenge of European competition. The grant forms part of some ECU 4,685m. ($5,932m.) to be distributed by the EU to signatories of the new association agreements over a period of four to five years. It will be distributed mainly to private manufacturing companies on a project basis rather than through government agencies, with the aim of assisting them to modernize, expand and improve training. Morocco could receive additional funds in 1999 when the EU intends to offer further grants, with the largest amounts being allocated to those countries with the most successful industrial restructuring programmes. In August 1997 it was reported that the EU was to start disbursing aid promised under the free-trade accord following the initialling, in July, of a framework agreement. In addition, Moroccan industries were to receive a further ECU 450m. ($570m.) in loans from the EIB. During 1997 the Government embarked on a plan to provide financial assistance to small and medium-sized firms, which accounted for about 90% of Moroccan industry, in order to prepare them for increased competition from the EU after 2008. Companies would be offered long-term credits at preferential rates so that they could invest in new equipment and training. In November USAID approved a loan of $10m. to support the programme, which received a further $5.5m. from the Moroccan Government.

Morocco has invested heavily in the 'downstream' phosphates industry. Four phosphate-processing plants are in operation at Safi: Maroc Chimie I, producing phosphoric acid and fertilizers; Maroc Chimie II, producing phosphoric acid; Maroc Phosphore I—a much larger plant, opened in 1976—producing phosphoric acid and monoammonium phosphate; and Maroc Phosphore II—opened in 1982, with three sulphuric acid lines and three phosphoric acid lines. A new facility is planned at Safi with a capacity to produce 2,300 tons a day of sulphuric acid which will be fed into the phosphoric acid plants at the complex. The project is part of the rehabilitation and modernization programme at Safi. The contract to prepare detailed designs for the facility was awarded in March 1997 to the French company Krebs. The phosphoric acid treatment plant at Jorf Lasfar began production in 1986. In 1987 the commissioning of two plants for phosphate calcination took place, as well as the entry into production of the fertilizer-manufacturing units of the Maroc Phosphore III and IV factories at Jorf Lasfar, producing a new type of fertilizer-diammonia. Maroc Phosphore III and IV were expected to add a further 784,000 tons of phosphoric acid per year to total production. In 1991 the OCP announced a project to develop the Maroc Phosphore V and VI fertilizer and acid production units at Jorf Lasfar, with the aim of doubling annual

capacity, estimated at 4.5m. tons of sulphuric acid, 1.4m. tons of phosphoric acid and 1.2m. tons of fertilizers. In April 1995 it was announced that construction of the Maroc Phosphore units could be opened to private capital. The OCP declared in July 1997 that it planned to build a sodium tripolyphosphate plant at Jorf Lasfar, as a joint venture with Prayon-Rupel of Belgium. The $30m. plant will have an initial capacity of 50,000 tons, rising to 100,000 tons. In 1987 the value of exports of phosphate derivatives (mainly phosphoric acid) surpassed that of phosphate rock for the first time, and in 1988 the combined value of phosphoric acid and fertilizers accounted for almost two-thirds of total exports of phosphates and phosphate derivatives. The value of exports by the OCP rose from 9,855m. dirhams in 1990 to 10,048m. dirhams in 1991. Phosphoric acid and phosphate fertilizers accounted for some 70% of sales. Exports by the OCP in 1992 declined to 8,491m. dirhams, but phosphoric acid and fertilizers continued to account for about 70% of sales revenue. After a four-year slump, OCP exports of phosphates and phosphate products rose to US $1,060m. in 1994, a 13% increase over 1993. OCP exports accounted for 28% of the country's total foreign currency earnings in 1994, compared with 25% in 1993. Exports of phosphoric acid rose from 1.6m. tons in 1996 to 1.8m. tons in 1997. The OCP has pursued a number of joint venture phosphate projects with foreign partners. In early 1996 the company signed a five-year contract with Pardeed Phosphates of India to supply 80% of its phosphate requirement, amounting to 250,000–500,000 tons a year. Also in 1996, the Indian Farmers Fertilizer Co-operative (IFFCO) and the OCP discussed the setting up of a joint venture phosphoric acid manufacturing facility, the entire output of which was to have been bought by the IFFCO to use as feedstock for its phosphoric fertilizer plants in India. However, this project did not proceed. Having signed a partnership agreement with Troy of Mexico in August 1995, the OCP agreed a joint venture in December 1995 with Prayon-Rupel for a 130,000 tons-per-year phosphoric acid plant, but the project was not implemented until 1999. The OCP also agreed to supply Grande Paroisse of France with sufficient phosphate to feed its 180,000 tons-per-year phosphoric acid plant. Under an agreement between the OCP and Norsk Hydro of Norway signed in 1999 the OCP is to become the sole supplier of phosphates to Norsk Hydro's European plants and the two companies are to co-operate in developing speciality products using monoammonium phosphate and diammonium phosphate. A 300,000-tons-per-year phosphoric acid plant at Jorf Lasfar, a joint venture between the OCP and the Indian fertilizer group Birla, went into production in 1999. A new storage and production facility for phosphoric acid at Jorf Lafar, a joint venture between the OCP and Chambal of India, should begin production in 2000, processing up to 1.1m. tons of rock annually. Total production of phosphoric acid rose from 2.6m. tons in 1996 to 2.7m. tons in 1997.

The largest industrial project in the 1980s, outside the phosphates industry, was the Nador steel rod and bar mill, with an annual capacity of 420,000 metric tons, built by a British company, Davy Loewy, with a £75m. contract agreed in 1980. The plant began production in 1984 with an output that included wire and reinforcing rods and bars. In May 1994 it was reported that SONASID was seeking foreign investors to finance its expansion. The steel mill required considerable modernization and needed a private sector company to provide capital and technological assistance to increase its capacity of 420,000 tons a year by building an electric arc furnace and continuous caster. Earlier, in May 1992, it was reported that SONASID planned to build a steel mini-mill near Jorf Lasfar port consisting of a 258,000 tons-per-year continuous caster and a 250,000 tons-per-year bar mill. The Government was disappointed when no buyer was found for the state's 51% holding in SONASID, which was put up for sale in early 1995. In a new attempt at a sale, SONASID was 35% privatized on the Casablanca stock exchange in July 1996, and in October 1997 the state's remaining 62% holding was sold to a consortium of local financial institutions. The consortium planned to modernize and expand the Nador plant. SONASID increased its capacity from 480,000 tons a year to 600,000 tons a year in February 1998 when it acquired Longometal Industries of Casablanca. The company recorded profits of 188m. dirhams (US $20m.) in 1997. In early 1999 it was reported that Kobe Steel of Japan was carrying out a feasibility study for a new steel complex at Nador. Costs estimated at $200m. were to be met by the UN's development arm (60%), Kobe Steel (30%) and Moroccan sources (10%).

In late 1994 the privately-owned Maroc Sidérurgie (Masid) announced that it was to build a steel mini-mill near Casablanca to produce 125,000 tons a year of steel bars and rods. The plant would include a 30-ton electric furnace, continuous billet caster and rolling mill. Masid planned to involve a European company as a partner in the project with about one-third of equity. The Banque Nationale pour le Développement Economique (BNDE) announced that it was to participate in financing the US $82m. project by providing a long-term loan of $13m. The local mining group OISMINE was to invest $27m. Liquigaz GPL of Canada and MN Dastur of India were also involved in the project, which was due to become operational in April 1997.

Petroleum refining is another major industry. The biggest refinery, located at Mohammadia and owned by the Société Anonyme Marocaine de l'Industrie du Raffinage (SAMIR), has a design capacity of 4m. tons per year but has been producing at more than 5m. tons per year. CTIP of Italy won a contract to raise the refinery's capacity to 6m. tons a year. The other oil refinery, at Sidi Kacem (owned by the Société Chérifienne des Pétroles, SCP), has a capacity of 1.2m. tons a year. The two refineries, which satisfy 80% of local demand, were originally considered part of the strategic sector and not included on the list of companies listed for privatization. In March 1996, however, the Government offered for sale 25% of its holding in SAMIR worth an estimated 1,730m.–2,070m. dirhams (US $200m.–$240m.); 70% of the shares were reserved for small investors. The offer was fully subscribed, with some 75% of buyers using the new privatization bonds (see below). The Government planned to sell a further 25% of its holding in SAMIR through the stock exchange at a later date. The demand for SAMIR shares was encouraged by reports that both the Royal Dutch/Shell Group and Total of France were interested in buying a controlling stake. In early 1996 petrol distributors expressed concern that the privatization of SAMIR might lead to an increase in the company's prices. Local distributors complained that their profit margins were already too low owing to government control of petrol prices. As a result, Mobil Oil Maroc, which had previously announced a programme to double its investment to $5m. a year, stated that it would not increase investment. In May 1997 it was announced that a Saudi-owned company (Corral Petroleum Holdings) had purchased majority stakes in SAMIR and SCP (67.7% of SAMIR's capital and 73.9% of SCP) in a privatization deal that would generate $420m. in revenues for the Government. Corral also made a commitment to invest a similar amount in the local refining industry over five years. In early 1998 Corral announced plans to merge the operation and administration of the two companies. In April the Government declared that it was to sell its remaining shares in the two companies to Corral, bringing the company's total shareholdings to 74.47% in SAMIR and 81.29% in SCP in a transaction estimated at 400m. dirhams ($40.7m.). In May SAMIR announced plans to invest $500m. over the next five years in development projects, including an expansion of its refinery at Mohammadia and modernizing port links.

One of Morocco's major import-substitution industries is cement production. The country's cement works produced a total of 3.9m. tons in 1987. Virtually all plants were working below capacity (average utilization of capacity was 70% in 1987), but amid indications of renewed growth in the construction industry domestic production reached 4.6m. tons in 1988 and 5.4m. tons in 1990. Cement production rose from 6.6m. tons in 1996 to 7.2m. tons in 1997. In 1990 consumption of cement increased by 16.7%, compared with the previous year, and all the country's cement production units indicated consistent growth. Cement plants have attracted increased foreign investment in recent years, especially from France. Lafarge-Coppée of France holds a 65% interest in Cementos Marroquíes (Cemenmar), a 26.5% interest in the Cimenterie Nouvelle de Casablanca (Cinouca) and a 40% interest in Cimenterie de Meknès. Annual capacity at the Cinouca plant increased to 1.9m. tons, following the opening of a new 700,000-ton production line. Production capacity at Cemenmar's Tétouan plant, currently 250,000 tons per year, may also be increased. Lafarge-Coppée has also taken an equity share in Readymix Maroc. Another French company,

Ciments Français, has a 51% share in Société des Ciments d'Agadir, which has a production capacity of 1m. tons per year, and controls 60% of Cimenterie de Safi, a 600,000 tons-per-year plant. The International Finance Corpn (IFC) has provided financial assistance for the new Safi plant (US $20.3m.) and for Cinouca's expansion programme ($17m.). In May 1994 the IFC agreed to provide $10m. to modernize Ciment du Maroc's plant at Agadir. A further $4.2m. was to be provided by a syndicate led by Banque Indosuez of France. Among the largest privatizations to have been completed by mid-1994 were holdings of the ODI, including the Cior. In August 1996 the local Laraqui group sold its majority shareholding in the Asment de Temara cement plant to Portugal's Cimpor-Cimentos for $70m. The Laraqui group had earlier planned a 30% increase in production capacity at the 900,000 tons-per-year plant, but other shareholders failed to agree to the necessary capital increase. Cior is planning a $8.5m. expansion project, involving a distribution centre and a crushing plant, in the north of the kingdom. In February 1998 Lafarge Coppée announced an expansion project at its Casablanca plant, where capacity will be increased from 1.6m. tons to 2m. tons. Cement sales were reported to have fallen slightly in 1998, to 7.15m. tons, with the Lafarge group accounting for 41.6% of total sales, Ciments de l'Oriental 21.7%, Ciments du Maroc 17.2%, Asmar 10.8% and Asment 8.7%.

The food-processing industry remains of considerable importance. It produces both for export and for domestic consumption. A large quantity of grain is processed into flour locally, but imported wheat is processed at a number of mills. There are also extensive sugar processing facilities in the country (see Agriculture and Fisheries). Other food industries include fruit and vegetable processing and canning—mainly for export—and fish canning. Fruit and vegetable processing recorded low growth rates in the mid-1980s, despite the fact that manufacturers could market directly, rather than through the Office de Commercialisation et d'Exportation, which was dismantled as part of the Government's privatization programme. This sector encountered restrictions on exports by the EC from 1986, when Spain and Portugal acceded to the Community. In 1998 Morocco's food-processing industries were reported to be highly inefficient and poorly equipped to meet open competition from the large agro-industrial groups of the EU.

The textile industry suffered from over-stocking in the mid-1960s, but in the 1970s its turnover grew at an annual rate of about 10%, and by 1981 it employed some 55,000 workers. Investment in textiles and leather increased from 361m. dirhams in 1982 to 717m. dirhams in 1984, and 966m. dirhams in 1986; in 1987 the level of investment nearly doubled, to 1,857m. dirhams. In 1988 textiles and leather accounted for 22% of total investment and 58% of projected employment, virtually all of this coming from textiles rather than leather. In 1990 investments in textiles and leathers increased by 45% (to 3,583m. dirhams, compared with 2,466m. dirhams in 1989). Textiles were at the forefront of export-led industrial growth, and export earnings increased significantly in the 1980s. Whereas in 1983 clothing exports were worth 683m. dirhams, by 1987 their value was 2,347m. dirhams. In 1988 Moroccan exports of textiles and leather goods together accounted for 38% of all manufactured exports. Owing to the Gulf crisis of 1990–91, Moroccan textile exports to Gulf markets were reported to have suffered. European markets for Moroccan products, however, were not severely affected, although there has been a tendency for preference to be given to Portuguese and Eastern European goods. Spanish and Italian textiles firms have invested in Morocco in recent years. Tavex of Spain is majority shareholder in the Settavex textile scheme in Settat, which now employs 300 staff and produces 13.5m. metres of denim fabric a year. Settavex embarked on an expansion programme in 1998–99 to modernize its production facilities and diversify its product range. In 1999 the IFC announced plans to invest US $14m. in the company. In January 1992 Carrera, an Italian textile firm, established a joint venture in Tangier with the local Nasco group to produce 2m. pairs of jeans per year. In early 1999 the American company Fruit of the Loom announced that it was transferring part of its operations from Ireland to a plant in Morocco which will employ 700 workers. Also in 1999 the Moroccan Compagnie chérifienne des textiles signed a partnership agreement with the French company Sanglar-Sicap involving co-operation in both production and marketing. Rising labour costs are presenting problems for the textile industry which remains Morocco's major exporter of manufactured goods. Some 85% of total production of some 1,500 companies is exported, mainly to Europe. The sector employs some 180,000 people, about one-quarter of the total manufacturing labour force. There are fears that some European-owned textile plants may transfer their operations to Asia if labour costs continue to rise. In January 1996 the British company Marks and Spencer denied allegations that Morocco's Société Industrielle de Confection à Mèknes—which makes clothes for Marks and Spencer—was using child labour.

In the engineering sector, there are four plants assembling cars and small utility vehicles: Renault Maroc, the Société de Promotion Industrielle et Automobile au Maroc (Peugeot-Talbot), SOMACA (Fiat), and the Société Méditerranéenne pour l'Industrie Automobile (Land Rover). Heavy trucks (16.5 metric tons and over) are manufactured by Berliet Maroc and Saida; smaller capacity vehicles are assembled by Berliet, Auto-Hall and Siab. Berliet also assembles buses, and Somami-Rahali, a Casablanca-based firm, has manufactured bus bodies for Daf chassis imported from the Netherlands. A limited range of motor vehicle components is made locally, as are tyres. Railway goods wagons, and mineral and tanker wagons are assembled by SCIF of Casablanca. In April 1994 the Ministry of Commerce, Industry and Privatization invited tenders to build and operate a plant producing an economy car for the local market and to develop the local components industry. In 1999 Yamaha of Japan and its Moroccan partner, Marocaine industrielle, financière et agricole (Mifa), announced the construction of a new factory to produce motorcycles for the local market.

In May 1996 the French/Italian electronics company, SGS-Thomson, announced that it was to spend US $300m. over the next five years expanding its two factories near Casablanca which assemble electronic components and currently employ more than 2,000 people. In October 1997 South Korea's Daewoo Corpn signed an agreement with the Government to build a car assembly plant and a semiconductor plant at the Nouasser industrial complex near Casablanca, involving an investment of $500m. The two plants were expected to create almost 6,000 jobs and generate exports of $300m. during the next five years. Daewoo launched a holding company, Daewoo-Maghreb, in June 1998 in order to implement the agreement. The two plants were expected to start production by the end of 1999. In 1998 the American computer firm Microsoft announced that it was establishing its regional headquarters in Casablanca, and two other US companies, Compaq and Oracle, stated that they would co-operate in opening Moroccan-based subsidiaries.

Morocco's pharmaceuticals industry comprises 24 production facilities and earned US $421m. in 1997. Almost all production is under licence, most raw materials are imported and output is almost entirely for domestic consumption. All the large plants are owned by major international companies such as Hoechst Marion Russel of Germany and Pfizer of the USA. In 1998 Britain's SmithKline Beecham opened a new $8m. pharmaceuticals plant near Rabat, and Pfizer announced that its factory at El Jadida had been chosen as one of four sites to produce the drug Viagra.

After severe droughts in 1992 and 1993 had exacerbated serious power shortages, the state power company, ONE, was forced to develop an emergency plan to increase generating capacity. Contracts for several new power stations were awarded in 1993, including the installation of 100 MW of new capacity at the CTZ-ZI power plant at Casablanca, to be built by Technip of France at a cost of US $88m. In October 1993 an agreement was signed between ONE and Tractabel of Belgium and AES of the USA to build and operate a 500-MW oil-fired power station at Mohammadia. Output from the $600m. plant was to be sold exclusively to ONE under a long-term contract. In July 1994 the EIB approved a loan of $96m. to ONE to help finance the interconnection of the Moroccan and Spanish power grids, the first power link between North Africa and Europe. The 400-kV undersea electricity link with Spain under the Strait of Gibraltar, which cost $250m., was inaugurated in June 1998. In November 1994 it was reported that ONE had failed to meet payment to local distribution companies for oil shipments. State companies, including the Office National des Chemins de Fer

and the Office National de l'Eau Potable, had fallen into arrears amounting to an estimated $194m. A special payment of $107m. was made to ONE in the 1995 budget to help the company overcome its payment problems.

In September 1994 it was reported that the first of two 330-MW units at the Jorf Lasfar power station had reached full load in late August and had been linked to the national grid in July; and that the second would be linked to the grid in early 1995. In June 1994 the Minister of Privatization had stated that the full or partial privatization of power distribution was under consideration, and in October ONE invited tenders to build and operate Morocco's first private power project, the Jorf Lasfar III and IV units. It was announced that the successful bidders would also receive contracts to manage the two existing units at Jorf Lasfar on a concession basis and a letter of intent to build and operate the planned Jorf Lasfar V and VI units. The contract for the privatization and expansion of the Jorf Lasfar power station was awarded to ABB Asea Brown Boveri of Switzerland and CMS Energy Corpn of the USA in February 1995; however, the final agreements were not initialled with ONE until April 1996. ONE indicated that the deal would be finalized when the financial arrangements had been made; these arrangements were outlined at the end of 1996. Under the agreements, two additional 348-MW units will be constructed to double the power station's capacity to 1,362 MW, the first unit to be completed in September 1999 and the second in March 2000. All the electricity generated at the plant will be purchased by ONE, which retains its monopoly over distribution. Construction work, carried out by subsidiaries of ABB Asea Brown Boveri, began in September 1997 and when completed the plant will be operated and maintained by CMS Energy Corpn for 30 years under the build-operate-transfer formula. The US $1,500m. project is being financed mainly by commercial bank loans, supported by export credit facilities from Italy and Switzerland and loans from the US Export-Import Bank and the US Overseas Private Investment Corpn. In early 1998 it was reported that ABB Asea Brown Boveri and CMS Energy Corpn were discussing a further expansion of the power station involving the addition of 700 MW of capacity. Early in 1999, the Anglo-French company Alsthom won a $34m. contract to constuct two high-voltage lines between the Jorf Lasfar and Mohammadia power stations to be completed in early 2000.

In November 1996 it was reported that ONE was revising its plan to build two new gas-fired power stations in Mohammadia and Kénitra in Morocco's industrial heartland. It was instead considering the construction of one installation at a northern location because of immediate access to the Europe–Maghreb gas pipeline, saving on fuel transport costs. Morocco currently receives 1,000m. cu m of gas a year from Algeria instead of transit fees. Building a station further south would require the construction of a 240-km branch pipeline to feed the plant with gas. ONE confirmed in January 1997 that it wanted the facility to be built in Tahaddart near Tangier rather than in Mohammadia or Kénitra as originally planned. The 370-450-MW gas-fired Tahaddart power plant will be owned by ONE and two foreign partners. Electricité de France and Endesa of Spain. Under the original ownership agreement signed in 1998, the two foreign partners were each to hold a 30% stake in the plant with the remaining 40% shared by ONE and a construction firm as yet to be designated. At the end of 1998, however, the Minister of Energy and Mining announced that the holding of each of the foreign partners was to be increased to 40%, a decision opposed by the chairman of ONE. In November five companies were shortlisted to build and run the plant, which will cost an estimated $500m. Construction will be on a 15-20 year build-operate-transfer basis, with the first phase scheduled to become operational in 2003 and the second in 2005. The station will use Algerian gas from the Maghreb–Europe pipeline.

Following a visit to the Western Sahara by Prime Minister Youssoufi in December 1998. ONE announced a US $58m. investment programme in the disputed territory to expand the electricity grid, including a 21-MW power plant at Dakhla.

In August 1995 Lyonnaise des Eaux-Dumez of France signed an agreement with the Moroccan authorities to manage Casablanca's power and water distribution network; the agreement was approved in principle in March 1996. Opposition parties criticized the deal, arguing that it was a privatization and would lead to higher prices for consumers. Lyonnaise des Eaux-Dumez rejected these claims and stated that the agreement was neither a sale nor a privatization. Lyonnaise des Eaux plans to spend some US $3,000m. over the 30 year contract period to improve water purification, water distribution and expand the electricity network. Early in 1999 the company announced that it would spend $82m. over the next two years. In May 1998 a consortium of Spanish, Portuguese and local companies signed a 30-year concession agreement to operate power, water and wastewater systems in Greater Rabat (including Salé and Temara), involving investment of 14,000m. dirhams ($1,500m.) over the concession period. Other cities were reported to be contemplating contracting private operators to manage water and sewerage services, but the Casablanca and Rabat contracts proved highly controversial and met with resistance from the employers' federation.

In April 1995 ONE announced that it was to appoint a consortium of contractors to build and operate a 50-MW wind-driven power plant at Tétouan. The consortium will operate the plant for 19 years, after which ownership will pass to ONE, which is responsible for the construction of the transmission lines and associated substations. The plant will cost an estimated US $60m. Construction of the plant by Denmark's Vestas Wind Systems began in early 1998 and was expected to be completed in 1999. The consortium appointed to operate the plant included Electricité de France and Compagnie Eolienne du Detroit/Banque Paribas. It was reported in January 1997 that ONE was working on a plan to invite private investors to build a 200-MW wind power station in the south (likely to be near Agadir). The project will be the second wind power scheme, following the facility at Tétouan in the north. Early in 1999 ONE, together with a French consortium of Electricité de France, Banque Paribas and Germa, announced the construction of a $53m. wind-driven power plant in the north, near Gibraltar. The construction of dams with hydroelectric complexes, a programme which began in the 1960s, remains an important element in the Government's strategy to increase generating capacity. In mid-1997 the AFESD agreed a loan of $100m. for the Dchar el-Oued and Aït Messaoud hydroelectric dams in the Tadla region. Construction of the dams was scheduled to begin in 1998. In November 1995 it was reported that the Association Marocaine pour la Gestion de l'Energie was preparing a study on solar power. In October 1997 Germany's development agency, Kreditanstalt für Wiederaufbau, agreed to contribute $5.6m. to a solar energy project in the Tensift region near Marrakesh operated by ONE. Early in 1999 it was reported that Morocco was considering the construction of medium-capacity nuclear reactors to provide power and desalinate sea water.

In May 1995 ONE and Sonelgaz of Algeria renewed a contract for 1995–96 under which Sonelgaz would supply 50 MW of electricity to Morocco at a cost of US $25m. Also in May ONE stated that it expected the Government to approve a $119m.-a-year investment programme to accelerate rural electrification as part of a plan to provide electricity to all rural households by 2010. Currently only 35% of rural households have electricity. The new programme is to co-ordinate two schemes for rural electrification already in progress; one financed by ONE, the other financed by local communities by creating a central fund to which both rural communities and ONE contribute. Some 1,255 villages were linked to the electricity grid in 1996. ONE announced plans for the electrification of 2,500 villages in 1998 and 3,800 in 1999. In May 1998 it was reported that negotiations were taking place with Japan for a $45.8m. loan to ONE to finance its rural electrification programme. In February 1996 ONE stated that investment of 30,000m. dirhams ($3,462m.) would be required between 1996 and 2000 to satisfy a growth in demand of some 7% a year. Additional generating capacity of 1,900 MW would be required over this period. Under the company's 1996–2000 operational plan, it aims to reduce its own power production by almost one-half, from 9,106 GWh to 4,757 GWh, and to increase the amount of electricity it buys in from 2,494 GWh in 1996 to 10,343 GWh in 2000. The private sector is to be more heavily involved in power generation, with ONE buying in electricity to resell to its customers. Some 1,814m. dirhams is to be spent on boosting production (935m.

dirhams on hydroelectric plants, 379m. dirhams on thermal power stations and 500m. dirhams on coal facilities), 1,831m. dirhams on transmission (including 933m. dirhams on the submarine link with Spain), 522m. dirhams on expanding the distribution network and 393m. dirhams on the rural electrification programme. In 1997–99 ONE was to spend 2,500m. dirhams expanding the national transmission network, including the cost of completing the link with Spain. Despite the fact that ONE no longer receives a government subsidy, the company reported that it was in profit in 1995 because of the success in making its operations cheaper and more effective. In February 1996 ONE introduced a new pricing system for electricity to standardize and control pricing practices and make the power sector more commercially competitive.

BALANCE OF PAYMENTS AND TRADE

Morocco's main sources of revenue are earnings from exports of phosphate rock and phosphate derivatives, agricultural products and manufactured goods, receipts from tourism and workers' remittances from abroad. The country's expenditure is mainly on imports of capital equipment, food and crude petroleum. After 1976 the deficit on the current account widened, as export earnings rose slowly while the cost of imports soared. In 1983 the Government took strong measures to close the export/import gap by reducing budget expenditure and by restricting imports. This reduced the trade deficit from 13,552m. dirhams in 1982 to 11,218m. dirhams in 1983. However, the continuing decline in phosphate exports (by volume and value), and the high level of food and energy imports, resulted in further increases in the trade deficit, to 15,278m. dirhams in 1984 and to 16,938m. dirhams in 1985. Only the collapse of petroleum prices during 1986 enabled the trade deficit for that year to fall by 26%, to 12,505m. dirhams. In 1987 the trade deficit fell by a further 5%, to 11,881m. dirhams. Imports in 1987 rose by only 1.9%, to 35,271m. dirhams, while exports increased in value by 5.8%, to 23,390m. dirhams. The trade deficit continued to fall in 1988, to 9,382m. dirhams, with imports of foodstuffs down by 3.9% and energy imports by 14.9%, while exports rose by 20%. The precarious nature of this improvement was revealed, however, by a sharp increase in the trade deficit in 1989, when exports declined by 5% and imports rose by 19%, compared with 1988. Even so, the improvements in the export performance of some sectors were encouraging, particularly the increase of more than 30% in export earnings from manufactured consumer goods in the first quarter of 1989. Results for the whole year, however, indicated that the trade deficit almost doubled, to 18,323.8m. dirhams. The decline in exports in 1989 was largely the result of a sharp drop in sales of phosphoric acid. In 1990 the trade deficit grew by 21% (despite an increase of 19% in exports), to 22,165m. dirhams. Imports increased by 22% in 1990, to 57,022m. dirhams. The 1990 trade deficit was equivalent to 10.5% of GDP. In 1991 the trade deficit rose to 22,437m. dirhams, despite a 7% increase in exports (to 37,283m. dirhams) and a decline in expenditure on energy imports. Imports rose to 59,720m. dirhams, of which more than one-half were semi-finished products and industrial equipment. Food exports rose by 20.6% and there was a steady growth in sales of manufactured products. Exports of phosphates and derivatives accounted for 27% of total sales. The trade deficit increased in 1992 by almost 30%, to 28,846m. dirhams. Invisible earnings (remittances from migrant workers and tourist revenues) also increased, however, so that balance-of-payment problems were not anticipated. Sales of phosphates and products decreased from 10,047m. dirhams in 1991 to 8,491.7m. dirhams in 1992. Clothing sales remained constant at 4,137m. dirhams. Oil imports increased by almost 22%, and those of wheat nearly doubled as a result of the drought, totalling 2.4m. tons in 1992. Imports of industrial machinery rose from 2,460.7m. dirhams in 1991 to 2,711m. dirhams in 1992. Figures published by the Central Bank record exports of 34,238m. dirhams in 1993 and imports of 56,368m. dirhams, giving a trade deficit of 22,130m. dirhams and a current account deficit of 4,899m. dirhams. In 1994 exports rose to 36,546m. dirhams, while imports increased by 17% to 65,963m. dirhams, resulting in a trade deficit of 29,417m. dirhams. The trade deficit continued to widen in 1995; although exports increased by 10.1% to reach 40,240m. dirhams, imports rose by 10.5% to total 72,869m. dirhams (primarily owing to a substantial increase in food imports following the severe drought), giving a deficit of 32,629m. dirhams. In 1996 the trade deficit narrowed slightly to 30,600m. dirhams as exports rose to 41,300m. dirhams and imports declined to 71,900m. dirhams. Revenue from tourism increased by almost one-quarter, to 9,000m. dirhams, and remittances from Moroccan migrants in Europe also rose, to 17,500m. dirhams. Official data confirmed that the value of exports grew slightly in 1997, to US $7,038.6m., while that of imports showed a slight fall, to $9,521.5m., leading to a narrowing of the trade deficit. Trade figures for January–November 1998 reveal that exports continued to grow, but that imports grew at a faster rate, resulting in widening trade deficit. However, tourism receipts and workers' remittances both increased compared with the corresponding period of 1997.

Morocco's GDP is heavily dependent on agricultural performance. GDP grew at an average annual rate of 2.9%, in real terms, during 1978–84, although growth was depressed during several of those years, owing largely to poor harvests. Improved agricultural output in 1985 allowed GDP to rise by 6.3% in real terms, and an exceptional harvest in 1986 contributed substantially to the 8.4% growth in GDP for that year. In 1987 GDP declined by 2.6%, largely as a result of poor harvests, forcing agricultural output down by 13%, and stagnation in the phosphate sector, contributing to a 1.2% fall in output from the mining sector. A record harvest in 1988 boosted GDP growth to an estimated 10.4%. Other strong areas were manufacturing, energy production, commerce, transport and other services. In 1989, despite a good harvest, GDP grew by only 1.8%. According to Moroccan official figures, GDP fell by approximately 3% in 1992, largely as a result of the drought, which reduced agriculture's share of GDP from 21% to 15%. However, according to the IMF, GDP declined by 4.1% in 1992 and grew by only 0.2% in 1993. Official estimates suggested that the economy grew by 11% in 1994 as a result of a good harvest following two years of economic decline. However, severe drought in 1995 caused a sharp contraction in the economy, with GDP declining by 7%. Heavy rainfall resulted in a marked improvement in the economy in 1996, with GDP growth of 12.0%. The economy contracted again in 1997 following a poor harvest; GDP declined by 2.2%. Official figures indicated that real GDP grew by 6.3% in 1998 and the Government forecast growth of 4% in 1999.

In 1997 the EU remained Morocco's largest trading partner, accounting for 60.6% of all exports and 52.1% of all imports, although its share of the market has declined slightly in recent years. In 1996 France was the largest source of goods, providing 20.8% of imports, followed by Spain (8.8%), the USA (7.4%), Italy (7.2%) and Germany (6.1%). France was also Morocco's largest export market in that year, taking 28.3% of exports, followed by Spain (9.9%), Japan (6.9%), India (6.3%) and Italy (6.3%). In 1998 Morocco signed free-trade agreements with Hungary and Bulgaria and expanded its trade links with China. Trade with the other Maghreb countries remains limited but was expected to increase, following the creation in 1989 of the Union of the Arab Maghreb (UAM). Numerous initiatives have been taken to encourage closer economic collaboration and integration with other members of the UAM, including the lowering of customs and tariff barriers and promotion of trade and joint ventures. Despite a great deal of rhetoric, by late 1995 the UAM had largely failed to promote greater economic co-operation between its members, and in December Morocco threatened to bring UAM activities to a standstill after it accused Algeria of interfering in the Western Sahara dispute (see History). Ambitious plans to increase bilateral trade with Egypt have not been realized.

In April 1994 Morocco hosted the signing of the GATT Uruguay round trade pact in Marrakesh. Morocco had been one of the principal supporters of the GATT agenda in the Arab world. In July 1993 the maximum customs duty on imported goods was reduced from 40% to 35%, and, in line with the government's commitment to GATT, rates on some 2,300 products (including textiles, fibres, paper and packaging, and foodstuffs) were reduced. In March 1995 the liberalization of cereal, vegetable oil and oilseed imports was postponed from April and May until July in order to give time for measures to be put in place to protect local industries. The existing quantitative restrictions are to be replaced by tariff barriers, in accordance with GATT.

Measures to liberalize sugar imports were also delayed until mid-1995. In June the Government announced that it had approved the ending of the state's monopoly on petroleum imports, as part of its policy of liberalizing the energy sector. In March 1998 customs duties on imported wheat were increased significantly in an attempt to protect local farmers.

Morocco's trade is likely to remain crucially dependent on Europe. In view of the importance of its trade relations with the EU, Morocco has continually sought more favourable trade agreements. A five-year agreement conferring 'partial association' on Morocco was negotiated in 1968 and came into force in 1969. A new agreement for an unlimited period was finalized in January 1976, whereby most Moroccan agricultural and industrial products were allowed free access to the EC, but with restrictions on a few crucial items, such as olive oil, citrus fruit, wine, textiles and refined petroleum products. In 1984 Morocco applied to join the EC, but, in the absence of European approval for its application, urged the Community to liberalize its trade policies; new quota agreements were signed in January 1985. The entry of Spain and Portugal into the EC in 1986 stimulated a series of discussions, in which Morocco, as one of the countries most affected, was deeply involved. It was later agreed that the voluntary quota system on manufactured goods should be abandoned, but no agreement was reached concerning agricultural exports. Proposals by the EC Commission covered the five-year transitional period up to 1990. However, Ministers of Foreign Affairs from EC member states were unable to agree on the Commission's proposals, while Morocco also expressed serious concern at what it regarded as the 'protectionism' of the EC and the inadequacy of the Community's arrangements for relations with Morocco. In July 1987 Morocco made a second application for full membership of the EC, which was rejected in October. In 1991 it was announced that the EC would provide a financial aid programme of US $5,800m. for eight Mediterranean countries, of which Morocco was to be the largest beneficiary (receiving $534m. in total funds). Concessionary loans would comprise 50%. In January 1992 the European Parliament decided to block $600m. of development aid, in protest at abuses of human rights in Morocco and in the disputed Western Sahara. Morocco then refused to conclude a new fishing accord, and agreement was not reached until May. In April the EC Commission approved a policy document envisaging a new Euro-Maghreb partnership. In October the European Parliament eventually ratified a fourth financial protocol, according to which Morocco was to receive $580m. in new funding over four years. In July 1993 it was reported that the EU had proposed an annual increase of 3% in quotas of citrus fruit, orange juice, fruit and vegetables from Morocco in 1997–2000. In January 1995 the Government signed an agreement with the EU to bring agricultural trade regulations closer to the provisions of GATT. Under the new agreement, Morocco's preferential status in tomato exports to the EU was reduced, but exports would be allowed to maintain their traditional level of 140,000–145,000 tons per year. A minimum price was imposed for the months from November to March, Morocco's busiest export period. Moroccan farmers were prevented from selling tomatoes at less than ECU 560 ($693) per ton, compared with minimum prices stipulated under the GATT of ECU 700–750 ($866–$928) in the period from November to March and ECU 920 ($1,138.5) for the months January to March. After two years of negotiations, in February 1996 Morocco became the third Mediterranean country to sign a free-trade accord with the EU. The accord had been initialled in November 1995 after delays due to Morocco's bitter dispute with the EU over fishing rights. Under the terms of the new agreement, Morocco will phase out protective tariffs on EU manufactured goods entering the country over a period of 12 years, and will receive financial help from the EU to assist local industries adapt to new competition. No detailed financial package was written into the agreement, but the EU pledged to give signatories of this type of accord priority access to some ECU 4,695m. ($5,983m.) over the period 1996–2000. The sensitive issue of free trade in agricultural products will not be discussed until 2000, although both parties agreed to increase agricultural trade and in the short term Morocco will benefit from a number of concessions. The accord forms part of the EU's wider plan to foster a new political and economic force in the Mediterranean based on free trade and political co-operation. By early 1999 the EU was reported to have extended a total of ECU 453m. in aid to Morocco since the accord was signed in 1996.

TOURISM

The tourist industry has become an increasingly important source of foreign exchange. By 1987 the total revenue earned from tourism had reached 8,000m. dirhams, representing 23% of total exports of goods and services. Only phosphates and their derivatives, and workers' remittances, brought in more foreign exchange. Tourism was undoubtedly one of the growth areas of the Moroccan economy in the 1980s, and government incentives played a significant part in its development. Special conditions drawn up in 1983 govern investment in tourism, including tax exemptions on capital goods imports, interest-free loans and, in certain circumstances, income tax exemptions for a 10-year period. Major tourist complexes were constructed at Casablanca, Agadir, Tangier and Restinga, near Tétouan. By the end of 1988 there were more than 79,000 beds available in nearly 500 hotels, pensions and holiday villages. Most tourists stay on the southern, Atlantic coast. The total number of foreign tourist arrivals in 1987 was 1,566,254, an increase of 6.5% on the 1986 total. In 1989 the number of tourists visiting Morocco increased by 27% (to 2,515,251, compared with 1,978,420 in 1988). In 1990 some 3m. foreigners visited Morocco, increasing tourist remittances by 22%, to 10,500m. dirhams. This advance was due to a rise in the number of Algerian visitors, taking advantage of the 'open frontiers' that had been authorized by the UAM. In 1991 tourist receipts declined to 8,822.2m. dirhams, despite a 3.1% increase in arrivals, mainly accounted for by more visitors from other Maghreb countries. In 1992 the number of visitors increased to 3.3m. Tourist arrivals from Italy increased by 67.9%, and from Spain by 43.4%. There was also an increase in the number of tourists from Germany, the USA and Japan, although tourist arrivals from Algeria decreased by 19%. Tourist arrivals decreased by 9.4% in 1993 and by 22.1% in 1994 (to 2.3m.) as a result of the recession in Europe, tensions between Morocco and Algeria and the fear of terrorist attacks following the Marrakesh shooting (see History). There was a further sharp decline in 1995 when the number of tourists fell to 1.5m., resulting in a decline of 12% in revenue to 10,000m. dirhams. In late 1995 the Ministry of Tourism reported that it had closed 36 hotels and downgraded 53 as part of a programme to raise the standard of tourist facilities. Foreign tourist arrivals increased from 1.6m. in 1996 to 1.8m. in 1997, but revenue fell slightly as a result of a decline in per caput expenditure. Official estimates indicate that foreign tourist arrivals continued to increase in 1998 to exceed 2m., and that revenues for the first 11 months of 1998 rose by over 14% to 13,460m. dirhams. Despite the increase in tourist numbers, the Ministry of Tourism's target of doubling numbers by the end of the 1999–2003 development plan period appeared overambitious.

In March 1993 it was reported that five state-owned hotels in Tangier, Meknès and Casablanca (the first of 37 hotels owned by the Office National Marocain du Tourisme scheduled for privatization) had been sold. A new approach to the privatization of state holdings in hotels was announced in April, according to which the Government would sell its holdings in four- and five-star hotels to international companies as a comprehensive transaction. The 1993 budget included a reduction in the allocation to the Office National Marocain du Tourisme to 90m. dirhams, indicating the Government's commitment to disengage from the tourist industry. In May 1994 local investors purchased the Transatlantique hotel in Meknès. In January 1998 the Ministry of Privatization announced that nine state-owned hotels would be offered for sale in 1998, including seven hotels that had failed to attract buyers when they were first offered for sale in November 1997.

Recent foreign investment is providing an opportunity to revive the flagging tourist industry. In July 1996 South Korea's Daewoo Corpn announced that it would buy the Rabat Hyatt Regency hotel for US $40m. and build an extension for an additional estimated $50m. In February 1997 it was reported that the French hotel management company Accor was to open subscriptions in March for its planned $100m. fund to invest in tourism development projects in Morocco. The funds will be spent to acquire hotels, spas and other facilities. In July Accor

purchased the local Moussafir hotel chain for $5m., the company's first purchase under its current investment programme in Morocco. In April it was reported that the company was in talks with the Government about financing and building a trade and leisure centre in Casablanca and a 1,200-room hotel complex in Agadir. In addition, Germany's Paradiana is to invest in two separate tourism projects (a 600-bed hotel and a holiday club) in the Agadir region, where the Société d'Aménagement de la Baie d'Agadir is trying to attract some $450m. of private investment to develop tourist facilities there. Agadir is Morocco's only significant coastal resort and the country's northern coastline lacks tourist infrastructure. To attract more foreign tourists Morocco needs to develop its coastline. In 1998 the French group Accor won a contract to manage three luxury hotels in Casablanca, and Majestic Hotels, a Saudi–British firm, announced the investment of $50m. in a tourist complex at Skhirat, south of Rabat.

TRANSPORT AND COMMUNICATIONS

There are 10 major ports: Casablanca, Safi, Mohammadia, Agadir, Kénitra, Jorf Lasfar, Tan Tan, Dakhla in the disputed territory of Western Sahara, along the Atlantic coast, and Nador in the north-east and Tangier in the north-west, both on the Mediterranean. Since early 1985 the major ports have been controlled by the Office d'Exploitation des Ports (ODEP). In 1985 ODEP began modernizing port equipment and facilities in a two-year development plan. In the period to 1990 ODEP planned to spend 1,350m. dirhams, more than half of which was to finance the development of ports. In 1991 several projects were announced, including a new container terminal at Casablanca, at a cost of 610m. dirhams, a 160m. dirham coal terminal at Jorf Lasfar and modernization of port equipment at ports controlled by ODEP. The World Bank was to provide loans of US $99m. to ODEP and $33m. to the central Government for the financing of these projects. The volume of traffic through all ports in 1988 reached 39.6m. tons, an increase of 12.7% over the 1987 total. In 1990 the volume was 37.9m. tons. The major goods handled include hydrocarbons and phosphates, sulphur and ammonia, triple superphosphate and phosphoric acid, citrus and other fruit, and vegetables. Of the total cargo handled in 1988, 42% went through Casablanca, 17% through Jorf Lasfar, 15% through Safi and 12% through Mohammadia. The volume of cargo traffic through Moroccan ports increased to 40.5m. tons, in 1993; the 22.1m. tons of imports included 9.5m. tons of hydrocarbons and 3.9m. tons of cereals. In March 1994 work began on a new harbour at Dakhla in Western Sahara as a centre for coastal and deep-sea fishing, including a 1,300-ha free-trade zone. In March 1996 it was reported that ODEP planned to invest 1,700m. dirhams ($200m.) in port development over the period 1996–2000. Its plans included investment of 328m. dirhams for the purchase of equipment and 144m. dirhams for infrastructure development at Casablanca, 361m. dirhams at Dakhla and 145m. dirhams at Jorf Lasfar. ODEP reported a rise in its turnover of 23% to 1,127m. dirhams in the year to the end of September 1995. In February 1996 shipping firms reported severe congestion at Casablanca owing to the Government's campaign against smuggling, which led to the arrest of a number of senior customs officials. In November 1996 the Government launched an initiative to raise interest in a $300m. investment project to build a new multi-purpose deep water port in Tangier. The aim of the project is to divert all merchandise traffic from the existing port, which is expected to suffer from serious congestion by 2002, despite short-term expansion projects in 1996–98. The contract for the project, known as Tangier-Atlantique, was expected to be awarded in 1998. It involves the design, construction, operation and financing of the new port under a 50-year concession. The second port at Tangier is scheduled for completion by 2003. In November 1997 Spain agreed credits of $4m. towards the cost of a new port at Agadir. In February 1998 ODEP announced that it was planning to spend $220m. on modernizing and expanding the country's port facilities during 1998–2002.

The railways are operated by the Office National des Chemins de Fer (ONCF). In 1989 the company planned to invest nearly 1,000m. dirhams in rail development, including projects to double the Rabat–Kénitra line and the construction of a connection between Casablanca and the city's King Muhammad V airport. Also considered were an extension of the rapid transit system which runs between Casablanca and Rabat south to El Jadida, a rail link between Taourirt and Nador in the north-east, and a controversial plan to link Marrakesh and el-Aaiún, in Western Sahara. In mid-1992 it was announced that the ADB had agreed to contribute US $84m. towards an estimated $270m. programme to improve main railway routes, in particular the Casablanca–Fez line. In January 1997, following a two-and-a-half-year period of almost no new investment, it was reported that ONCF was to start work on a $591m. (5,200m. dirhams) four-year restructuring and investment plan after securing loans to cover part of it. The plan includes rehabilitating installations, modernizing the rolling stock and reorganizing the company. In April ONCF awarded a contract to double the Kénitra–Meknès railway line to a local/Spanish consortium as part of the investment programme. The World Bank agreed in May to lend ONCF $85m. to expand the domestic network and purchase seven new locomotives, while in July the EIB approved a loan for rehabilitation and upgrading work on the Marrakesh–Casablanca and the Rabat–Fez–Oujda lines. The ADB has also pledged $85m. to support ONCF's investment programme. In September 1997 Cegelec of France was awarded contracts to electrify the Kénitra–Sidi Kacem line, improve lines serving Casablanca and rehabilitate the Sidi el Aidi–Oued Zem phosphate line. In October ONCF announced that it was interested in granting concessions to private investors to build and operate new railway lines of which the first would probably be a 120-km line from Taourit to Nador and Beni Enzar where a new port was planned. In 1996 ONCF for the first time reported an operational profit, of 7,000m. dirhams, though the company still incurred an overall loss of 206m. dirhams. The company was expected to become profitable in 1997. In February 1998 three French companies began a feasibility study financed by France for a 28-km metro for Casablanca. The $588m. project (aimed to ease congestion in Casablanca) has been under consideration for some years, but the Government has been unable to raise the necessary finance for it.

The road network is well developed, comprising more than 60,000 km of road, of which 50.3% is paved. Most of the roads are built to design standards appropriate for a volume of traffic substantially in advance of that which they are currently carrying. In 1997 there were 1,059,241 passenger cars and 379,504 commercial vehicles in use, as well as 19,704 motorcycles and scooters. Tonnage carried by public road freight transport under the auspices of the Office National des Transports virtually doubled between 1976 and 1986, from 6.8m. tons to 13.4m. tons, and rose to an estimated 14.7m. tons in 1988. In 1991 the Government approved a decree permitting the Société Nationale des Autoroutes du Maroc to collect tolls on Moroccan motorways. The revenue received from the tolls on the Casablanca–Rabat motorway was to be used to finance the construction of the projected Tangier–Casablanca motorway. In April 1991 four international groups were invited to rebid for the construction of the central section of the Tangier–Casablanca motorway, between Rabat and Larache, and the contract was awarded to a group of Italian companies. The US $220m. road project was to be funded by the AFESD and Italy. The AFESD agreed to a grant of $1.7m. for a study of the Maghreb Unity highway linking Nouadhibou, in Mauritania, with Benghazi, in Libya. In March 1996 contractors submitted bids for a 50-km section of the Rabat–Fez motorway between Khemisset and Sidi Allal Bahraoui, estimated to cost some $50m.–$60m. This was the fourth of five contracts for the motorway, and in August 1996 it was awarded to Spain's OCP Construcciones. An Italian consortium was working on the section between Meknès and Khemisset, under a $75m.-contract signed in November 1995. Invitations to bid for the final section of the Rabat–Fez motorway—a 15-km section from Sidi Allal Bahraoui to Rabat—were expected to be made in 1997. The EIB and the AFESD agreed long-term loans in 1995 to cover most of the cost of the Rabat–Fez motorway. In March 1995 Japan's Overseas Economic Co-operation Fund agreed to a loan of $86.7m. towards the cost of modernizing 2,400 km of roads throughout the country and of constructing roads linking central Morocco with the northern and southern provinces. The loan is to be repaid over 10 years with a 10-year grace period. The World Bank is also contributing $140m. to the $226m. road programme, parts

of which are now under construction. In June the World Bank approved a $57.6m. loan for road maintenance and management. It was reported in March and April 1997 that the Ministry of Public Works was evaluating bids for a project to build a four-lane, 112-km motorway from Casablanca to Jorf Lasfar on a build-operate-transfer-basis, and that a technical study for a 560-km road along the Mediterranean coast was to be undertaken. In February 1998 the Government announced that it was proceeding with the construction of a Mediterranean coastal highway which would link Tangier with Saidia, near the border with Algeria. Much of the construction costs would be financed by the state, but certain stretches were to be privately financed on a build-operate-transfer basis. In March bids were invited for a contract to build a 72-km highway between Casablanca and Azemmour, which forms part of the Casablanca–Jorf Lasfar motorway. In February work began on the construction of a motorway between Casablanca and Settat, a project part-financed by the AFESD and Japan's Overseas Economic Co-operation Fund. Japan is also helping to finance a 35-km motorway between Casablanca and Mohammadia. Early in 1999 Autoroutes du Maroc, a public-private partnership, announced new investmemt of $100m. to develop the country's road network, including highways linking Sidi el-Yamani to Tangier and Khemisset to Fez. The state-owned road transport company, Compagnie de Transports du Maroc-Lignes Nationales (CTM-LN), Morocco's biggest bus company, was privatized in 1993. The Government's remaining 18.9% holding in the company was sold on the Casablanca stock exchange in October 1994, raising $5.5m. The offer was nearly three times oversubscribed. In May 1995 the company announced a major expansion plan over the next three years, and in November claimed that it would double its profit in 1995 to 23.9m. dirhams ($2.9m.). The company also increased its capital by 23% to 122.6m. dirhams ($14.7m.) in order to purchase new buses. In 1999 LSA Grupo of Spain won a 15-year contract to manage the bus network in the city of Marrakesh.

In February 1996 plans to construct a fixed link across the Strait of Gibraltar received new impetus when Spain and Morocco issued a joint communiqué stating their commitment to the project and announcing that they had agreed that the fixed link would be a tunnel rather than a bridge, the latter option previously favoured by Morocco. The link would involve building a 22-km single rail tunnel 900 m under the seabed; a second main tunnel would be added after the first no longer satisfied demand. The first phase, estimated to take five years and cost US $403m., would be to dig an exploratory tunnel in order to gain a better understanding of technical difficulties. It was hoped that the EU would cover just over one-third of the cost of this phase, with the private sector financing the remainder under a concession scheme. The tunnel link was expected to create jobs in Morocco and Spain and encourage the establishment of passenger and freight transport networks from other European countries to the tunnel's Spanish terminal. Preliminary investigations to determine the technical feasibility of the proposed tunnel were carried out in November 1998.

There are 10 major airports in Morocco, as well as about 50 landing strips for light aircraft. In addition, el-Aaiún in Western Sahara has an airport. In 1991 a four-year programme to expand and modernize Moroccan airports, at an estimated cost of 1,200m. dirhams, was announced. The Office National des Aéroports (ONDA) and the ADB were each to provide a 25% loan to finance the project. The remaining 50% of the cost of the programme was to be negotiated. Marrakesh-Menara airport reopened in August 1991, after the extension of the runway and work on airport buildings at a cost of US $8m. A new passenger terminal was opened in July 1992 at Casablanca's King Muhammad V airport. The airport handled 1.8m. passengers in 1991 and it was forecast that some 3.3m. passengers would pass through the airport in 1993. The ONDA plans the creation of a major industrial and commercial zone, occupying 200 ha, as the latest phase in the expansion of the airport. In 1993 a $36m. contract to build an aircraft maintenance centre at the airport was awarded to a group of US firms, led by Westinghouse Electric Corpn. In December 1992 the ADB approved a loan of $102m. to support the ONDA's plans to upgrade the infrastructure of Morocco's airports. In late 1998 the ONDA began to implement longstanding plans for a new airport at Nador, in the north-east, estimated to cost $45m. Royal Air Maroc (RAM), which was formed in 1953, is the national airline. It operates services to European and African countries, as well as to the USA. In 1988 RAM handled 1.7m. passengers, compared with 1.2m. in 1983. The number of passengers travelling by RAM increased steadily in the early 1990s, reaching 2.3m. in 1994. Tourism accounts for a significant proportion of passengers carried, although flights for business-related purposes are increasingly important. Total freight carried by air has also continued to rise. As at November 1996 RAM operated 27 aircraft, most of them Boeings. The airline's current renewal and expansion plan envisaged the purchase of two new aircraft every year until 2001. Two Boeing 737–800 aircraft ordered in 1996 were delivered in May 1998 with financing arranged by the Banque Nationale de Paris. Also in May RAM signed a co-operation agreement with Spain's national carrier, Iberia, and early in 1999 it was reported that the company wished to sign a partnership agreement with Germany's Lufthansa. RAM also signed an agreement to operate joint flights with Gulf Air, initially between Casablanca and Abu Dhabi, and in February 1999 became one of the first companies to begin regular flights to the newly opened Gaza International Airport. The company announced a sharp increase in profits during 1997/98 and aimed to carry 3.5m. passengers during 1998/99. Five new aircraft are to be purchased, increasing the fleet to 32 aircraft by 2001. An independent Moroccan company, Regional Airlines, was set up in October 1997 and during its first year of operations developed a network of domestic flights, together with flights between Casablanca and Malaga in Spain. The company plans to expand its network to other centres in Spain and Portugal.

Television and most radio services are controlled by the state, which runs a nationwide television network (Radiodiffusion-Télévision Marocaine) and nine regional radio stations broadcasting in the Arabic, French and Berber languages. There is also a commercial radio network, which broadcasts from Tangier and Nador to North Africa (Radio Méditerranée Internationale). In 1996 there were 6.5m. radios and 3m. television sets in Morocco. A commercial television channel for subscribers opened in 1989. In December 1994 a contract was signed between the Office National des Postes et Télécommunications (ONPT) and Siemens of Germany to install 230,000 telephone lines as part of ONPT's programme to install a total of 400,000 new lines. The company plans to increase telephone density from 3.5 lines to 10 lines per 100 inhabitants by 2000. Negotiations were taking place with Ericsson of Sweden and Alcatel of France for the remaining lines. Under an agreement signed with ONPT in March 1995 AT&T of the USA is preparing a plan for the modernization of the country's telecommunications network. ONPT stated that it wants to double the capacity of its network and introduce the latest technology. AT&T will study ways to digitalize the network and expand the use of fibre optic links and satellites. When the study has been completed AT&T will begin negotiating to carry out part of the recommendations. In early 1996 ONPT announced that it was to invest 4,300m. dirhams (US $505.7m.) in that year on a programme to modernize and expand its network. There were plans for an additional 250,000 switching units to extend the automation system to more than 300 towns, the expansion of the global standard for mobiles (GSM) network to remote provinces, and increasing the number of subscribers from 1m. to 1.3m. The EIB is funding fibre optic links between Tétouan and Agadir and a link across the Strait of Gibraltar. In February 1996 it was reported that Glenayre Electronics of the USA had been awarded a $2.6m. contract to supply and install a pager system for ONPT, initially serving 50,000 subscribers in Rabat, Casablanca, Tangier, Marrakesh, Agadir, Tétouan, Fez and Larache, to be completed in March 1997. In April 1996 it was announced that, as part of a project to restructure and modernize the country's telecommunications network funded by the World Bank, Société Eton of France had been awarded a $1m. contract to supply connection equipment, and Acome/CEAC a $2.2m. contract to supply cable.

In June 1997 the Chamber of Representatives adopted a new law heralding the liberalization of the fixed and mobile telecommunications sector. In February 1998 the state-owned ONPT was divided up and a new enterprise, Itissalat al-Maghrib, with a monopoly of telecommunications, created as a preliminary to privatization. However, the privatization of some

20%-30% of the new company was delayed and in early 1999 it was announced that the sale would not go ahead until the end of the year. The sale was expected to generate some US $500m. The sale of the second GSM licence, originally planned for 1997, was expected to be completed in 1999. An expansion of the GSM network is under way to cover more than 90% of the country; it is planned to provide capacity for 600,000 users.

BANKING AND FINANCE

Morocco's foreign debt rose sharply during the second half of the 1970s. In October 1980, in an attempt to control its escalating debt burden, Morocco negotiated a three-year loan from the IMF, totalling US $1,000m., the largest loan ever granted to a developing country by the Fund at that time. The terms of the loan were modified in 1982, when the progress of the economy failed to meet the IMF conditions. By 1983 Morocco's debt had reached unmanageable proportions, and a new IMF agreement was negotiated as part of a debt-rescheduling arrangement with all of Morocco's creditors. Outstanding debt to the 'Paris Club' creditor countries and the Arab states was rescheduled in 1983, but negotiations with creditor banks continued until 1985. In 1985 Morocco negotiated a new arrangement with the IMF, but this encountered difficulties, as Morocco failed to achieve IMF targets in early 1986. Eventually, a new programme, with less stringent terms, was agreed in November 1986, to run until April 1988. The 'Paris Club' and the creditor banks agreed to reschedule debt repayments until the end of the IMF agreement. Meanwhile, during 1984–87 the World Bank provided finance for several sectoral adjustment programmes within a general programme to restructure and reorient the Moroccan economy. The major elements of this restructuring programme included a shift to export-oriented production, privatization, a reduction in public expenditure, fiscal reform and tighter control over the economy as a whole. In September 1987 the World Bank declared that Morocco was 'well-poised' for economic success, as a result of its stabilization and structural adjustment programmes, and it subsequently increased its lending, to make Morocco the Bank's third largest recipient after Turkey and Pakistan, during 1987. In mid-1988 the IMF approved a new stand-by facility of SDR 220m. for the period from June 1988 to the end of 1989. The Fund generally approved of Morocco's macroeconomic performance, but was somewhat critical of fiscal policy implementation. Debt owing to the 'Paris Club' of creditor countries was rescheduled in October 1988 and again in September 1990. In December 1988 the World Bank made further finances available as part of the structural adjustment support to assist Morocco with debt management. In early 1989 negotiations began for the rescheduling of $1,400m. owing to the commercial banks of the 'London Club' and continued until April 1990, when an agreement was reached. The new accord rescheduled about $3,200m. of medium-term debt over a period of up to 20 years and reduced the interest to be paid on the debt. The existing IMF stand-by agreement expired in December 1989 but was renewed for a further eight months in July 1990. In May 1991 Spain rescheduled official debt within Morocco's 'Paris Club' accords, which included credits provided by the concessionary lending agency Fondo de Ayuda al Desarrollo, repayable over 20 years. Total debt to Spain was then estimated at 110,000m. pesetas ($1,012m.). In July the World Bank approved a $235m. loan to the financial sector, which would permit Morocco to develop domestic financial markets and to invest in private export-orientated industries. Morocco is also one of a small group of heavily indebted countries to benefit from a World Bank Export Credit Enhanced Leverage, which provides bank guarantees and some funds for private-sector projects already receiving support from credit agencies. According to the Ministry of Finance, Morocco's external debt at the end of 1991 totalled $21,000m., of which $10,600m. was outstanding to 'Paris Club' Governments, $3,600m. to the 'London Club', $3,300m. to the World Bank, $1,600m. to the USA and $600m. to the IMF. Morocco's economic prospects improved signficantly in late 1991, when Saudi Arabia and other Gulf states agreed to cancel bilateral debts estimated at around $3,600m. In February 1992 the IMF approved a stand-by credit authorizing drawings of up to SDR 91.98m. ($129m.) to support the Government's economic programme from January 1992 to March 1993. At the end of this period the Government expected to be able to return to the international capital markets and to make no further demands on IMF resources. In February the 'Paris Club' Governments agreed to reschedule official debt worth $1,500m., and in March the World Bank approved a $275m. structural adjustment loan, the final loan in Morocco's economic rehabilitation, according to the country's official news agency. In August 1992, under the terms of the 'Paris Club' agreement signed in February, the USA announced that it would reschedule bilateral debt worth $101.1m. incurred up to 1983. Some $32.5m. in official development assistance was to be repaid over 20 years with a 10-year grace period and $68.6m. in consolidated debt and arrears was to be repaid over 15 years with an eight-year grace period. Figures released in May 1993 by the Ministry of Finance revealed that Morocco's external debt in 1993 was $21,305m. 'Paris Club' member states accounted for $10,549m. (about one-half of the total debt), the 'London Club' $3,525m. (17%) and international financial institutions $5,700m. (27%). Debt-service repayments in 1992 increased to $3,000m., but were projected to decrease from $2,848m. in 1993 to $2,126m. in 2000. Announcing the 1995 budget in December 1994, the Minister of Finance, Mourad Cherif, stated that the cost of servicing the external debt remained a burden with repayments in 1994 equivalent to 4.2% of gross national product. In June 1993 the Ministry of Finance introduced new rules whereby Moroccan banks or private enterprises were allowed to raise credits with foreign financial institutions to finance imports of goods and services without prior authorization.

In 1992 Morocco became the major recipient of concessionary financing from the Caisse Française de Développement, with loan commitments during the year totalling 274.5m. francs, compared with 160m. francs for Algeria and 110m. francs for Tunisia. In November it was announced that France would increase the value of its 1992 financial protocol to 1,220m. francs from 800m. francs. In mid-1993, however, the French Ministry of Finance indicated that the level of support offered under the 1993 protocol would probably be less than that for 1992. In December Spain agreed to provide a new five-year credit programme worth US $1,056m., renewing the credit line originally signed in 1988. The EU was to lend Morocco a total of ECU 438m. in 1992–96, together with funds for structural adjustment and EIB loans for the Europe-Maghreb gas pipeline. In February 1995 it was reported that Spain had renewed a credit line of $1,125m. as part of an economic and financial co-operation agreement signed in 1994. The credit line involved $375m. to be disbursed in five equal annual tranches and $750m. in export credits.

In late 1995 the Ministry of Finance estimated debt-servicing at 35% of foreign currency income and indicated that it was considering ways of reducing debt-service payments for the financial year starting 1 July 1996, including debt-equity swaps, refinancing and debt buy-backs. In January 1996 representatives of Morocco and France signed a series of bilateral agreements under which France agreed to forgive or convert 1,000m. French francs (US $203m.) of Moroccan debt, and promised further aid and technical assistance. France agreed to forgive 400m. francs of government debt on condition that this money be invested in development projects in the Rif (Morocco's main marijuana producing region); a further 600m. francs of sovereign debt was to be converted into equity of financial support for French companies investing in Morocco. In addition France would provide 340m. francs to assist with water and railway development projects, offer training and assistance to modernize and liberalize the administration, and help in the development of the country's tourist industry. Under the terms of the final accord, French and Moroccan investors were guaranteed equal treatment in both countries. France agreed to offer further financial aid in May, following a visit by King Hassan to Paris. The Caisse Française de Développement was to underwrite government bonds issued on the international market to the value of 1,500m. francs, and France would provide 1,200m. francs in aid over the next two years to support the Government's campaign against drugs smuggling. France's aid budget to Morocco is currently 1,500m. francs a year. Although the underwriting agreement was welcomed, it was unlikely to have a significant impact on the country's overall foreign debt. During the visit of the then Spanish Prime Minister, Felipe González, in February 1996, the disbursement of a 150,000m.

peseta ($1,198m.) credit package for the period to 2000 was discussed together with options for easing the terms of Morocco's $1,400m. debt to Spain. In October Spain agreed to convert $50m. of bilateral debt into investments in a similar deal to that concluded with France. In October 1997 France agreed to convert a further 1,400m. francs ($245m.) of bilateral debt into investments along the lines of the initiative concluded in January 1996 (see above). Morocco's total bilateral debt to France was estimated at $4,000m. At the same time, Spain offered to convert a further $38m. of its bilateral debt into local investment. In March Italy offered to convert $75m. of debt into local investment, and it was reported that similar debt-conversion deals were being discussed with Germany, Austria and the United Kingdom. During a visit to France by Prime Minister Youssoufi in October 1998, the French Government agreed to convert a further 700m. francs of debt into investments. At the same time, the United Kingdom agreed to make $42m. of 'Paris Club' debt available for conversion into equity. In early 1999 it was reported that Italy had agreed to convert some $100m. of bilateral debt into investments and to provide a further $16m. to enable small and medium-sized Moroccan firms to buy Italian exports. By this time Morocco had reached its limit for debt conversion under present 'Paris Club' rules. In December 1997 Morocco returned to international capital markets for the first time since 1981 when Commerzbank of Germany and Sumitomo Bank Ltd of Japan started arranging a five-year loan of $200m. The Euroloan was fully subscribed when it closed in February 1998. A Eurobond issue of around $300m. originally planned for 1998 was postponed, but was expected to be finalized before the end of 1999. The proceeds were to be used to help refinance expensive foreign debt from the 1980s. In March 1998 Moody's Investors Service and Standard Poor's awarded Morocco its first international credit ratings.

Servicing the foreign debt remained a serious burden, with debt-service payments accounting for 31.8% of export income in 1996 and 25.4% in 1997 according to World Bank figures. The Ministry of the Economy and Finance estimated Morocco's debt-service ratio at 30% in 1997. After the appointment of a new opposition-led Government in March 1998, the Minister of the Economy and Finance, Fathallah Oualalou, stated that the Government would go to the capital markets to refinance its most expensive debt. Morocco's total external debt stood at US $21,767m. at the end of 1996, of which $20,774m. was long-term public debt. At the end of 1998 the Government estimated that the country's foreign debt was equivalent to 52% of GDP. It aimed to reduce the debt burden to below 50% of GDP in 1999 and to 31% by the end of 2003. Some $1,700m. was allocated for external debt payments in the 1998/99 budget.

In December 1995 it was reported that the ADB had agreed a loan of US $225m., repayable over 12 years with a five-year grace period to support financial reforms in 1995–96. The loan agreement required the creation of a foreign exchange market, the establishment of an indirect system of currency controls, and the further development of commercial financing instruments. In January 1996 a committee comprising members of the Bank Al-Maghrib, the Ministry of Finance and commercial banks announced a number of reforms. Interest rates were freed to encourage competition between banks and to make it easier for companies to secure loans, bank reserve requirements were reduced by 5% to 15% of sight deposits and the proportion of a bank's equity that can be lent to a single client was increased from 7% to 10%. In April the Bank Al-Maghrib informed local banks that it would cease currency fixing on 2 May and allow banks to trade in foreign currencies from that date. However, local banks were reported to have requested a delay in the start of a domestic foreign exchange market as they needed time to obtain clarification on guidelines for certain types of transactions.

Morocco's central bank, the Bank Al-Maghrib, is the sole issuer of currency, holds and administers the State's foreign currency reserves, controls the commercial banking sector and advises the Government on its financial policies. Associated with the bank are six specialized credit institutions with specific sectoral responsibilities. There are 15 commercial banks, of which one of the most important is the Banque Marocaine du Commerce Extérieur SA (BMCE). In 1989 a new development bank, the Bank al-Amal, was established; three-quarters of its capital was to be made available in shares to Moroccans working abroad to encourage more investment from the expatriate community. The Banque Centrale Populaire (BCP, also known as Crédit Populaire du Maroc), which has specialized in handling the remittances of migrant workers for many years, was to be joined by the major Moroccan private bank, the Banque Commerciale du Maroc (BCM), which in 1989 acquired 10% of the capital of the Banque Méditerranéenne de Dépôts (BMD) in order to attract the savings of the 27,000 Moroccan workers in France who use the BMD. Several other Moroccan banks have heeded an appeal from the Minister of Finance and are extending their international activities. In February 1992 it was reported that the IFC had arranged a US $110m. credit line for four commercial banks (BCM, BMCE, Crédit du Maroc and Wafabank), the major source of term finance for the private sector. The credit lines were to be used to make five 10-year loans to small and medium-sized private-sector firms. In December the Government approved a banking law, which increased the scope for regulation in domestic banking. All local credit institutions were brought under the legislation, which also gave greater protection for savers and borrowers. In addition, the law codified rules governing business banks and other credit institutions previously excluded from legislation. In the same month it was announced that Wafabank, one of Morocco's leading privately-owned banks, was increasing its capital through the issue of shares on the Casablanca stock exchange. Other banks have been seeking foreign shareholders and increasing their capital to meet the growing demand for local banking services as the economy develops. In June 1993 the Banco Exterior de España became the first wholly-owned foreign company authorized to open a subsidiary in Morocco since the country won its independence. The BMCE took a small stake in the Banco Exterior de España and opened a branch in Madrid under a reciprocal arrangement. The long-established Citibank Maghreb offers retail banking services and has the same status as a local bank. Nevertheless, the Central Bank has proved cautious in licensing foreign institutions. In August 1993 it was reported that the Banco Central Hispano-Americano of Spain was to purchase a 15% interest in Morocco's largest bank, the BCM, subject to the approval of the Moroccan and Spanish monetary authorities, in an agreement valued at $48.8m. In October 1994 the Minister of Privatization announced the sale of most of the state's 50.4% holding in the BMCE. Some 14% of the bank's shares were offered for sale on the Casablanca stock exchange in January 1995 and another 26% were offered for sale by international tender in April, one-half restricted to local non-bank institutions and the remainder was open to all bidders. The sale of 26% of BMCE shares raised $144m., 42% more than the Government's minimum price. The new shareholders included the Royale Marocaine d'Assurances, London-based Morgan Grenfell and Co, and Morgan Stanley of the USA. The last publicly-owned shares in the BMCE were sold to the private sector in May 1997.

In March 1996 the BMCE issued a global depository receipt (GDR) to boost share capital. The issue was more than four times oversubscribed and raised US $52m.; 48% of the issue was placed in Europe, 30% in the USA and 22% in Asia. It represented the first international equity issue from Morocco and North Africa and the largest GDR transaction in the Arab world. Although small on an international scale, it was significant in Morocco where total foreign investment was estimated at $200m. Financial analysts argued that demand was high because investors were attracted by the progress made by the bank since its privatization. The funds raised by the offer will be used to expand the bank's lending activities in Morocco. The issue proved popular and was four times oversubscribed. In 1995 the BMCE registered assets of 33,957m. dirhams and net profits increased by 19.2% to 301m. dirhams in that year. In March 1998 BMCE established its own merchant bank, capitalized at $10.2m. Later in the year a number of foreign banks acquired shares in BMCE, while the bank reduced its holding in Crédit du Maroc to 20.25%. Early in 1999 the bank announced plans to open a number of overseas offices, but postponed plans to issue new GDRs. The Government confirmed that it would privatize the BCP and the BNDE before 1999. BNDE was put on the market in May 1998 when the Government announced the sale of a minority stake in the bank.

No bidder met the tender requirements, however, and it was generally agreed that the shares had been overpriced. In early 1999 the Government stated that the sale of 51% stake in the company would proceed. At the same time, the planned privatization of BCP was postponed until 2000 owing to legal proceedings and internal reform.

The Government launched the first issue of its new privatization bond in January 1996. The issue originally had been planned by the Ministry of Privatization for November 1995, but was delayed when the Ministry of Finance claimed jurisdiction on the grounds that it would constitute sovereign debt. The bonds may be exchanged for shares in any of the companies to be privatized on the stock exchange in the next three years, and to make the bonds attractive to the public, holders are given priority access to shares in newly privatized companies. Individual investors were offered the majority of the bonds, while companies, especially investment funds, were offered the remainder. The issue was handled by the BCM and Wafabank. Some 1,700m. dirhams (US $200m.) was raised through the sale of the first issue which was oversubscribed by 25%. The first test of the new bond came in March 1996, when the Government offered for sale on the stock exchange 25% of its stake in SAMIR. The offer was fully subscribed with about three-quarters of the buyers using privatization bonds. A second tranche of privatization bonds was issued in May under the same terms and conditions as the first tranche in January, although this time one-half of the bonds were reserved for institutional investment. Preliminary results indicated that demand for the second issue was lower than for the first. The Ministry of Privatization had hoped to raise 1,000m. dirhams from the second issue. However, in December 1998 the Government appeared to have decided to end the policy of issuing privatization bonds when it was announced that the Treasury would reimburse holders of existing bonds after they reach maturity.

From the beginning of 1999 the Bank al-Maghrib authorized all Moroccan banks to invest up to 10% of their equity in the Euro which was expected to become the major currency for Morocco's external transactions.

By 1992 the volume of transactions on the Casablanca stock exchange had risen to 1,520m. dirhams, but this increased more than threefold in 1993 (to 4,870m. dirhams) as a result of the privatization of state companies, including CTM-LN and Cior. In July 1993 it was reported that a number of decrees had been approved to convert the Casablanca exchange into a private company with stock held by brokers, to create new stock-trading bodies, to channel small savers' funds into share issues and unit trusts, and to create a stock exchange commission. A major boost to stock exchange activity in 1994 was the issue of shares worth 1,500m. dirhams in Morocco's leading private company, ONA. Local companies have turned increasingly to the stock market to raise capital through local share offers. In January 1995 the General Tire and Rubber Co raised its capital by 20% in a stock market offering, becoming the first newly-privatized company to do so. In November 1994 the bourse Director forecast a turnover of 9,000m. dirhams in 1994, almost double the figure for 1993. In new moves to modernize the exchange, the Government announced in November 1994 that it had authorized the operations of the country's first stockbrokers. An agreement signed in February 1995 provided for the Société Française des Bourses and Société Interprofessionelle de Compensation des Valeurs Mobilières to conduct a US $1.2m. study on the modernization and computerization of the stock exchange and to establish a central depositary and clearing house. The stock market crises affecting several Asian countries during the second half of 1997 had little impact on the Casablanca stock exchange because only some 5% of transactions involved foreign investors. In mid-1997 the Société Marocaine de Dépôt et Crédit and the Crédit Immobilier et Hôtelier both issued bonds on the exchange. At the end of 1997 the exchange began a campaign to attract new listings, especially from small and medium-sized firms, and aimed to increase the number of companies listed from the current 49 to 100. The results, however, were disappointing, partly because of delays in the privatization programme. The number of companies listed remained at around 50 and trading volumes on the exchange remained low, at around $134m. a week in early 1999.

In August 1991 Tangier became the kingdom's first 'offshore' banking zone. It is intended to attract major international banks, and their local operations must have a minimum capital of US $500,000. Banks are offered exemption from corporation tax for 15 years, and during this period they pay a $25,000 annual licence fee. The zone is intended to compete with other Mediterranean 'offshore' zones to attract capital into the kingdom. In April 1992 Crédit Lyonnais of France became the first bank to announce its participation in the zone followed by the Banque Nationale de Paris, both with local partners. In January 1995 Attijari International, a joint venture between the local BCM and Spain's BCH capitalized at $3m., became the third bank to open in the zone. In mid-1994 it was reported that the new Euratlas Capital Development Fund, and a new investment bank, the Maghreb International Bank, would also be based in the Tangier zone.

DEVELOPMENT

The 1978 Five-Year Development Plan never came into effect, largely because of the disruption caused to the economy by the war in Western Sahara and the fall in phosphate revenues after 1975. Instead, a three-year transitional plan, which was to emphasize agriculture and industry, and attempt to reduce public expenditure, was introduced as part of the austerity measures adopted by the Government. The target for annual GDP growth was set at a modest 4.6%. Only 3% annual growth was, however, achieved in 1978 and 1979. In April 1981 a new Five-Year Development Plan came into operation, whose general aims were similar to that of its predecessor, but which envisaged a more rapid rate of GDP growth, at 6.5% a year. The level of investment was overambitious and, following the decision to reschedule the country's external debt in 1983, many of the Plan's targets were abandoned. The Government was obliged to make severe reductions in public expenditure in order to satisfy the terms of the IMF programme. Not only were the 1983 budget commitments for capital expenditure cut by more than 20%, but even the revised targets for 1984 were reduced further. All major projects were postponed, except those already under way and likely to enhance export earnings or import savings.

The proposed 1986–88 Three-Year Plan, announced in April 1985, suggested further cuts in expenditure. Investment was to be reduced from the 1984 level of 20% of GDP to only 16.7%, while it was projected that GDP would rise by 2.9% per year. However, in late 1985 it was announced that this transitional plan was to be delayed, and a new set of proposals for a more expansionary programme was produced. These plans, however, were also deferred, largely as a result of IMF pressure, and a policy of bringing government spending more closely into balance with revenues was eventually pursued. Measures geared mainly towards tighter spending controls and the gradual reform of the fiscal system helped to reduce the treasury deficit in 1986. In October 1987 a new Five-Year Plan for 1988–92 was presented, in which 52% of funding was expected to come from the private sector. A large proportion of the investment funds was to be directed towards the newly-formed local authorities (collectivités locales), which were allocated 36,000m. dirhams. The Plan was expected to transform the current account deficit into a surplus, equivalent to 2.9% of GDP by 1992, and to enable exports to increase by 5.5% per annum. It also aimed to mobilize domestic savings for investment at a rate of 16.6% of GDP per year and to create jobs for the estimated 300,000 people entering the labour market every year. The Plan also included a reform of the public sector, envisaging the privatization of many state companies. Appropriate legislation for a privatization programme was approved by the Chamber of Representatives in April 1988 and came into force from January 1990. The six-year privatization programme was subsequently extended beyond 1995.

The 1989 budget aimed to reduce further the budget deficit, mainly by increasing tax revenue, and to limit the increase in overall state expenditure to around 7%. In the event, however, revenues failed to increase as expected, and the budget deficit was greater than had been anticipated. The treasury deficit in 1989 was equivalent to 5.7% of GDP, rather than the projected 4.4%. The 1990 budget, which had been endorsed by the Chamber of Representatives at the end of 1989, was radically revised during early 1990, while a variety of austerity measures

were implemented, including a devaluation of the dirham in an attempt to improve the balance-of-payments deficit.

In accordance with the anticipated results of the 1988–92 Five-Year Plan, the main economic objectives for 1991 were to increase the rate of GDP growth to 4%–4.5%, a reduction in the annual rate of inflation to 5% (from a rate of 7%–8% in 1990) and a reduction of the budget deficit to 2% of GDP. The rise in investment in 1990 produced a more optimistic outlook for 1991. In early 1991 the Government announced that domestic savings would be encouraged, that investment would be made more efficient and that foreign trade and the public and financial sectors would be reformed, in an attempt to realize the year's economic objectives. The budget proposals for 1992 envisaged a substantial rise in social spending. Education was allocated 1,600m. dirhams (an increase of 21%), and health 552m. dirhams (an increase of more than 25%). Defence spending was to rise by 13.6%, to 10,000m. dirhams. Total spending was projected at 86,440m. dirhams, 5.5% higher than for 1991, and the deficit was to remain stable, at 1,450m. dirhams. To increase revenues, it was forecast that direct taxation would rise by 23.8%, and indirect taxes by 15.3%.

The budget proposals for 1993 envisaged a 6% increase in GDP. Overall revenue was expected to rise to 77,220m. dirhams, despite reductions in taxation. Expenditure was forecast at 80,000m. dirhams. Priority was to be given to education, public health, employment, irrigation and electric power generation. A reduction of the budget deficit was forecast, to 1% in 1993, compared with 2% in 1992 and 3% in 1991. Inflation was regarded as stable at 5.7% and foreign reserves had risen. Public investment was to increase by 11%. Debts totalling 2,700m. dirhams owed by farmers were to be rescheduled, and the Government was to pay off public-sector arrears worth 2,603m. dirhams to ease cash-flow problems besetting local suppliers. Some 800m. dirhams was allocated to increase youth employment, and more than 15,000 jobs were to be created in public administration. Under the 1994 budget proposals, expenditure was projected to increase to 110,553m. dirhams. Of recurrent expenditure of 47,111m. dirhams, 12,900m. dirhams were allocated to education, and 9,400m. dirhams to defence. Revenues were projected at 105,352m. dirhams, including 23,719m. dirhams from indirect taxes, 17,098m. dirhams from direct taxes and 18,002m. dirhams from customs duties. The increase in recurrent expenditure was to be financed by an estimated 16% increase in tax revenues. The total projected deficit was 5,202m. dirhams. The Minister of Finance reported that debt-reservicing costs would increase by 17.3% in 1994, to 27,168m. dirhams. There was speculation that the Government's commitment to keep the budget deficit to 1.5% of GDP would be difficult to achieve because of pressure on state spending to maintain social stability. Under the 1995 budget, announced in December 1994, state spending was to be cut in most sectors in order to bring the budget deficit under control, a major priority for the Government. The Minister of Finance, Mourad Cherif, announced that the 1995 deficit would be around 7,000m. dirhams (US $781m.) and insisted that recourse to bank lending had to remain at reasonable levels. Official figures forecast revenues of 88,900m. dirhams in 1995 and expenditure of 91,471m. dirhams. Current spending was forecast to rise only slightly in an attempt to halt inflationary pressures in the public sector. The figure given for inflation was 4%, but other official sources put it at 5.1% in 1994. Investment spending was cut from 19,147m. dirhams in 1994 to 16,624m. dirhams in 1995. Receipts from the privatization programme, estimated at 3,500m. dirhams ($391m.) in 1995 were to be allocated to financing the investment budget and special provisions. Foreign investment was expected to reach $700m. in 1995, which, it was hoped would help cover the current account deficit. Cherif told the Chamber of Representatives that in order to reduce state spending, private sector involvement in infrastructure development would be extended to sectors such as telecommunications and communications. The budget also included incentives for stock market investment, with a reduction of the tax on share earnings from 15% to 10%. While the budget was welcomed by the business community, it was criticized by the opposition because it offered little help to the majority of the population. In late 1995 the Government approved a mini-budget for January–June 1996 to bridge the gap between December 1995 and the start of the new financial year in July 1996. Expenditure was projected at 47,900m. dirhams, of which the major item was debt-servicing and repayment, forecast at 13,700m. dirhams. Revenue was projected at 43,400m. dirhams, of which 13.2m. dirhams would be provided by indirect taxes and 5,800m. dirhams from customs duties. Value-added tax was to be raised to 20% to compensate for an anticipated fall in income and corporate taxes. Revenue from customs duties was also projected to decline as the Government began to comply with the GATT. The projected deficit was 4,500m. dirhams and was expected to be somewhat lower than the actual figure for the same period in 1995, which was higher than planned owing to the severe drought. In June 1996 the Chamber of Representatives approved the budget for July 1996–June 1997. Expenditure was forecast at 117,180.3m. dirhams, while revenue was expected to total 107,744.1m. dirhams, giving a deficit of 9,436.2m. dirhams. The draft budget for 1997/98, presented to the Chamber of Representatives in May 1997, envisaged expenditure of 126,700m. dirhams, with revenue forecast at 114,300m. dirhams, leading to a 32% increase in the fiscal deficit. In February 1998 the Government was more optimistic about the budget deficit for 1997, forecasting that if the agricultural harvest was good the overall deficit would not exceed 3.5% of GDP. Nevertheless, in a report published in March, the IMF urged the Government to cut current spending and reduce the budget deficit. The IMF stated that the projected widening of the budget deficit in 1997/98, mainly as a result of public-sector pay increases granted in 1996, was not consistent with the need for stronger fiscal consolidation. It encouraged the Government to reduce the size of the civil service and replace food subsidies with better targeted assistance. Fathallah Oualalou, the recently-appointed Minister of the Economy and Finance, stated that he aimed to eliminate the budget deficit early next century and that the first loser would be the consumer. In April Prime Minister Youssoufi announced that public-sector spending would be cut in order to reduce the budget deficit. In August 1998 the Chamber of Representatives approved the draft budget for 1998/99 and it was subsequently endorsed by the upper house, the Chamber of Advisers, in late September. It envisaged a rise in total expenditure to 132,100m. dirhams, with revenues projected to increase to 118,400m. dirhams, giving a budget deficit of 13,700m. dirhams. Priority was accorded to social expenditure, with increases in allocations for health, social development, housing, youth and sports and culture; and addressing the problem of unemployment.

Directory

The Constitution

The following is a summary of the main provisions of the Constitution, as approved in a national referendum on 4 September 1992, and as amended by referendum on 13 September 1996.

PREAMBLE

The Kingdom of Morocco, a sovereign Islamic State whose official language is Arabic, constitutes a part of the Great Arab Maghreb. As an African State, one of its aims is the realization of African unity. It adheres to the principles, rights and obligations of those international organizations of which it is a member and works for the preservation of peace and security in the world.

GENERAL PRINCIPLES

Morocco is a constitutional, democratic and social monarchy. Sovereignty pertains to the nation and is exercised directly by means of the referendum and indirectly by the constitutional institutions. All Moroccans are equal before the law, and all adults enjoy equal political rights including the franchise. Freedoms of movement, opinion and speech and the right of assembly are guaranteed. Islam is the state religion. All Moroccans have equal rights in seeking education and employment. The right to strike, and to private property, is guaranteed. All Moroccans contribute to the defence of the Kingdom and to public costs. There shall be no one-party system.

THE MONARCHY

The Crown of Morocco and its attendant constitutional rights shall be hereditary in the line of HM King Hassan II, and shall be transmitted to the oldest son, unless during his lifetime the King has appointed as his successor another of his sons. The King is the symbol of unity, guarantees the continuity of the state, and safeguards respect for Islam and the Constitution. The King appoints, and may dismiss, the Prime Minister and other Cabinet Ministers (appointed upon the Prime Minister's recommendation), and presides over the Cabinet. He shall promulgate adopted legislation within a 30-day period, and has the power to dissolve the Chamber of Representatives and or the Chamber of Advisers. The Sovereign is the Commander-in-Chief of the Armed Forces; makes appointments to civil and military posts; appoints Ambassadors; signs and ratifies treaties; presides over the Supreme Council of the Magistracy, the Supreme Council of Education and the Supreme Council for National Reconstruction and Planning; and exercises the right of pardon. In cases of threat to the national territory or to the action of constitutional institutions, the King, having consulted the President of the Chamber of Representatives, the President of the Chamber of Advisers and the Chairman of the Constitutional Council, and after addressing the nation, has the right to declare a State of Emergency by royal decree. The State of Emergency shall not entail the dissolution of Parliament and shall be terminated by the same procedure followed in its proclamation.

LEGISLATURE

This consists of a bicameral parliament: the Chamber of Representatives and the Chamber of Advisers. Members of the Chamber of Representatives are elected by direct universal suffrage for a five-year term. Three-fifths of the members of the Chamber of Advisers are elected by electoral colleges of local councils; the remainder are elected by electoral colleges representing chambers of commerce and trade unions. Members of the Chamber of Advisers are elected for a nine-year term, with one-third renewable every three years. Deputies in both chambers enjoy parliamentary immunity. Parliament shall adopt legislation, which may be initiated by members of either chamber or by the Prime Minister. Draft legislation shall be examined consecutively by both parliamentary chambers. If the two chambers fail to agree on the draft legislation the Government may request that a bilateral commission propose a final draft for approval by the chambers. If the chambers do not then adopt the draft, the Government may submit the draft (modified, if need be) to the Chamber of Representatives. Henceforth the draft submitted can be definitively adopted only by absolute majority of the members of the Chamber of Representatives. Parliament holds its meetings during two sessions each year, commencing on the second Friday in October and the second Friday in April.

GOVERNMENT

The Government, composed of the Prime Minister and his Ministers, is responsible to the King and Parliament and ensures the execution of laws. The Prime Minister is empowered to initiate legislation and to exercise statutory powers except where these are reserved to the King. He presents to both parliamentary chambers the Government's intended programme and is responsible for co-ordinating ministerial work.

RELATIONS BETWEEN THE AUTHORITIES

The King may request a second reading, by both Chambers of Parliament, of any draft bill or proposed law. In addition, he may submit proposed legislation to a referendum by decree; and dissolve either Chamber or both if a proposal that has been rejected is approved by referendum. He may also dissolve either Chamber by decree after consulting the Chairman of the Constitutional Council, and addressing the nation, but the succeeding Chamber may not be dissolved within a year of its election. The Chamber of Representatives may force the collective resignation of the Government either by refusing a vote of confidence or by adopting a censure motion. The election of the new Parliament or Chamber shall take place within three months of its dissolution. In the interim period the King shall exercise the legislative powers of Parliament, in addition to those conferred upon him by the Constitution. A censure motion must be signed by at least one-quarter of the Chamber's members, and shall be approved by the Chamber only by an absolute majority vote of its members. The Chamber of Advisers is competent to issue 'warning' motions to the Government and, by a two-thirds' majority, force its resignation.

THE CONSTITUTIONAL COUNCIL

The Constitutional Council consists of six members appointed by the King (including the Chairman) for a period of nine years, and six members appointed for the same period—three selected by the President of the Chamber of Representatives and three by the President of the Chamber of Advisers. One-third of each category of the Council are renewed every three years. The Council is empowered to judge the validity of legislative elections and referendums, as well as that of organic laws and the rules of procedure of both parliamentary chambers, submitted to it.

JUDICIARY

The Judiciary is independent. Judges are appointed on the recommendation of the Supreme Council of the Magistracy presided over by the King.

THE ECONOMIC AND SOCIAL COUNCIL

An Economic and Social Council shall be established to give its opinion on all matters of an economic or social nature. Its constitution, organization, prerogatives and rules of procedure shall be determined by an organic law.

THE HIGH AUDIT COUNCIL

The High Audit Council exercises the general supervision of the implementation of fiscal laws. It ensures the regularity of revenues and expenditure operations of the departments legally under its jurisdiction, as it assesses the management of the affairs thereof. It is competent to penalize any breach of the rules governing such operations. Regional audit councils exercise the supervision of the accounts of local assemblies and bodies, and the management of the affairs thereof.

LOCAL GOVERNMENT

Local government in the Kingdom consists of establishing regions, governorships, provinces and communes.

REVISING THE CONSTITUTION

The King, the Chamber of Representatives and the Chamber of Advisers are competent to initiate a revision of the Constitution. The King has the right to submit the revision project he initiates to a national referendum. A proposal for a revision by either parliamentary chamber shall be adopted only if it receives a two-thirds' majority vote by the chamber's members. Revision projects and proposals shall be submitted to the nation for referendum by royal decree; a revision of the Constitution shall be definitive after approval by referendum. Neither the state, system of monarchy nor the prescriptions related to the religion of Islam may be subject to a constitutional revision.

The Government

HEAD OF STATE

HM King MUHAMMAD VI (acceded 23 July 1999).

CABINET

(September 1999)

A coalition of the Union socialiste des forces populaires (USFP); Rassemblement national des indépendants (RNI); Istiqlal; Parti du progrès et du socialisme (PPS); Mouvement national populaire (MNP); Front des forces démocratiques (FFD); Parti socialiste démocratique (PSD).

Judicial System

The **Supreme Court** (al-Majlis al-Aala) is responsible for the interpretation of the law and regulates the jurisprudence of the courts and tribunals of the Kingdom. The Supreme Court sits at Rabat and is divided into six Chambers.

First President: DRISS DAHAK.

Attorney-General: AHMAD ZEGHARI.

The 15 **Courts of Appeal** hear appeals from lower courts and also comprise a criminal division.

The **Courts of First Instance** pass judgment on offences punishable by up to five years' imprisonment. These courts also pass judgment, without possibility of appeal, in personal, civil and commercial cases involving up to 3,000 dirhams.

The **Regional Tribunals** pass judgment in the first and last resort in cases of personal property of 1,000 dirhams. The Regional Tribunals also pass judgment, subject to appeal before the Court of

Appeal, in cases of minor offences in penal matters, punishable by a fine of 10 to 800 dirhams.

Labour Tribunals settle, by means of conciliation, disputes arising from rental contracts or services between employers and employees engaged in private industry. There are 14 labour tribunals in the Kingdom.

The **High Court of Justice**, one-half of whose members are elected from the Chamber of Representatives and the remainder from the Chamber of Advisers, considers crimes and felonies allegedly committed by government members in the exercise of their functions. The Court's president is appointed by royal decree.

Religion

ISLAM

About 99% of Moroccans are Muslims (of whom about 90% are of the Sunni sect), and Islam is the state religion.

CHRISTIANITY

There are about 69,000 Christians, mostly Roman Catholics.

The Roman Catholic Church

Morocco (excluding the disputed territory of Western Sahara) comprises two archdioceses, directly responsible to the Holy See. At 31 December 1997 there were an estimated 25,268 adherents in the country, representing less than 0.1% of the population. The Moroccan archbishops participate in the Conférence Episcopale Régionale du Nord de l'Afrique (f. 1985), based in Algiers (Algeria).

Archbishop of Rabat: Most Rev. Hubert Michon, Archevêché, 1 rue Zerhouni, BP 258, 10001 Rabat; tel. (7) 709239; fax (7) 706282.

Archbishop of Tangier: Most Rev. José Antonio Peteiro Freire, Archevêché, 55 rue Sidi Bouabid, BP 2116, Tangier; tel. (9) 932762; fax (9) 949117.

Western Sahara comprises a single Apostolic Prefecture, with an estimated 160 Catholics (1997).

Prefect Apostolic of Western Sahara: Fr Acacio Valbuena Rodríguez, Misión Católica, BP 31, 70001 el-Aaiún; tel. 893270.

The Anglican Communion

Within the Church of England, Morocco forms part of the diocese of Gibraltar in Europe. There are Anglican churches in Casablanca and Tangier.

Protestant Church

Evangelical Church: 33 rue d'Azilal, 20000 Casablanca; tel. (2) 302151; fax (2) 444768; f. 1920; established in six towns; Pres. Pastor Etienne Quinche; 1,000 mems.

JUDAISM

There is a Jewish community of some 8,000. In March 1999 the Moroccan authorities reopened the synagogue in Fez, established in the 17th century.

Grand Rabbi of Casablanca: Chalom Messas, President of the Rabbinical Court of Casablanca, Palais de Justice, place des Nations Unies.

Transport

Office National des Transports (ONT): rue al-Fadila, Quartier Industriel, BP 596, Rabat-Chellah; tel. (7) 797842; telex 36090; fax (7) 797850; f. 1958; Man. Dir AHMAD EL-YOUSFI.

RAILWAYS

In 1997 there were 1,907 km of railways, of which 295 km were double track; 1,003 km of lines were electrified and diesel locomotives were used on the rest. In that year the network carried some 11.5m. passengers and 28.8m. metric tons of freight. All services are nationalized. A feasibility study was begun in early 1998 for the construction of a 28-km metro system in Casablanca.

Office National des Chemins de Fer (ONCF): 8 bis rue Abderrahmane El Ghafiki, Rabat-Agdal; tel. (7) 774747; fax (7) 777857; f. 1963; administers all Morocco's railways; Pres. Minister of Transport; Dir-Gen. MUHAMMAD EL-ALJ.

ROADS

In 1997 there were 57,804 km of classified roads, of which 52.3% were paved. There were 10,336 km of main roads and 10,739 km of regional roads.

Cie de Transports au Maroc 'Lignes Nationales' (CTM—LN): 23 rue Léon l'Africain, Casablanca; tel. (2) 312061; telex 28962; agencies in Tangier, Rabat, Meknès, Oujda, Marrakesh, Agadir, El Jadida, Safi, Casablanca, es-Saouira, Ksar es-Souk, Fez and Ouarzazate; privatized in mid-1993 with 40% of shares reserved for Moroccan citizens; Man. Dir MUHAMMAD EL-ALJ.

SHIPPING

Morocco's 21 ports handled 45.8m. tons of goods in 1997. The most important ports, in terms of the volume of goods handled, are Casablanca, Mohammadia, Jorf Lasfar and Safi. Tangier is the principal port for passenger services. Construction work on new ports at Tangier (to handle merchandise traffic) and Agadir was expected to begin in 2000.

Office d'Exploitation des Ports (ODEP): 4 rue Mossa Ibnou Noussair, Casablanca; tel. (2) 317111; telex 46790; fax (2) 313501; f. 1985; Man. Dir MUHAMMAD HALAB.

Principal Shipping Companies

Agence Gibmar SA: 3 rue Henri Regnault, Tangier; tel. (9) 935875; fax (9) 933239; e-mail agemcemed@mamnet.net.ma; also at Casablanca; regular services from Tangier to Gibraltar; Chair. JAMES PETER GAGGERO; Dir YOUSSEF BENYAHIA.

Cie Chérifienne d'Armement: 5 blvd Abdallah ben Yacine, 21700 Casablanca; tel. (2) 309455; telex 27054; fax (2) 301186; f. 1929; regular services to Europe; Man. Dir MAX KADOCH.

Cie Marocaine d'Agences Maritimes (COMARINE): 157 ave Hassan II, BP 71, Nador.

Cie Marocaine de Navigation (COMANAV): 7 blvd de la Résistance, BP 628, Casablanca; tel. (2) 303012; fax (2) 308455; f. 1946; regular services to Mediterranean, North-west European, Middle Eastern and West African ports; tramping; Chair. MUHAMMAD BENHAROUGA.

Limadet-ferry: 3 rue Ibn Rochd, Tangier; tel. (9) 33639; telex 33013; fax (9) 37173; f. 1966; operates between Algeciras (Spain) and Tangier, six daily; Dir-Gen. RACHID BEN MANSOUR.

Société Marocaine de Navigation Atlas: 81 ave Houmane el-Fatouaki, 21000 Casablanca; tel. (2) 224190; telex 23067; fax (2) 274401; f. 1976; Chair. HASSAN CHAMI; Man. Dir M. SLAOUI.

Union Maritime Maroc-Scandinave (UNIMAR): 12 rue de Foucauld, BP 746, Casablanca; tel. (2) 279590; telex 22996; fax (2) 223883; f. 1974; chemicals; Dir-Gen. ABD AL-WAHAB BEN KIRANE.

Voyages Paquet: Hôtel Royal Mansour, rue Sidi Belyout, 20000 Casablanca; tel. (2) 311065; fax (2) 442108; f. 1970; Pres. MUHAMMAD ELOUALI ELALAMI; Dir-Gen. NAÏMA BAKALI ELOUALI ELALAMI.

CIVIL AVIATION

The main international airports are at Casablanca (King Muhammad V), Rabat, Tangier, Marrakesh, Agadir Inezgane, Fez, Oujda, Al-Hocima, el-Aaiún, Ouarzazate and Agadir al-Massira. Construction of a new international airport al-Aroui, located 25 km south of Nador, began in late 1998.

Regional Airlines: Aéroport de Muhammad V, Casablanca; f. 1997; privately-owned; domestic flights and services to southern Spain, Portugal and the Canary Islands; Pres. and CEO MEHDI ALAOUI.

Royal Air Maroc (RAM): Aéroport de Casablanca-Anfa; tel. (2) 912000; telex 21880; fax (2) 912087; f. 1953; 94.4% state-owned; domestic flights and services to 31 countries in western Europe, Scandinavia, the Americas, North and West Africa, the Canary Islands and the Middle East; CEO MUHAMMAD HASSAD.

Tourism

Tourism is Morocco's second main source of convertible currency. The country's attractions for tourists include its sunny climate, ancient sites (notably the cities of Fez, Marrakesh, Meknès and Rabat) and spectacular scenery. There are popular holiday resorts on the Atlantic and Mediterranean coasts. In 1998 tourist arrivals totalled an estimated 2.0m., compared with 2.9m. in 1993. Tourist receipts in 1998 totalled US $1,500m.

Office National Marocain du Tourisme: 31 angle ave al-Abtal and rue Oued Fas, Agdal, Rabat; tel. (7) 681531; telex 36019; fax (7) 777437; internet http://www.wizarat.sukkan.gov.ma/ONMT; f. 1918; Dir SAMIR KHELDOUNI SAHRAOUI.

Defence

Commander-in-Chief of the Armed Forces: HM King MUHAMMAD VI.

Estimated Defence Budget (1998): 14,200m. dirhams.

Military Service: 18 months.

Total Armed Forces (August 1998): 196,300 (army 175,000; navy 7,800; air force 13,500); royal guard 12,000. Paramilitary forces: 42,000. Reserves: 150,000.

Education

Since independence in 1956, Morocco has tried to solve a number of educational problems: a youthful and fast-growing population, an urgent need for skilled workers and executives, a great diversity of teaching methods between French, Spanish, Muslim and Moroccan government schools, and, above all, a high degree of adult illiteracy. In 1995, according to UNESCO estimates, adult illiteracy averaged 56.3% (males 43.4%; females 69.0%). Under the 1996/97 budget, expenditure on education by the central Government was projected at 16,013m. dirhams (18.6% of total spending).

In 1998/99 there were 3,317,153 pupils in primary schools. At this level most instruction is given in government schools, where syllabuses have been standardized since 1967. Great progress was made in providing new schools during 1957–64, but since then the increase in the number of places has decelerated. A decree of November 1963 made education compulsory for children between the ages of seven and 13 years, and this has now been applied in most urban areas, but throughout the country only 72% (81% of boys; 63% of girls) of the age-group attended school in 1996. All primary teachers are Moroccan. Instruction is given in Arabic for the first two years and in Arabic and French for the next three years, with English as the first additional language.

Secondary education, beginning at the age of 13, lasts for up to six years (comprising two cycles of three years), and in 1998/99 provided for 1,328,789 pupils (excluding those in private and professional schools). In 1988 the secondary school graduation examination, the *baccalauréat*, was replaced by a system of continuous assessment. Most secondary teachers are Moroccan, but in 1986 there were 1,461 from abroad, chiefly from France. Secondary enrolment in 1996 included 39% of the relevant age-group (boys 44%; girls 34%).

There are eight universities in Morocco, including the Islamic University of al-Quarawiyin at Fez (founded in 859), the Muhammad V University at Rabat (opened in 1957), and an English-language

university, inaugurated at Ifrane in 1995. In addition, there are institutes of higher education in business studies, agriculture, mining, law, and statistics and advanced economics. In 1998/99 there was a total of 266,507 students engaged in higher education.

Adult education is supplemented by radio programmes, simplified type, and a newspaper for the newly literate. In recent years increasing attention has been given to education for girls. There are now a number of mixed and girls' schools, notably in urban areas.

OMAN

Geography

The Sultanate of Oman occupies the extreme east and south-east of the Arabian peninsula. It is bordered by the United Arab Emirates (UAE) to the north and west, by Saudi Arabia to the west and by Yemen to the south-west. A detached area of Oman, separated from the rest of the country by UAE territory, lies at the tip of the Musandam peninsula, on the southern shore of the Strait of Hormuz. Oman is separated from Iran by the Gulf of Oman, and it has a coastline of more than 1,600 km (1,000 miles) on the Indian Ocean. The total area of the country is 309,500 sq km (119,500 sq miles). Oman's frontiers with all its neighbours have yet to be clearly demarcated, although agreement exists on their general course. In mid-1995 Oman completed the demarcation of its joint borders with both Yemen and Saudi Arabia. In May 1997 Oman and Yemen signed international border demarcation maps in Muscat, Oman.

The first full census in Oman was held in 1993. Previous estimates of the country's population varied widely between official Omani figures and those of independent international organizations. The UN Population Division, basing its assessment on a mid-1965 figure of 571,000, estimated totals of 654,000 for mid-1970 and 984,000 for mid-1980. By 1990 the UN estimated that Oman's mid-year population had grown to 1,502,000. World Bank estimates indicated annual average population growth of 4.8% during 1990–96. According to the census of 1 December 1993, the population totalled 2,018,074, comprising 1,483,226 Omani nationals (73.5%) and 534,848 non-Omanis (26.5%). In 1997 the UN estimated the mid-year population to be 2,401,000. The majority of the population are Ibadi Muslims, and about one-quarter are Hindus.

At Muscat the mean annual rainfall is 100 mm and the mean temperature varies between 20°C and 43°C (69°F and 110°F). Rainfall on the hills of the interior is somewhat heavier, and the south-western province of Dhofar is the only part of Arabia to benefit from the summer monsoon.

Oman may be divided into nine topographical areas. The largest urban area in the country is the capital region, around Muscat. Although most of the country is arid, the al-Batinah plain, which lies between the Gulf of Oman and the Hajar al-Gharbi range of mountains, comprises a fertile coastal region, and is among the most densely populated areas of the country. Another such plain is found between Raysut and Salalah, on the south-west coast in the Dhofar region, which, in total, occupies one-third of the country's area and extends northwards into the Rub al-Khali, or 'empty quarter', on Oman's western border: a rainless, unrelieved wilderness of shifting sand, almost entirely without human habitation.

Irrigation has been developed in some parts of the country, including the Dhahira area, a semi-desert plain between the south-western Hajar mountains and the Rub al-Khali, which also provides clusters of cultivable land near the wadis Dank and Ain, and the Buraini oasis. From Jebel al-Akhdar, at the southern tip of the Hajar al-Gharbi range, towards the desert in the south, lies the Interior, the country's central hill region and the most densely populated zone. The area has four main valleys, two of which (Halafein and Samail) provide the traditional route to Muscat.

The less hospitable regions are sparsely populated by groups of tribal settlers. The Hajar al-Gharbi, running parallel to the coast southwards from Oman's border with the UAE, is the home of the Rostaq, Awabi and Nakhe tribes. To the east of the Hajar range, the Sharqiya area extends south towards the Arabian Sea. It is an area of sandy plains and the home of the various Bani tribes. Musandam, separated from Oman by the UAE, is a mountainous area inhabited by the ash-Shahouh tribes. Around the eastern coast of the Arabian Sea, the Barr al-Hekkman, a group of islands and salt-plains of 650 sq km (250 sq miles), is inhabited by fishing communities.

For administrative purposes, the Sultanate is divided into eight governorates, comprising 59 *wilayat* (provinces), each under the jurisdiction of a *wali*, or provincial governor.

History

Revised for this edition by YOUSSEF CHOUEIRI

Oman was probably the land of Magan (mentioned in Sumerian tablets) with which cities such as Ur of the Chaldees traded in the third millennium BC. The province of Dhofar also produced frankincense in vast quantities, which was shipped to markets in Iraq, Syria, Egypt and the West. Roman geographers mention the city of Omana, although its precise location has not been identified, and Portus Moschus, conceivably Muscat. Oman, at various times, came under the influence of the Himyaritic kingdoms of southern Arabia and of Iran, which are believed to have been responsible for the introduction of the *falaj* irrigation systems, although legend attributes them to Sulaiman ibn Daud (Solomon).

The people of Oman come from two main ethnic stocks, the Qahtan, who immigrated from southern Arabia, and the Nizar, who came in from the north. According to tradition, the first important invasion from southern Arabia was led by Malik ibn Faham, after the final collapse of the Marib dam in Yemen in the first or second century AD. Oman was one of the first countries to be converted to Islam by Amr ibn al-As, who later converted Egypt. Omanis of the tribe of al-Azd played an important part in the early days of Islam in Iraq. They subsequently embraced the Ibadi doctrine, which holds that the caliphate in Islam should not be hereditary or confined to any one family, and established their own independent Imamate in Oman in the eighth century AD. Subsequently, although subject to invasions by the Caliphate, Iranians, Moguls and others, Oman has largely maintained its independence.

During the 10th century Sohar was probably the largest and most important city in the Arab world, while Omani mariners, together with those from Basra and other Gulf ports, went as far afield as China. When the Portuguese arrived in 1507, on their way to India, Affonso d'Albuquerque and his forces found the Omani seaport under the suzerainty of the King of Hormuz, himself of Omani stock. The towns of Qalhat, Quryat, Muscat and Sohar were already prosperous.

However, the arrival of the Portuguese in the Indian Ocean radically altered the balance of power in the area. The Portuguese established themselves in the Omani ports, concentrating principally on Sohar and Muscat, where they built two great forts, Merani (1587) and Jalali (1588). British and Dutch traders followed in the wake of the Portuguese, though they did not establish themselves by force of arms in Oman. In 1650 the Imam Nasir ibn Murshid of the Yaariba dynasty, who was also credited with a period of Omani renaissance during which learning flourished, effectively expelled the Portuguese from Muscat and the rest of Oman. The Omanis then extended their

power, and by 1730 had conquered the Portuguese settlements on the east coast of Africa, including Mogadishu (now in Somalia), Mombasa (Kenya) and Zanzibar (now part of Tanzania).

The country was, however, ravaged by civil war in the first half of the 18th century, when the authority of the Imam diminished. During this period the Iranians were summoned to assist one of the contenders for the Imamate, but they were subsequently ousted by Ahmad ibn Said, who was elected Imam in 1749 and founded the al-Bu Said dynasty, one of the oldest dynasties in the Middle East, which still rules Oman. The country prospered under the new dynasty and its maritime influence revived. In about 1786 the capital of the country was transferred from Rostaq to Muscat, a move which led to a dichotomy between the coast and the interior, creating political problems between the two regions at various times.

The Imam, Said bin Sultan, ruled Oman from 1804 until 1856. He was a strong and popular ruler, who also gained the respect and friendship of European nations, in particular the British. Treaties providing for the establishment of consular relations were negotiated with the British in 1839 (there had been earlier treaties of friendship in 1798 and 1800), the USA in 1833, France in 1844 and the Netherlands in 1877. British relations with Oman were maintained almost uninterrupted from the early 18th century until the present day, while relations with the other states concerned were less continuous.

Said bin Sultan revived Omani interest in Zanzibar and, in the latter part of his reign, spent an increasing amount of his time there. He started the clove plantations which later brought great wealth to the islands of Zanzibar and Pemba, and he founded the dynasty which ruled there until the revolution in 1964. During Said's reign, Omani dominions expanded to their greatest extent. In 1829 Dhofar became one of the constituent parts of the Sultanate and has remained so ever since.

The latter half of the 19th century was a difficult period for Oman. Not only had it lost its East African possessions, but a series of treaties with Britain to curb the slave trade also brought about a decline in the local economy, as Muscat had been an important port for this lucrative traffic.

Several insurrections took place towards the end of the 19th century, and in 1913 a new Imam was elected in the interior, in defiance of the Sultan who ruled from Muscat. This led to the expulsion of the Sultan's garrisons from Nizwa, Izki and Sumail. In the same year Sultan Faisal bin Turki, who had ruled since 1888, died, to be succeeded by his son Taimur. Efforts to come to terms with the rebels failed until 1920, when an agreement was reached between the Sultan and the principal dissidents, led by Isa bin Salih. It provided for peace, free movement of persons between the interior and the coast, limitation of customs duties and non-interference by the government of the Sultan in the internal affairs of the signatory tribes. A Treaty of Friendship with Britain, signed on 20 December 1951, recognized the full independence of the sultanate, officially called Muscat and Oman. Relations between the Imam, Muhammad bin Abdullah al-Khalili, and the Sultan remained good until the Imam's death in 1954, when rebellion again broke out under the Imam's successor, Ghalib bin Ali, who sought external assistance to establish a separate principality. In December 1955 forces under the Sultan's control entered the main inhabited centres of Oman without resistance. The former Imam was allowed by the Sultan to retire to his village, but his brother, Talib, escaped to Saudi Arabia and thence to Cairo. An 'Oman Imamate' office was established there, and the Imam's cause was supported by Egyptian propaganda. In the summer of 1957 Talib returned and established himself, with followers, in the mountain areas north-west of Nizwa. The Sultan appealed for British help, and fighting continued until early 1959, when the Sultan's authority was fully re-established. In October 1960, despite British objections, 10 Arab countries succeeded in placing the 'question of Oman' on the agenda of the UN General Assembly. In 1961 a resolution in support of separate independence for Oman failed to secure the necessary majority, and in 1963 a UN Commission of Inquiry refuted the Imamate's charges of oppressive government and public hostility to the Sultan. Nevertheless, a committee was formed to study the problem and, after its report had been submitted to the General Assembly in 1965, a resolution was adopted which, among other things, demanded the elimination of British domination in any form. The question was debated on several further occasions until, more than a year after Sultan Qaboos's accession, Oman (as Muscat and Oman was renamed in 1970) became a member of the UN in October 1971.

TRANSFORMATION UNDER QABOOS

By 1970 Sultan Said's Government had come to be regarded as the most reactionary and isolationist in the area. Slavery was still common, and many medieval prohibitions were in force. The Sultan's insistence that petroleum revenues be used exclusively to fund defence was embarrassing for Britain, the oil companies and the neighbouring states, and provoked the rebellion that began in Dhofar province in 1964. On 23 July 1970 the Sultan was deposed (and later exiled) in a coup, led by his son, Qaboos bin Said, at the royal palace in Salalah. Qaboos, who was then 29 years of age and had trained at Britain's Royal Military Academy (Sandhurst), thus became Sultan amid general acclaim, both within the country and abroad. Sultan Qaboos intended to transform the country, using petroleum revenues for development, following the model of the Gulf sheikhdoms to the north. He asked the rebels for their co-operation, but only the Dhofar Liberation Front responded favourably. The Popular Front for the Liberation of the Occupied Arabian Gulf (reported to control much of Dhofar, and to be receiving aid, via Southern Yemen, from the People's Republic of China) and its ally, the National Democratic Front for the Liberation of the Occupied Arab Gulf, appeared to be of the opinion that the palace coup had changed little.

In August 1970 Muscat and Oman became simply the 'Sultanate of Oman'. Sultan Qaboos appointed his uncle, Tariq bin Taimur, as Prime Minister. Tariq resigned his office in December 1971, since which time the Sultan has himself presided over cabinet meetings and acted as his own Prime Minister, Minister of Defence and Minister of Foreign Affairs (and Minister of Finance in the 1990s). Priority was given to providing the basic social and economic infrastructure which the former Sultan had rigidly opposed—housing, education, communications, health services, etc. In addition, restrictions on travel were abolished, many prisoners were released, and many Omanis returned from abroad. None the less, a substantial proportion of the annual budget continued to be devoted to defence and to quelling the Dhofar insurgency.

Oman's admission to the UN in 1971 was achieved despite opposition from the People's Democratic Republic of Yemen (PDRY, formerly Southern Yemen), which supported the Popular Front for the Liberation of Oman and the Arab Gulf, formed in 1972 by the unification of the two nationalist liberation fronts. The name of this organization was changed in July 1974 to the People's Front for the Liberation of Oman (PFLO). Oman's relationship with Britain also compromised Oman's candidature for UN membership. Britain continues to supply weapons, ammunition and military advisers to the Omani Government.

The progress on social and economic reform that was achieved after the palace coup of 1970 did have some impact on the strength of the insurgent movement, but fighting continued until 1975. Omani forces attacked the border area of the PDRY for the first time in May 1972. In 1973 Iranian troops entered the conflict on the side of the Sultan, who also received assistance from Jordan, Saudi Arabia, the UAE, Pakistan and India. Although the Sultan's forces gradually gained the upper hand, the war was prolonged, and during October 1975 the rebels used sophisticated weapons such as Soviet-made SAM-7 missiles. In December 1975, after a new offensive, the Sultan claimed a complete victory over the insurgents. Saudi Arabia helped to negotiate a cease-fire in 1976, and an amnesty was granted to Omani nationals who had been fighting for the PFLO.

During 1975–80 only desultory conflicts took place, the majority of rebels having returned to their homes in Oman. In January 1977 Iran withdrew the bulk of its forces from Dhofar, but a token force remained until the Iranian revolution in early 1979. A renewal of the insurrection against Sultan Qaboos occurred in June 1978, when a party of British engineers was attacked in the Salalah region of Dhofar. The PFLO became largely an external force, however, and had little success in attracting adherents within Oman, despite the assassination, in 1979, of the Governor of Dhofar, and reports of renewed insurgency. In January 1981 Oman closed its border with the

PDRY, and more British officers were seconded to the Omani forces as the frontier defences were put on alert. However, by October 1982, after talks at which Kuwait and the UAE mediated, Oman and the PDRY had re-established diplomatic relations, signing an agreement on 'normalization'.

FOREIGN RELATIONS UNDER QABOOS

Oman's relations with its other Arab neighbours improved considerably following the accession of Sultan Qaboos. During the reign of Sultan Said, Omani dependence on British military forces had been viewed with disfavour by its neighbours, increasing Oman's isolation in the Arab world. Since 1970, however, both Kuwait and the UAE have supplied much-needed financial support to Oman, while diplomatic relations were established with Iraq, a former supporter of the PFLO. The establishment of economic and diplomatic links with Saudi Arabia was particularly significant. Oman's support for the Israeli-Egyptian peace treaty of 1979 threatened to damage relations with some of the more uncompromising members of the League of Arab States (Arab League, see p. 264), but promised closer ties with the USA and with Egypt, which, at that time, undertook to respond to any request from Oman for military aid. Concern over regional security prompted Oman to join the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255), founded in May 1981.

The strategic importance of military bases in Oman has long been recognized. After the United Kingdom withdrew its forces from Masirah island in 1977 the USA demonstrated keen interest in the territory. In February 1980 Oman began negotiations with the USA concerning a defence alliance whereby, in exchange for US military and economic aid and a commitment to Oman's security, Oman would grant the USA use of port and air base facilities in the Gulf (including Masirah island). Although direct alignment with a 'superpower' was considered to be contrary to Oman's foreign policy, the agreement was finalized in June, and was bitterly condemned by the Arab People's Congress in Libya as a concession to 'US imperialism'. The outbreak of the Iran–Iraq War in September 1980 only served to underline Oman's strategic importance, particularly with regard to the Strait of Hormuz, a narrow waterway at the mouth of the Persian (Arabian) Gulf, between Oman and Iran, through which about two-thirds of the world's sea-borne trade in crude petroleum passed at that time. The fact that Oman possesses export outlets other than the Strait brought economic advantages to the country in May 1984, as its ports handled some trade which was destined for countries within the Gulf whose commerce was threatened by an escalation of the Iran–Iraq War.

In 1981 the USA established a communications centre in Oman, and pledged more than US $200m. in 1981–83 to develop port and airport facilities in return for the right to stockpile supplies in Oman for possible use by the US Rapid Deployment Force. By 1985 the total sum spent on the improvement of facilities in Oman had risen to $300m. United States forces were permitted to make landings in Oman during the massive 'Bright Star' military exercises, held in the region in December 1981. This aroused protest from the PDRY, as it contravened a clause of the 'normalization' agreement previously made. As a result, the other Gulf states, particularly Kuwait, attempted to discourage both countries' links with the 'superpowers' by reportedly offering Oman $1,200m. to withdraw the US military facility. In a preliminary attempt to co-ordinate the Gulf's own independent defence system, the GCC focused its attention on Oman, awarding a five-year defence grant to the country in July 1983 and holding joint military exercises there in October.

In September 1985 Oman established diplomatic relations with the USSR. The move was encouraged by the peaceful relations which had been maintained between Oman and the PDRY since the resumption of diplomatic contact in 1982, and was interpreted as an indication of Oman's desire to preserve its political independence. However, an American presence was discreetly maintained, and US troops were allowed to use military bases in Oman only with the agreement of the Omani Government. The USA continued to make improvements to existing installations in the Sultanate, expanding fuel, ammunition, power and water facilities at Seeb airfield. In October 1988 Oman and the PDRY signed an agreement to increase co-operation in the sectors of trade and communications. The signing took place during the first visit to the Sultanate by a President of the PDRY since the PDRY attained independence in 1967. In January 1989 the Omani Minister of Petroleum and Minerals, Said ash-Shanfari, became the first Omani minister to visit the USSR since the establishment of diplomatic relations between the two countries in 1985. In early 1989 Oman adopted a more conciliatory policy towards Iran (in November 1987 Oman had supported the Arab League's condemnation of Iran's prolonging hostilities with Iraq), and in March the two countries established an economic co-operation committee. However, Oman's support for Iran was conditional upon the latter's efforts to achieve political stability in the Gulf region.

After the invasion of Kuwait by Iraqi troops in August 1990, the Omani Government stated that the dispute should be resolved without the use of force. When it became clear that Iraq would not withdraw from Kuwait, Oman, together with the other members of the GCC, gave its support to the deployment of a US-led defensive force in Saudi Arabia. The Omani Government expressed the view that the imposition of economic sanctions would force Iraq to withdraw from Kuwait. Oman was, however, prepared to tolerate the continuation in office of the Iraqi President, Saddam Hussain. In late November there was evidence that Oman had attempted to mediate in the crisis, when the Iraqi Minister of Foreign Affairs, Tareq Aziz, made the first official Iraqi visit to a GCC state, other than Kuwait, since August 1990.

In the aftermath of the Gulf crisis, Sultan Qaboos supported further integration among the GCC's members, and in December 1991, at the annual meeting of GCC Heads of State, he unsuccessfully proposed the creation of a GCC army. By March 1995, following Iraq's deployment in October 1994 of troops and artillery near the border with Kuwait in what was widely regarded as an attempt to effect the easing of UN economic sanctions imposed in August 1990, Oman's stance on the prolongation of economic restrictions against Iraq appeared ambivalent, urging the prompt political rehabilitation of Iraq in the region, while continuing to support the indefinite maintenance of economic sanctions. Since that time Oman has continued to support UN attempts to implement those resolutions relating to the Gulf War settlement (including a number of US and British air strikes against strategic installations in Iraq), whilst attempting to draw international attention to the profound difficulties being inflicted on the Iraqi population by the maintenance of sanctions. Oman has also sought to maintain diplomatic channels with Iraq, and has urged the Iraqi authorities to seek regional rehabilitation through conciliation on issues such as alleged Kuwaiti prisoners of war (see chapter on Kuwait). Despite reports in February 1999 that Sultan Qaboos had communicated to US officials his opposition to aspects of US foreign policy which entailed interference in the internal affairs of other countries (a clear reference to US policy towards Iraq), in March, during a visit to Oman by the US Secretary of Defense, it was reported that the Omani Government had agreed to renew its military access agreement with the USA.

Oman has expressed a particular desire to promote relations between the GCC states and Iran, and to support gradual political reform in the latter. In March 1991 Oman hosted a meeting at which diplomatic relations between Saudi Arabia and Iran were restored. In September 1992 the Governments of Oman and Iran signed an agreement to increase trade and economic co-operation, in particular in the sectors of transport and shipping. Further bilateral discussions were conducted in June 1998 in an attempt to formulate a strategy to combat smuggling activities across the Strait of Hormuz; a memorandum of understanding was signed to that end. However, Oman, as a GCC member, has continued to support the claims of the UAE in its territorial dispute with Iran over the sovereignty of Abu Musa and Greater and Lesser Tunb islands.

In January 1992 President Mitterrand of France arrived in Muscat for talks on increasing political ties and bilateral commerce, particularly in the defence, energy and banking sectors. In April Oman and the UAE agreed to relax travel regulations to enable nationals to travel between the countries with identity cards, rather than passports. In May the President of the UAE, Sheikh Zayed an-Nahyan, visited the Sultan for

talks, as a result of which diplomatic representation between the two countries was raised to ambassadorial level.

In October 1992 Oman signed an agreement with Yemen (the Yemen Arab Republic–YAR–and the PDRY were unified in May 1990) to establish the demarcation of their border. The agreement was officially ratified in December, and in October 1993 Sultan Qaboos pledged $21m. to finance the construction of a border road between the two countries. Normalization of relations were restored and in March 1994 Oman hosted talks with Yemen to discuss the furthering of bilateral co-operation. The efforts of Sultan Qaboos to mediate a settlement to the conflict in Yemen ended in disappointment when fighting broke out again between the two rival Yemeni factions in late April. However, the Sultanate was elected to be a non-permanent member of the UN Security Council for a two-year term from January 1994, in tribute to its mediatory role in the Middle East. In June 1995 Oman and Yemen completed the demarcation of their joint border; in the following month Oman and Saudi Arabia officially demarcated their common border. At the end of July 1996 Oman withdrew an estimated 15,000 troops from the last of the disputed territories on the Yemeni border, in accordance with the 1992 agreement. In May 1997 official representatives from both countries signed the international border demarcation maps at a ceremony in Muscat. It was also agreed to promote bilateral trade by building a new 245-km road linking the two countries. In September 1998, following a meeting of border officials from both countries, 12 economic co-operation accords were announced, as were plans for the establishment of a free-trade zone; Saudi claims that the border agreement violated sovereign Saudi territory were rejected by both countries.

In January 1994 bilateral talks were held with Egypt to promote the exchange of expertise between their respective armed forces. In March the Pakistani Prime Minister, Benazir Bhutto, made an official visit to Oman which resulted in an agreement to increase co-operation in various fields, especially in the sectors of economics and regional security. In April the Israeli Deputy Minister of Foreign Affairs, Yossi Beilin, participated in talks in Oman. This constituted the first official visit by an Israeli minister to an Arab Gulf state since Israel's declaration of independence in 1948. In late September 1994, moreover, Oman and the other GCC member states announced the partial ending of their economic boycott of Israel. In December the Israeli Prime Minister, Itzhak Rabin, made an official visit to the Sultanate to discuss the Middle East peace process, and in February 1995 it was announced that low-level diplomatic relations were to be established between Oman and Israel with the opening of interests sections, respectively, in Tel-Aviv and Muscat.

The agreement to establish interests sections was signed in January 1996, and in April relations between the two countries were consolidated further by a two-day official visit to Oman by Shimon Peres, the new Israeli Prime Minister. An Omani trade office was opened in Israel in August 1996, despite concerns that relations with Israel would be undermined by the uncompromising international stance adopted by the new Netanyahu Government in Israel. However, in April 1997, in accordance with an Arab League resolution adopted in March in protest at Israel's decision to construct a Jewish settlement in a disputed area of East Jerusalem, Oman suspended diplomatic links with Israel, resumed the economic boycott and withdrew from multilateral peace talks. As the Middle East peace process faltered, Oman suspended all commercial and business activities with Israel; the Government barred Israeli companies from taking part in an annual computer fair in Muscat, and two Israeli Ministry of Foreign Affairs officials were refused visas to enter Oman in order to find a permanent site for the Israeli diplomatic mission in Muscat. In late July, the Omani Ministry of Foreign Affairs announced the opening of a representative office in the Palestinian National Authority (PNA)-administered city of Gaza, to be headed by an ambassador, and in October, in an address to the UN General Assembly, the Minister of State for Foreign Affairs, Yousuf bin al-Alawi bin Abdullah, urged UN members to encourage Israel to withdraw from the Golan Heights and southern Lebanon. Bin al-Alawi also reiterated the Government's support for the PNA. In November Oman attended the Middle East and North Africa economic conference in Doha, which was widely boycotted by Arab nations, owing to Israel's participation. In December Oman recalled its representative from its trade office in Tel-Aviv. In late May 1998 Sultan Qaboos formally received the first Palestinian ambassador to Oman, and in the following month Yasser Arafat, the President of the PNA, visited Oman and met Sultan Qaboos during a tour of Arab states, which Arafat hoped would produce a general consensus on the organization of a pan-Arab summit to discuss the Middle East peace process. Arafat visited Oman again in mid-March 1999, hoping to secure the Sultan's support for a unilateral declaration of Palestinian statehood in May. However, in common with many Western states, the Omani Government considered that the postponement of such a declaration would be in the best interests of the Palestinian cause, particularly given the proximity of forthcoming Israeli elections; following the election of the Labour alliance's Ehud Barak as the new Israeli Prime Minister, the Omani authorities expressed renewed hopes for the future of the peace process.

DOMESTIC DEVELOPMENTS SINCE 1981

A 45-member Consultative Assembly (consisting of 17 representatives of the Government, 17 representatives of the private sector and 11 regional representatives) was created in October 1981 in response to suggestions that Sultan Qaboos was not being made sufficiently aware of public opinion. In 1983 the Assembly's membership was expanded to 55, including 19 representatives of the Government. Its role, however, was confined to comment on economic and social development and recommendations on future policy. In November 1990 Sultan Qaboos announced that a new Consultative Council, comprising regional representatives, was to be established within one year, in order to allow 'wider participation' by Omani citizens in national 'responsibilities and tasks'. In March 1991 he announced that the Council would consist of 59 elected members. The President of the Council was to be appointed by the Government. In April 21 prominent figures met to nominate three candidates (of whom one was to be appointed to the Council) for each of the country's *wilayat* (provinces). On taking office, the members of the Council were to appoint committees and executive officers. An annual meeting between the Council and members of the Government would also be held. Although the Council has no legislative power, ministers are obliged to present annual statements to it and to answer any questions addressed to them.

In December 1991 a cabinet reshuffle produced wide-ranging ministerial changes and the amalgamation of several ministries. This was followed by a further reshuffle in May 1992. The inaugural session of the Consultative Council, created to replace the former State Consultative Assembly, was held in January 1992. The new body's 59 members were appointed for a three-year term. Three new ministries were created in the cabinet reshuffle in January 1994, and in July it was announced that membership of the Consultative Council would be increased to 80 in 1995, allowing constituencies of 30,000 or more inhabitants to have two seats while the remaining regions would each be represented by one member. Women were to be permitted, for the first time, to be nominated as candidates in six regions in and around the capital. In early 1995 two women were appointed to the Consultative Council. On 6 November 1996 Sultan Qaboos issued a decree promulgating what was termed a Basic Statute of the State, a constitutional document defining, for the first time, the organs and guiding principles of the State. Article 58 of the Statute provided for a Council of Oman, to be composed of the Consultative Council (Majlis ash-Shoura) and a new Council of State (Majlis ad-Dawlah). The latter was to be appointed from among prominent Omanis, and would act in a liaison capacity between the Government and the people of Oman. Later in November it was reported that 23 senior government ministers had resigned as directors of public joint-stock companies, in accordance with a stipulation in the Basic Statute that ministers should not abuse their official position for personal gain. In December a Defence Council was established by royal decree, comprising the Minister of the Royal Court, the heads of the branches of the armed and police forces and the head of internal security. The process of succession to the Sultan, as defined by the Basic Statute, required that the ruling family determine a successor within three days of the throne's falling

vacant, failing which the Defence Council would confirm the appointment of a successor pre-determined by the Sultan.

Voting was organized on 16 October 1997 to select candidates for appointment to the Consultative Council. Of a total of 736 candidates, 164 were chosen, from whose number the Sultan selected the 82 members of the new Council on 24 November. The two female members of the outgoing Council were returned to office. (Women from all regions had been permitted to seek nomination in the October poll.) In mid-December the Sultan issued a decree appointing the 41 members of the Council of State, which was reportedly dominated by former politicians, business leaders and academics. A further decree established the Council of Oman, which was formally inaugurated by the Sultan on 27 December.

In mid-1994 the Omani Government was reported to be employing stringent measures to curb an apparent rise in Islamic militancy in the country. In late August the security forces announced the arrest of more than 200 members of an allegedly foreign-sponsored Islamic organization, most of whom were later released. Among the persons arrested were two junior ministers, university lecturers, students and soldiers. In November several detainees were sentenced to death, having been found guilty of conspiracy to foment sedition; the Sultan subsequently commuted the death sentences to terms of imprisonment.

In 1997 there were public signs of growing impatience with the slow pace of progress on political reform and economic development. Civil disturbances were reported in al-Hajer, 180 km west of Muscat, in May; troops were eventually deployed to end the demonstrations and disperse the crowds. University students also protested against the introduction of severe security measures on campus, which included a ban on public gatherings. Hitherto, such demonstrations had been virtually unknown in Oman and it was widely believed that budget cuts and privatization plans had created anxiety about employment prospects among the younger generation.

In September 1995 Qais bin Abd al-Munim az-Zawawi, Deputy Prime Minister for Financial and Economic Affairs and Oman's principal financial policy-maker, was killed in a traffic accident when travelling in the same vehicle as the Sultan (who escaped unharmed). A week later Ahmad bin Abd an-Nabi Macki, the Minister of the Civil Service, was appointed acting Minister of Finance and the Economy. In a cabinet reshuffle in December Macki was relieved of the civil service portfolio and appointed to head the newly-created Ministry of National Economy; it was announced that he would continue to 'supervise' the former Ministry of Financial and Economic Affairs, now restyled the Ministry of Finance. In early November 1996 Fahar bin Taimour as-Said, Deputy Prime Minister for Security and Defence, died. In a cabinet reorganization in December 1997 the portfolio of Justice, Awqaf (Religious Endowments) and Islamic Affairs was separated into two ministries; Sheikh Muhammad bin Abdullah bin Zahir al-Hinai, previously Minister of Agriculture and Fisheries, was appointed Minister of Justice, and Sheikh Abdullah bin Muhammad bin Abdullah as-Salimi entered the Council of Ministers as Minister of Awqaf (Religious Endowments) and Religious Affairs. Three other ministers were replaced following their retirement. All the new ministers were Western-educated, with a strong academic background, and their appointment seemed to suggest a move towards technocratic rule in Oman. In late 1998, in what was widely regarded as a significant step towards greater democratization, the Minister of Health and the Minister of Social Affairs, Labour and Vocational Training appeared before the Consultative Council to hear complaints and respond to questions concerning the poor performance of their ministries.

Economy

Updated for this edition by ALAN J. DAY

Oman's economy is based largely on revenue from the petroleum sector. Petroleum was first produced commercially in 1967, but it was not until 1970, when Sultan Qaboos bin Said assumed power, that income from petroleum was invested in the country's economic development. Subsequently, Oman's economy expanded considerably under a prudent policy of avoiding external debt while developing both public and private sectors.

In 1995, according to estimates by the World Bank, Oman's gross national product (GNP), measured at average 1993-95 prices, was US $10,578m., equivalent to $4,820 per head. Between 1985 and 1995 it was estimated, GNP per head increased, in real terms, at an average rate of 0.3% per year. Oman's economic growth since the mid-1960s has been rapid but uneven. Between 1965 and 1980, according to World Bank estimates, the country's gross domestic product (GDP) increased, in real terms, by 12.5% per year, one of the highest national growth rates in the world. The comparable increase between 1973 and 1984 was 6.1% per year, a rate that was maintained at 6% during 1985. Measured in current prices, Oman's annual GDP rose from an estimated mere $60m. in 1965 to $8,980m. in 1985. However, real GDP rose by only 3.3% in 1986 and it declined by 3.4% in 1987. During 1990–95 the average annual growth rate for GDP, measured at constant prices, was 6.0%. In 1996 there was a marked increase in GDP of 11% and in 1997, according to the Central Bank of Oman, GDP growth was 12.5%. However, Oman's economy suffered a serious downturn in 1998, with GDP decreasing by 10.2% (to RO 5,457.1m.) at current prices. This reflected the collapse in international petroleum prices and prompted the introduction of an austerity budget in January 1999 (See Finance and Development). However, following an agreement by OPEC producers to reduce oil production from April 1999, and a consequent recovery in world petroleum prices, by mid-1999 there were signs of economic improvement.

Revenues from petroleum have been used to underpin a series of five-year development plans, covering 1976–80, 1981–85, 1986–90, 1991–95 and, currently, 1996–2000. These plans have aimed to provide the country with necessary social amenities while investing further in the petroleum sector, but in recent years there has been a strong emphasis on diversification within the economy. The 1991–95 plan imposed strict limits on projected external borrowing, and again emphasized the diversification of the economy, which was to be achieved through the expansion of the private sector, and renewed stress on industry, agriculture and fisheries, mining and services. In July 1994 the Government initiated a wide-ranging privatization programme to attract private investment, particularly for infrastructure projects. In November an investment law was introduced to allow foreign nationals to own as much as 100% of 'projects contributing to the development of the national economy', particularly if they pertained to infrastructure. A new tax law was introduced in October 1996, reducing the rate of tax paid by Omani companies with 49% or less foreign ownership as part of the Government's efforts to promote foreign investment and strengthen the role of the private sector in the economy. All companies working in industry, mining, fishing, tourism and agriculture now benefit from tax exemptions which previously applied only to firms that were entirely Omani-owned. Early in 1997 the Minister of Commerce and Industry announced that all new Omani companies would be required to offer 49% of their shares to foreign ownership, a move that was not welcomed by a number of the country's major trading families who felt that this initiative would undermine their dominant position.

Under the fifth Development Plan (1996–2000), announced in January 1996, emphasis was placed on the elimination of the budget deficit by 2000 through the reduction of public expenditure, the development of the non-petroleum sector and the expansion of the privatization programme. The policy of 'Omanizing' the work-force (to reduce the country's dependence

on expatriate labour, thereby providing opportunities for Oman's rapidly expanding population) was given fresh impetus when, in June 1996, the Government stated that it would assume the full cost of training Omani nationals employed in the private sector and announced that a schedule of charges would be imposed on private sector companies employing foreign workers. Yet despite the Government's 'Omanization' policy, figures for the end of 1996 revealed that expatriates made up almost two-thirds of the workforce and continued to dominate the private sector. (Indian nationals form the largest group of expatriates, comprising almost one-half of all foreign workers in 1993.) The Ministry of Social Affairs and Labour had given private sector companies until the end of 1996 to submit plans indicating how they intended to replace expatriate staff with Omanis so as to meet government quotas, but under pressure from the business community the deadline was extended to the end of 1997. Quotas for the number of Omanis employed have been set by sector: 60% of all employees in transport and storage; 45% in banks, insurance companies and estate agents; 35% in manufacturing industry; 30% in hotels and restaurants and 20% in the wholesale industry. However, finding employment for the growing number of Omanis leaving school every year is becoming an increasingly urgent problem. Between 1998 and 2002 the annual number of school leavers is projected to total 48,000, rising to 53,000 between 2003 and 2007. At the end of 1996 almost 80% of all employees in the public sector, but only 25% of private-sector workers, were Omanis. It will be difficult for the Government to increase this percentage, as the monthly salary of the majority of foreign workers in the private sector is much less than an Omani would expect to earn, and many jobs in the private sector, especially those involving manual work, are unattractive to Omani nationals. By early 1999, acording to official figures, some 449,000 foreign workers were employed in Oman's private sector, compared with just 47,400 Omanis. In the previous year, 22,000 foreign workers had been expelled from the country by the Government.

Oman is neither a member of the Organization of the Petroleum Exporting Countries (OPEC), nor of the Organization of Arab Petroleum Exporting Countries (OAPEC). However, its agreements on concessionary terms ensure that concession-holders are obliged to grant it the same privileges as those granted to members of OPEC. Oman is not, therefore, subject to controls on petroleum production and pricing, although it generally respects OPEC's policies. In the 1980s Oman benefited from its freedom to raise production levels to compensate for any loss of income resulting from the existence of large surplus stocks of petroleum during the first half of the decade. Owing to Oman's position on the southern shore of the Persian (Arabian) Gulf, the country was less vulnerable to the disruption of petroleum traffic caused by the 1980–88 war between Iran and Iraq. Annual Omani production of crude petroleum fell from 135m. barrels in 1976 to 103m. barrels in 1980, but the opening of new fields brought a recovery, with the result that production reached 137m. barrels in 1983, at a rate of 375,000 barrels per day (b/d). In June 1990 the level of oil production was 650,000 b/d and the Ministry of Petroleum and Minerals planned to raise it by an additional 50,000 b/d. However, in July the Omani Government suspended these plans in an attempt to co-operate with OPEC's efforts to raise international oil prices. In 1992 the price of Omani oil averaged US $18 per barrel, but by the end of 1993 the price had sunk to less than $12 per barrel. In January 1994 Oman cut its output by 5% in the hope that other oil-producing countries would follow suit in order to raise the price of oil. By April, however, Oman abandoned its unilateral stance, resuming production to 800,000 b/d to average $14 per barrel by mid-1994. Production averaged 865,000 b/d in 1995 and 895,000 b/d in 1996, increasing to 910,000 b/d in 1997 at an average price of nearly $19 per barrel. In March 1998 Oman agreed a modest cut in production as its contribution to international efforts to arrest a decline in prices. In 1998 production averaged 905,000 b/d. By early 1999 production had decreased to 850,000 b/d and was expected to decrease further following voluntary production cuts of 388,000 b/d implemented in response to production cuts agreed by OPEC members in March, and effective from April. Although petroleum remains the predominant feature in all aspects of the Omani economy, the development of the country's gas reserves for export and as the basis for energy-intensive industrial projects is seen as the main hope for transforming the economy in the future.

Oman's development has been aided by grants from the Gulf Co-operation Council (GCC—see p. 255). Among GCC regulations is an agreement to abolish tariffs on home-produced goods that are traded between member countries. Oman has retained these tariffs, however, in order to protect the country's developing industrial sector. In 1986 the Omani Government requested other members of the GCC to reveal the level of subsidy being applied to goods that they exported to Oman, in order to enable the tariff system to be updated.

In mid-1991 the annual rate of inflation was estimated at 3%, decreasing to 1.4% in 1992, and annual economic growth averaging 6% was recorded for the period 1991–95. Annual inflation averaged 1.5% in 1990–94, reportedly falling to 0.3% by 1996; consumer prices declined by an annual average of 0.2% in 1995–98.

AGRICULTURE AND FISHERIES

Since the development of the petroleum industry, the relative importance of agriculture has declined sharply. However, it remains a significant source of employment and income. The 1993 census indicated that 60% of arable land was under cultivation and that some 9.4% of the working population were engaged in the agricultural sector. Most agriculture currently takes the form of subsistence farming by traditional methods. Agricultural GDP increased by an annual average of 8.9%, in real terms, during 1978–92, and by 5.2% and 3.2%, respectively, in 1993 and 1994. The 1986–90 Five-Year Plan emphasized the expansion of the fishing industry and the encouragement of production for export and the urban market. This was intended to reduce Oman's dependence on food imports, which cost RO 131m. (18.6% of Oman's total imports) in 1987 and RO 162.6m. in 1990. The Oman Bank for Agriculture and Fisheries (established in 1981 with the intention of curbing rural-to-urban migration) provides loans to farmers, and there is a state marketing authority, the Public Authority for Marketing Produce, which aims to increase domestic consumption of local products. In 1987 Japan granted a concessionary loan of US $200m. to Oman for the development of agriculture and infrastructure. By the end of 1988, which was declared to be 'Agricultural Year' by the Sultan, about 2,500 government-owned research and experimental farms had been established. In January 1989 a 10-year plan was announced for the development of the agricultural and fishing industries. In 1989 government expenditure on agriculture, forestry and fishing was only RO 27.1m. (less than 2% of the total). By 1993 government expenditure on the sector had increased to RO 40.7m., representing 3.7% of the total. Expenditure on the sector decreased in 1994 to RO 30.8m., equivalent to 2.8% of total expenditure.

About 60% of the area under cultivation is planted with dates. Other crops include lucerne (alfalfa), limes, mangoes, melons, bananas, papaya and coconuts. Oman is almost self-sufficient in tomatoes, cucumbers, onions and peppers. Imports of cereals increased from 52,000 metric tons in 1974 to 287,000 tons in 1987 and 445,800 tons in 1995. Livestock farming is practised in Dhofar, which benefits from monsoon rains between June and September. Cattle are raised in the hills north of Salalah, and goats in the Hajar mountains.

During 1992–96 agricultural output rose from 784,200 tons to 1,181,800 tons, reflecting an expansion of modern techniques and intensification methods. As a result of the increase in production, the value of agricultural produce increased from RO 85.1m. in 1992 to RO 100.8m. in 1996, registering an annual increase of 4.6% (although the rate targeted in the 1991–96 Development Plan was 6.3%). Over the same period, the value of agricultural exports increased from RO 31.8m. to RO 50.8m.—an average annual growth of 14.5%.

Agriculture is heavily dependent on irrigation. In 1985 the Government announced that rural power and water networks were to be greatly expanded over the next five years, and in that year new dams at Khour ar-Rassagh and Wadi al-Koudh came into operation. By early 1988 a dam with a capacity of 3.6m. cu m was under construction at Wadi Jizzi in Sohar. In August 1989 three schemes to improve and expand the water distribution networks were announced: two in Nizwa and S... costing RO 2m. each, and one on Masirah island, at a

RO 500,000. In May 1990, contracts were awarded to improve water supply systems in Nizwa and Sur. The Nizwa project consisted of laying 45 km of pipeline, construction of a new section for the reservoir and the establishment of a telemetry system at a cost of RO 741,000. The Sur project involved a RO 688,000 contract to lay 10 km of transmission pipeline, 30 km of distribution pipeline and install a pumping station. In April 1991 the Ministry of Agriculture and Fisheries awarded a contract worth US $8.3m. to build two recharge dams in the Batinah coastal region. Dams already constructed at Wadi Rubkah and Wadi Taww will eventually have respective capacities of 5m. cu m and 3.7m. cu m. The Ministry of Agriculture and Fisheries commissioned a recharge dam to be built at Wadi al-Fuleij, in Sur, at a cost of RO 1.2m., enabling a saving of 2.2m. cu m of flood water which would normally flow from the wadi into the sea. In May 1990 the newly-created Ministry of Water Resources announced a programme for water rationalization which introduced new regulations for the registration of wells and a permit requirement for new wells. Nevertheless, irrigation still accounts for an estimated 90% of the country's water consumption and as the crops produced are of relatively low value the high rate of water usage by the agricultural sector remains a matter of concern for the Government. Oman's consumption of fresh water currently exceeds that replaced naturally by rainfall, and the depletion of groundwater supplies and sea-water intrusion into coastal aquifers have become a serious problem. A conference organized by Sultan Qaboos University in Muscat in April 1997 urged all the GCC states to reduce the volume of water allocated to agriculture in order to conserve scarce supplies. However, for the Omani Government to impose additional restrictions on water use would present difficulties, given that agriculture is such a politically sensitive sector; figures for the end of 1996 indicated that agriculture employed almost half of all Omanis in the work-force and provided jobs for at least some young Omanis living in the countryside where alternative forms of employment are limited.

Fishing is a traditional industry in Oman, and during the 1970s it employed about 10% of the working population. In 1980 the Oman National Fisheries Co (ONFC) was formed to organize concession agreements, government trawlers and land facilities. By 1996 the ONFC was operating nine deep-sea trawlers, an onboard fish meal plant and a processing and freezing plant at Mutrah. The inshore waters are rich in marine animals (mainly rock-cod, snapper and cuttlefish, together with some shellfish), which are the main source of protein in the diet of many Omanis, and provide some export revenue. In August 1991, however, new regulations to curb excess fishing of shellfish were introduced. The Government's Fishermen's Fund grants substantial subsidies to the sub-sector, while the Bank for Agriculture and Fisheries encouraged small-scale fishing, and had helped to provide about 500 boats and 2,000 outboard motors by early 1984. Most of those engaged in the sub-sector, however, were reluctant to change from subsistence to commercial fishing, despite the expansion of facilities for the storage and marketing of fish. During the late 1970s the annual catch was about 60,000 metric tons. The total catch in 1985 was 101,180 tons and in 1988 it increased by 22% compared with the previous year, to 165,576 tons. By 1992, however, the total catch had declined to 112,313 tons, but it rose to 116,469 tons in 1993 and 118,568 tons in 1994 (comprising 97,531 tons landed by traditional fishing methods and 21,037 tons landed by the ONFC). In 1995 the total catch increased to 139,860 tons, although in 1996 it decreased to 121,615 tons, about a third of which was exported. In March 1989 the Government held discussions with the US Agency for International Development (USAID) concerning the provision of finance for a project to develop and manage the local fishing industry. In July 1990 representatives of the USA and Oman concluded discussions concerning an agreement on the provision of aid. The USA pledged US $75m. for a water programme already under way, and contributed approximately $40m. to a fisheries scheme. In November 1991 the newly-renamed Ministry of Agriculture and Fisheries Wealth announced the awarding of contracts for consultancy work on four fishing-harbour projects: at Qurayat, Bukha, Al-Lakbi and Mirbat. Construction of the fishing harbour at Qurayat was due to commence in April 1995. In 1992 electricity charges for the agriculture and fishery sectors were reduced as an incentive. In the fourth Five-Year Plan (1991–1995) RO 200m. was allocated to the fishing industry with the objective of raising its annual growth rate to account for 9.9% of GDP.

PETROLEUM AND NATURAL GAS

Since the early 1970s the economy of Oman has been dominated by the petroleum industry. Petroleum currently accounts for about 75% of government revenue and around 40% of GDP. Proven oil reserves totalled 5,300m. barrels in 1998, sufficient to sustain production at present rates until 2014. In 1937 Petroleum Concessions (Oman) Ltd, a subsidiary of the Iraq Petroleum Co, was granted a 75-year concession to explore for petroleum, extending over the whole area except for the district of Dhofar. A concession covering Dhofar was granted in 1953 to Dhofar Cities Service Petroleum Corpn. However, petroleum was not discovered until 1964, when deposits were found near Fahud. Commercial production began in 1967, and average output increased to around 300,000 b/d in the 1970s. Production is managed by Petroleum Development Oman (PDO), in which the Government holds a 60% share, while Royal Dutch/Shell has 34%. In 1997 PDO was responsible for about 94.5% of Oman's crude oil output, the remainder being produced by a number of foreign concerns. PDO operates two main production areas: a group of central oilfields, south-west of Muscat, and a group of southern oilfields in Dhofar. The central area was the first to be developed, and four connected oilfields together produced crude petroleum at an average rate of 341,000 b/d in 1975. When production from the three Ghaba fields started in 1976, output from the total central area reached a peak level of 368,000 b/d. From then on, production declined, averaging about 250,000 b/d in early 1984. Development of the oilfields in the south has compensated for this fall. Production started at the Marmul field in 1980, and the Rima field came 'on stream' in 1982, producing 45,000 b/d in early 1984. Further fields, at Marmul, Nimr and Sayyala, were brought into production in late 1985. Output from the southern fields totalled some 150,000 b/d in early 1984. A north–south pipeline connects the oilfields to the port of Mina al-Fahal, near Muscat. In June 1988 the Rajaa oilfield, situated in the Balija region of central Oman, commenced production. Also in mid-1988 78 new wells were being drilled in the Yibal region of northern Oman, where 168 producing wells and 43 water-injection wells were already in operation.

In mid-1995 the Government revealed plans to offer at least 10 largely untapped petroleum exploration areas (mostly in southern Oman) to international companies before the end of the year in order to stimulate exploration activity. In the first half of 1996 four major concessions for exploration were granted by PDO to the US companies Triton Energy and Phillips Petroleum Oman, the Japan Petroleum Exploration Co (Japex) and a joint venture between the US company, Arco, and the Portuguese-owned Partex (Oman) Corpn. Early in 1997 it was announced that the Saudi Arabian company, Nimr Petroleum, had been granted a concession to drill for oil on the south-east coast near Masirah island. In June 1998 the Government signed three exploration and production agreements with US companies—Amoco, Occidental Petroleum Corpn, and Triton—securing a minimum investment of US $80m. in exploration activities. Yet despite the Government's claims that it wishes to encourage greater foreign involvement in developing the country's oil reserves, the most productive fields are operated by the PDO. In March 1997 the petroleum minister reiterated that the Government was not planning to change the ownership structure of the PDO, which remains heavily dependent on managerial and technical assistance from Shell, and the complete nationalization of Oman's petroleum industry appears to be unlikely in the immediate future.

In 1987 petroleum exports were estimated to be worth RO 1,194m., representing 82% of total revenue, and in 1988 they were worth RO 1,141.0m., according to estimates by the Central Bank. Japan is the principal recipient of Omani petroleum, taking 40.4% of the total in 1992, compared with 52.6% in 1986. Following the rise in petroleum prices occasioned by the Gulf crisis, the Government's net oil revenues rose by almost 58%, to RO 1,538m., in 1990. Oil exports rose to 252.5m. barrels in 1992 from 243.7m. in 1991. Net oil revenues fell to RO 1,241m. in 1991, rising slightly to RO 1,276m. in 1992, accounting for

79% and 77% of total revenue respectively. In January 1994 production was reduced to 720,000 b/d following an attempt by the Government to raise prices. The plan was abandoned when it became apparent that production quotas set by OPEC would not be reduced and the PDO subsequently resumed production of an average of 800,000 b/d in 1994. In late 1994 the Government announced that it was to invest US $6,000m. in the crude petroleum production sector during 1995–98, in an attempt to increase petroleum reserves. In 1993 exports of crude petroleum provided 72.2% of total export earnings, and in 1994 the proportion increased to 74%. Petroleum exports rose from 778,000 b/d in 1995 to 811,000 b/d in 1996. However, exports to Japan fell from 272,000 b/d to 247,000 b/d. Exports to South Korea rose slightly from 147,000 b/d to 156,000 b/d while exports to the People's Republic of China increased from 90,000 b/d to 116,000 b/d. Figures for the first quarter of 1997 revealed a further decrease in exports to Japan while exports to the People's Republic of China more than doubled compared with the same period in 1996 (making the latter Oman's leading customer in this period). As a result of increased levels of production and higher prices, the value of petroleum exports rose substantially from $4,752m. in 1995 to $5,889m. in 1996. The value of exports for the first quarter of 1997 was $1,587m. compared with $1,247m. during the same period in 1996. By September 1997 export earnings for the year were RO 1,678m. ($4,358m.). Oil revenues in 1998 were RO 1,497m. ($3,888m.), but were projected to decrease to RO 902m. ($2,363m.) in 1999.

Oman's recoverable reserves of natural gas were estimated to total 263,500m. cu m (9,310,000m. cu ft) in 1987. By 1998, after further discoveries, known reserves had risen to 800,000m. cu m (28,400,000m. cu ft). The Yibal gas fields are thought to be capable of a daily yield of 4m. cu m (140m. cu ft). In September 1984 PDO embarked on a 10-year programme of exploration for unassociated gas, which, it was hoped, would enable more petroleum to be released for export. By September 1985 a total of 19 new discoveries of gas deposits had been reported. Gas production in 1985 reached 3,930m. cu m, of which 1,290m. cu m was reinjected, 900m. cu m was flared, 190m. cu m was lost and 1,550m. cu m was consumed. In 1985 PDO discovered gas reserves in Lekhwair, where it was planned, in 1989, to construct a gas injection plant in order to improve recovery levels, using surplus gas. The plant was part of a larger project to upgrade facilities at the Lekhwair field and its cost was estimated at US $100m.–$130m. In June 1990 PDO announced that it was initiating several oil pipelines and gas lift projects. In August 1990 PDO awarded a contract to develop a water flood scheme at the Lekhwair oilfield. This project was allocated $500m., enabling the scheme to have a daily capacity of 200,000 barrels of crude petroleum and 4m. cu ft of gas. In June 1986 offshore gas was discovered in the Bukha field, in the Musandam Peninsula region. Its reserves were estimated at 31.2m. barrels of condensate, 500,000m. cu ft (14,000m. cu m) of dry gas and 7.3m. barrels of associated gas. A contract to develop the gas field was negotiated with a group led by a Canadian company, International Petroleum (IPL). At the end of 1987 natural gas was being extracted at the rate of 3.90m. cu m (140m. cu ft) per day, and by the end of the decade this was increased to between 14m. and 17m. cu m per day. A pipeline links Yibal to Muscat and Sohar, and an extension of the gas pipeline network from Yibal to Izki has been completed. The scheme is intended to provide sufficient supplies from Yibal to the coast until 2010. PDO also initiated a programme to build a 10-in pipeline, 26 km in length, from Natih to Fahud. Other projects have included pipeline links from Qaharir to Marmul and Jalmu to Rima. Schemes are under way to convert domestic fuelling systems to natural gas in order to release more petroleum for export, and gas is also used to enhance the rate of petroleum recovery (by reinjection), and to power the country's copper smelter (see below). Gas liquefaction plants have been built at Yibal. In July 1989 a proposal to expand the plant producing natural gas liquids (NGL) at Yibal was announced. In 1987 output of liquefied petroleum gas (LPG) by the National Gas Co was 35,000 tons, increasing to 37,000 tons in 1988. The Government has exclusive rights to revenue from gas, and in 1988 the National Gas Co's profits reached RO 649,000, 17.5% higher than in 1987. In April 1989 Oman agreed terms for a 10-year contract to supply natural gas for the world's first floating methanol plant, beginning production by 1991. The Government agreed to sell as much as 6,343m. cu m (224,000m. cu ft) of natural gas over the period of the agreement to the consortium owning the plant, which has a capacity of 2,200 metric tons per day. In July 1989 PDO announced its largest gas discovery for 22 years, at the Saih Nihayda field in the central region. Recoverable reserves were estimated at 10,000m. cu m (350,000m. cu ft), making it Oman's fifth biggest gas field. A further large discovery of gas, at the Saih Rawl field, was announced in March 1991. In 1992 gas revenues peaked at RO 63.1m. (equivalent to 3.3% of total revenue), only to decrease again to RO 57.9m. (3.3%) in 1993 and to RO 52.5m. (2.9%) in 1994. In 1991 it was announced that more than RO 44m. had been allocated for exploration and exploitation of new gas discoveries. In February 1992 plans were announced for massive investment in a project to produce liquefied natural gas (LNG), to be implemented by Oman LNG, a consortium led by the Government (51% share), Shell, Total, and various Japanese and Korean companies. The liquefaction plant is being constructed at al-Ghalilah near Sur, on the coast 150 km south of the capital by the Chiyoda Corporation of Japan and Foster Wheeler of the USA. The plant, which is expected to cost $2,250m., will have a capacity of 6.6m. tons per year (t/y) and production is scheduled to start in 2000. Oman LNG is raising the bulk of the finance for the plant through loans from commercial firms and the balance through equity. A 25-year agreement with the Korea Gas Corpn has been signed to supply 4.1m. t/y of LNG from 2000. However, a preliminary sales and purchase agreement with the Petroleum Authority of Thailand, which would have accounted for most of the remainder of the new LNG plant's planned output, was suspended in November 1997. In May 1998 it was reported that negotiations on alternative long- and medium-term supply deals were underway with China, India and Turkey. At the same time, Oman LNG approved a sales and purchase agreement with Japan's Osaka Gas for 700,000 t/y from 2000 to 2025. In December 1998 Oman LNG agreed a 20-year deal with Enron of the USA for the supply of 1.6m. t/y of LNG to India's Dabhol power plant. Plans are underway to drill new wells at three of the country's central gasfields, Barik, Saih Rawl and Saih Nihayda, in order to supply the amount of gas that will be required by the new liquefaction plant. Revenues from gas are still relatively small, little more than 3% of total revenues, but they are expected to increase rapidly when the LNG project becomes operational and could eventually rival earnings from petroleum exports.

Oman's first petroleum refinery came into production at Mina al-Fahal, near Muscat, in late 1982. As a result, the value of imports of refined products was reduced from RO 49.5m. in the first half of 1982 to RO 7m. in the comparable period of 1983. It was hoped that the new refinery would satisfy domestic demand for petrol. The refinery's average throughput was 38,000 b/d in 1983, and by 1988, its capacity had risen to 80,000 b/d. Construction of a second refinery at Sohar was to begin in 2000. In June 1999 it was reported that UOP of the USA had signed two agreements with Oman Refining Company (ORC) covering engineering technology and technology transfer on the proposed 75,000-b/d facility (having earlier been awarded the contract for design work). The refinery had been originally intended for Salalah but was relocated to Sohar where a number of integrated industries are planned. In June 1992 Oman signed an agreement with Kazakhstan to explore for, develop and produce petroleum and gas in the republic. Later that year Oman agreed to collaborate with Kazakhstan, Azerbaijan and Russia in the 'Caspian Pipeline Consortium'. This project envisaged the construction of a pipeline to transport about 1.5m. b/d of petroleum from the former Soviet republics. Azerbaijan later withdrew from the project and after five years of disputes Russia, Kazakhstan and Oman, together with eight major oil companies, signed an agreement in April 1997 to build the pipeline. In the restructured consortium the Russian Government is the biggest shareholder, Kazakhstan holds 24% and Oman 7%. Construction work on the pipeline will cost US $2,000m. In 1993 the Governments of Oman and India signed a memorandum that envisaged the construction of a $5,000m. submarine pipeline, to transport Omani natural gas to the subcontinent. The project, promoted by the state-owned Oman Oil Company (OOC), was to have been carried out in two

stages involving the construction of two pipelines with a total capacity of 2,000 cu ft of gas a day and was to have been completed by 2001. In 1996, however, it was reported that the project would not proceed in the immediate future because of complex technical problems and concern that Oman would not have sufficient reserves to provide adequate supplies of gas, given its other commitments. The proposed Oman–Sharjah pipeline faces similar constraints but BP Amoco, the company promoting the project, insists it will be able to obtain the gas. Engineering, procurement and construction bids were expected to be invited in July 1999 for two new gas pipeline projects in Oman. The two PDO projects will involve the construction of a 300-km line between Fahud and Sohar and a 670-km line from Saih Nihayda to Salalah. Both are due to be completed by the end of 2001 and will transport gas to feed industries planned at Sohar (see Industry and Minerals) and Salalah. The Oman Gas Company (OGC–80% government-owned and 20%-owned by the OOC), formed in March 1999, will oversee their construction, at an estimated cost of some $570m. A preliminary accord was signed with Caltex of the USA in 1993 to construct a $1,900m. refinery in Thailand which would have the capacity to refine 130,000 barrels of crude per day. Under the agreement Oman would reserve the right to export 80,000 b/d for refinement. The OOC plans to build two refineries in India with Indian partners. In late 1996 it was reported that plans were proceeding for the first refinery to be built in Madhya Pradesh (with Bharat Petroleum). The refinery, with a capacity of 6m. t/y is expected to cost $1,600m.

INDUSTRY AND MINERALS

Before 1964, industry in Oman was confined to small traditional handicrafts, such as silversmithing, weaving and boat-building. The development of petroleum generated activity in the construction sector, but it was not until the change of regime in 1970 that government investment in infrastructure projects and private spending on housing started a boom in construction. Some of the new projects were not well conceived, resulting in the drain of resources abroad to foreign contractors. By 1984, however, the construction industry in Oman was still healthy, at a time of relative inactivity in other Gulf states. This situation altered radically at the end of 1985, as major projects under the 1981–85 Plan, such as the Sultan Qaboos University, were completed. In 1986 petroleum prices declined sharply, and virtually all construction projects were brought to a halt.

With smaller petroleum revenues than many other Middle Eastern states, Oman is not well placed to develop heavy industry or manufacturing on a large scale. The Government is, accordingly, concentrating more on the development of agriculture and fisheries, and encouraging construction in the rural areas, with the emphasis on social projects and roads. Small-scale industrial ventures in the private sector are also being promoted, and the Government offers incentives to private enterprise, such as cheap land and energy, exemption from duty on imports of raw materials and plant, and low-interest loans. The 1981–85 Development Plan aimed to quadruple industrial output, giving the industrial sector an average growth rate of 36.2% per year over the Plan's term and between 1982 and early 1984, more than 640 small and medium-sized enterprises went into operation. A large proportion of Oman's labour force in construction and industry was provided by immigrant workers from India and Pakistan. During 1984, however, as the recession worsened and tenders for projects were fewer, many contractors reduced the numbers of their employees by between 20% and 50%. The 1986–90 Development Plan aimed to diversify Oman's economic base as a provision against an eventual exhaustion of hydrocarbon reserves. In 1990 industry (including mining, manfacturing, construction and power) provided 56.5% of Oman's GDP, although the proportion was reduced to 51.7% in the following year which was designated the 'Year of Industry'. In that year the Government allocated RO 24m. for industrial projects. These included a plant to manufacture 200m. glass bottles per year and another to produce 300,000 car batteries per year. The latter began production in 1992, which was also declared a 'Year of Industry' by the Sultan. In that year the Government adopted a 15-year industrial strategy, which included a liberalization of credit provision, regulations to simplify administrative procedures for business executives and development of the infrastructure. An industrial estate was established in 1983 at Rusayl, near Muscat, and two new industrial estates were opened in November 1992 at Sohar and Raysut. Further industrial estates are planned at Nizwa, Sur, Khasab and al-Buraimi. During 1980–94 industrial GDP increased by an annual average of 6.2%. Manufacturing industry grew by 11.6% in 1995 and 5.4% in 1996. The 1996–2000 Development Plan envisaged the expansion and diversification of Oman's industrial sector, in order to reduce the country's dependence on oil revenues. Planned development projects in gas-intensive industries include a fertilizer plant, an aluminium smelter and a petrochemicals facility, although the progress of all three ventures has been adversely affected by falling commodity prices, investor caution and complicated financing arrangements. In early 1997 Oman and India signed an agreement to construct a fertilizer plant at Sur, next to the LNG complex. The plant, costing an estimated US $1,100m., was to produce ammonia and urea and have a capacity of 1.7m. t/y. It was to be constructed and managed by the Oman-India Fertilizer Project in which the state-owned OOC will have a 50% stake and the two Indian partners 25% each. Gas feedstock for the plant was to be provided by PDO and the two Indian partners were to take most of the output. However, it was reported in May 1999 that the Indian authorities were studying a proposal to restructure the financial terms of the proposed venture (one of the Indian partners withdrew in March blaming low fertilizer prices). Construction of both the aluminium smelter and petrochemicals complex is planned at Sohar, north-east of Muscat. The smelter is intended to have a capacity of 480,000 t/y, and the petrochemicals plant is projected to produce 450,000 t/y of ethylene and 450,000 t/y of polyethylene. Both plants would use gas feedstock from fields in central Oman, necessitating the construction of a 300-km pipeline (see above). Despite ongoing negotiations, by mid-1999 financing arrangements for these projects (particularly in relation to the building of a gas separation plant required for the petrochemicals complex) remained unresolved. Alongside these major projects the Government is encouraging small-scale industries to locate on the industrial estates which now cover some 200 ha. Government incentives to private industry include interest-free loans and exemption from customs duties on capital goods and raw material imports.

Geological surveys are being undertaken to locate mineral deposits other than petroleum and natural gas. So far, sizeable reserves of copper and chromite (chromium ore) have been found. Chromite reserves, estimated at 2m. tons of medium-grade ore, exist on the coastal side of the Jebel Akhdar. The concession to develop the deposit is held by a Canadian-based company. The government-owned Oman Mining Co (OMC) began mining chromite in early 1984, and in 1986 about 5,000 tons were produced. In 1989 OMC was ordered to suspend the mining and export of chromite while a joint committee of the Ministries of Commerce and Industry and Petroleum and Minerals established priorities for the sector. In 1991 the new Oman Chromite Co, owned jointly by the Government (15%), private companies (45%) and public subscribers (40%), announced plans to exploit the country's chromite reserves at a rate of approximately 15,000 tons per year. By 1992 it was estimated that Oman had reserves of about 200m. tons of chromite ore at as many as 600 sites. OMC has exploited three copper mines, at Bayda, Avga and Lassail, near Sohar, north-west of Muscat, where drilling had indicated the presence of about 12m. tons of ore. In 1990 about 3,000 tons of copper ore per day was being handled from these pits. A complex for the smelting and refining of the copper ore, at Sohar, began operation in July 1983. The project cost more than US $200m., of which Saudi Arabia provided more than one-half. In 1994 bids were invited to expand the copper smelter at an estimated cost of RO 2m.–3.5m. The Yibal–Ghubra gas pipeline has been extended to the Sohar region to provide fuel, both for the smelter and for cement manufacturing. The privatization of the OMC was expected to provide sufficient funds to expand the copper refinery at Sohar, increasing its capacity from 22,000–24,000 tons a year to 33,000 tons a year. Preliminary results from a joint study between OMC and Minproc Engineers (Australia) have indicated that the mining of copper at Hail as-Safil and Ar-Raki in Yanqul province would be economically viable, with

total potential reserves of 15.25m. tons. The OMC developed a new gold mine at Yanqul in 1994, which was expected to produce 500kg of gold annually. In July 1989 plans were announced for the construction of a plant to produce ferro-chrome near Sohar, on the Batinah coast, to begin after 1991. In August 1990, a French geological company won a RO 98,800 contract to explore for lead and zinc in the Saih Hatat and Jebel Akhdar regions. In 1991 the UN Development Programme agreed to co-operate with the Ministry of Petroleum and Minerals in a study of Oman's coal resources. The study, the cost of which was estimated at $1m., was to examine the possibility of using coal at Al-Kamil, near Sur, to generate electricity. Coal deposits exceeding 122m. tons have been discovered in the province of Bani Bu Ali, south of Sur. Estimated recoverable reserves at the two coalfields in Wadi Muswa and Wadi Fisaw are sufficient to meet the power generation needs of the Sharqiya region for the next 35–40 years.

The economic and industrial changes which have taken place in the country since 1970 have led to a need for major increases in power and water supply. Net installed generating capacity in Oman rose from 479 MW in 1981 to 1,250 MW in 1993, while actual production rose from 1,148m. kWh in 1981 to more than 6,000m. kWh in the early 1990s. In 1991 the Ministry of Electricity was preparing to evaluate bids for a number of major projects in the electricity sector, including a consultancy contract for the fourth-phase, 160 MW expansion of the Ghubrah power and desalination plant. In late 1994 Hitachi Zozen of Japan and ABB Turbinen Nuernberg of Germany signed a contract for the construction of a desalination plant at Ghubrah 5. The plant would have a desalination capacity of up to six million gallons per day, and a 30-MW back-pressure steam turbine would also be built. In May 1999 it was reported that a British firm, Weir Westgarth, had been awarded a US $46.2m. contract to install a new unit at the desalination facility at Ghubrah, expanding capacity by 6m.–7m. gallons per day. In early 1995 the Government announced it was to proceed with a large-scale power and desalination project at Barqa which, by 2010, would provide an extra 1,880 MW of power and a desalination capacity of 56m. gallons per day. The first phase of the project will include the construction of a 388-MW power plant and a 14m.-gallons-per-day desalination plant. In 1996 it was announced that the project would be completed in four stages on a build-own-operate basis and that the main developer would be selected by the Ministry of Electricity and Water. In 1996 the Government announced its decision to privatize the electricity industry. This policy has resulted in the Government involving the private sector in projects that the state is unable to fund but has not meant selling off any of the existing publicly-owned facilities. The 90-MW Manah power station in Muscat, which was completed in 1996, was the first project to involve the private sector and was built on a build-operate-transfer basis. The Government will assume ownership of the plant after 20 years. Plans to expand the Manah power station by 180 MW, at a cost of $120m., were approved in April 1999. Another privately-owned and operated 200-MW power station is planned at Salalah in Dhofar. The project will include power generation and expansion of the transmission and distribution systems. The Government invited tenders for the project in early 1997. The Manah project included power purchase agreements, but the Government has indicated that future privately-funded projects will not be given the same guarantees which may make it more difficult to attract private investors. By 1995 some 87% of Oman's regions were connected to the National Grid. In September 1998 Bharat Heavy Electricals (BHEL) of India was awarded a contract by PDO for turnkey execution of a 90-MW gas turbine power station at Hubara. The first of three 30-MW turbines are due for completion in September 1999, with the commissioning of the whole station expected one year later. It was reported in August that BHEL had also been awarded the contract for the expansion of the Rusayl power plant by 90 MW–120 MW. This extension will add another gas turbine unit to the six already installed on site and a seventh currently under construction.

Plans to build a wastewater system to serve Muscat, which were first proposed in 1995, made some progress in the first half of 1999, as a consortium led by the local Galfar Engineering & Contracting was reportedly finalizing negotiations to undertake the project on a build-own-operate-transfer basis. In April 1999 a consortium led by Oman Engineering Consultancy and including French and Egyptian companies was awarded an engineering design and construction supervision contract on a water-supply scheme at Sharqiya Sands. At that time it was reported that similar consultancy work had begun on a water-supply scheme at Al-Masarat.

Other heavy industrial projects under consideration include plans for a hydrochloric acid plant, a silicon plant (using locally mined quartz), a salt production plant and a new sugar refinery. Expansion work on the Raysut Cement Company plant, costing RO 36.8m. (US $95.5m.), was due for completion in early 1999 and was to increase output to 1,500 tons per day. Tourism is in the early stages of development in Oman, and private-sector initiatives are being encouraged. In 1996 the number of hotels, motels and resthouses totalled about 50, compared with 32 in 1991. The present target is to have over 10,000 rooms by the year 2005.

FINANCE AND DEVELOPMENT

Expenditure on defence and national security in Oman has increased rapidly, with the total doubling between 1979 and 1984. In 1979 the budget allocation for defence spending was RO 238m. By 1986 this figure had risen to RO 665m., representing 42% of total expenditure. Although the allocation for 1988 was reduced to RO 519m., it still placed considerable strain on the country's finances. By 1994, defence expenditure had increased to RO 779.3m. (34.8% of total expenditure). In view of Oman's strategic importance within the GCC, defence expenditure is supported by other Council countries.

Infrastructural and communications projects are gradually being completed. Port facilities are being improved by the expansion of Mina Raysut at Salalah, and 12 new berths have been completed at Mina Qaboos. In June 1990 a contract was awarded for work on the third phase of a scheme to improve facilities at Nizwa. The project involved the construction of a 140-metre bridge and a 900-metre by-pass. Mina Qaboos handled 1.9m. tons of cargo in 1988. In April 1992 an RO 11.7m. contract for further development of Mina Qaboos was awarded to a British company, Wimpey Alawi. A new container terminal at Salalah port, a key element in the development of southern Oman, was officially opened in December 1998, and by April 1999 the port had four berths with a total handling capacity of 2m. 20-foot equivalent units (TEUs). Salalah Port Services (SPS) was formed by the Omani Government, Sea-Land of the USA and Maersk of Denmark to carry out the development and holds a 30-year concession to operate, manage and procure equipment for the container port. It was reported in July 1999 that SPS is to form a new company to manage a free-trade zone to be established at Salalah. The free zone will extend two km beyond the existing port boundaries, and the development will be funded mainly by the private sector. In May the Communications Ministry awarded South Korea's Daewoo Engineering & Construction Company a contract to build a 5 km–6 km breakwater at Sohar port. (The port will serve a planned aluminium smelter and petrochemicals plant at Sohar, along with an industrial zone.)

Between 1970 and 1985 an estimated 6,000 km of asphalt roads and 18,500 km of dirt roads were built in Oman. In 1990 the Ministry of Communications announced proposals to build 140 km of roads and to upgrade a further 158 km, in addition to constructing 58 km of road in Al-Qabil, Ibra and Briddayah. The Dhofar Transport Co was awarded a contract in May 1990 to build a 13-km link road connecting Al-Ayjah and Sur, at a cost of RO 2.5m. Another project under consideration in 1990 was the construction of a 16-km road linking the Thumrait airforce base to the main Salalah—Thumrait highway, at a cost of RO 400,000. By 1994 a road linking Salalah with Sarfait, near the border with Yemen, had been completed. In May 1999 contracts were awarded for the construction of a 58-km road in Dima and at-Tayeen and the Birkat al-Manz to Sayq road. Air services to rural and outlying areas have been increased: by the end of 1984 there were rural air services to Khassab, Bayah, Buraimi, Sur and Masirah island. A major expansion programme at Seeb International Airport was completed in 1985, and in the following year more than 1.4m. passengers passed through the airport. In 1993 five international airlines began operating regular flights to Oman. In 1996 on estimated 2.2.m.

passengers passed through Seeb Airport. In 1998 the Government appointed a financial consultant to oversee the privatization of Seeb International Airport. A two-stage expansion plan for the airport envisages an increase in capacity from the current 2.8m. passengers per year to 6m. by 2004 and to 10m. by 2010, at an estimated cost of US $500m. Oman's second largest airport is at Salalah and has been upgraded to receive cargo and passenger aircraft of all sizes.

In mid-1999 the expansion of the telecommunications network continued with contracts being awarded for the expansion of the mobile telephone network in Dhofar, Muscat and al-Batinah. In July the Government announced the establishment of the Oman Telecommunications Company, which was to replace the General Telecommunications Organization, in a first step towards privatization.

The targets of the 1976–80 Development Plan were relatively modest, concentrating on establishing a workable basis for light industry and agriculture. The Omani Development Bank was established in December 1977 to encourage private sector investment. The 1981–85 Development Plan envisaged total expenditure of RO 7,400m., of which RO 3,300m. was to be allocated to development projects. The general aim was to reduce economic dependence on petroleum, in favour of private-sector industry. The Plan included development of tourism, education, health, welfare, housing and roads. In 1984 it was announced that total spending on projects undertaken during the 1981–85 Development Plan would total RO 1,800m., 28% more than was originally envisaged.

At the end of 1985 the 1986–90 Development Plan was approved, with proposed expenditure totalling RO 9,250m. (US $26,780m.). Early in 1986, however, proposed spending was reduced to RO 8,830m. as a result of falling oil prices. The revised total was based on an estimated average petroleum price of $20 per barrel. The subsequent decline in oil prices, to less than $10 per barrel in July, necessitated further revision of proposed expenditure. Although oil prices rose above $17 per barrel by the end of 1986, the Plan was postponed for re-evaluation. In January 1991 the Government announced a fourth Development Plan, covering the period 1991–95. The plan envisaged total expenditure of RO 9,450m. The projected rate of annual GDP growth in the five years was about 6.3%. In April 1991 total development spending for the Plan period was reportedly budgeted at RO 2,107m. Of this, some RO 319m. was to be allocated to construction projects, including a hospital, housing and schools; to a $78m. extension of the airport at Seeb; to the $65m. development of the port of Mina Qaboos, gas fields and fishing ports; and to the upgrading of the Rusayl–Nizwa highway and the renovation of the Muscat water networks.

Despite the world oil surplus in the early 1980s, Oman raised its petroleum output during the 1981–85 Plan period, maintaining adequate revenues, but at a lower level than originally expected. From 1982, falling oil prices led to deficits in the annual budget. In January 1986 the rial was devalued by 10.2%, to compensate for the reduction in petroleum revenues. By 1987 the effect of the decline in oil prices was evident as expenditure decreased from RO 1,587.2m. in 1986 to RO 1,330.1m. Revenue from the petroleum sector increased from RO 521.2m. in 1986 to RO 998.0m. in 1990 (an increase of 45% over the previous year). This resulted in a reduction in the budget deficit to RO 32.8m., compared with a deficit of RO 289.5m. in 1989. In 1991 oil revenue declined to RO 777.0m., and total revenue to RO 1,261.4m. Total expenditure was 1,575.1m. The budget for 1995 anticipated an increase in total revenue to RO 1,847.0m., of which RO 1,352.4m. was oil revenue, and an increase in total expenditure to RO 2,159.0m., resulting in a deficit of RO 312.0m. The budget for 1996 envisaged total revenue of RO 1,934m. and expenditure of RO 2,152m., with a budget deficit forecast of RO 218m. Actual revenue and expenditure figures for the year were, however, estimated at RO 1,990.2m. and RO 2,253.7m. respectively, resulting in a deficit of RO 263.5m. The 1997 budget anticipated increases in revenue to RO 2,003m. (including RO 1,502m. from petroleum) and in expenditure to RO 2,266m., leaving a deficit of RO 263m. However, according to figures released by the National Economy Ministry in April 1998, actual revenue for the year, at RO 2,270m., was about 13% higher than the budgeted figure (largely attributable to increased earnings from petroleum). Although actual expenditure was also more than forecast (RO 2,292.5m.), the budget deficit of RO 21.7m. was considerably lower than anticipated. The Government maintained a policy of putting any extra petroleum revenue derived from a price over US $15 a barrel, and up to $17, into the State General Reserve Fund. The current Development Plan envisages the elimination of the budget deficit by the year 2000. However, the 1998 budget predicted a deficit of RO 295m. (based on proposed revenue of RO 2,012m. and expenditure of RO 2,307m.). A bleaker outlook for the price of petroleum in 1998, compared with the previous two years, was also likely to require cuts in spending if the target of balancing the budget by the turn of the century was to be achieved. The actual budget deficit in 1998 was RO 311m., marginally higher than predicted. The 1999 budget, announced by the Government in January and based on an average oil price of only $9 per barrel, forecast a deficit of RO 631m. from revenue of RO 1,525m. ($3,961m.) and expenditure of RO 2,156m. Non-oil income was forecast at RO 550m. The 1999 budget also included a range of revenue-raising measures, in particular an increase in corporate taxes and taxes on luxury goods, and the introduction of higher customs duties.

Oman's trade pattern continues to reflect the dominance of petroleum in the economy. In 1987 the value of non-oil exports and re-exports was RO 123.9m., equivalent to 8.3% of the value of total exports. Although by 1990, their value had risen to RO 176.2m., this represented just 8.3% of total exports. In 1991, however, the Government's efforts at diversifying the economy began to demonstrate a degree of success and non-oil exports and re-exports were valued at RO 244.2m., accounting for 13.0% of the total exports of RO 1,873.9m. Their value continued to increase and in 1994, they accounted for RO 503.9m. (23.6% of total exports of RO 2,132.0m.) The value of recorded imports in 1987 (when unrecorded imports were estimated at RO 55m.) was RO 700.7m. By 1990, this had risen to RO 1,030.9m. Their value continued to rise until 1994 when a 4.8% decrease (to RO 1,505.3m.) was recorded. In 1990 Oman's balance of trade showed an improvement of 56.1% compared with 1989, with recorded imports totalling RO 1,030.9m., compared with exports of RO 2,116.4m. A trade surplus was recorded each year between 1991 and 1993, and in 1994 a 29.7% increase in the trade surplus, was recorded with an increase in exports, to RO 2,132.0m., and a decrease in imports, to RO 1,505.3m. In the period 1991–94 the UAE was Oman's principal supplier of imports, followed by Japan, the United Kingdom and the USA. The principal markets for exports during this period were Japan, the Republic of Korea, the UAE and Thailand. In 1994 the principal sources of imports were the UAE (29.1%) and Japan (19.9%) while the principal markets for exports were Japan (34.8%) and the Republic of Korea (14.2%). The value of exports rose from RO 2,330.5m. in 1995 to RO 2,820.0m. in 1996, due to an increased volume of oil exported, as well as higher prices. Imports rose more slowly from RO 1,633.0m. in 1995 to RO 1,760.0m. in 1996, resulting in an increase in the trade surplus from RO 697.5m. in 1995 to RO 1,060.0m. in 1996. In 1997 there was a trade surplus of RO 938.3m. from imports of RO 1,995.8m. and exports of RO 2,934.1m. In 1998, however, a trade deficit was recorded, of RO 122.5m., owing to imports of RO 2,117.5m. and exports of RO 2,240.0m. In mid-June 1996 the World Trade Organization agreed to establish a working party to negotiate terms of entry for Oman. The decision followed a commitment made by the Omani Undersecretary for Commerce and Industry to co-operate with other GCC countries in the promotion of liberal trade. In March 1997, Oman became one of the founder members of the Indian Ocean Rim Association for Regional Co-operation (IOR-ARC) which seeks to promote co-operation in trade, investment and economic development between the countries of the region. During a state visit to India in April, Sultan Qaboos signed a number of co-operation agreements to promote trade between India and Oman. India is an important source of imports to Oman, but Oman is keen to increase its small volume of exports to India.

Between 1981 and 1982 Oman's balance-of-payments surplus fell by 40.3%, and in the following year it declined by a further 52.8%, to US $ 351m., despite GDP growth of 16.0%. In 1986 a deficit of $1,040m. was recorded on the current account of the balance of payments. A major reason for the deficit on the current account, in addition to the decline in revenue from

petroleum, was the level of remittances being transferred abroad by foreigners working in Oman. This increased by 52.5% between 1981 and 1982, to RO 236m., and reached RO 300m. in 1984. A surplus of $784m. was recorded on the current account of the balance of payments in 1987, followed by a $309m. deficit in 1988, a $305m. surplus in 1989 and in 1990 Oman's balance of payments recorded a current account surplus of $1,106m. However a deficit of $244m. was recorded in 1991 and by 1993 this had increased sharply to $1,069m. In June 1990 the Government pledged that foreign workers would retain their tax-free status. The announcement was made after the Government had expressed its intention to impose a levy on foreign remittances, in an attempt to increase revenues. In October 1993 it was announced that income tax would be collected from all companies, whether Omani or foreign, from 1 January 1994 in order to increase government revenue. Despite its balance-of-payments surpluses, Oman has also received a substantial amount of foreign aid and loans, mainly in order to finance development projects. Oman's foreign debt declined from $1,931m. (with a debt-service ratio of 4.6%) in 1984 to $1,875m. at the end of 1985. Until 1986, Oman enjoyed an excellent credit rating, and in 1983 the country was able to raise a Eurodollar loan of $300m. with no difficulty. The sharp fall in petroleum prices altered this position, and an application for a Euroloan of $500m. in 1986 encountered difficulty in attracting a sufficient number of subscribers. According to World Bank data, Oman's total foreign debt increased to $2,959m. at the end of 1986, but declined to $2,848m. in 1987. However, petroleum prices revived in 1988, and the Government secured a syndicated loan of $500m. in June 1989, and another of $300m. in October 1991. At the end of 1995 Oman's total external debt was $3,107m., of which $2,563m. was long-term public debt. In that year the cost of servicing the external debt was equivalent to 7.5% of the total value of exports of goods and services. In January 1994 four international banks were awarded a mandate to raise a $300m. five-year syndicated sovereign loan to finance the fiscal deficit. Oman's external debt reached $3,854m. in 1998 and was forecast to rise to $4,400m. by the end of 1999. In February 1999 the Government secured a $350m. five-year syndicated loan from a consortium of local and international banks.

In comparison with some other countries in the region, Oman has a small banking sector. In 1998 there were 20 banks (seven national institutions, nine foreign banks and four specialized banks) operating in the Sultanate. The largest bank is the National Bank of Oman, which reportedly has 30% of the market in retail and corporate banking, and recorded profits of $39m. in 1998. Other large institutions are Bank Muscat Al-Ahli Al-Omani and Oman International Bank. Mergers have been officially encouraged to strengthen the banking sector. In April 1997, mergers were approved between the Oman Development Bank and the Oman Bank for Agriculture and Fisheries, and the Commercial Bank of Oman and the Oman Savings and Finance Bank (the latter being finalized the following August). A new bank, the Oman Alliance Bank, was launched in May and the Industrial Bank of Oman was due to be launched in October. It was announced in June 1998 that the Commercial Bank of Oman (Combank) had undertaken a further merger with the Bank of Oman, Bahrain and Kuwait (BOBK). At the end of 1995 the Central Bank of Oman's total assets stood at RO 912.4m. Between 1973 and 1986 the rial Omani was linked to the US dollar at a rate of $1 = RO 0.3454, but in January 1986 the rial was devalued by 10.2%, with the exchange rate adjusted to $1 = RO 0.3845. The Central Bank raised interest rates in April 1989, with the annual rate payable on non-government deposits increased by 1%, to 9.5%, and that on rial loans raised by 0.75%, to 11.25%. In mid-1983 only 40% of bank staff were Omani; however, government efforts to reduce the number of foreign staff in the banking sector succeeded in reducing their number to 19.4% by mid-1994. By the end of 1995 banks had to reduce their foreign staff to 10% of their work-force or face heavy penalties. In May 1992 the Government introduced a new law increasing the minimum requirement for a bank's paid-up capital to RO 10m., in order to encourage smaller banks to merge and thereby rationalize the banking system. Measures introduced to strengthen the banking sector included the creation of a fund in March 1995 to guarantee bank deposits. In an effort to broaden the base of local financial institutions, the Central Bank announced in early 1997 that it will impose limits on the voting shares that any individual or company can hold in a local bank. In 1989 Oman's first stock exchange—the Muscat Securities Market (MSM)—was opened, trading in shares in local companies with a potential total value of RO 250m. Oman's first investment fund open to non-GCC nationals was listed on the London and Muscat stock exchanges in March 1994. Subscriptions for the Oryx fund, launched to raise $52m., closed in June. A second investment fund set up in 1994 was the UAE-Omani Joint Holding Co with a capital of $78m. Both funds were fully subscribed. In March 1995 the stock exchanges of Muscat and Bahrain were formally linked. The Government's first Eurobond was launched in March 1997 and was heavily oversubscribed. Oman is the first GCC country to venture into the Eurobond market. In November 1998 a new National Investment Fund was established by royal decree to support the MSM by channelling RO 100m. (US $260m.) from pension funds into the bourse. A new regulatory body, the Capital Market Authority, formally separated from the MSM in January 1999, in accordance with the capital market law promulgated in November 1998. The new authority was to supervise the MSM and guarantee investors' rights.

The Iraqi invasion of Kuwait on 2 August 1990 prompted panic withdrawals of deposits and increased demand for foreign currency during a 10-day period following the invasion. By late August 1990, however, the local banking system had stabilized, and by April 1991, encouraged by uncompromising government action and by encouraging reports of economic growth, deposits at local commercial banks had fully recovered from the impact of the Gulf crisis. Following the collapse of the Bank of Credit and Commerce International (BCCI) in July 1991, substantial support from the Omani Government enabled depositors and creditors in the country to be paid in full. On 15 February 1992 the Bank Dhofar al-Omani al-Fransi acquired the 12 BCCI branches in the Sultanate.

HEALTH

Oman has a free National Health Service, and in 1998 there were 54 hospitals and 110 health centres, with a total of more than 5,075 beds. There were also 96 preventive health centres, five mobile rural health centres and three maternity centres in 1990. In 1998 there were 3,061 physicians working in Oman. The Royal Hospital of Oman, with 629 beds, was completed in 1987 and became fully operational in 1988, with a staff of more than 2,000, including more than 220 doctors and 1,000 nurses, mainly recruited from overseas. The Ministry of Health has announced plans to construct a paediatric hospital, with 200 beds, in Muscat. In March 1989 it was announced that citizens of other GCC member-states would be eligible to the same health services as Omani citizens. In June 1990 the Ministry of Health announced a programme to construct children's wards at four hospitals at an estimated cost of RO 800,000. In April 1992 Oman and the People's Republic of China signed an agreement for co-operation in the health sector. Of total expenditure by the central Government in 1997, RO 129.9m. (7.0%) was for health services, and a further RO 79.0m. (4.3%) for social security and welfare.

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units
1,000 baiza = 1 rial Omani (RO).

Sterling, Dollar and Euro Equivalents (30 April 1999)
£1 sterling = 620.0 baiza;
US $1 = 384.5 baiza;
€1 = 407.5 baiza;
100 rials Omani = £161.29 = $260.08 = €245.43.

Exchange Rate
Between February 1973 and January 1986 the value of the rial Omani was fixed at US $2.8952 ($1 = 345.4 baiza). In January 1986 the currency was devalued by about 10.2%, with the exchange rate fixed at 1 rial = $2.6008 ($1 = 384.5 baiza).

Directory

The Constitution

The Basic Statute of the State was promulgated by royal decree on 6 November 1996, as Oman's first document defining the organs and guiding principles of the State.

Chapter 1 defines the State and the system of government. Oman is defined as an Arab, Islamic and independent state with full sovereignty. Islamic law (*Shari'a*) is the basis for legislation. The official language is Arabic. The system of government is defined as Sultani (Royal), hereditary in the male descendants of Sayyid Turki bin Said bin Sultan. Article 6 determines the procedure whereby the Sultan is designated.

Chapter 2 defines the political, economic, social, cultural and security principles of the State. Article 11 (economic principles) includes the stipulation that 'All natural resources and revenues therefrom shall be the property of the State which will preserve and utilize them in the best manner taking into consideration the requirements of the State's security and the interests of the national economy'. The constructive and fruitful co-operation between public and private activity is stated to be the essence of the national economy. Public property is inviolable, and private ownership is safeguarded. Article 14 (security principles) provides for a Defence Council to preserve the safety and defence of the Sultanate.

Chapter 3 defines public rights and duties. Individual and collective freedoms are guaranteed within the limits of the law.

Chapter 4 concerns the Head of State, the Council of Ministers, Specialized Councils and financial affairs of the State. Article 41 defines the Sultan as Head of State and Supreme Commander of the Armed Forces. The article states that 'His person is inviolable. Respect for him is a duty and his command must be obeyed. He is the symbol of national unity and the guardian of its preservation and protection.' The Sultan presides over the Council of Ministers, or may appoint a person (Prime Minister) to preside on his behalf. Deputy Prime Ministers and other Ministers are appointed by the Sultan. The Council of Ministers and Specialized Councils assist the Sultan in implementing the general policy of the State.

Chapter 5 comprises a single Article (58). This states that the Council of Oman shall consist of the Majlis ash-Shoura (Consultative Council) and the Majlis ad-Dawlah (Council of State). The jurisdiction, terms, sessions, rules of procedure, membership and regulation of each shall be determined by the law.

Chapter 6 concerns the judiciary. Articles 59 and 60 state that the supremacy of the law shall be the basis of governance, and enshrine the dignity, integrity, impartiality and independence of the judiciary. Article 66 provides for a Supreme Council of the judiciary.

Chapter 7 defines the general provisions pertaining to the application of the Basic Statute.

The Government

HEAD OF STATE

Sultan: QABOOS BIN SAID (assumed power on 23 July 1970, after deposing his father).

COUNCIL OF MINISTERS

(September 1999)

COUNCIL OF OMAN

Majlis ash-Shoura
(Consultative Council)

President: ABD AL-QADIR BIN SALIM ADH-DHAHAB.

The Majlis ash-Shoura was established by royal decree in November 1991. Members of the Majlis are appointed by the Sultan from among nominees selected at national polls. Two representatives are appointed from four candidates in each *wilaya* (region) of more than 30,000 inhabitants, and one from two candidates in each *wilaya* of fewer than 30,000 inhabitants. Members of the Majlis are appointed for a single three-year term of office. The Majlis appointed in November 1997 comprised 82 members. The Majlis is an advisory body, the duties of which include the review of all social and economic draft laws prior to their enactment; public-service ministries are required to submit reports and answer questions regarding their performance, plans and achievements. The President of the Majlis ash-Shoura is appointed by royal decree.

Majlis ad-Dawlah
(Council of State)

President: Sheikh HAMUD BIN ABDULLAH AL-HARITHI.

The Majlis ad-Dawlah was established in December 1997, in accordance with the terms of the Basic Statute of the State. It is also an advisory body, comprising 41 members appointed by the Sultan. Its function is to serve as a liaison between the government and the people of Oman.

Political Organizations

There are no political organizations in Oman.

Judicial System

Oman's Basic Statute guarantees the independence of the judiciary. The foundation for the legal system is *Shari'a* (Islamic law), which is the basis for family law, dealing with matters such as inheritance and divorce. Separate courts have been established to deal with commercial disputes and other matters to which *Shari'a* does not apply.

Courts of the First Instance are competent to try cases of criminal misdemeanour; serious crimes are tried by the Criminal Courts; the Court of Appeal is in Muscat. There are district courts throughout the country. Special courts deal with military crimes committed by members of the armed and security forces.

The Basic Statute provides for a Supreme Council to supervise the proper functioning of the courts.

Religion

ISLAM

The majority of the population (estimated at 53.5% in 1994) are Muslims, of whom approximately three-quarters are of the Ibadi sect and about one-quarter are Sunni Muslims.

HINDUISM

According to 1994 estimates, 28.0% of the population are Hindus.

CHRISTIANITY

It was estimated that in 1994 14.7% of the population were Christians.

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Oman forms part of the diocese of Cyprus and the Gulf. In Oman there are inter-denominational churches at Ruwi and Ghala, in Muscat, and at Salalah, and the congregations are entirely expatriate. The Bishop in Cyprus and the Gulf is resident in Cyprus, while the Archdeacon in the Gulf is resident in the United Arab Emirates.

Chaplaincy: POB 1982, Ruwi 112; tel. 702372; fax 789943; joint chaplaincy of the Anglican Church and the Reformed Church of America; Chaplain Rev. GERARD STOREY.

The Press

Article 31 of Oman's Basic Statute guarantees the freedom of the press, printing and publishing, according to the terms and conditions specified by the law. Published matter 'leading to discord, harming the State's security or abusing human dignity or rights' is prohibited.

Oman Chromite Co SAOG: POB 346, 321 Tareef Sohar; tel. 845115; fax 845155; e-mail omchromc@gto.net.om; production of chromite.

Oman Fisheries Co SAOG: POB 2900, Ruwi 112; tel. 693032; fax 697304; f. 1980 as Oman National Fisheries Co; responsible for commercial development of fishing, processing and marketing of marine products; operates 9 deep-sea trawlers, a processing and freezing plant and an onboard fishmeal plant; Gen. Man. MUHAMMAD ALAWI.

Oman Flour Mills Co SOAG: POB 566, Ruwi 112; tel. 711155; fax 714711; f. 1976; sales US $99m. (1997/98); cap. $40m.; 60% state-owned; produces 800 tons per day (t/d) of various flours and 600 t/d of animal feedstuffs; Chair. RASHID BIN SALIM AL-MASROORY; 181 employees.

Oman Mining Co LLC: POB 758, 113 Muscat; tel. 850777; telex 3041; fax 850865; f. 1978; cap. RO 25m.; state-owned; development of copper, gold and chromite mines; Chair. MOHSIN HAIDER DARWISH.

Oman Organic Fertilizer and Chemicals Industries SAO: POB 6781, Ruwi; tel. 591013; telex 5407; fax 590120; f. 1981; cap. RO 2m.; manufacture of organic fertilizers commenced 1986; Gen. Man. TEJ B. SARAF; 28 employees.

Oman Refreshment Co Ltd SAOG: POB 301, Seeb Airport; tel. 591455; telex 5583; fax 591389; f. 1974; cap. RO 2m. (1995); bottling and distribution of soft drinks; Chair. ANWAR ALI SULTAN; Man. Dir. ABDULLAH MOUSA; 360 employees.

Poly Products LLC: POB 2561, Ruwi 112; tel. 626044; fax 626046; e-mail polyprod@gto.net.om; f. 1979; sales US $20m. (1996); cap. and res $8m.; manufacture of flexible and rigid polyurethane foam and spring mattresses, divan and upholstered beds; Man. Dir SAID AL-HINAI; Gen. Man. SAYED ANWAR AHSAN; 350–400 employees.

Yahya Costain LLC: POB 2282, 112 Ruwi; tel. 591366; telex 5218; fax 591981; f. 1977; mechanical, electrical, civil and process engineering, building and geotechnical investigation, furniture manufacture and joinery; Gen. Man. S. C. MARSHALL; 2,000 employees.

Transport

ROADS

A network of adequate graded roads links all the main centres of population and only a few mountain villages are not accessible by Land Rover. In 1995 there were an estimated 6,020 km of asphalt road and 24,300 km of graded roads.

Directorate-General of Roads: POB 7027, Mutrah; tel. 701577; Dir-Gen. of Roads Sheikh MUHAMMAD BIN HILAL AL-KHALILI.

Oman National Transport Co SAOG: POB 620, Muscat; tel. 590046; telex 5018; fax 590152; operates local, regional and long-distance bus services from Muscat; Chair. TARIQ BIN MUHAMMAD AMIN AL-MANTHERI; Man. Dir SULAYMAN BIN MUHANA AL-ADAWI.

SHIPPING

Port Sultan Qaboos, at the entrance to the Persian (Arabian) Gulf, was built in 1974 to provide nine deep-water berths varying in length from 250 ft to 750 ft (76 m to 228 m), with draughts of up to 43 ft (13 m), and three berths for shallow-draught vessels drawing 12 ft to 16 ft (3.7 m to 4.9 m) of water. A total of 12 new berths have been opened and two of the existing berths have been upgraded to a container terminal capable of handling 60 containers per hour. The port also has a 3,000-ton-capacity cold store which belongs to the Oman Fisheries Co. In 1997 1,521 ships visited Port Sultan Qaboos, and in 1994 2.8m. tons of cargo were handled. In 1992 work commenced on the upgrading and expansion of Port Sultan Qaboos.

Directorate General of Ports and Maritime Affairs: POB 684, 113 Ruwi; tel. 700986; fax 702044; e-mail dgpma@gto.net.one; Dir-Gen. Eng. JAMAL T. AZIZ.

Oman National Shipping Line: POB 1479, 114 Jibroo; tel. 792316; fax 792317.

Port Services Corporation SAOG: POB 133, Muscat 113; tel. 714001; telex 5233; fax 714007; e-mail pscco@gto.net.com; f. 1976; cap. RO 4.8m.; jointly owned by the Govt of Oman and private shareholders; Chair. (acting) Eng. MAJID BIN SAID AR-RAWAHI; ABDULLAH AL-GHAZALI; Pres. SAUD AHMAD AN-NAHARI.

The oil terminal at Mina al-Fahal can also accommodate the largest super-tankers on offshore loading buoys. Similar facilities for the import of refined petroleum products exist at Mina al-Fahal. Mina Raysut, near Salalah, has been developed into an all-weather port, and, in addition to container facilities, has four deep-water berths and two shallow berths. In November 1998 the first phase of the Mina Raysut container terminal opened; phase two was scheduled for completion in mid-1999. During 1994 203 ships called at the port. Loading facilities for smaller craft exist at Sohar, Khaboura, Sur, Marbet, Ras al-Had, Kasab, Al-Biaa, Masirah and Salalah.

CIVIL AVIATION

Domestic and international flights operate from Seeb International Airport. Oman's second international airport, at Salalah, was completed in 1978. In 1997 some 2.4m. passengers passed through Seeb International Airport. There are airports at Salalah, Sur, Masirah, Khasab and Diba; most other sizeable towns have airstrips.

Directorate-General of Civil Aviation: POB 1, CPO Seeb Airport, 111 Muscat; tel. 519210; telex 5418; fax 510122; e-mail dgen@dgcam.com; Dir-Gen. Eng. AHMAD BIN SAID BIN SALIM AR-RAWAHY.

Gulf Aviation Ltd (Gulf Air): POB 138, Bahrain; tel. 531166; telex 8255; fax 530385; internet http://www.gulfair.com; f. 1950; jointly owned by the Govts of Bahrain, Oman, Qatar and Abu Dhabi (UAE); international services to destinations in Europe, the USA, Africa, the Middle East and the Far East; Chair. YOUSUF AHMAD ASH-SHIRAWI; Pres. and Chief Exec. ALI IBRAHIM AL-MALKI.

Oman Aviation Services Co SAOG: POB 1058, Seeb International Airport; tel. 519223; telex 5424; fax 510805; f. 1981; cap. RO 7m.; 35% of shares owned by Govt, 65% by Omani nationals; air-charter, maintenance, handling and catering; operators of Oman's domestic airline; international services to India, Kuwait, Pakistan, Sri Lanka and the UAE; Chair. SALIM BIN ABDULLAH AL-GHAZALI.

Tourism

Tourism, introduced in 1985, is strictly controlled. Attractions, apart from the capital itself, include Nizwa, ancient capital of the interior, Dhofar and the forts of Nakhl, Rustaq, and Al-Hazm. In 1996 there were 349,000 visitor arrivals in Oman, and tourist receipts for that year totalled US $99m.

Directorate-General of Tourism: POB 550, Muscat 113; tel. 796730; fax 794213; Dir-Gen. J. H. SAYYID FATIK.

Defence

Chief of Staff of the Sultan's Armed Forces: Lt-Gen. KHAMIS BIN SALIM AL-KABANI.

Defence Expenditure (1998 budget): 695m. Omani rials.

Military service: voluntary.

Total armed forces (August 1998): 43,500: army 25,000; navy 4,200; air force 4,100. There is a 6,500-strong Royal Guard.

Paramilitary forces: 4,400: tribal Home Guard (*Firqat*) 4,000; police coastguard 400.

Education

Great advances have been made in education since 1970, when Sultan Qaboos came to power. Although education is still not compulsory, it is provided free to Omani citizens from primary to tertiary level, and attendance has greatly increased. Primary education begins at six years of age and lasts for six years. The next level of education, divided into two equal stages (preparatory and secondary), lasts for a further six years. As a proportion of the school-age population, the total enrolment at primary, preparatory and secondary schools increased from 25% (boys 36%; girls 14%) in 1975 to 73% (boys 74%; girls 71%) in 1996/97. Primary enrolment in 1996/97 included 68% of children in the relevant age-group (boys 69%; girls 67%), while preparatory and secondary enrolment included 56% of children in the relevant age-group (boys 57%; girls 55%). In 1994/95 there were eight teacher-training colleges and 9 vocational institutes, together with institutes of health sciences and banking and five technical institutes. There were also eight Islamic colleges. Oman's first national university, named after Sultan Qaboos, was opened in late 1986, and had 5,135 students (males 2,465; females 2,670) in 1996/97. In 1970 an estimated 80% of Oman's adult population were illiterate; however, government literacy centres for adults (first opened in 1973) have largely redressed this problem. In 1994/95 such centres were attended by 6,654 students (635 males; 6,019 females); some 192 adult education centres were attended by 18,179 students (8,493 males; 9,686 females). Of total expenditure by the central Government in 1997, RO 269.8m. (14.6%) was allocated to education.

QATAR

Geography

The State of Qatar occupies a peninsula (roughly 160 km long, and between 55 km and 90 km wide), projecting northwards from the Arabian mainland, on the west coast of the Persian (Arabian) Gulf. Its western coastline joins onto the shores of Saudi Arabia, and to the east lie the United Arab Emirates (UAE) and Oman. The total area is 11,437 sq km (4,416 sq miles), and at the census of 16 March 1986 the population was 369,079, of whom fewer than one-third were native Qataris. At mid-1995, according to official estimates, the population was 640,846, but a census in 1997 enumerated a provisional total of only 520,500. About 60% of the total were concentrated in the town of Doha, on the east coast. Two other ports, Zakrit on the west coast and Umm Said on the east, were developed after the discovery of petroleum. Zakrit is a convenient, if shallow, harbour for the import of goods from Bahrain, while Umm Said affords anchorage to deep-sea tankers and freighters.

The climate of Qatar is hot and humid in summer, with temperatures reaching 44°C between July and September, and humidity exceeding 85%. There is some rain in winter, when temperatures range between 10°C and 20°C. Qatar is stony, sandy and barren; limited supplies of underground water are unsuitable for drinking or agriculture because of high mineral content. More than one-half of the water supply is now provided by sea-water distillation processes.

History

Revised for this edition by KAMIL MAHDI

Qatar was formerly dominated by the Khalifa family of nearby Bahrain. The peninsula became part of Turkey's Ottoman Empire in 1872, but Turkish forces evacuated Qatar at the beginning of the First World War (1914–18). The United Kingdom recognized Sheikh Abdullah ath-Thani as Ruler of Qatar, and in 1916 made a treaty with him, in accordance with its policy in Bahrain, the Trucial States (now the United Arab Emirates) and Kuwait. The Ruler of Qatar undertook not to cede, mortgage or otherwise dispose of parts of his territories to anyone except the British Government, nor to enter into any relationship with a foreign government, other than the British, without British consent. In return, Britain undertook to protect Qatar from all aggression by sea, and to provide support in case of an overland attack. A further treaty, concluded in 1934, extended fuller British protection to Qatar.

The discovery of petroleum in 1939 promised greater prosperity for Qatar, but further development was delayed by the onset of the Second World War, and production did not begin on a commercial scale until 1949. The country used the revenues from the export of petroleum to finance an ambitious development programme. In January 1961 Qatar joined the Organization of the Petroleum Exporting Countries (OPEC, see p. 272), and in May 1970 it also became a member of the Organization of Arab Petroleum Exporting Countries (OAPEC, see p. 268). Qatar is a relatively minor oil-exporting country, but its development needs and its standard of living are highly dependent upon its small oil (and, more recently, gas) reserves.

In October 1960 Sheikh Ali ath-Thani, who had been Ruler of Qatar since 1949, abdicated in favour of his son, Sheikh Ahmad ath-Thani. In 1968 the British Government announced its intention to withdraw British forces from the Persian (Arabian) Gulf area by 1971. As a result, Qatar attempted to associate itself with Bahrain and the Trucial States in a proposed federation. In April 1970 the Ruler, Sheikh Ahmad, announced a provisional Constitution for Qatar, providing for a partially elected consultative assembly. Effective power remained, however, in the monarch's hands. In May 1970 the Deputy Ruler, Sheikh Khalifa ath-Thani (a cousin of Sheikh Ahmad), was appointed Prime Minister. After the failure of negotiations for union with neighbouring Gulf countries, Qatar became fully independent on 1 September 1971, when the Ruler took the title of Amir. The 1916 treaty was replaced by a new treaty of friendship with the United Kingdom. In February 1972 a bloodless coup, led by Sheikh Khalifa, the Crown Prince and Prime Minister, deposed the Amir during his absence abroad. Claiming support from the royal family and the armed forces, Sheikh Khalifa proclaimed himself Amir and retained the premiership.

Qatar has generally maintained close links with Saudi Arabia, with which it signed a bilateral defence agreement in 1982, although there have been periods of tension between the two countries. In early 1981 Qatar joined the newly-established Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255). By May 1983 member countries were implementing new GCC regulations, including the abolition of import tariffs between member states, reduced restrictions on travel between GCC countries, and more favourable investment conditions for business. Co-operation on defence was also a priority, as was underlined by the threat to the security of GCC states posed by an escalation of the war between Iran and Iraq, which had begun in 1980, and in October 1983 Qatari forces participated in the GCC's 'Peninsula Shield' joint military exercise in Oman.

After his accession in 1972, and in accordance with the 1970 Constitution, Sheikh Khalifa decreed the first Advisory Council, to complement the Government. Its 20 members, selected from representatives elected by limited suffrage, were increased to 30 in 1975 and to 35 in 1988. The Advisory Council's term of office was extended by four years in May 1978 and by further terms of four years in 1982, 1986, 1990, 1994 and 1998. The Advisory Council's constitutional entitlements include power to debate legislation drafted by the Council of Ministers before ratification and promulgation. It also has power to request ministerial statements on matters of general and specific policy, including the draft budget.

Using the wealth that it acquired through petroleum sales, the Qatari Government made significant social and infrastructural improvements. Under Sheikh Khalifa reforms were instituted increasing expenditure on public services, housing, health, welfare and non-contributory pensions. By the early 1980s a programme of infrastructure construction was almost complete and the provision of education, health services and public utilities to Qatar's citizens was free and generous. The rapid development required a high dependence upon expatriate labour whose numbers came to exceed those of the local population, but who lacked the rights and privileges of the latter. In May 1989 the Supreme Council for Planning (SCP) was formed to co-ordinate plans for Qatar's social and economic development. Under the direction of the heir apparent (Sheikh Hamad bin Khalifa ath-Thani), the council promoted industrial diversification and agricultural development in order to reduce dependence on the petroleum

sector, although Qatar remains dependent on revenue from oil and, more recently, gas.

In July 1989, in the first government reshuffle since 1978, seven ministers were replaced and 11 new members were appointed to a new 16-member Council of Ministers. Five new portfolios were created. The Minister of Foreign Affairs, Abdullah bin Khalifa al-Attiyah, resigned in May 1990 and was replaced by Mubarak Ali al-Khatir, the former Minister of Electricity and Water. In January 1992 some 50 leading Qatari citizens petitioned the Amir to demand the establishment of a consultative assembly with legislative powers. They also expressed concern at abuse of power in the emirate and proposed reforms of the economy and the education system. In September there was another extensive reorganization of the Council of Ministers, expanding its membership from 14 to 17.

On 27 June 1995 the Deputy Amir, Heir Apparent, Minister of Defence and Commander-in-Chief of the Armed Forces, Maj.-Gen. Sheikh Hamad bin Khalifa ath-Thani, deposed the Amir in a bloodless coup. Sheikh Hamad proclaimed himself Amir, claiming the support of the royal family and the Qatari people. Sheikh Khalifa, who was in Switzerland at the time of the coup, immediately denounced his son's actions, and vowed to return to Qatar. Although Sheikh Khalifa had effectively granted Sheikh Hamad control of the emirate's affairs in 1992 (with the exception of the treasury), a power struggle was reported to have emerged between the two in the months preceding the coup: Sheikh Khalifa was particularly opposed to his son's notably independent foreign policy (which had led to the strengthening of relations with both Iran and Iraq, and with Israel, thereby jeopardizing relations with Saudi Arabia and the other Gulf states), and had attempted to regain influence in policy decisions. The United Kingdom and the USA quickly recognized the new Amir; Saudi Arabia endorsed the regime shortly afterwards. In mid-July Sheikh Hamad reorganized the Council of Ministers and appointed himself Prime Minister, while retaining the posts of Minister of Defence and Commander-in-Chief of the Armed Forces. Sheikh Abdullah, Sheikh Hamad's brother, was appointed Deputy Prime Minister and Minister of the Interior. Speculation that Sheikh Abdullah might be named heir apparent was swiftly curbed by alterations made to the rules of succession, specifying that thenceforth the hereditary line would pass through the sons of the Amir. The new Amir instituted a number of reforms including the relaxation of press censorship and greater transparency of government procedures. There was also discussion of the separation of the financial affairs of the state from those of the ruling family, and in August 1997 the Amir announced that a draft law was being prepared to ensure this separation. Women's issues have also assumed greater prominence; in May 1998 the Amir's wife gave a newspaper interview in which she advocated reform to facilitate the participation of women in political life.

In November 1995 Sheikh Hamad announced his intention to establish an elected municipal council, although elections for this were not held until March 1999 (see below). In early June 1997, the justice minister resigned, reportedly owing to conflict within the Council of Ministers over the municipal elections. Meanwhile, the deposed Amir took residence in the United Arab Emirates (UAE), and visited Bahrain, Kuwait, Saudi Arabia, Egypt and Syria in an apparent attempt to assert his legitimacy as ruler of Qatar. In January 1996, moreover, Qatar's Minister of Foreign Affairs confirmed that Sheikh Khalifa had gained control of a substantial part of Qatar's financial reserves. In the following month security forces in Qatar were reported to have foiled an attempted coup. As many as 100 people were arrested, and a warrant was issued for the arrest of Sheikh Hamad bin Jasim bin Hamad ath-Thani, a former Minister of Economy and Trade. There were conflicting reports as to the origin of the coup plot, including suggestions that other Gulf states might be implicated. Sheikh Khalifa denied any involvement; however, he was quick to imply that the alleged plot indicated popular support for his return. The trial began in December 1997 of seven people on charges of selling state military secrets. In early February 1998 two of the defendants, including a military officer, were convicted and sentenced to 10 years' imprisonment; another military officer was imprisoned for one year for failing to report a capital offence. All seven were acquitted of charges of forming an illegal society with the intention of overthrowing the Government. In November 1997, meanwhile, the trial began of 110 people (40 of whom were charged *in absentia*), accused of involvement in the attempted coup of February 1996. Hearings were immediately adjourned. Another seven individuals, including a member of the ruling family, were charged with involvement in the attempted coup, in February 1998. A number of those being tried *in absentia* were apprehended during that year, including the former deputy chief of intelligence, Abdullah Jasim al-Maliki, who was extradited from Yemen in September. In October the Minister of Foreign Affairs gave evidence in Doha Criminal Court as part of the legal proceedings against the accused men. It was hoped that this development would contribute to a new public perception of greater transparency in government affairs. In November a number of sentences were announced and five of the accused were each awarded 10-year prison terms.

Meanwhile, the Government had requested the suspension of several bank accounts held in the names of Sheikh Khalifa and a former office director, Isa al-Kawari, in five countries, pending the outcome of legal proceedings, initiated in Qatar and abroad in late July 1996, to determine the ownership of some \$3,000m.–\$8,000m. in overseas assets, which were asserted by the new Amir to have been amassed by his father from state oil and investment revenues. By mid-October, however, it was reported that Sheikh Hamad and Sheikh Khalifa had been reconciled, and in February 1997 all legal proceedings were formally withdrawn. Although there was much speculation surrounding the possibility of Sheikh Khalifa returning to Qatar, he indicated that this would not happen in the near future. On 22 October 1996 Sheikh Hamad named the third eldest of his four sons, Sheikh Jasim bin Hamad bin Khalifa ath-Thani, as heir apparent. Shortly afterwards, Sheikh Hamad appointed his younger brother, Sheikh Abdullah bin Khalifa ath-Thani (the Minister of the Interior), as Prime Minister. On 30 October a new Government, which included five newly-appointed ministers, was formed. A Ministry of Housing and the Civil Service was established, while the Ministry of Information and Culture was abolished. The Council of Ministers was reorganized in January 1998. Notable changes included the appointment of Sheikh Muhammad bin Khalifa ath-Thani as Deputy Prime Minister; he was succeeded as Minister of Finance, Economy and Trade by Yousuf Hussein Kamal (previously an under-secretary at the finance ministry). In March 1998 it was reported that the Ministry of Information had been reinstated, and that a National Council for Culture, Arts and Heritage had been created.

In March 1999 elections for the Municipal Council were held. They were the first elections to be held in Qatar and took place under full adult suffrage. Women were permitted to contest the elections, although no female candidates actually gained a seat on the Council, which was to have a consultative role in the operations of the Ministry of Municipal Affairs and Agriculture. The rate of participation by voters reportedly exceeded 90% in Doha, and was estimated at 60–70% of the registered electorate in rural areas. However, the number of registered voters was low: it was estimated that only 22,000 of an eligible 40,000 actually participated in the elections. It was subsequently reported that members of the Council had objected to legislation placing the new body under the supervision of the Minister of Municipal Affairs and Agriculture. In June Ali bin Muhammad al-Khatir, formerly Minister of State for Council of Ministers' Affairs, was appointed Minister of Municipal Affairs and Agriculture; Ali bin Saad al-Kawari replaced him as Minister of State for Council of Ministers' Affairs. In July the Amir established a 32-member commission to draft a permanent constitution which was to include an elected legislature. The commission was to present its work within three years.

In April 1986 Qatar raided the island of Fasht ad-Dibal, which had been artificially constructed on a coral reef in the Persian (Arabian) Gulf, and seized 29 foreign workers who were constructing a Bahraini coastguard station on the island. Officials of the GCC met representatives of both states in an attempt to reconcile them, and to avoid a division within the Council. In May the workers were released, and the two Governments agreed to destroy the island. In July 1991 Qatar referred the demarcation of its maritime border with Bahrain and the issue of ownership of the potentially oil-rich Hawar

islands (held by Bahrain) to the International Court of Justice (ICJ) in The Hague. In mid-1992 the Qatari Government rejected Bahrain's attempt to broaden the issue to include sovereignty over an area around Zubara on the Qatari coast, while in April 1992 Qatar had issued a decree redefining its maritime borders to include territorial waters claimed by Bahrain. A hearing of the ICJ opened in February 1994 with the aim of determining whether the court had jurisdiction to give a ruling on the dispute. In July the ICJ invited the two countries to resubmit their dispute by 30 November, either jointly or separately. However, the two countries failed to reach agreement on presenting the dispute to the Court, and at the end of November Qatar submitted a unilateral request to continue its case through the ICJ. In February 1995, while the ICJ declared that it would have authority to adjudicate in the dispute (despite Bahrain's refusal to accept the principle of an ICJ ruling), Saudi Arabia also proposed to act as mediator between the two countries. Sheikh Hamad, then Deputy Amir and Heir Apparent, subsequently indicated that Qatar would be willing to withdraw the case from the ICJ if Saudi arbitration proved successful. In September, however, relations between Qatar and Bahrain soured following the Bahraini Government's decision to construct a tourism resort on the Hawar islands despite controversy over their sovereignty. In late December, furthermore, Qatar's deposed Amir visited Bahrain and suggested that sovereignty of the Hawar islands would be returned to that country if he were restored to power. Qatar retaliated by televising interviews with exiled Bahraini Shi'ites and by publishing articles alluding to abuses of human rights in Bahrain. In mid-1996 the Qatari Government reiterated not only its rejection of Bahraini exhortations to withdraw the case from the ICJ, but also its willingness to consider Saudi involvement in negotiations, provoking renewed Bahraini claims of sovereignty over the disputed territory in July 1996. During August the Bahraini authorities continued to promote a regional settlement to the dispute, proposing the convention of a bilateral summit meeting to be followed by Saudi mediation. Relations between Qatar and Bahrain deteriorated at the end of 1996 following an announcement, made by the Bahrain Government in early December, that two Qatari nationals had been arrested in Bahrain and charged with spying. (The two men were subsequently acquitted.) Qatar retaliated with public accusations of Bahraini involvement in the failed February coup attempt. Bahrain boycotted the GCC annual summit convened in Doha in December, at which it was decided to establish a quadripartite committee (comprising those GCC countries not involved in the dispute) to facilitate a solution. Attempts by the committee to foster improved relations between Bahrain and Qatar achieved a degree of success, and meetings between prominent government ministers from both countries in London (United Kingdom) and Manama (Bahrain) in February and March 1997 resulted in the announcement that diplomatic relations at ambassadorial level were to be established between the two countries by mid-1997. Qatar announced its choice of ambassador to Bahrain in early April, but Bahrain has yet to approve this choice and to announce its ambassador to Qatar. Previously hostile media coverage of the dispute diminished as a result of these contacts, although little further progress was made. In April 1998 Bahrain alleged that the 82 documents submitted by Qatar to the ICJ in 1997 in support of its claims to sovereignty and territorial rights were forgeries. The ICJ directed Qatar to produce a report on the authenticity of the document. Following the submission of the report, in which four experts differed in their opinion of the documents, Qatar announced that it would disregard them. Nevertheless, Qatar continued to state its willingness to accept the ICJ's decision. By mid-1999, however, the ICJ had yet to make a ruling on the dispute.

Qatar, as a member of the GCC, the League of Arab States (Arab League) and the UN, condemned Iraq's occupation of Kuwait in August 1990, although it had previously supported Iraq in its 1980–88 war with Iran. In late 1990 Qatar permitted the deployment of foreign forces on its territory, as part of the multinational attempt to force Iraq to withdraw from Kuwait. Units of the Qatari armed forces subsequently participated in the military operation to liberate Kuwait in January–February 1991. Qatar resumed tentative contact with Iraq in 1993. In March 1995, during the first official visit to the country by a senior Iraqi official since the 1990–91 crisis, the Iraqi Minister of Foreign Affairs, Muhammad Saeed as-Sahaf, attended a meeting with his Qatari counterpart, Sheikh Hamad bin Jaber ath-Thani, to discuss the furtherance of bilateral relations. At a press conference at the end of the visit, the Qatari minister indicated Qatar's determination to pursue a foreign policy independent from that of its GCC neighbours when he announced his country's support for the ending of UN sanctions against Iraq. Notwithstanding Qatar's close alliance with the USA, the Amir expressed dismay at US policy towards both Iraq and Iran during meetings with the US President in Washington, DC (USA), in June 1997. Qatar also sent humanitarian aid to Iraq and continued to do so during the weeks of military crisis in February 1998 (see chapter on Iraq). At that time the Qatari Minister of Foreign Affairs made a visit to Baghdad to relay messages between the Iraqi President and the Amir, following which the Amir himself travelled to Saudi Arabia for a meeting with King Fahd to discuss the deepening crisis. After the easing of tensions in the region, the Amir met the Iraqi Minister of Foreign Affairs during the latter's presence at a meeting of foreign ministers of the Organization of the Islamic Conference in Doha in March. In late 1998, as relations between Iraq and weapons inspectors of the UN Special Commission (UNSCOM) deteriorated (see chapter on Iraq), prompting renewed US and British aerial bombardment of Iraq in December, Qatar, together with other Gulf states, attempted to distance itself from the armed initiative. In the same month, however, the USA announced plans to construct a new military base in Qatar, to be completed in 2000, which was to be the largest military-equipment positioning site in the world. Increasing military co-operation with France (Qatar's main arms supplier) has underlined Qatar's desire to broaden its support and follow a somewhat independent foreign policy. In March 1999, however, in response to Qatar's criticism of the continued bombardment of Iraq, the US Secretary of Defense, William Cohen, insisted that US policy in the region was being implemented with the full support of the Qatari authorities.

In May 1992 Qatar signed six agreements with Iran for co-operation in various sectors, including customs, air traffic and the exchange of information. In July 1993 the Deputy Amir, Sheikh Hamad, visited Teheran and in October an agreement was signed to establish a joint committee for co-operation in the oil and gas sector. In January 1994 Qatar hosted talks with Iran to discuss security issues and draw up plans to curb drugs-trafficking in the Persian Gulf. Qatar chose to pursue good relations with Iran despite adverse reaction from its Arab neighbours and the USA. Iran's relations with the Arab states of the Gulf showed a marked improvement during 1997 and 1998, and as a result, both the Amir and the Minister of Foreign Affairs urged an end to the US isolation of Iran during their respective visits to the USA in June 1997 and March 1998. A further improvement in relations with Iran was evident in May 1999 when the Iranian President, Muhammad Khatami, visited Qatar.

In June 1992 Qatar followed Kuwait and Bahrain in signing a defence pact with the USA. In mid-1993 Qatar and the United Kingdom signed a memorandum of understanding on defence. On 7 April 1994 Qatar became a contracting party to the General Agreement on Tariffs and Trade (GATT), and a week later the Qatari Minister of Foreign Affairs travelled to Bonn, Germany, for three days of talks on expanding mutual co-operation. The following month military co-operation was discussed with a Russian military official. Sheikh Hamad, the Deputy Amir, voiced Qatar's continuing support for the Palestinian reconstruction programme when a Palestinian delegation visited in June. In August Qatar and France signed a defence agreement which would entail Qatar receiving a number of *Mirage* 2000-5 aircraft. In the same month the Qatari Minister of Foreign Affairs met King Hussein of Jordan in London to discuss the Middle East peace process and ways of boosting bilateral relations.

At the end of September 1992 tensions arose with Saudi Arabia when Qatar accused a Saudi force of attacking the al-Khofous border post, killing two soldiers and capturing another. As a result, Qatar announced the suspension of a 1965 agreement with Saudi Arabia on border demarcation (which had never been fully ratified) and withdrew its 200-strong contingent

from the GCC 'Peninsula Shield' force in Kuwait. The Saudi Government denied the involvement of its armed forces. Qatar registered its disaffection by boycotting meetings of the GCC ministers in Abu Dhabi and Kuwait in November. However, on 20 December, following mediation by President Mubarak of Egypt, Sheikh Khalifa and King Fahd of Saudi Arabia signed an agreement whereby a committee was to be established to demarcate the border between the two states by the end of 1993. Qatar subsequently resumed attendance of GCC sessions but in November 1994 Qatar boycotted a meeting in Saudi Arabia of GCC ministers of the interior, in protest at what it alleged to have been armed incidents on the border with Saudi Arabia in March and October, during one of which a Qatari citizen was reported to have been wounded by Saudi border guards. In June 1999 officials from Qatar and Saudi Arabia met in Riyadh, Saudi Arabia, to sign the final maps demarcating their joint border.

The foreign policy adopted by Qatar in 1994 differed from that of its GCC allies on a number of key issues. Qatar declined to support a final communiqué, issued by seven other Arab states, demanding an immediate cease-fire in Yemen, arguing that it was not their place to interfere in the domestic affairs of another country. Similarly, Qatar made early contact with the Israeli Government without waiting for the peace process to be firmly established: in January 1994 discussions took place with regard to the supply of natural gas to Israel. Following Arab protests, Qatar conceded that a sales agreement would depend on a feasibility study and on Israel's withdrawal from all Arab territories occupied in 1967. In September, however, Qatar, along with the other GCC states, revoked aspects of the economic boycott of Israel. In early November the Israeli Deputy Minister of Foreign Affairs, Yossi Beilin, made an official visit to Qatar, and in December negotiations were reported to be in progress on the establishment of an Israeli interests office in Doha. A trade office was established, and in October 1995 Qatar's Minister of Foreign Affairs was reported to have expressed his country's support for the cancellation of the direct economic boycott of Israel, even if a compromise peace settlement in the Middle East were not achieved. In the following month Israel signed a memorandum of intent to purchase Qatari liquefied natural gas, and in April 1996 Shimon Peres made the first official visit to Qatar by an Israeli Prime Minister. However, relations deteriorated in late 1996, when Israel declared that the memorandum of intent to purchase Qatari gas had expired, although negotiations would continue. In early November, Qatar announced that any gas sales to Israel would be dependent on the peace process and would be conducted through a US company. In December, Qatar condemned Israeli settlement activity in Arab-occupied territories, and in March 1997 Qatar 'froze' relations with Israel. At the end of that month, the Arab League passed a resolution recommending the restoration of the economic boycott against Israel and withdrawal from multilateral peace talks with that state. Qatar was heavily pressed by Arab and Islamic interests to cancel the Middle East and North Africa economic summit planned for November 1997, to be held in Doha. (This was to be the fourth in a series of meetings gathering Israeli and Arab leaders to discuss the development of economic links in the region.) Recent set-backs in the peace process with Israel had cast doubt over the future of the summit, although the USA was determined that the meeting should go ahead. The Amir, who received a kidney transplant in the USA in mid-1997 and spent nearly three months until October convalescing in that country, had also ruled out cancellation. The conference, downgraded from a 'summit', owing to the widespread Arab boycott, proceeded on 16–18 November, with the participation of an Israeli delegation. The Qatari Government emphasized the economic rather than the political aspects of the conference, and attempted to attract foreign investment for joint industrial projects in the country. Following the Doha conference, a dispute erupted with Egypt when the Qatari Minister of State for Foreign Affairs accused the Egyptian Government (which had been vociferous in its demands for the cancellation of the conference) of conducting a campaign of denigration against Qatar. The dispute continued in the media and in the political arena for several months, and about 700 Egyptian workers, including almost all those employed by the Ministry of the Interior, had their employment in Qatar terminated. A meeting in December between the Amir and President Mubarak in Riyadh did not appear to have settled matters completely, but in early March 1998, it was announced that differences between Qatar and Egypt were to be resolved, with an exchange of ministerial visits. Later in March, the Qatari Amir visited Cairo for talks on bilateral relations. Qatar's relations with the UAE also soured at the time of the Doha meeting, but they improved following a visit by the Amir to the UAE in March 1998. Following the conference, the Qatari Government distanced itself from Israel and criticized the intransigence of the Netanyahu administration. Statements issued in early 1998 concerned the possible closure of the Israeli trade office in Doha. A visit to Qatar by the Hamas leader Sheikh Ahmad Yassin in June 1998 was criticized by the Israeli Government. In mid-1999 the Israeli trade mission in Doha was evicted from its premises owing to a legal dispute with the owner of the property, although there were no plans to close the mission. In August, as Arab participation in talks with the new Israeli Government resumed, the Amir visited the Palestinian National Authority-controlled areas, in a gesture of support for the negotiating process.

Economy

Dr P. T. H. UNWIN

Revised for this edition by ALAN J. DAY

Qatar is a largely barren peninsula, with stony and sandy soil which is generally unsuitable for arable farming. There are numerous coastal saline flats, known as *sabkha*, and the only agricultural soils are found in small depressions in the centre of the country and towards the north. Traditionally the Qatari economy was based on the nomadic farming of livestock, and on fishing and pearling. Since the discovery of significant reserves of petroleum in 1939, however, the exploitation of these deposits has transformed Qatar into one of the richest countries in the region, measured in terms of average income. In 1984, according to estimates by the World Bank, Qatar's gross national product (GNP), calculated on a 1982–84 base period (to adjust for fluctuations in prices and exchange rates), was US $5,780m., equivalent to $19,010 per head. As in 1983, Qatar's GNP per head in 1984 was the second highest national level in the world, exceeded only by that of its neighbour, the United Arab Emirates (UAE). In 1985, however, Qatar's GNP per head (at average 1983–85 prices) declined to $16,220, the sixth highest level in the world (exceeded by the UAE, Bermuda, Brunei, the USA and Switzerland). According to World Bank estimates, Qatar's GNP in constant prices, i.e. adjusted for inflation, actually diminished between 1973 and 1985, owing to declines in petroleum output and prices in the early 1980s. Over this period, real GNP per head declined by 8.5% per annum. Over the 12 years to 1985, it is estimated, the country's population increased at an average rate of 6.8% per year, mainly because of an influx of immigrant labour. This rate was estimated to have declined to 5.8% per year during 1985–95. The World Bank estimated the average rate of decline in Qatar's real GNP per head as 2.6% per annum over the period 1985–95. In 1995 the World Bank estimated Qatar's GNP, measured at average 1993–95 prices, as $7,448m., equivalent to $11,600 per head on a conventional exchange-rate basis. In 1997 GNP was estimated to be $7,429m., equivalent to $11,750 per head.

The economic changes that have taken place within Qatar in recent years have been made possible by the high level of labour immigration. In 1991 the number of indigenous Qataris was estimated at 350,000, while the World Bank estimated the total

mid-year population at 506,000. The provisional results of a census, carried out in 1997, showed a population of 520,500. In May 1997 the Government issued a directive advising private sector businesses to ensure that Qatari nationals constituted at least 20% of their work-force. By the mid-1980s the economy still relied heavily on petroleum revenues, but a policy of diversification meant that between 1979 and 1983 the percentage of government revenues derived from crude oil fell from 93% to 80%. The collapse in world prices for crude petroleum during 1986 nevertheless placed an increased burden on an already stressed economy. Despite a recovery in the price of oil in the second half of the year, Qatar's total revenue from petroleum in 1986 was approximately US $1,720m., compared with $3,068m. in 1985. Oil revenues remained at low levels during the second half of the 1980s. In 1984 the petroleum sector's contribution to GDP was 45%, but by 1988 the proportion had fallen to an estimated 27%. Qatar has a reputation for caution in its economic policy, but in the late 1980s moves towards economic restructuring were made, and reforms took place, in anticipation of a sharp reduction in Qatar's output of crude oil after 2010. As a result, in 1987 the Government introduced a programme of industrialization, centred on ambitious plans for the development of the North Field, the world's largest single natural gas deposit.

By 1990 the first phase of the North Field development programme was close to completion, but Iraq's invasion of Kuwait in August led to a temporary suspension of major investment projects. Production from the North Field began on 3 September 1991, the 20th anniversary of Qatar's independence. By mid-1995 Qatar had secured an estimated US $4,000m. of international project finance for its industrialization programme, early implementation of which was one of the main priorities of the new Amir who took power in June 1995. By mid-1998 the total amount of project finance secured by Qatar was estimated to have exceeded $6,000m., as international bankers continued to respond positively to the emirate's development programme.

A 1997 IMF survey of Qatar's economy indicated that, whereas there had been a 2.4% increase in real GDP in 1994, 1995 had witnessed an estimated 1.2% overall decline in real GDP (the oil and gas component having declined by 2.6% and the non-oil component by 0.7% in that year). The IMF's estimates for 1996 showed that there had been 23.8% growth in the oil and gas sector and 5% growth in other sectors, resulting in real GDP growth of 9.9% overall in that year. The IMF's predictions of real GDP growth rates of 15.5% in 1997 and 11.5% in 1998, based on an average oil export price of US $17.70 per barrel, proved to be over-optimistic, owing to a slump in world oil prices from late 1997. Despite a significant increase in petroleum production in 1997 and 1998, and the first liquefied natural gas exports from Qatar, the economic growth rate nevertheless fell below 2% in 1998 as a result of the decline in petroleum prices. The divestment of a number of enterprises at the end of 1998 helped the Government to cut its budget deficit from 10.7% of GDP in 1997/98 to 0.1% of GDP in 1998/99, while a recovery in petroleum prices during the first half of 1999 increased revenue to well above the 1999/2000 budget estimate (which had assumed that oil prices would remain depressed). Having taken steps in 1998 to curb recurrent expenditure and reduce subsidies, the Government remained committed in 1999 to structural reform of the economy.

Total external debt, including project finance, grew from US $4,508m. at the end of 1995 to $7,342m. at the end of 1996. By the end of 1998 it had reached $9,796m. with the Government's share of Qatar's external debt (representing borrowing to finance the fiscal deficit) totalling $2,961m. (32% of GDP) in March 1999. The remainder of the country's external debt is project-related. Foreign confidence in Qatar's industrialization strategy remained strong in mid-1999, with successful international and domestic bond issues and the continuing availability of new bank lending for oil, gas and chemicals projects (totalling an estimated $2,200m. in the 12 months to July 1999).

PETROLEUM AND NATURAL GAS

The first concession to explore for petroleum in Qatar was granted to the Anglo-Persian Oil Co in 1935, and was later transferred to Petroleum Development (Qatar) Ltd. Deposits of petroleum were first discovered in Qatar in 1939, although exploration and production was delayed during the Second World War. By 1949 a pipeline had been constructed from the Dukhan oilfield, on the west coast, to Umm Said in the east, where terminal facilities had also been built, and in December of that year the first shipment of Qatari petroleum was exported. In 1952 the Shell Co of Qatar acquired a concession to develop the entire continental shelf offshore area, and by 1960 petroleum had been discovered at Idd ash-Shargi, 100 km to the east of Qatar. Soon afterwards, a second offshore oilfield was discovered, to the north-east of the first, at Maydan Mahzam, and in 1970 a third offshore field, Bul Hanine, was discovered nearby. In 1953 Petroleum Development (Qatar) Ltd was renamed the Qatar Petroleum Co, and by 1960 Qatar's onshore production had reached 60,360,000 barrels, compared with 800,000 barrels in 1949. Qatar was admitted to membership of the Organization of the Petroleum Exporting Countries (OPEC) in 1961. In 1969 Qatar and Abu Dhabi agreed to a joint production scheme for the al-Bunduq field which straddles the border between Qatar and the UAE.

Following Qatar's attainment of full independence in 1971, the petroleum industry was reorganized, and in 1972 the Qatar National Petroleum Co was created to supervise the country's oil operations. In 1974 the Qatar General Petroleum Corpn (QGPC) was established, and new participation agreements were signed with the foreign oil companies operating in the country, to give the Government a 60% share in profits. In December 1974 the Government announced its intention to purchase the remaining 40% share in the ownership of QGPC and the Shell Co of Qatar. After lengthy negotiations, the state took over the assets and rights of QGPC in September 1976, and acquired those of the Shell Co of Qatar in February 1977.

Qatar's oil production varied considerably during the 1970s and the early 1980s, falling from 570,300 barrels per day (b/d) in 1973 to 437,600 b/d in 1975. By 1979 production had risen to 508,100 b/d, but it subsequently declined rapidly, and in 1982 output averaged only 332,000 b/d. However, even this reduced level of production was higher than Qatar's recommended OPEC quota of 300,000 b/d. By July 1990 Qatar's OPEC quota had been raised to 371,000 b/d. However, Iraq's invasion of Kuwait in August led to the suspension of quotas in order to allow OPEC member states to compensate for the loss of Iraqi and Kuwaiti production. Between August 1990 and February 1991 Qatari production averaged 420,000 b/d. After the liberation of Kuwait, Qatar's production quota was set by OPEC at 399,000 b/d and by the fourth quarter of 1993 Qatar's OPEC production quota was 378,000 b/d. Total oil production (including natural gas liquids) averaged 450,000 b/d in 1994, 460,000 b/d in 1995 and 570,000 b/d in 1996, rising sharply to a record level of 725,000 b/d in 1997 and 805,000 b/d in 1998. Qatar accepted a nominal OPEC production quota of 414,000 b/d from January 1998 while continuing to lobby (based on its financial needs as OPEC's smallest producer) for a substantial quota increase to a level closer to its actual output. When OPEC made a series of supply cuts in 1998/99 to counteract the decline in world petroleum prices, Qatar agreed to reduce its actual output, adopting reference levels of 670,000 b/d from April 1998, 640,000 b/d from July and 593,000 b/d from April 1999; its formal OPEC quota remained unchanged at 414,000 b/d. Qatar's installed production capacity exceeded 800,000 b/d by mid-1999 and was scheduled to reach 850,000 b/d by early 2000 as oilfield development projects progressed. Qatar's proven crude oil reserves at the end of 1998 totalled 3,700m. barrels (sufficient for 13 years' production at 1998 levels), while probable reserves were estimated at some 5,400m. barrels.

Among the concessions that Qatar granted for petroleum exploitation in the 1980s was Amoco's 25-year production-sharing agreement for an 8,000-sq km area covering most of the country, except the Dukhan field and part of the north-east, which was concluded at the beginning of 1986. A six-year offshore exploration permit for 2,800 sq km was granted to Elf Aquitaine in 1988. An offshore concession agreement with the group of companies headed by Wintershall was terminated in June 1985, with the discovery of substantial quantities of gas in the area, but the consortium won a partial award against Qatar at the International Arbitration Tribunal at The Hague,

after which a production-sharing agreement was concluded. The consortium announced plans in early 1994 for the development of facilities to produce gas and condensate for export before the end of the century. In 1995 it opened negotiations with the Dubai Government on a proposal to export gas via pipeline to Jebel Ali in Dubai. In late 1994 Wintershall had reduced its interest in the consortium from 50% to 15% and had relinquished the role of operating company. The revised participation was Atlantic Richfield (operator) 27.5%, Gulfstream Resources 27.5%, British Gas 25%, Wintershall 15% and Preussag 5%. This consortium brought the Ar-Rayyan field into production in November 1996 at an initial rate of 32,000 b/d. Under a July 1997 agreement with QGPC, the consortium was granted the right to develop up to 23m. cu m (800m. cu ft) per day of gas production from a defined sector of the North Field for export (via pipeline) after separation of liquids for separate marketing.

In September 1994 Occidental Petroleum secured a five-year contract, worth an estimated US $1.9m. per year, to supply technical and support services to QGPC in onshore and offshore fields. At the same time Occidental concluded a 25-year production-sharing agreement for the Idd ash-Shargi offshore field, whereby the US company would invest an estimated $700m. to raise output from around 20,000 b/d to over 90,000 b/d and would have an entitlement to 19% of the field's output. Production from this field averaged 75,000 b/d in early 1996, and was expected to reach 110,000 b/d by 2000. Under QGPC's timetable for making available new exploration blocks to foreign oil companies, agreements were in force in respect of 90% of Qatar's territorial area by mid-1995. A subsidiary of the US company Pennzoil signed a four-year offshore exploration agreement on production-sharing terms in July 1994, this being Qatar's first new exploration agreement for two years. Maersk Oil began oil production in an offshore concession area in late 1994. It was hoped to increase output at Maersk's Ash-Shaheen field from 30,000 b/d to 150,000 b/d by the end of 1998, upon completion of new production facilities. An agreement on the development of another offshore oilfield (Al-Khalij) was concluded in July 1995 between QGPC and the concession holders, Elf Aquitaine (55% and operator) and Agip International (45%). Production from this field, which had estimated reserves of 70m. barrels, began in 1997 at an initial rate of 30,000 b/d. In April 1996 QGPC signed an exploration and production-sharing agreement with Chevron Overseas Petroleum (the operator and majority partner in a 60%–40% venture with the Hungarian Oil and Gas Co) pertaining to a 7,500-sq km offshore concession area. Output from the onshore Durkhan field was expected to rise from 280,000 b/d in mid-1997 to 335,000 b/d in 1999, as the result of a programme to enhance recovery methods and to install new facilities.

Qatar's first major refinery, at Umm Said, was commissioned in 1974 for the National Oil Distribution Co (NODCO), which had been founded in 1968 to manage the refining and distribution of oil products. Umm Said refinery had an initial capacity of 6,200 b/d which had increased to 12,000 b/d by 1977. A second refinery, with a capacity of 50,000 b/d, was built by a French company, Technip, and commenced operations in 1984. It is situated close to the original Umm Said refinery and is linked to it. The new refinery was structured to allow for further expansion, to meet the expected increase in local consumption without any need for major modifications or additional equipment. In 1988 two new pipelines were constructed to carry light and heavy products from Umm Said to QGPC's export terminal. In April 1990 the two refineries at Umm Said were processing 62,000 b/d of crude petroleum and exporting 50,000 b/d of oil products. Modifications were being planned that would make it possible to include a proportion of North Field gas condensates in the refineries' mix of feedstocks. In 1995 QGPC was examining the feasibility of building a new refinery at Ras Laffan to process up to 120,000 b/d of condensate which would become available if North Field gas development proceeded according to current plans. About 27,000 b/d of condensate-processing capacity was planned at Umm Said as part of a refinery expansion project which would increase total refinery throughput at Umm Said to 80,000 b/d. In June 1998 Lurgi of Germany and LG of the Republic of Korea signed a US $686m.-contract to carry out further expansion of the Umm Said refinery over a three-year period, intended to increase overall capacity to 137,000 b/d.

Qatar's proven reserves of natural gas at the end of 1998 were estimated to total 8,490,000m. cu m, representing 5.8% of total world reserves at that date. The major part of Qatari reserves are in the offshore North Field (the world's largest single deposit of non-associated gas), which was discovered in the 1970s and subsequently assumed a central position in the Government's development plans. Prior to the inauguration of the North Field in 1991, Qatar's gas output was drawn from a relatively small onshore deposit of non-associated gas (used mainly for power generation) and from the onshore and offshore oilfields, whose output of associated gas is processed at two plants at Umm Said. Annual gas output averaged less than 10,000m. cu m during the 1980s, when low output of associated gas at periods of weak oil demand prevented some gas-dependent industries from achieving optimum production levels.

The first phase of Qatar's North Field Development Project (NFDP) is designed to produce a constant 22.6m. cu m per day of gas for domestic use, together with 1.65m. tons per year of liquefied petroleum gas and condensate for export. Having been completed at a cost close to the budgeted US $1,300m., the first-phase facilities went into production in September 1991.

The second phase of the NFDP involves the construction of an integrated liquefied natural gas (LNG) complex and associated export facilities at Ras Laffan, at an estimated total cost of as much as US $5,000m. The liquefaction plant will have an annual capacity of up to 6m. tons of LNG, of which 4m. tons are to be shipped to Japan under a 25-year agreement with Chubu Electric Power Co. Contracts for most of the 'downstream' construction work were signed in July 1993, when the shareholders in the Qatargas company which would operate the LNG plant were QGPC (65%), Mobil (10%), Total (10%), Marubeni Corpn (7.5%) and Mitsui & Co (7.5%). Construction work on the liquefaction plant began in April 1994. A $2,000m. 'downstream' financing package (funded by four Japanese and two European financial institutions) became available for disbursement in October 1995. A $570m. 'upstream' financing package was syndicated in September 1996. Qatargas made its first condensate exports in that month and dispatched its first LNG shipment to Japan in December. In 1998 Qatargas exported some 3.6m. tons of LNG, worth some $700m., compared with $400m. in 1997. Some 6.1m. tons were expected to be exported in 1999, mainly to the Japanese market.

In a separate venture, QGPC (70%) and Mobil (30%) agreed in December 1992 to establish a new company, subsequently incorporated as the Ras Laffan Liquefied Natural Gas Co (RASGAS), with a view to developing another LNG export facility by the end of the decade, at a cost of up to US $7,500m. Output of about 10m. tons per year was envisaged, and the most likely export markets were seen as Japan, the Republic of Korea and Taiwan. In August 1995 RASGAS was close to signing a sales and purchase agreement with the Korea Gas Corpn for the supply of 2.4m. tons of LNG per year from August 1999 (with an option for a further 1.6m. tons per year), which would effectively guarantee implementation of the project. Discussions with other potential customers had so far yielded letters of intent in respect of at least 6.6m. tons per year (from companies in Taiwan, Turkey and China) and memoranda of understanding in respect of up to 4.5m. tons per year (from Thailand and India). Having signed the Korea Gas agreement, RASGAS awarded construction contracts worth an estimated $1,390m. in April 1996. In June 1997 Korea Gas Corpn (KOGAS) signed an agreement to double its LNG purchases from RASGAS to 4.8m. tons per year by 2001. RASGAS subsequently scaled up its construction programme to add the required production capacity. RASGAS shipped its first cargo of LNG in June 1999 on spot-market terms. Deliveries to KOGAS were scheduled to begin in July. Details of a project to export dry gas directly to Pakistan by pipeline were being finalized in 1994 by a consortium whose main sponsors were Crescent Petroleum (based in Sharjah, UAE), Brown & Root (the US company which would handle the construction work) and TransCanada PipeLines. The consortium proposed to raise $3,200m. of private funding to finance the building of a 1,600-km pipeline with a capacity of 1,600 cu ft per day. The proposed pipeline route would cross about 100 km of land in the far north-east of the UAE (where

a compressor station would be sited) but would otherwise run offshore. In May 1995 Pakistan and Qatar established a joint committee to examine the technical and economic feasibility of the project. In late 1996 the French company Total joined the consortium (now named the Gulf-South Asia Gas Corpn) to take responsibility for 'upstream' development work. Qatar's exports of natural gas rose to 13,500m. cu m in 1996 (double the 1990 figure), so that gas exploitation was on course to join oil as a major source of income by the early 21st century. Budgetary constraints arising from the sharp downturn in oil prices from late 1997 resulted in delays in the provision of state investment for a range of current gas projects; but development was largely unaffected because the bulk of new funds came from external sources, including a number of 'blue chip' international hydrocarbons companies for whom Qatar remained a favoured investment destination. In March 1999 QGPC signed an outline agreement with the UAE Offset Group to develop and supply Qatari gas to the UAE and Oman. Estimated to cost some $10,000m. over seven years, the programme envisaged the construction of an undersea pipeline from Ras Laffan to Abu Dhabi, Dubai and Oman which would initially supply some 30,000m. cu m of gas per year.

INDUSTRY

Qatar's hydrocarbon-based industrialization strategy has centred on the development of 'downstream' processing facilities for oil and gas feedstocks, coupled with some diversification into heavy industry, using local gas as a low-cost fuel source. Three core schemes were initiated at Umm Said in the late 1970s and early 1980s. These are the Qatar Fertilizer Co (QAFCO), the Qatar Petrochemicals Co (QAPCO) and the Qatar Steel Co (QASCO).

The first of these projects was QAFCO, which was established in 1969 and which, since 1975, has been owned jointly by QGPC (75%) and Norsk Hydro of Norway (25%). Production of fertilizers began in 1973, with gas feedstocks being supplied from the Dukhan field. Work on a second plant, QAFCO II, began in 1976 and was completed in 1979. QAFCO made substantial profits in the first half of the 1980s, experienced a downturn in 1986 and 1987, as a result of difficult conditions in the world market, and made a steady recovery in succeeding years, after taking action to improve productivity. In 1990 production totalled 708,000 tons of ammonia and 761,000 tons of urea. Major export markets included India and China. In 1992 QAFCO's profits reached a record QR 172m. Plans are proceeding to increase QAFCO's production capacity by using gas from the North Field. A third QAFCO plant with a capacity of 1,500 tons per day of ammonia and 2,000 tons per day of urea came into production in March 1997. In 1995 QAFCO produced 885,966 tons of urea (a 3.3% increase over 1994) and 794,074 tons of ammonia (a 1.2% increase over 1994). In excellent market conditions, the company made a net profit of QR 289.6m. in 1994 on total sales worth QR 583.8m., representing year-on-year increases of 124% in profits and 39% in turnover. About four-fifths of QAFCO's ammonia output and two-fifths of its urea output were exported to India in 1994. In 1998 QAFCO increased production to new record levels (1.67m. tons of urea and 1.37m. tons of ammonia), although it recorded a 60% decline in profits, to QR 156m., owing to depressed world prices. In July 1999 QAFCO secured major new export orders for urea from Australia following a drive to diversify its overseas presence. In late 1999 a decision was expected on the construction of a fourth QAFCO plant which was to have a capacity of 1,800 tons per day of ammonia and 2,400 tons per day of urea.

The petrochemical facilities of QAPCO were commissioned at Umm Said during 1980 and 1981. The company was established in 1974. The plant had an initial design capacity of 280,000 tons of ethylene per year, but in its first year of production it produced only 132,679 tons. The plant also produces low-density polyethylene and sulphur. Sales, particularly of ethylene, were substantially below production, and in 1983 plans were cancelled for a high-density polyethylene plant at the complex. The company suffered from a shortage of ethane-rich gas, and therefore construction of an ethane recovery plant was completed in 1985. Nevertheless, QAPCO made a record loss of QR 156m. in 1985, as a result of the world-wide decline in prices of polyethylene, and a reduction in output of one-third. In early 1986 QAPCO's financial difficulties forced it to renegotiate a US $100m. Euroloan which was signed in 1984. In early 1989 the rehabilitation of the value-control system at the ethylene plant was completed. QAPCO's performance in 1989 was much improved, with profits estimated at a record QR 420m. In September 1990 the French company Elf Atochem, and in June 1991 the Italian company Enichem, each acquired a 10% interest in QAPCO. QGPC holds the remaining 80%. Another initiative in the field of petrochemicals was taken in 1991, when the QGPC and a Canadian company, International Octane, established the Qatar Fuel Additives Co (QAFAC), which was to build a plant to produce methyl tertiary butyl ether (MTBE) and methanol. Following several restructurings, in June 1996 shareholdings in QAFAC were distributed as follows: QGPC 50%, International Octane 15%, Lee Chang Yung Chemical Industrial Corpn 15% and China Petroleum Corpn 20% (the two last-named being Taiwanese companies). Construction work began in 1997 on a plant with an annual capacity of 830,000 tons of methanol and 610,000 tons of MTBE. The work was expected to take 26 months at an estimated cost of $425m. In June 1992 QAPCO announced a programme of expansion, involving estimated expenditure of $385m., under which ethylene capacity at Umm Said was scheduled to reach 450,000 tons in October 1995 and 525,000 tons in April 1996, while polyethylene capacity would be nearly doubled, to 365,000 tons per year, in April 1996. In 1994 QAPCO produced a record 357,000 tons of ethylene and 186,000 tons of polyethylene (representing year-on-year increases of 1.5% and 2.5% respectively) and achieved a 44% increase in profits to QR 260m. In 1998 QAPCO made a net profit of just under QR 300m. (52% less than in 1997) owing to difficult market conditions. In May 1996 QGPC signed a preliminary agreement with a group of European companies with existing interests in Qatar (Norsk Hydro, Elf Atochem and Enichem) for a project to produce an annual 338,000 tons of ethylene dichloride, 200,000 tons of vinyl chloride monomer and 260,000 tons of caustic soda, using ethylene feedstock supplied by QAPCO. Participation in the new venture, to be called Qatar Vinyl Co, was finalized in January 1997. The project, estimated to cost $500m., was scheduled for completion in 2000. In May 1997 QGPC signed an outline agreement with Phillips Petroleum to develop a plant at Umm Said which would include a 500,000 tons-per-year ethylene cracker, 467,000 tons-per-year of polyethylene capacity and 50,000 tons-per-year of hexene-I capacity. Feedstock would be supplied from a natural gas liquids plant at Umm Said. The target date for completion of the project, costing an estimated $750m., was the end of 2000.

The Qatar Steel Co (QASCO) began commercial production in 1978, and processes imported iron ore and local scrap for export, mainly to Saudi Arabia, Kuwait and the UAE. The government is now the sole owner of QASCO, having acquired the holdings of the original Japanese partners (a total of 30%) in May 1997. Production levels rose continuously, from 378,544 tons of steel bars in 1979 to 475,000 tons in 1984. Production reached more than 550,000 tons in 1989, and a record 565,000 tons in 1990. QASCO assumed the management of the Umm Said steel mill in early 1989, although Japan's Kobe Steel Co, the former managers, maintained a consultancy at the plant. In June 1992 QASCO decided to commission a feasibility study with the aim of increasing capacity at the Umm Said plant by 140,000 tons per year, as the first stage of a plan to raise Qatari steel production to 1m. tons per year. QASCO's output in 1991 was 561,000 tons, yielding a profit of QR 127m. In 1992 production totalled 588,000 tons, yielding a profit of QR 155m., and in 1993 output reached 608,626 tons. A contract was awarded in early 1995 for the supply and installation of a 140,000-tons-per-year rolling mill to raise reinforced steel bar capacity to 470,000 tons per year. A contract was signed in May 1996 for the installation, over a period of 18 months, of an electric arc furnace with an annual output capacity of 500,000 tons of molten steel. In 1995 QASCO produced 601,000 tons of concrete-reinforcing bars and recorded a net profit of QR 210m. In February 1997 QASCO established the Qatar Hot Briquetted Iron Company (Qabico) to build a 2m. tons-per-year hot briquetted iron plant at Umm Said at an estimated cost of US $408m. Qabico was owned 31% by QASCO, 10% by Qimco (see below) and 10% by the Qatar Shipping Co, with the remaining shares divided equally between Kuwait's Gulf Investment Corpn, Kuwait's

National Industries Co and Duferco (a holding company based in the Channel Islands). A further seven major development projects, involving total investment of more than $1,000m., were included in QASCO's development plans for the period to 2005.

In addition to these major industrial schemes, many small enterprises have been established, mainly at Umm Said, now the industrial centre of the country. In 1973 the Industrial Development Technical Centre (IDTC) was founded to co-ordinate the development of non-oil related industry, and by 1983 it had reported the establishment of 72 industrial ventures. The Qatar Flour Mills Co began production at Umm Bab in 1969, and by 1985 output had reached a level of about 1,700 tons per day. Cement production began in Qatar at a rate of 330,000 tons per year, and was aimed solely at the domestic market. By the mid-1980s cheap imports, particularly from the UAE, had forced the Qatar National Cement Manufacturing Co (QNCMC) to reduce its prices by as much as 30%, but in 1984 production rose by 26%, to 313,000 tons, and profits for the year were QR 13.8m. In 1985 production increased further, to 319,740 tons, which was 1% above the capacity for which the plant was designed. In 1992 output of cement totalled 354,133 tons, output of clinker totalled 313,287 tons, and net profits were QR 25.8m. In 1994 net profits were QR 40m., an increase of 27% over 1993. Work began in 1995 on a new 2,000-tons-per-day cement plant at Umm Bab, designed to increase Qatar's total cement capacity to 3,200 tons per day by mid-1997. The new capacity would eliminate Qatar's net import requirement for cement (of up to 700 tons per day in 1995), placing it instead in a position to become a net exporter. Other industries in the country include a ready-mix concrete factory, a plastics factory, a paint factory, a detergents company and several light industrial ventures.

Much of Qatar's initial industrial development depended on the operation of a power and desalination complex at Ras Abu Aboud, which can produce 11.5m. gallons of water per day and 210 MW of power. In 1983 a new power and desalination complex came into production at Ras Abu Fontas. Domestic demand for water in Qatar is among the highest per head in the world, and the Government has initiated several schemes to upgrade the water network. Qatar had an installed electricity generating capacity of 1,284 MW, and water desalination capacity of 68m. gallons per day, in mid-1993. The joint-stock Qatar Electricity and Water Co (QEWC) was founded in 1990 to manage the generating installations and associated facilities, leaving distribution under the control of the Ministry of Electricity and Water. In 1999 the Government announced proposals for the creation of a Qatar Electricity Corpn to take over the distribution and transmission of electricity. In April QEWC assumed the management of the Ras Abu Fontas generating facilities for which the Ministry of Electricity and Water had been previously responsible. A new independent water and power project was under consideration at that time, following forecasts that some 400 MW of additional generating capacity would be needed within two years to meet the expected growth in electricity demand. International companies were invited to submit 'build, own and operate' proposals for a plant at Ras Laffan with an eventual capacity of 1,100 MW. The Government was meanwhile finalizing plans to discourage wasteful consumption by imposing charges for electricity and water usage in excess of a basic monthly allocation per household (Qatari nationals had hitherto enjoyed unmetered free supplies of electricity and water).

The joint-stock Qatar Industrial Manufacturing Co (QIMCO), established in 1990 to promote industrial joint ventures, made a net profit of QR 7m. in 1992, when it held investments of QR 64.5m. in eight industrial projects. By the end of 1994 QIMCO held investments totalling QR 90.6m. in 10 projects (seven of them in the local market). There was a 29% increase in net profits (to QR 16.7m.) and a 4.6% increase in shareholders' equity (to QR 138.1m.) in 1994. In 1995 QIMCO recorded a net profit of QR 23m. Its investments totalled QR 102m., while its operating companies' aggregate sales revenue exceeded QR 200m. In 1996, QIMCO's net profit was QR 21.5m. In June 1993, in an attempt to attract foreign investment for industrial projects, the Government approved legislation to reduce the maximum rate of taxation on profits earned by foreign partners in joint ventures from 50% to 35%. In June 1997 the Government announced plans to establish a purpose-built light industrial zone to the west of Doha and to introduce a new investment law incorporating incentive schemes for companies setting up plants in designated industrial zones. The new investment law would also allow non-Qatari entities to take majority shareholdings in joint-venture projects (which were currently required to be at least 51% Qatari-owned).

AGRICULTURE AND FISHING

Qatar's agricultural activity increased steadily during the 1970s, with the number of producing farms rising from 338 in 1975 to 406 in 1979. However, during the same period the number of non-producing farms also rose, owing to increased problems of water supply and water salinity. Agriculture (including fishing) provided 0.9% of Qatar's GDP in 1997. All agricultural land in the country is owned by the Government, and most farm owners participate only indirectly in the farming process, having permanent positions in other sectors of the economy. Consequently, most farms in Qatar are administered by immigrant managers employing Omani, Palestinian, Iranian and Egyptian labour. Vegetable production has been the most successful sector of the agrarian economy, and Qatar is now thought to be self-sufficient in winter vegetables, and nearly self-sufficient in summer vegetables, with some being exported to other Gulf countries. A dairy farm, completed in 1984, can satisfy about 60% of the local demand for dairy products. Egg production averaged about 1m. per year in 1985, which was sufficient to meet 80% of local demand. At the end of 1991 Qatar and Iran announced plans for a $13,000m. pipeline to carry drinking water to Qatar from Iran's Karum river. In April 1992 the Arab-Qatari Company for Vegetable Production (AQCVP) signed a $5m. contract with Dace of the Netherlands for the supply of greenhouses, sufficient to treble the company's covered growing area. In 1999 a project to establish a processing and packaging plant in Doha with a planned annual capacity of 800 tons of dates and 400 tons of vegetables commenced.

In May 1992 the Government announced the provision of interest-free loans of up to QR 500,000 to farmers and fishermen, to encourage production by promoting modernization. The loans, repayable over 10 years, were to be administered by a special committee, established by the Ministry of Agriculture and Municipal Affairs. In 1997 Qatar's imports of food and live animals were valued at QR 1,078.5m., representing about 9% of total import spending. In 1997 Qatar produced 4,000 tons of cereals, 43,000 tons of vegetables and melons and 16,000 tons of fruit and dates, as well as 22,000 tons of milk, 4,000 tons of poultry meat, 4,000 tons of eggs, and 14,000 tons of mutton and lamb.

Most of the country's fishing is undertaken by the Qatar National Fishing Co (QNFC), which was formed in 1966 and was nationalized in 1980. By 1985 the company had a refrigeration and processing plant near Doha, capable of handling 7 tons of shrimps per day. From the mid-1970s until 1980 the annual catch was estimated at about 2,000 tons. The total rose to 2,604 tons in 1981, but fell to 2,114 tons in 1983. By 1994 the total catch had reached 5,086 tons, declining in 1995 to 4,271 tons before reaching 4,739 tons in 1996.

BUDGET AND FINANCE

Since 1979 the Qatari riyal has been officially pegged to the IMF special drawing right (SDR) at a rate of QR 4.7619 = SDR 1 within a permitted fluctuation margin of plus or minus 7.25%. Since 1986, however, the riyal has in reality been linked to the US dollar at a rate of QR 3.64 = $1.

The increases in petroleum revenue which occurred in the 1970s resulted in large budget surpluses, which enabled Qatar to embark on its impressive programme of industrial and infrastructural projects. However, after achieving a budget surplus of QR 7,993m. in 1980, the country recorded a deficit of QR 566m. in 1983. This was largely due to the fall in petroleum exports, and, in order to alleviate the problem, government current expenditure was reduced. As a result of these cutbacks, less foreign investment was attracted to the country, and liquidity levels consequently suffered. In 1984/85, in an attempt to solve this problem, the government increased expenditure to QR 12,173m. As a result of the collapse of petroleum prices, no budget was announced for 1986/87, but it was understood that ministries were asked not to exceed the previous year's budget. The 1987/88 budget proposals contained no provisions for any

substantial investment in the areas of gas, power or desalination, but placed more emphasis on social services, in an attempt to stimulate the depressed contracting sector. Expenditure on defence, however, continued to increase, and in 1986 France agreed to supply Qatar with four *Mirage* F-1 fighter aircraft, missiles and a radar system, at a cost of $243m. Nevertheless, the actual deficit for 1987, according to the Qatar Monetary Agency (QMA), was 34% below the predicted figure. The 1988/89 budget forecast total expenditure of QR 12,442.5m., revenue of QR 6,335.8m. and a budget deficit of QR 6,106.7m., the highest level yet projected. From 1989 Qatar's financial year began on 1 April.

The 1994/95 budget made provision for a 20% fall in revenue to QR 8,359m. (mainly because of low oil prices). Total expenditure was set to fall by 10% to QR 11,830m. (including a capital budget of QR 2,320m.), while the budget deficit was projected to rise by 28% to QR 3,471m. Cutbacks in expenditure were to include a halt to property loans for citizens, an accelerated shift from expatriate to local labour, and closures of some overseas information offices. The capital spending allocations for 1994/95 were public services and infrastructure projects QR 1,031m. (including QR 151m. for roads, QR 174m. for sewerage and QR 135m. for land purchases); economic services and industrial projects (including water and power supplies and airport expansion) QR 1,022m.; and health, social services, education and youth welfare QR 267m. The official budget out-turn for 1994/95 showed substantially higher revenue receipts of QR 10,188m. and total expenditure of QR 12,711m., producing a lower-than-anticipated deficit of QR 2,523m. The 1995/96 budget provided for a 10.1% rise in revenue to QR 9,204m. (assuming an average crude oil price of US $15 per barrel) and a 7.7% rise in total expenditure to QR 12,735m. (including slightly lower capital spending of QR 2,224m.). Capital spending allocations for 1995/96 were public works and infrastructure QR 931m. (including QR 198m. for roads, QR 251m. for sewerage and QR 120m. for land purchases); economic services QR 928m.; and health, social services, education and youth welfare QR 365m. The budget out-turn for that year showed an 20.0% increase in revenues (mainly owing to higher oil prices), which totalled QR 12,226m., compared with expenditure of QR 13,460m., resulting in a deficit of QR 1,234m.

The 1996/97 budget provided for total expenditure of QR 13,750m. (QR 11,530m. on current account and QR 2,220m. on capital account) and total revenue of QR 10,800m., resulting in a projected deficit of QR 2,950m. A QR 500m. package of increases in public-sector pay and allowances was announced in late June 1996. The 1996/97 out-turn, published by the Central Bank, showed higher revenues of QR 13,459m. and expenditure of QR 15,947m., producing a deficit of QR 2,488m.

The 1997/98 budget forecast provided for total expenditure of QR 16,387m. (including a 20% increase in spending on capital projects) and revenues of QR 13,397m., producing an anticipated deficit QR 2,990m. The budget out-turn figures for 1997/98, published in April 1999, showed an actual deficit of QR 3,578m. (expenditure QR 17,603m., revenue QR 14,025m.). In 1998/99 the Government budgeted for expenditure of QR 15,659m. and revenue of QR 12,353m., leaving a deficit of QR 3,306m. However, the preliminary out-turn figures for 1998/99 showed a deficit of only QR 47m. (expenditure QR 14,997m., revenue QR 14,950m.) after taking account of some $650m. (QR 2,366m.) raised from the partial privatization of Qatar Telecommunications Corporation. The 1999/2000 budget provided for total revenue of QR 10,530m. (including QR 5,315m. from oil and gas) and total expenditure of QR 14,136m. (including capital spending of QR 2,632m.), leaving a deficit of QR 3,606m. The budget was based on an average petroleum price of US $10 per barrel in 1999/2000, causing projected oil and gas revenue to decrease by more than 18% (compared with the decline of more than 25% between the 1997/98 and 1998/99 fiscal years). By mid-1999, however, oil prices had recovered to more than $15 per barrel, encouraging hopes that a balanced budget out-turn might be achieved in the current fiscal year. Among the revenue-raising measures implemented in the 1999/2000 fiscal year were substantial increases in the charges for entry visas and residency permits.

The inauguration of the Qatar Bank for Industrial Development (QBID) in November 1997 brought the number of banks operating in Qatar to 15 (excluding the Central Bank), including eight foreign banks. Structured as a joint venture between the Qatar Government and local private-sector interests (mainly banks and insurance companies), the QBID will provide soft loans to fund the fixed capital requirements of small- and medium-sized industrial ventures. In October 1993 the QMA was superseded by the Qatar Central Bank, with paid-up capital of QR 50m. and overall capital and reserves totalling QR 156m. The Central Bank's end-1998 assets totalled QR 5,755.3m. (including QR 3,781.8m. of foreign assets), while the principal liabilities on its end-1998 balance sheet were currency issued to the value of QR 1,729.2m. and local banks' deposits totalling QR 828.0m. The Central Bank has supervisory powers over all banks, foreign exchange houses, investment companies and finance houses operating in Qatar. In August 1997 the Central Bank was empowered to license Qatar-based banks and finance companies to establish 'offshore' banking units (OBUs), with effect from October 1997. Bahrain had previously been the only GCC member state with an 'offshore' banking sector.

Until April 1997 trading in local companies' shares was conducted through an unofficial stock exchange which had a turnover of some US $89.3m. in 1996. In May 1997 an official Doha Securities Market (DSM), supervised by the Ministry of Finance, Economy and Trade, began trading in the shares of 17 companies and banks, the number rising to 18 by February 1998, when their market capitalization totalled QR 9,902m. ($2,720m.) and weekly turnover was averaging QR 8.4m. ($2.3m.). In May 1998 the Qatar Arabian Investment Company (QAIC) was launched with plans for its shares to be listed on the DSM—the first listing of a dollar-denominated stock and the first open to non-Qatari investment. The market's start-up costs were funded by the Government, which planned to organize a series of share offers as part of a future privatization programme. Currently conducting business by floor trading, the DSM is to be relocated in 2000 to a purpose-built exchange with a fully computerized trading system. During the last quarter of 1998 (when the initial public offering of shares in Qatar Telecom began) the DSM had an average weekly turnover of QR 26.7m. ($7.3m.).

In 1997 the Government continued its practice of contracting syndicated overseas loans for general funding purposes, taking out loans of US $300m. and $200m. from consortia of international banks in the latter months of the year. A new public debt law approved in March 1998 was intended to facilitate the issue of treasury bills and bonds to finance the Government's budget deficit, the Central Bank Governor stating that the new law would also enable the bank to influence money supply and interest rates by market intervention. Under a Central Bank directive which came into force on 1 April, the maximum 6.5% interest rate on riyal deposits was abolished and banks were permitted to set their own interest rates on deposits of over 15 months' duration. Recommended by the IMF as part of desirable financial sector reform, the changes were intended to attract more local capital into the domestic banking system and to encourage depositors to hold funds on a longer-term basis. In July 1999 the Government issued its first treasury bond, worth QR 2,000m., which was heavily over-subscribed. The three-year bonds had a face value of QR 10,000 each and carried 7.75% non-taxable interest, payable half-yearly. Trading in the bonds was to be confined to Qatari banks for one year, after which it was proposed to open it to companies and individuals. The Government, whose domestic borrowings totalled an estimated QR 10,800m. at the end of April 1999, saw the treasury bonds as a replacement for short- and medium-term bank credits.

In May 1998 the Commercial Bank of Qatar (CBQ) became the first local bank to secure a syndicated credit facility, signing an agreement with a group of regional and international banks under which it would borrow US $60m. for the financing of forthcoming industrial projects. At the end of June, however, the Qatari authorities postponed the Government's first Eurobond issue, owing to unfavourable conditions in emerging debt markets. The 10-year Eurobond, worth $1,000m., was subsequently successfully issued in May 1999, attracting investors from the USA (55%), Europe (25%) and the Middle East (20%).

In addition to investment in industrial diversification at home, Qatar also allocated considerable sums of aid to poorer countries during the 1970s. In 1975 the level of aid was US $339m., but in 1980 the total declined to $277m., representing 4.2% of GNP.

In October 1990 the Government announced that the debts owing to it by 10 Arab and African countries (Cameroon, Egypt, Guinea, Mali, Mauritania, Morocco, Somalia, Syria, Tunisia and Uganda) were to be cancelled. The World Bank estimated that Qatar extended net aid of around $1m. (0.01% of GNP) in 1991 and that its cumulative net aid over the five years 1987–91 amounted to just $4m.

In December 1995 IMF statistics for Qatar indicated total official reserves of $694m. and total foreign assets of $787m. However, it was confirmed by the Government in the following month that a substantial tranche of Qatar's reserves had remained under the control of the former Amir, Sheikh Khalifa, following his removal from office in June 1995. The sum involved was widely reported to be in the region of $3,000m. A settlement agreement was signed in February 1997 whereby Sheikh Khalifa was understood to have formally ceded control over disputed assets.

TRADE, TRANSPORT AND COMMUNICATIONS

A primary objective in development has been to diversify Qatar's economic base away from dependence on petroleum. However, despite an overall downward trend in world oil prices since 1986, oil revenues have continued to dominate the country's export earnings.

During the 1970s imports and exports grew quickly, but in the early 1980s there was a fall in Qatar's levels of trade. Imports were reduced over the period 1982–84, and in 1985 their value declined to QR 4,146.5m., the lowest annual total since 1976. The value of exports fell from QR 20,787m. in 1980 to QR 12,002m. in 1983, reflecting the reduction in petroleum exports. By 1989, the value of imports had risen to QR 4,827m. They continued to rise and were valued at QR 6,169m. in 1990 and to QR 6,261m. in 1991. Export earnings were QR 9,967m. in 1989 and QR 14,161m. in 1990, but fell to QR 11,684m. in 1991. In 1991 Japan provided 13.6% of Qatar's imports, the United Kingdom 11.8%, and the USA 11.6%. According to analysts, Japan's imports of Qatari crude petroleum in 1988 accounted for more than one-half of the estimated value of Qatar's total oil exports. In 1997 the principal source of imports (14.2%) was the USA; other important suppliers in that year were Japan, the United Kingdom, France, Germany, Italy, Saudi Arabia and the United Arab Emirates. Preliminary figures for exports in 1994 suggested that Asia (excluding Arab countries) was the principal market for exports (80.8%). The principal commodities that Qatar imports are electrical items and machinery, and there is also considerable importation of basic manufactures, food and live animals, and chemicals. Apart from its exports of petroleum, most of Qatar's export trade is with its Arab neighbours.

In 1994 Qatar's exports were valued at QR 10,851m. and its imports at QR 6,122m., leaving a visible trade surplus of QR 4,729m. Net outgoings of QR 6,556m. on the services account placed the current account in deficit by QR 1,827m., while net capital transfers of QR 138m. raised the overall balance-of-payments deficit to QR 1,965m. The visible trade surplus decreased to QR 1,940m. in 1995, increasing to QR 4,546 in 1996 and declining slightly, to QR 3,143 in 1997. In that year net services expenditure and private transfers increased the current account deficit to QR 6,111m., while net capital transfers of QR 4,336m. produced an overall balance-of-payments deficit of QR 1,775m. Provisional Central Bank figures for 1998 showed a trade surplus of QR 1,307m., from exports of QR 13,416m. and imports of QR 12,109m., while net services expenditure and private transfers produced a current-account deficit of QR 7,566m. Net capital transfers of QR 4,878m. resulted in an increased overall balance-of-payments deficit for 1998 of QR 2,688m. Japan remained Qatar's most important trading partner in 1996, taking 56.6% of its exports by value, although its share of Qatari imports was only 6.8%.

The first contracts for a major port development project at Doha were awarded in mid-1993. Extensive dredging work on the 17-km port approach channel would serve the dual purpose of upgrading the maritime access facility and providing landfill material to create 360,000 sq m of new quayside space at the port and to fill some 3.55m. sq m of reclaimed land, which was designated as the site of a new international airport. Also under development at Doha was a new container terminal with two berths and a roll-on, roll-off facility. At Ras Laffan, major new port facilities for LNG and condensate carriers and roll-on roll-off vessels were completed in 1995. The development plan for Ras Laffan proposed the linking of the port area to a 50 sq km-industrial area which would be surrounded by a buffer zone. In April 1996, Ras Laffan was officially designated an industrial city. In late 1997 a US firm was selected as consultant for a US $450m. roads project involving the reconstruction and upgrading of 280 km of the primary road network and the construction of 19 interchanges, including numerous bridges and underpasses. However, falling oil revenues in 1998 compelled the Government to modify its original plans and to split the construction work into several packages to be phased over a number of years.

The Qatar Shipping Co, established in 1992, was scheduled to inaugurate a passenger and car ferry service between Doha and Bahrain in late 1994, while expanding its cargo-carrying capabilities to include the transport of crude oil, liquefied petroleum gas, petrochemicals and iron ore. A QR 350m. fleet expansion programme was approved in June 1996. The Qatar Government is a co-owner of the regional airline Gulf Air. Qatar Airways was established by Qatari business interests in 1993 and introduced its inaugural services (on routes to the UAE and at fares which undercut Gulf Air) in January 1994. Initially, the airline was wholly dependent on leased aircraft but by mid-1995 five aircraft had been purchased and the number of destinations served increased to 21. In February 1997 Qatar Airways embarked on an extensive restructuring programme following a decision to double its capital to US $50m. through the sale of new shares to local institutions and individuals. In April 1997 legislation was introduced authorizing a $19m.-government loan to Qatar Airways. A Doha airport departure tax of QR 20 per passenger, introduced in June 1996, was expected to generate revenue of QR 13m. per year. In April 1998 Qatar Airways confirmed its intention to acquire a listing on the Doha Securities Market by the end of 1999, when the 1997 state loan to the airline would be converted into stock. Results for 1997 showed that Qatar Airways had achieved a 46% increase in passenger volume, to 630,000 and a 71% increase in revenue, and the airline was expected to break even in the near future. Under a five-year $400m. expansion plan, the airline was to increase its fleet to 15 aircraft (including at least six European Airbus A320s) and to expand its services to Europe, Asia and the Middle East. In the year ending March 1999 Qatar Airways carried 910,000 passengers. In May 1998, bids were received for the construction of a new $125m. international terminal at Doha airport, although the contract had yet to be awarded in mid-1999.

The state-owned Qatar Public Telecommunications Corpn (Q-Tel) made a net profit of QR 307m. on a turnover of about QR 1,000m. in 1996, when it had a public network with a design capacity of 350,000 lines. The main Q-Tel network had 150,000 subscribers in 1996, while there was rapid growth in the provision of ancillary services, including mobile telephones (29,000 users in 1996), cable television (30,000 users) and a paging network (60,000 users). Q-Tel held a 10% share in the Ath-Thurraya satellite programme being developed by a consortium headed by Emirates Telecommunications Corpn. In 1997 Q-Tel was the Government's largest source of revenue, excluding hydrocarbons, with net profits of QR 470m. In December 1998 Q-Tel was partially privatized with 45% of its shares being sold for some US $650m.

SOCIAL SERVICES

In 1995 Qatar had four government hospitals, with a total of 1,122 beds, and there were 715 physicians working in official medical services. In 1988, according to the World Health Organization, there were 20 physicians, three dentists and 51 nurses for every 10,000 inhabitants in Qatar, the highest ratios for any Arab country. The Hamad General Hospital (opened in 1982) has 598 beds. In 1995 there were 25 health centres and four out-patient clinics. There is a hospital for women, offering 272 maternity beds. Social welfare developments within the country have been a high priority. Education has expanded, and by 1994/95 there were 169 primary schools in the country. The University of Qatar was established in 1977, and new campus buildings were completed in February 1985.

Under the 1993/94 government budget, social services and health were allocated a total of QR 552m. plus an additional QR 235m. of capital funding from outside the budget. Major health facilities under development included a children's hospital and an outpatients' clinic, while there was a house-building target of more than 3,000 new dwellings in 1993/94. The 1994/95 capital budget for health and social services totalled QR 200.3m., to include broadcasting transmission stations as well as health centres and housing projects. The 1995/96 budget of QR 280m. focused primarily on housing and health centres. A capital allocation of QR 103m. for education and youth welfare in 1993/94 envisaged the construction of 13 schools and a new science faculty building at the University of Qatar. There was a continuing emphasis on school and university premises within the 1994/95 allocation of QR 66.7m. and the 1995/96 allocation of QR 85m.

Construction of Qatar's first privately-financed hospital (the 116-bed Al-Ahli hospital in Doha) was scheduled to begin in August 1996 and to continue for 18 months at a projected cost of QR 100m. The Government announced, in March 1996, that local private-sector funding would also be sought for other health projects, including the expansion of 14 existing facilities. Other government proposals include the introduction of compulsory health cards costing QR 50 per five-year period for Qatari nationals, QR 100 per annum for expatriate civil servants and diplomats and QR 200 per annum for other expatriates. Visitors to Qatar would be liable to pay 15% of the cost of local medical treatment. In early 1999 the Hamad Medical Corporation announced increased charges for the supply of medical services and medicines to expatriates and to foreign visitors.

The 1997/98 budget provided funding for government housing schemes, including the completion of 900 houses already under construction and the building of 700 additional houses. In 1998 the Government was considering several initiatives to improve access to housing for Qatari nationals entering private-sector employment, including the establishment of a new bank to provide housing loans. Consideration was also being given to the introduction of pension schemes and other social security provisions to encourage Qatari nationals to take up private-sector employment. The 1998/99 budget contained provision for spending of QR 241m. in the health and social services sector, of which QR 190m. would finance the completion of the 700 houses provided for under the previous budget as well as the construction of 700 new housing units. The 1998/99 budget also allocated QR 77.4m. to education and youth welfare. The 1999/2000 budget allocated QR 250m. for health and social services and QR 66m. for education and youth welfare.

Statistical Survey

Source (unless otherwise stated): Press and Publications Dept, Ministry of Education, POB 80, Doha; telex 4552.

AREA AND POPULATION

Area: 11,437 sq km (4,416 sq miles).

Population: 369,079 (males 247,852; females 121,227) at census of 16 March 1986; 640,846 (official estimate) at mid-1995; 520,500 (provisional) at census of 1997.

Density (1997): 45.5 per sq km.

Principal Towns (estimated population of municipalities, mid-1995): Doha (capital) 392,384; Ar-Rayyan 165,127; Al-Wakrah 33,891; Umm Salal 19,194; Al-Khor 10,618.

Births, Marriages and Deaths (1995): Registered live births 10,371 (birth rate 16.2 per 1,000); Registered marriages 1,488 (marriage rate 2.3 per 1,000); Registered deaths 1,000 (death rate 1.6 per 1,000).

1996: Registered live births 10,317 (birth rate 18.5 per 1,000); Registered deaths 1,015 (death rate 1.8 per 1,000) (Source: UN, *Population and Vital Statistics Report*).

Expectation of Life (UN estimates, years at birth, 1990–95): 70.5 (males 68.8; females 74.2). Source: UN, *World Population Prospects: The 1996 Revision*.

Economically Active Population (persons aged 15 years and over, March 1986): Agriculture and fishing 6,283; Mining and quarrying 4,807; Manufacturing 13,914; Electricity, gas and water 5,266; Building and construction 40,523; Trade, restaurants and hotels 21,964; Transport and communications 7,357; Finance, insurance and real estate 3,157; Community, social and personal services 96,466; Activities not adequately defined 501; Total employed 200,238 (Qatari nationals 20,807; non-Qataris 179,431). Figures include 1,025 unemployed persons with previous work experience, but exclude 944 persons seeking work for the first time.

Mid-1997 (estimate): Agriculture, etc. 5,000; Total labour force 312,000 (Source: FAO, *Production Yearbook*).

AGRICULTURE, ETC.

Principal Crops (FAO estimates, '000 metric tons, 1997): Barley 4; Cabbages 2; Tomatoes 10; Cauliflowers 1; Pumpkins 8; Cucumbers 2; Aubergines (Egg-plants) 4; Onions (dry) 4; Carrots 1; Other vegetables 11; Watermelons 2; Melons 3; Dates 15; Citrus fruits 1. Source: FAO, *Production Yearbook*.

Livestock (FAO estimates, '000 head, year ending September 1997): Horses 2; Cattle 14; Camels 47; Sheep 200; Goats 172; Chickens (million) 4. Source: FAO, *Production Yearbook*.

Livestock Products (FAO estimates, '000 metric tons, 1997): Mutton and lamb 14; Goat meat 1; Poultry meat 4; Cows' milk 11; Sheep's milk 5; Goats' milk 6; Hen eggs 4; Sheepskins 2. Source: FAO, *Production Yearbook*.

Fishing (metric tons, live weight): Total catch 5,086 in 1994; 4,271 in 1995; 4,739 in 1996. Source: FAO, *Yearbook of Fishery Statistics*.

MINING

Production ('000 metric tons, unless otherwise indicated, 1995): Crude petroleum 18,706; Natural gas (petajoules) 531. Source: UN, *Industrial Commodity Statistics Yearbook*.

INDUSTRY

Production (estimates, '000 metric tons, unless otherwise indicated, 1995): Wheat flour (including bran) 42 (1994); Nitrogenous fertilizers (nitrogen content) 858 (1994); Jet fuels 399; Motor spirit (petrol) 558; Gas-diesel (Distillate fuel) oils 770; Residual fuel oils 1,010; Liquefied petroleum gas 1,327; Cement 580; Steel bars 601 (official figure); Electric energy 5,738 million kWh. Source: mainly UN, *Industrial Commodity Statistics Yearbook*.

FINANCE

Currency and Exchange Rates: 100 dirhams = 1 Qatar riyal (QR). *Sterling, Dollar and Euro Equivalents* (30 April 1999): £1 sterling = 5.870 riyals; US $1 = 3.640 riyals; €1 = 3.857 riyals; 100 Qatar riyals = £17.04 = $27.47 = €25.92. *Exchange Rate:* Since June 1980 the official mid-point rate has been fixed at US $1 = QR 3.64.

Budget (QR million, year ending 31 March): 1995/96: *Revenue* 12,226; *Expenditure* 13,460 (Current 11,710, Capital 1,750); 1996/97: *Revenue* 13,459; *Expenditure* 15,947 (Current 14,060, Capital 1,887); 1997/98 (provisional): *Revenue* 14,351; *Expenditure* 17,722 (Current 15,632, Capital 2,090); 1998/99 (provisional): *Revenue* 12,219; *Expenditure* 15,404 (Current 13,779, Capital 1,625). Note: Figures exclude net lending and equity participation. Source: Qatar Central Bank, *Quarterly Statistical Bulletin*.

International Reserves (US $ million at 31 December 1994): Gold 41.6; IMF special drawing rights 29.0; Reserve position in IMF 44.7; Foreign exchange 584.0; Total 699.3. Source: IMF, *International Financial Statistics*.

Money Supply (QR million at 31 December 1998): Currency outside banks 1,499.3; Demand deposits at commercial banks 2,716.9; Total money 4,216.2. Source: Qatar Central Bank, *Quarterly Statistical Bulletin*.

Cost of Living (Consumer Price Index for Doha; base: 1988 = 100): 118.4 in 1995; 127.2 in 1996; 130.7 in 1997. Source: Qatar Central Bank, *Quarterly Statistical Bulletin*.

Expenditure on the Gross Domestic Product (QR million at current prices, 1995): Government final consumption expenditure 9,010; Private final consumption expenditure 8,015; Increase in stocks 50; Gross fixed capital formation 6,850; *Total domestic expenditure* 23,925; Exports of goods and services 12,550; *Less* Imports of goods and services 9,120; *GDP in purchasers' values* 27,355. Note: Figures are provisional. The revised total (in QR million) is 29,622.

Gross Domestic Product by Economic Activity (preliminary estimates, QR million at current prices, 1997): Agriculture and

fishing 292; Petroleum and natural gas 12,750; Manufacturing 2,505; Electricity and water 435; Construction 2,270; Trade, restaurants and hotels 2,557; Transport and communications 1,265; Finance, insurance, real estate and business services 3,510; Other services (including import duties, *less* imputed bank service charges) 7,880; Total 33,464. Source: Qatar Central Bank, *Quarterly Statistical Bulletin*.

Balance of Payments (estimates, QR million, 1998): Exports f.o.b. 13,416; Imports f.o.b. –12,109; *Trade balance* 1,307; Services, private and official transfers (net) –8,873; *Current balance* –7,566; Capital (net) 4,878; *Overall balance* –2,688. Source: Qatar Central Bank, *Quarterly Statistical Bulletin*.

EXTERNAL TRADE

Imports f.o.b. (QR million): 9,406 in 1996; 10,893 in 1997; 12,109 (estimate) in 1998.

Exports f.o.b. (QR million): 13,952 in 1996; 14,036 in 1997; 13,416 (estimate) in 1998.

Principal Commodities (distribution by SITC, QR million): *Imports c.i.f.* (1997): Food and live animals 1,078.5; Crude materials (inedible) except fuels 299.2; Chemicals and related products 653.4; Basic manufactures 2,737.2; Machinery and transport equipment 6,122.6; Miscellaneous manufactured articles 985.7; Total (incl. others) 12,091.5. *Exports f.o.b.*(1994): Mineral fuels and lubricants 9,297.4 (Petroleum, petroleum products, etc. 8,148.9, Gas (natural and manufactured) 1,148.5); Chemicals and related products 1,187.9 (Manufactured fertilizers 420.2, Plastics in primary forms 372.3); Basic manufactures 676.0 (Iron and steel 673.6); Total (incl. others) 11,452.8 (excl. re-exports 242.3). Source (for Imports): Qatar Central Bank, *Annual Report*.

Principal Trading Partners (QR million): *Imports c.i.f.* (1997): Australia 167; Bahrain 131; Belgium 145; Brazil 159; People's Republic of China 203; France 975; Germany 923; India 222; Indonesia 133; Italy 781; Japan 1,437; Republic of Korea 231; Netherlands 202; Saudi Arabia 744; Spain 162; Sweden 223; United Arab Emirates 631; United Kingdom 1,264; USA 1,713; Total (incl. others) 12,091. *Exports f.o.b.* (incl. re-exports, 1994): States of the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC) 1,170.0; USA 233.5; Asia (except Arab countries) 9,448.0; Australia and New Zealand 475.3; Total (incl. others) 11,695.1. Source (for Imports): Qatar Central Bank, *Annual Report*.

TRANSPORT

Road Traffic (licensed vehicles, 1995): Private 141,679; Public transport 65,926; Heavy vehicles 4,881; Taxis 1,747; Motorcycles 2,952; Trailers 2,329; General transport 2,769; *Total* 222,283 (excl. government vehicles, totalling 5,169 in 1993).

Shipping (international sea-borne freight traffic, '000 metric tons, 1994): *Goods loaded:* 5,853; *Goods unloaded:* 2,500. *Merchant Fleet* (registered at 31 December 1997): 62 vessels; 647,663 gross registered tons (Source: Lloyd's Register of Shipping, *World Fleet Statistics*.)

Civil Aviation (scheduled services 1995): Kilometres flown 21 million; Passengers carried 1,073,000; Passenger-km 2,766 million; Total ton-km 395 million. Figures include an apportionment (one-quarter) of the traffic of Gulf Air, a multinational airline with its headquarters in Bahrain. Source: UN, *Statistical Yearbook*.

TOURISM

Tourist arrivals ('000 foreign visitors, hotel occupants only): 241 in 1994; 294 in 1995; 327 in 1996. Source: World Tourism Organization, *Yearbook of Tourism Statistics*.

Hotel beds (1995): 2,667.

Directory

The Constitution

A provisional Constitution was adopted on 2 April 1970. Executive power is vested in the Amir, as Head of State, and exercised by the Council of Ministers, appointed by the Head of State. The Amir is assisted by the appointed Advisory Council of 20 members (increased to 30 in 1975 and to 35 in 1988), whose term was extended for six years in 1975, for a further four years in 1978, and for further terms of four years in 1982, 1986, 1990, 1994 and 1998. All fundamental democratic rights are guaranteed. In 1975 the Advisory Council was granted power to summon individual ministers to answer questions on legislation before promulgation. Previously the Advisory Council was restricted to debating draft bills and regulations before framing recommendations to the Council of Ministers. In November 1998 it was announced that a constitutional committee was to be established to draft a permanent constitution, and in March 1999 elections took place, by universal adult suffrage, for a 29-member Municipal Council which was to have a consultative role in the operations of the Ministry of Municipal Affairs and Agriculture.

The Government

HEAD OF STATE

Amir: Maj.-Gen. Sheikh HAMAD BIN KHALIFA ATH-THANI (assumed power 27 June 1995).

Crown Prince: Sheikh JASIM BIN HAMAD BIN KHALIFA ATH-THANI.

COUNCIL OF MINISTERS
(September 1999)

Amir, Minister of Defence and Commander-in-Chief of the Armed Forces: Maj.-Gen. Sheikh HAMAD BIN KHALIFA ATH-THANI.

Prime Minister and Minister of the Interior: Sheikh ABDULLAH BIN KHALIFA ATH-THANI.

Deputy Prime Minister: Sheikh MUHAMMAD BIN KHALIFA ATH-THANI.

Minister of Foreign Affairs: Sheikh HAMAD BIN JASIM BIN JABER ATH-THANI.

Minister of Finance, Economy and Trade: YOUSUF HUSSEIN KAMAL.

Minister of Awqaf (Religious Endowments) and Islamic Affairs: AHMAD BIN ABDULLAH SALEM AL-MARRI.

Minister of Municipal Affairs and Agriculture: ALI BIN MUHAMMAD AL-KHATIR.

Minister of Justice: HASSAN BIN ABDULLAH AL-GHANIM.

Minister of Communication and Transport: Sheikh AHMAD BIN NASSER ATH-THANI.

Minister of Education, Culture and Higher Education: MUHAMMAD ABD AR-RAHIM KAFOUD.

Minister of Energy, Industry, Electricity and Water: ABDULLAH BIN HAMAD AL-ATTIYA.

Minister of Public Health: Dr HAJAR BIN AHMAD HAJAR.

Judicial System

Justice is administered by five courts (Higher Criminal, Lower Criminal, Commercial and Civil, Labour and the Court of Appeal) on the basis of codified laws. In addition the *Shari'a* Court decides on all issues regarding the personal affairs of Muslims, specific offences where the defendant is Muslim, and civil disputes where the parties elect to have them adjudicated upon, by recourse to Islamic Law of the Holy Quran and the Prophet's Sunna or tradition. Non-Muslims are invariably tried by a court operating codified law. Independence of the judiciary is guaranteed by the provisional Constitution.

Presidency of Shari'a Courts and Islamic Affairs: POB 232, Doha; tel. 452222; telex 5115; Pres. Sheikh ABD AR-RAHMAN BIN ABDULLAH AL-MAHMOUD.

Chief Justice: MUBARAK BIN KHALIFA AS-ASARI.

Public Prosecutor: Col ABDULLAH AL-MAL.

Religion

The indigenous population are Muslims of the Sunni sect, most being of the strict Wahhabi persuasion.

Qatar Petrochemical Co (QAPCO) SAQ: POB 756, Doha; tel. 777111; telex 4871; fax 772674; f. 1974; QGPC has an 80% share; 10% is held by ELF-ATOCHEM (France); the remaining 10% is held by ENICHEM (Italy); total assets QR 3,110m.; operation of petrochemical plant at Umm Said (tel. 777111; telex 4871; fax 772674); produced 491,000 tons of ethylene, 355,000 tons of low-density polyethylene, and 49,000 tons of solid sulphur in 1998; Gen. Man. HAMAD RASHID AL-MOHANNADI.

UTILITIES

Ministry of Energy, Industry, Electricity and Water: (see above); co-ordinates production and supply of utilities in Qatar; control of electricity to be assumed by a new body, the **Qatar Electricity Corpn,** in 1999.

Qatar Electricity and Water Co (QEWC): POB 22046, Doha; tel. 858585; fax 831116; e-mail qewc@qatar.net.qa; f. 1990; manages privately-owned utilities, generation of power and water and desalination.

MAJOR COMPANIES

AKC Contracting: POB 1991, Doha; tel. 440474; fax 440497; e-mail akcqatar@qatar.net.qa; f. 1975; building, plumbing, joinery, landscaping, etc.; sales QR 59m. (1992); Man. Dir Sheikh ABD AL-AZIZ BIN KHALIFA ATH-THANI; Gen. Man. GRAHAM SCOTT-WARD; 700 employees.

Arab-Qatari Co for Dairy Production: POB 8324, Doha; tel. 601107; telex 4972; fax 600516; f. 1981; production of dairy products, ice creams and fruit juices; cap. p.u. QR 45m.; Gen. Man. (Commercial) KAMAL KANDALAFT

Arab-Qatari Co for Poultry Production: POB 3606, Doha; tel. 729042; fax 729028; produces between 1m. and 2.5m. broiler chickens, and between 10m. and 25m. eggs, per year; Dir ISMAIL FAITI AL-ISMAIL.

Kassem Darwish Fakhroo & Sons (KDS): POB 350, Doha; tel. 422781; telex 4298; fax 426378; f. 1911 (corporate group 1971); electrical, mechanical and civil contractors, general trading, manufacturers; Chair. KASSEM DARWISH FAKHROO; Man. Dir HASSAN K. DARWISH; 1,000 employees.

Mideast Constructors Ltd (MECON): POB 3325, Doha; tel. 415025; telex 4293; fax 415174; e-mail mecon@qatar.net.qa; f. 1975; mechanical and electrical instrumentation, heating, ventilating and air-conditioning, and civil engineering and contracting; annual sales QR 220m.; Chair. AHMAD AL-MANNAI; Gen. Man. SAMIR E. DWIDAR; 550 employees.

National Industrial Gas Plants: POB 1391, Doha; tel. 422116; telex 4408; fax 435030; f. 1954; production of industrial gases (oxygen, carbon dioxide, nitrogen, argon and acetylene), liquid gases (oxygen, nitrogen and argon), and dry ice, hydrostatic pressure testing of high-pressure cylinders; Pres. M. H. ALMANA; 125 employees.

Qatar Dairy Co: POB 4770, Doha; tel. 689977; fax 689922; production of dairy products.

Qatar Fertilizer Co (QAFCO) SAQ: POB 50001, Umm Said; tel. 779779; telex 4215; fax 770347; e-mail info@qafco.com; internet http://www.qafco.com; f. 1969; produced 1,371,380 tons of ammonia and 1,668,157 tons of urea in 1998; owned by QGPC (75%) and Norsk Hydro (25%); Chair. ABDULLAH H. SALATT; Man. Dir KHALIFA AS-SUWAIDI.

Qatar Flour Mills Co SAQ: POB 1444, Doha; tel. 671816; telex 4285; fax 671611; f. 1968; produced 33,000 metric tons of flour and 11,500 tons of bran in 1993; Chair. Sheikh AHMAD BIN ABDULLAH ATH-THANI; Gen. Man. GHAZI ABD AL-SALIMI.

Qatar Industrial Manufacturing Co: POB 16875, Doha; tel. 672212; fax 670344; f. 1989 to establish domestic and international industrial ventures; operates seven subsidiaries; Qatar Saudi Gypsum Co, Qatar Jet Fuel Co, Qatar Metal-Coating Co, Modern Detergent Co, Gulf Ferro Co, National Paper Co, Qatar Sand-Treatment Plant.

Qatar National Cement Co SAQ: POB 1333, Doha; tel. 350800; telex 4337; fax 417846; f. 1965; produced 470,000 tons of ordinary Portland and salt-resisting cement in 1994; Chair. KHALIFA ABDULLAH AS-SUBAYI; Gen. Man. SAEED M. AL-KUWARI.

Qatar National Plastic Factory: POB 5615, Doha; tel. 689977; telex 4365; fax 689922; production of polyethylene bags, film and UPVC pipes.

Qatar Steel Co (QASCO): POB 50090, Steel Mill, Umm Said; tel. 778778; telex 4606; fax 771424; the plant was completed in 1978, and produced 601,000 tons of concrete-reinforcing steel bars in 1995; the Govt owns a 70% share, with Kobe Steel (20%) and Tokyo Boeki (10%); Chair. AHMAD MUHAMMAD ALI AS-SUBAYI; Man. Dir NASSER MUHAMMAD AL-MANSOURI.

Qatar Hot Briquetted Iron Co (Qabico): f. 1997 by QASCO (31%), Duferco (16.3%), Gulf Investment Corpn (16.3%), National Industries Co (16.3%), Qatar Industrial Manufacturing Co (10%), Qatar Shipping Co (10%); capacity 2m. tons.

Readymix (Qatar) Ltd: POB 5007, Doha; tel. 653070; fax 651534; f. 1978; production of ready-mixed concrete; Gen. Man. W. D. FORDE.

Qatar Quarry Co Ltd: POB 5007, Doha; tel. 653070; fax 651534; f. 1983; production of aggregates, road materials and armour rock; Gen. Man. W. D. FORDE.

Transport

ROADS

In 1991 there were some 1,191 km (740 miles) of surfaced road linking Doha and the petroleum centres of Dukhan and Umm Said with the northern end of the peninsula. A 105-km (65-mile) road

from Doha to Salwa was completed in 1970, and joins one leading from Al Hufuf in Saudi Arabia, giving Qatar land access to the Mediterranean. A 418-km (260-mile) highway, built in conjunction with Abu Dhabi, links both states with the Gulf network.

SHIPPING

Doha Port has nine general cargo berths of 7.5m–9.0m depth. Total length of berths is 1,699 m. In addition, there is a flour mill berth, and a container terminal (with a depth of 12.0m and a length of 600m) with a roll-on roll-off berth at the north end, is currently under construction. Cold storage facilities exist for cargo of up to 500 tons. At Umm Said Harbour the Northern Deep Water Wharves consist of a deep-water quay 730 m long with a dredged depth alongside of 15.5 m, and a quay 570 m long with a dredged depth alongside of 13.0 m. The General Cargo Wharves consist of a quay 400 m long with a dredged depth alongside of 10.0 m. The Southern Deep Water Wharves consist of a deep water quay 508 m long with a dredged depth alongside of 13.0 m. The North Field gas project has increased the demand for shipping facilities. A major new industrial port was completed at Ras Laffan in 1995, providing facilities for LNG and condensate carriers and roll-on-roll-off vessels.

Department of Ports, Maritime Affairs and Land Transport: POB 313, Doha; tel. 457457; telex 4378; fax 413563; Dir of Ports G. A. Genkeer.

Qatar National Navigation and Transport Co Ltd (QNNTC): West Bay, Al-Tameen St, POB 153, Doha; tel. 468666; telex 4206; fax 468777; f. 1957; 100%-owned by Qatari nationals; shipping agents, stevedoring, chandlers, forwarding, shipowning, repair, construction, etc.; Chief Exec. Abd al-Aziz H. Salatt.

Qatar Shipping Co, SAQ: POB 22180; Doha; tel. 436777; telex 4888; fax 329692; e-mail qshipwdm@qatar.net.qa; f. 1992; oil and bulk cargo shipping; Chair. Abd al-Aziz H. Salat; Gen. Man. Bryan S. Archer.

CIVIL AVIATION

Doha International Airport is equipped to receive all types of aircraft. In 1995 the total number of passengers using the existing airport was 2,263,287. Construction of a new terminal, at a cost of QR 350m., began in 1997.

Department of Civil Aviation: POB 3000, Doha; tel. 428177; telex 4306; fax 429070; Dir of Civil Aviation Abd al-Aziz an-Noaimi.

Doha International Airport: POB 73, Doha; tel. 622222; fax 622044; Dir Abdullah bin Ahmad ath-Thani.

Gulf Air Co Ltd: POB 3394, Doha; tel. 455455; telex 5150; fax 449955; internet http://www.gulfair.com; jointly owned by the Govts of Bahrain, Oman, Qatar and Abu Dhabi; flights world-wide; Pres. and CEO Ahmad bin Saif an-Nahiyan.

Gulf Helicopters: POB 811, Doha; tel. 333888; fax 352287; e-mail gulfheli@qatar.net.qa; f. 1974; owned by QGPC; Chair. Abdullah bin Hamad al-Attiya.

Qatar Airways: POB 22550, Doha; tel. 621717; fax 621533; f. 1993; services to 20 international destinations; CEO Akbar al-Baker.

Defence

Estimated Defence Budget (1998): QR 4,500m.

Total armed forces (August 1998): 11,800: army 8,500; navy 1,800 (incl. marine police); air force 1,500.

Education

All education within Qatar is provided free of charge, although it is not compulsory, and numerous scholarships are awarded for study overseas. In 1994/95 there were 6,786 children receiving private pre-primary education. Primary schooling begins at six years of age and lasts for six years. In 1995/96 the 174 primary schools were attended by 53,631 pupils. The next level of education, beginning at 12 years of age, is divided between a three-year preparatory stage (with 20,701 pupils at 70 schools in 1993/94) and a further three-year secondary stage (14,817 pupils at 53 schools in 1993/94). General secondary education facilities are complemented by a technical school, a school of commerce and an institute of religious studies. Specialized instruction is also available at an institute of administration and a language teaching institute. In 1994/95 there were 3,858 teachers employed and 37,635 pupils enrolled at secondary level in Qatari schools. In 1995 the equivalent of 86% of all children in the relevant age-group (boys 87%; girls 85%) were enrolled at primary schools, while the comparable ratio for secondary enrolment was equivalent to 80% (boys 81%; girls 79%). In 1994/95 some 1,193 Qataris were sent on scholarships to higher education institutions abroad, in other Arab countries, Britain, France or the USA. In October 1973 the first two Higher Teacher Training Colleges were opened, providing education to university level. In 1993/94 the University of Qatar comprised the faculties of education, science, humanities and social studies, administration and economics, technology, engineering and *Shari'a*. In the academic year 1996/97 there were 8,475 students and a teaching staff of 643 at the University of Qatar. The 1998/99 budget allocated QR 77.4m. to education and youth welfare. The average rate of adult illiteracy in 1995 was estimated by UNESCO to be 20.6% (males 20.8%; females 20.1%).

SAUDI ARABIA

Physical and Social Geography of the Arabian Peninsula

The Arabian peninsula is a distinct geographical unit, delimited on three sides by sea—on the east by the Persian (Arabian) Gulf and the Gulf of Oman, on the south by the Indian Ocean, and on the west by the Red Sea—while its remaining (northern) side is occupied by the deserts of Jordan and Iraq. This isolated territory, extending over some 2.5m. sq km (about 1m. sq miles), is divided politically into several states. The largest of these is Saudi Arabia, which occupies 2,240,000 sq km (865,000 sq miles); to the east and south lie much smaller territories where suzerainty and even actual frontiers are disputed in some instances. Along the shores of the Persian Gulf and the Gulf of Oman there are, beginning in the north, the State of Kuwait, with two adjacent zones of 'neutral' territory; then, after a stretch of Saudi Arabian coast, the islands of Bahrain and the Qatar peninsula, followed by the United Arab Emirates and the much larger Sultanate of Oman. Yemen occupies most of the southern coastline of the peninsula, and its south-western corner.

PHYSICAL FEATURES

Structurally, the whole of Arabia is a vast platform of ancient rocks, once continuous with north-east Africa. Subsequently a series of great fissures opened, as the result of which a large trough, or rift valley, was formed and later occupied by the sea, to produce the Red Sea and Gulf of Aden. The Arabian platform is tilted, with its highest part in the extreme west, along the Red Sea, and it slopes gradually down from west to east. Thus the Red Sea coast is often bold and mountainous, whereas the Persian Gulf coast is flat, low-lying and fringed with extensive coral reefs which make it difficult to approach the shore in many places.

Dislocation of the rock strata in the west of Arabia has led to the upwelling of much lava, which has solidified into vast barren expanses, known as *harras*. Volcanic cones and flows are also prominent along the whole length of the western coast as far as Aden, where peaks rise to more than 3,000 m above sea-level. The mountains reach their highest in the south, in Yemen, with summits at 4,000 m, and the lowest part of this mountain wall occurs roughly halfway along its course, in the region of Jeddah, Mecca, and Medina. A principal reason for the location of these three Saudi Arabian towns is that they offer the easiest route inland from the coast, and one of the shortest routes across Arabia.

Further to the east the ancient platform is covered by relatively thin layers of younger rocks. Some of the strata have been eroded to form shallow depressions; others have proved more resistant, and now stand out as ridges. This central area, relieved by shallow vales and upstanding ridges and covered in many places by desert sand, is called the Najd, and is considered to be the homeland of the Wahhabi sect, which now rules the whole of Saudi Arabia. Further east, practically all the land lies well below 300 m in altitude, and both to the north and to the south are desert areas. The Nefud in the north has some wells, and even a slight rainfall, and therefore supports a few oasis cultivators and pastoral nomads. South of the Najd, however, lies the Rub' al-Khali, or Empty Quarter, a rainless, unrelieved wilderness of shifting sand, too harsh for occupation even by nomads.

Most of the east coast of Arabia (al-Hasa) is low-lying, but an exception is the imposing ridge of the Jebel al-Akhdar ('Green Mountain') of Oman, which also produces a fjord-like coastline along the Gulf of Oman. Another feature is the large river valleys, or *wadis*, cut by river action during an earlier geological period, but in modern times almost, or entirely, dry and partially filled with sand. The largest is the Wadi Hadramawt, which runs parallel to the southern coast for several hundred km; another is the Wadi Sirhan, which stretches north-westwards from the Nefud into Jordan.

CLIMATE

Because of its land-locked nature, the winds reaching Arabia are generally dry, and almost all the area is arid. In the north there is a rainfall of 100 mm–200 mm annually; further south, except near the coast, even this fails. The higher parts of the west and south do, however, experience appreciable falls—rather sporadic in some parts, but copious and reliable in areas adjacent to the Red Sea.

Because of aridity, and hence relatively cloudless skies, there are great extremes of temperature. The summer is overwhelmingly hot, with maxima of more than 50°C, which are intensified by the dark rocks, while in winter there can be general severe frost and even weeks of snow in the mountains. Another result of the wide variations in temperature is the prevalence of violent local winds. Also, near the coast, atmospheric humidity is particularly high, and the coasts of both the Red Sea and the Persian Gulf are notorious for their humidity. Average summer temperatures in Saudi Arabia's coastal regions range from 38°C to 49°C (100°F–120°F), sometimes reaching 54°C (129°F) in the interior, or falling to a minimum of 24°C (75.2°F) in Jeddah. The winters are mild, except in the mountains. Winter temperatures range from 8°C (46.4°F) to 30°C (86°F) in Riyadh, and reach a maximum of 33°C (91.4°F) in Jeddah.

Owing to the tilt of the strata eastwards, and their great elevation in the west, rain falling in the hills near the Red Sea apparently percolates gradually eastwards, to emerge as springs along the Persian Gulf coast. This phenomenon, borne out by the fact that the flow of water in the springs greatly exceeds the total rainfall in the same district, suggests that water may be present underground over much of the interior. Irrigation schemes to exploit these supplies have been developed, notably in the Najd at al-Kharj, but results have been fairly limited.

ECONOMIC LIFE

Over much of Arabia, life is based around oases. Many wells are used solely by nomads for watering their animals, but in some parts, more especially the south, there is regular cultivation. Yemen, in particular, has a well-developed agriculture, showing a gradation of crops according to altitude, with cereals, fruit, coffee and qat (a narcotic) as the chief products. Other agricultural districts are in Oman and in the large oases of the Hedjaz (including Medina and Mecca). However, conditions in Arabia are harsh, and the population depends partly on resources brought in from outside, such as revenues from pilgrims. A major change in the economy of Saudi Arabia and the Gulf States resulted from the exploitation of petroleum, the revenues from which transformed those States.

RACE, LANGUAGE AND RELIGION

The inhabitants of the centre, north and west are of almost unmixed Mediterranean stock—lightly built, long-headed and dark. In coastal districts of the east, south and south-west, intermixture of broader-headed and slightly heavier peoples of Armenoid descent is a prominent feature; and there has been some exchange of racial type with the populations on the Iranian shores of the Persian Gulf and Gulf of Oman. Owing to the long-continued slave trade, negroid influences from Africa are also widespread. On this basis it is possible to delimit two ethnic

zones within Arabia: a northern, central and western area, geographically arid and in isolation, with a relatively unmixed racial composition; and the coastlands of the south, south-west and east, showing a mixed population. A recent result of the rapid economic growth in the petroleum-producing countries has been the influx of large numbers of expatriates from the developed countries of the Western world, and labourers from developing countries further east. Arabic, however, is the sole language of Arabia. Unlike many other parts of the Middle East, European languages are not current.

As its borders enclose the holy cities of Mecca and Medina, Saudi Arabia is the centre of the Islamic faith. About 85% of Saudi Muslims belong to the Sunni sect of Islam, the remainder being Shi'ites. Except in the Eastern Province, Sunni rites prevail.

History

Revised for this edition by the Editor

ANCIENT AND MEDIEVAL HISTORY

For the most part, Arabian history has been the account of small pockets of settled civilization, subsisting mainly on trade, in the midst of nomadic tribes. The earliest urban settlements developed in the south-west, where the flourishing Minaean kingdom is believed to have been established in the 12th century BC. This was followed by the Sabaean and Himyarite kingdoms, which lasted until the sixth century AD. The term 'kingdom' in this connection implies a loose federation of city states rather than a centralized monarchy. As an important trading station between east and west, southern Arabia was brought into early contact with the Persian and Roman empires, and thereby with Judaism, Zoroastrianism, and later Christianity. Politically, however, the south Arabian principalities remained independent.

By the end of the sixth century the centre of power had shifted to the west coast, to the Hedjaz cities of at-Ta'if, Mecca and Medina. While the southern regions fell under the control of the Sasanid rulers of Persia, the independent Hedjaz grew in importance as a trade route between the Byzantine Empire, Egypt, and the East. From the fifth century, Mecca was dominated by the tribe of Quraish. Meanwhile, the central deserts remained nomadic, and the inhospitable east coast remained, for the most part, under Persian influence.

The flowering and development of Arabism from the 7th century AD, inspired by the Prophet Muhammad (the founder of Islam) proceeded, for the most part, outside the Arabian peninsula itself. The Islamic unification of the Near and Middle East reduced the importance of the Hedjaz as a trade route. Mecca retained a unique status as a centre of pilgrimage for the whole Islamic world, but Arabia as a whole, temporarily united under Muhammad and his successors, soon drifted back into disunity. Yemen was the first to break away from the weakening Abbasid Caliphate in Baghdad, and from the ninth century onwards a variety of small dynasties established themselves in San'a, Zabid, and other towns. Mecca also had its semi-independent governors, though their proximity to Egypt made them more cautious in their attitude towards the Caliphs and the later rulers of that country, particularly the Fatimids of the 10th to 12th centuries. In Oman, in the south-east, a line of spiritual Imams arose who before long were exercising temporal power. To the north the Arabian shores of the Persian Gulf provided a home for the fanatical Carmathian sect, whose influence at times extended as far as Iraq, Syria, Mecca, and Yemen.

THE OTTOMAN PERIOD

Arabia remained unsettled until the beginning of the 16th century, when the whole peninsula came nominally under the suzerainty of the Ottoman Sultans in Istanbul. Their hold was never very strong, even in the Hedjaz, and in Oman and Yemen native lines of Imams were once again exercising unfettered authority before the end of the century. More important for the future of the peninsula was the appearance of European merchant adventurers in the Indian Ocean and the Persian (Arabian) Gulf. The Portuguese were the first to arrive, in the 16th century, and they were followed in the 17th and 18th centuries by the British, Dutch and French. By the beginning of the 19th century Britain had supplanted its European rivals and had established its influence firmly in the Gulf and, to a lesser extent, along the southern coast.

The political structure of Arabia was now beginning to develop along its modern lines. Yemen was already a virtually independent Imamate; Lahej broke away in the middle of the 18th century, only to lose Aden to Britain in 1839 and to become the nucleus of the Aden Protectorate. To the north of Yemen was the principality of the Asir, generally independent, though both countries were occupied by the Turks from 1850 until the outbreak of the First World War. The Hedjaz continued to be a province of the Ottoman Empire. In 1793 the Sultanate of Oman was established with its capital at Muscat, and during the 19th century all the rulers and chieftains along the Persian Gulf coast, including Oman, the sheikhdoms of the Trucial Coast, Bahrain and Kuwait, entered into 'exclusive' treaty relations with the British Government. Britain was principally concerned with preventing French, Russian and German penetration towards India, and suppressing the trade in slaves and weapons.

Meanwhile, the Najd, in the centre of Arabia, was the scene of another upheaval with religious inspirations. The puritanical and reforming Wahhabi movement, launched in the middle of the 18th century, had by 1800 grown so powerful that its followers were able to capture Karbala and Najaf in Iraq, Damascus in Syria, and Mecca and Medina in the Hedjaz. They were defeated by Muhammad Ali of Egypt, acting in the name of the Ottoman Sultan, in 1811–18 and again in 1838, but the Wahhabi ruling house of Sa'ud continued to rule in the interior until 1890, when the rival Rashidi family, which had Turkish support, seized control of Riyadh.

In 1901 a member of the deposed Sa'udi family, Abd al-Aziz ibn Abd ar-Rahman, set out from Kuwait, where he had been living in exile, to regain the family's former domains. In 1902, with only about 200 followers, Abd al-Aziz captured Riyadh, expelled the Rashidi dynasty and proclaimed himself ruler of the Najd. Later he recovered and consolidated the outlying provinces of the kingdom, resisting Turkish attempts to subjugate him. Having restored the House of Sa'ud as a ruling dynasty, Abd al-Aziz became known as Ibn Sa'ud. To strengthen his position, Ibn Sa'ud instituted the formation of Wahhabi colonies, known as Ikhwan ('Brethren'), throughout the territory under his control. The first Ikhwan settlement was founded in 1912, and about 100 more were established, spreading Wahhabi doctrines to communities in remote desert areas, over the next 15 years. These colonies formed the basis of a centralized organization which was to prove a powerful instrument in later years. By the outbreak of the First World War (1914–18), Ibn Sa'ud was effectively the master of central Arabia, including the Hasa coast of the Persian Gulf.

EVENTS, 1914–26

When Turkey entered the war on the side of Germany in October 1914, Arabia inevitably became a centre of intrigue, if not necessarily of military action. British influence was paramount along the eastern and southern coasts, where the various sheikhs and tribal chiefs from Kuwait to the Hadramawt lost no time in severing their remaining connections with the Ottoman Empire. On the other hand, the Turks had faithful allies in Ibn Rashid of the Shammar, to the north of the Najd, and in Imam Yahya of Yemen. The Turks also maintained garrisons along

the west coast. In the centre, Ibn Sa'ud, who, in 1913, had accepted Turkish recognition of his occupation of the Hasa coast, enjoyed friendly relations with the British-controlled Government of India.

British military strategy developed, as the war dragged on, into a two-pronged thrust against the Turks from both Egypt and the Persian Gulf. In the implementation of this plan opinions were divided on the extent to which use could be made of the Arab population. The Indian Government on the eastern wing, while favouring the pretensions of Ibn Sa'ud, preferred to see the problem in purely military terms, and opposed any suggestion of an Arab revolt. This, however, was the scheme favoured by the Arab Bureau in Cairo, whose views eventually prevailed in London. They were alarmed at the Ottoman declaration of a *jihad* (holy war) and possible repercussions in Egypt and North Africa. Negotiations were started at a very early stage with Arab nationalist movements in Syria and Egypt, but these met with comparatively little success. More progress was made when the British negotiators turned their attentions to the Sharif of Mecca, Hussein, a member of the Hashimi family which had ruled in Mecca since the 11th century AD. The support of such a religious dignitary would be an effective counter to Turkish claims. Hussein was inclined to favour the Allied cause, but it was only after he had elicited from the British (in the MacMahon correspondence—see Documents on Palestine, p. 98) promises which he believed would meet Arab nationalist aspirations that he decided to move. On 5 June 1916 he proclaimed Arab independence and declared war on the Turks. By November he felt sufficiently confident to claim the title of King of the Hedjaz. Military operations continued throughout the winter, and in July 1917 the port of Aqaba was captured and the Hedjaz cleared of Turkish troops except for a beleaguered garrison in Medina.

Arabia thereafter remained comparatively peaceful, and was not even greatly disturbed by the complicated post-war political manoeuvres in the Middle East. Hussein was a rather ineffectual spokesman for the Arab point of view at the peace conferences and over the allocation of mandates, and as a result forfeited the favour of the British Government. When, therefore, he was unwise enough to challenge the growing power of his former rival Ibn Sa'ud, he found himself entirely without support. Ibn Sa'ud's stature had been steadily growing since the end of the war. In November 1921 he had succeeded in supplanting the house of Ibn Rashid and annexing the Shammar, and a year later he was recognized by the Government of India as overlord of Hayil, Shammar and Jawf. On 5 March 1924 Hussein laid claim to the title of Caliph, made vacant by the deposition of the Ottoman Sultan. His claims were nowhere recognized, and Ibn Sa'ud overran the Hedjaz in a campaign of a few months, captured Mecca and forced Hussein's abdication. Hussein's eldest son, Ali, continued to hold Jeddah for another year, but was then ousted, and on 8 January 1926 Ibn Sa'ud proclaimed himself King of the Hedjaz. At first the Najd and the Hedjaz formed a dual kingdom, but on 23 September 1932 they were merged to form the Kingdom of Saudi Arabia.

THE KINGDOM OF SAUDI ARABIA*

Ibn Sa'ud's new status was recognized by Britain in the Treaty of Jeddah of 1927, while Ibn Sa'ud, in his turn, acknowledged his rival Hussein's sons, Abdullah and Faisal, as rulers of Transjordan and Iraq, and also the special status of the British-protected sheikhdoms along the Gulf coast. The northern frontier of his domains had previously been established by the Hadda and Bahra agreements of November 1925, which set the Mandate boundaries as the limit of his expansion. The border with Yemen was settled in 1934 after protracted negotiations and a brief war.

In the years that followed, the new King's priority remained the unification and development of his country. The colonization policy which he had begun in 1912 was pursued vigorously; land settlements were established and unruliness among the bedouin was suppressed. The modernization of communications was initiated, and the need for economic development emphasized. The main damage that Saudi Arabia suffered during the Second World War was economic. The pilgrimage traffic declined to almost nothing, and in April 1943 it was necessary to include Saudi Arabia as a beneficiary of Lend-Lease, the arrangement whereby the USA supplied equipment to allied countries.

Saudi Arabia's production of crude petroleum increased steadily as new oilfields were developed. In October 1945 a petroleum refinery opened at Ras Tanura, and two years later work started on the Trans-Arabian Pipeline (Tapline), to connect the Arabian oilfields with ports on the Mediterranean Sea in Lebanon. Petroleum first reached the Lebanese port of Sidon on 2 December 1950. In the same month the Saudi Arabian Government and the Arabian-American Oil Co (Aramco) signed a new agreement providing for equal shares of the proceeds of petroleum sales. In 1956 a government-owned National Oil Co was formed to exploit areas not covered by the Aramco concession.

Saudi Arabia was a founder member of the League of Arab States (Arab League), formed in 1945, and initially played a loyal and comparatively inconspicuous part. Ibn Sa'ud sent a small force to join the fighting against Israel in the summer of 1948. When the solidarity of the League began to weaken, it was natural that he should side with Egypt and Syria rather than with his old dynastic enemies, the rulers of Iraq and Jordan. In the course of time, however, he began to turn once more to internal development, and to forget his political quarrel with the USA in his need for economic advice and aid; in 1950 and 1951 a US $15m. loan was agreed, as well as a four-point agreement and a mutual assistance pact. However, the real basis of development was the revenue from the developing petroleum industry. This was sufficient to justify the announcement, in July 1949, of a $270m. Four-Year Plan, whose main feature was an ambitious programme of railway development. Apart from this, the King's policy was one of cautious modernization at home, and the enhancement of Saudi Arabian prestige and influence in the Middle East and in world affairs generally.

AFTER IBN SA'UD

On 9 November 1953 King Ibn Sa'ud died, at the age of 71, and was succeeded by one of his many sons, Sa'ud ibn Abd al-Aziz, hitherto the Crown Prince, who had been appointed Prime Minister in the previous month. Another of the late King's sons, Faisal ibn Abd al-Aziz, replaced Sa'ud as Crown Prince and Prime Minister. The policy of strengthening the governmental machine, and of relying less on one-man rule, was continued by the formation of new ministries and a regular Council of Ministers. In March 1958, bowing to pressure from the royal family, King Sa'ud conferred on Crown Prince Faisal full powers over foreign, internal and economic affairs, with the professed aim of strengthening the machinery of government and of centralizing responsibilities. In December 1960, however, the Crown Prince resigned as Prime Minister, and the King assumed the premiership himself. In the following month, a high planning council, with a team of international experts, was formed to survey the country's resources, and there followed steady progress in the modernization of the country.

Throughout his reign, King Sa'ud regarded his role as that of a mediator between the conflicting national and foreign interests in the Arab Middle East. He refused to join either the United Arab Republic (UAR) or the rival Arab Federation. Relations with Egypt ranged from the mutual defence pacts between Egypt, Syria and Saudi Arabia in October 1955 (which Yemen and Jordan also signed a year later) to the open quarrel in March 1958 over an alleged plot to assassinate President Nasser. Subsequently, relations improved. The Saudi Government also played a leading role in bringing the Arab Governments together after Egypt's nationalization of the Suez Canal in July 1956 and the Israeli, British and French military action in the Sinai peninsula in November. In 1961 Saudi Arabia supported the Syrians in their break with the UAR, and in general, relations with that country deteriorated. By 1964, however, in spite of the tensions over the revolution in Yemen, King Sa'ud attended the Cairo conference on the Jordan waters dispute in January, and in March, after a meeting in Riyadh, diplomatic relations with the UAR were resumed.

* For subsequent developments in the rest of the Arabian peninsula, see separate chapters on Bahrain, Kuwait, Oman, Qatar, the United Arab Emirates and Yemen.

FAISAL IN POWER

In March 1964 King Sa'ud relinquished all real power over the affairs of the country to his brother, Crown Prince Faisal, who had again acted as Prime Minister intermittently during 1962, and continuously since mid-1963. The rule of Prince Faisal was expected to result in many concessions to 'Westernization', such as more cinemas and television, with more profound social and economic reforms to follow. The change of power, by which King Sa'ud retired as active monarch, was supported in a statement by the *'ulama* council of religious leaders (Council of Ulema) 'in the light of developments, the King's condition of health, and his inability to attend to state affairs'. In November 1964 Sa'ud was forced to abdicate in favour of Faisal. The new King retained the post of Prime Minister, and in March 1965 appointed his half-brother, Khalid ibn Abd al-Aziz, to be Crown Prince. On 24 August 1965 King Faisal confirmed his stature as an important Arab leader when he concluded an agreement at Jeddah with President Nasser of the UAR on a peace plan for Yemen.

Although the Yemen issue remained unresolved, there was evidence of Saudi Arabia's genuine anxiety that a solution should be found, even though in April 1966 the construction of a military airfield near the frontier brought protests from the Republican Government of Yemen and the UAR. Representatives of Saudi Arabia and the UAR met in Kuwait in August 1966 in an attempt to implement the Jeddah agreement, but relations with both the UAR and the Arab League continued to be tense.

THE SIX-DAY WAR, AND AFTER

In the June 1967 Arab–Israeli war, Saudi forces collaborated with Jordanian and Iraqi forces in action against Israel. At a summit conference of Arab leaders held in Khartoum at the end of August 1967 Saudi Arabia agreed to provide £50m. of a total £135m. fund to assist Jordan and the UAR in restoring their economic strength after the hostilities with Israel. An agreement was also concluded with President Nasser on the withdrawal of UAR and Saudi military support for the warring parties in Yemen. By way of recompense for these concessions, Saudi Arabia persuaded other Arab states that it was in their best interests to resume shipments of petroleum to Western countries—supplies had been suspended for political reasons after the war with Israel.

Although outwardly calm, the internal political situation was disturbed by abortive coups in June and September 1969. Plans for both seem to have been discovered in advance, the only visible evidence being the arrests of numbers of army and air force officers. A flight of private capital abroad was also reported. In Yemen the royalist cause, which the Saudi Government had strongly supported, appeared to be within sight of victory early in 1968. By mid-1969, however, its remaining adherents had largely been driven into exile and the civil war seemed to have come to an end, although further hostilities were reported during the 1969/70 winter. Dissension amongst the royalists, which led to the withdrawal of Saudi assistance, was a principal factor in this decline. Discussions between San'a representatives and Saudi officials took place in 1970, and the Yemen Arab Republic (YAR) was officially recognized in July. Relations with Southern Yemen (subsequently the People's Democratic Republic of Yemen—PDRY) deteriorated, however, and in December 1969 the two countries fought an extensive battle on the disputed frontier: Saudi Arabia won easily, owing mainly to its superior air power.

REPERCUSSIONS OF THE OCTOBER WAR

When the Arab–Israeli war of October 1973 broke out and US aid to Israel continued, Saudi Arabia, despite its traditionally good relationship with the West, led a movement by all the Arab petroleum-producing countries to exert political pressure by cuts in petroleum production. Since there was no immediate response from the USA, members of the Organization of the Petroleum Exporting Countries (OPEC—of which Saudi Arabia is a member, see p. 272) placed an embargo on petroleum supplies to that country and to several other developed Western countries. Supplies to the western world were not cut off entirely, but it was announced that production would be progressively reduced until attitudes towards support for Israel changed. Western nations attempted to repair their links with the petroleum-producing countries, who were debating among themselves how far they should wield the 'oil weapon' to achieve their ends.

As the possessor of 40% of the Middle East's petroleum reserves, and one-quarter of world reserves, Saudi Arabia, together with Egypt, was in the very forefront of negotiations. It soon became apparent, however, that the Saudis held different views from those of other producer nations (notably Libya, Algeria and Iran) on the extent to which their control of petroleum supplies could safely be used to put pressure on the West. It was feared in Riyadh that too much of this pressure would have unwanted economic repercussions. The more radical OPEC members wanted to retain the petroleum embargo until a satisfactory outcome to the October hostilities was reached. At a meeting in March 1974, however, Saudi Arabia pressed for a resumption of supplies to the USA and, when this was agreed, resisted any moves to increase prices for petroleum, which had risen to nearly four times the pre-hostilities level. It was reported that, in order to achieve their aim, the Saudis had threatened to leave OPEC and to lower prices unilaterally. Reluctantly, therefore, the more radical OPEC members agreed to a price freeze.

Meanwhile, in negotiations with consumer countries, the Saudis made it clear that the continued supply of petroleum was dependent not only on a change in attitudes towards Israel but on assistance to Saudi Arabia itself in industrializing and diversifying its economy, in preparation for the time when reserves of petroleum would be depleted. The USA, in particular, showed itself eager to satisfy these conditions, and an important economic and military co-operation agreement was signed in May 1974.

ASSASSINATION OF FAISAL, ACCESSION OF KHALID

On 25 March 1975 King Faisal was assassinated by one of his nephews, Prince Faisal ibn Masaed ibn Abd al-Aziz. There were fears of a conspiracy but it soon became clear that the assassin had acted on his own initiative. King Faisal was succeeded by his half-brother, Khalid, hitherto Crown Prince. The new King Khalid also became Prime Minister, and appointed one of his brothers, Fahd ibn Abd al-Aziz (Minister of the Interior since 1962), to be Crown Prince and First Deputy Prime Minister.

No major change of policy followed Khalid's succession. He quickly announced that Saudi Arabia would follow the late King Faisal's policies of pursuing Islamic solidarity and the strengthening of Arab unity, and that Saudi Arabia's objectives remained 'the recovery of occupied Arab territories' and the 'liberation of the City of Jerusalem from the claws of Zionism'.

In March 1976 Saudi Arabia established diplomatic relations with the PDRY. Although the two countries had been ideological enemies since the PDRY achieved independence (as Southern Yemen) in 1967, they were both concerned about the presence of Iranian forces in Oman. A Saudi Arabian loan was made to the needy PDRY, and it was expected that, in return, the Yemenis would abandon their support for the People's Front for the Liberation of Oman.

An indication of the growth in stature of Saudi Arabia in Arab affairs in the late 1970s was the key role which the country played in October 1976 in bringing about the Riyadh summit—a meeting which was instrumental in ending the civil war in Lebanon and also brought about reconciliation between Egypt and Syria. Saudi Arabia also asserted itself at the OPEC summit in Doha in December 1976, when the country, along with the United Arab Emirates, showed itself firmly committed to a petroleum price rise of only 5%, while the other OPEC countries insisted on a 10% rise.

Saudi Arabia supported President Sadat of Egypt, fearing that his fall from power would result in the ascendancy of Egypt's political left. When Sadat visited Israel in November 1977, Saudi Arabia gave him discreet support in his peace initiative. This position, however, was abandoned following the signing of the Egyptian-Israeli treaty in the following spring. At the Arab summit meeting held in April 1979, Saudi Arabia aligned itself with the 'moderate' states in supporting the sanctions against Egypt which had been outlined at the Arab League meeting in the previous November. In July 1979 the Saudi Government withdrew from its arms manufacturing con-

sortium with Egypt. Nevertheless, flights between Egypt and Saudi Arabia continued, and there was no ban on the employment of Egyptian workers in Saudi Arabia.

In domestic affairs, the Saudi Government was content to allow social change to unfold gradually, although the country's vast petroleum wealth and the development plans of 1975–80 and 1980–85 brought about a great improvement in communications, welfare services and the standard of living in general.

The stability of the kingdom and the hegemony of the royal family were abrubtly undermined when some 250 armed 'traditionalist' dissidents seized and occupied the Grand Mosque at Mecca on 20 November 1979, the eve of the Islamic year AH 1400. The insurgents, led by Juhaiman ibn Seif al-Otaibi, attempted to force the estimated 50,000-strong congregation (the majority of whom were subsequently released) to recognize one of their number, Muhammad ibn Abdullah al-Qatami, as the Mahdi (or 'Guided One' of Islamic theological tradition—a prophet sent to replace corruption and evil with justice and law at the end of time). Reports of the siege became increasingly confused, the authorities apparently convinced, at least initially, that the insurgents were drawn from the disaffected quarters of the country's Shi'a minority, although al-Otaibi was known to be from one of the most pre-eminent Sunni families of the Najd. Al-Otaibi declared that the corruption, ostentation and 'westernization' of the as-Sa'ud dynasty had necessitated such a response. The Council of Ulema issued special dispensation to the security forces to use arms to end the siege, which continued for two weeks, before the rebel 'purists' were defeated; al-Qatami was one of 102 insurgents killed during the liberation of the Mosque, while al-Otaibi was one of 63 rebels executed following the siege. More than 100 Saudi troops and 27 civilians were killed during the operation to relieve the Mosque.

SAUDI ARABIA IN THE 1980s

The siege of the Grand Mosque revealed a degree of popular unease in Saudi Arabia. Although the royal family retained a firm grip on power, the existing system entitled as many as 5,000 Saudi princes to royal privileges, and there was widely-rumoured disenchantment with the royal family's conspicuous consumption and privilege. An eight-man committee under the chairmanship of Prince Nayef, Minister of the Interior, was appointed in March 1980 to draft a 200-article 'system of rule' based on Islamic principles. It was announced that a consultative assembly would be formed to act as an advisory body, although the assembly was not inaugurated until 1993 (see below). Saudi Arabia's geo-political position, however, added to the unease. With the PDRY already in the Soviet orbit, with the YAR concluding an agreement to purchase armaments from the USSR in November 1979, and with the Soviet invasion of Afghanistan in December, Saudi Arabia came to feel increasingly vulnerable. This feeling was intensified by the outbreak of war between Iran and Iraq in September 1980, which caused further instability in the region. Saudi Arabia initially supported Iraq, but later came to fear that Iranian retaliation might take the form of agitating Saudi Arabia's Shi'a minority (which had rioted violently in the Eastern Province in late 1979). Saudi Arabia therefore concentrated on consolidating its position in the early 1980s. Defence spending became a major feature of Saudi Arabia's current expenditure, largely involving the purchase or loan of armaments and military equipment from the USA. In March 1981 the USA agreed to sell to Saudi Arabia five AWACS (airborne warning and control systems) aircraft in addition to the four that were supplied under US control after the outbreak of the Iran–Iraq War.

In May 1981 Saudi Arabia joined five other Gulf states in founding the Co-operation Council for the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255), a pact for economic co-operation but also with some emphasis on the formation of a military alliance and a collective security agreement. The GCC made preliminary moves towards the co-ordination of its members' defences in November 1982, when it was agreed that its own Rapid Defence Force (RDF) would be formed. This decision was ratified in October 1983, when member countries participated in the 'Peninsula Shield' joint military exercises in Oman. Saudi Arabia's defence forces form a large part of the RDF's military strength.

Saudi Arabia was one of the leading mediators in the negotiations which ended the 1981 missile crisis in Lebanon, and has become increasingly involved in trying to find a solution to the whole Arab–Israeli question and the issue of Palestinian autonomy. The basis of Saudi Arabia's policy with regard to these questions was the eight-point 'Fahd Plan', first publicized by Prince (later King) Fahd in August 1981. The plan (reproduced in Documents on Palestine, p. 115) caused concern in the remainder of the Arab world because it recognized the legitimacy of Israel, by implication, although Saudi Arabia was reluctant to admit this. The plan was due to be discussed at an Arab summit meeting at Fez, in Morocco, in November, but there was disagreement over its implications and the summit quickly broke up in disarray.

ACCESSION OF FAHD

King Khalid died suddenly on 13 June 1982 and was succeeded by his younger brother, Fahd, hitherto Crown Prince. Owing to Khalid's ill health, Fahd had already exercised considerable power. Fahd also became Prime Minister, and he appointed a half-brother, Abdullah ibn Abd al-Aziz (Commander of the National Guard since 1962), to be Crown Prince and First Deputy Prime Minister. The previous Saudi policy of positively seeking a solution to the Palestine question, inflamed still further by the Israeli move into Lebanon in June, was continued. The Saudi Government was unwilling to exercise the political influence over Syria (particularly concerning Syrian involvement in Lebanon) which Western countries assumed it to have, demonstrating clearly its priority of Arab unity. In February 1984 Crown Prince Abdullah expressed support for the Syrian position in Lebanon, demanding a withdrawal of US marines from the area.

After 1982 there was a considerable slump in government revenues from petroleum. Supportive loans to other Arab countries, including Syria and Iraq, proved to be a significant burden on the kingdom's finances. Donations to Iraq were widely thought to have totalled US $25,000m. by April 1984, and there seemed little likelihood that Saudi Arabia would abrogate the responsibility which it had assumed for supporting Iraq in its war with Iran. Under an agreement reached in the first year of the Iran–Iraq War, Saudi Arabia and Kuwait sold up to 310,000 b/d of oil (250,000 b/d from the Neutral/Partitioned Zone and the remainder from Saudi Arabia) through the Arabian Oil Co, the proceeds of which went to Iraq, to compensate it for lost export capacity. In mid-1987, however, Saudi Arabia assured Iran that it was selling only a negligible amount of oil on Iraq's behalf.

As the war between Iran and Iraq showed signs of escalating towards the end of 1983 and in early 1984, Saudi Arabia appeared to be in danger of becoming involved militarily in the conflict. In April 1984 a Saudi Arabian merchant ship, a tanker loading at Iran's Kharg island oil terminal, was struck by missiles from Iraqi fighter aircraft. In retaliatory incidents in May, Iranian aircraft attacked two more tankers, one of which was travelling in Saudi Arabian waters. In response, Saudi Arabia approached the USA to request help in improving its defence systems, by extending its air defence zone (with the new 'Fahd Line'), and by mobilizing its defences to patrol the region. At a meeting of the UN Security Council in May, the GCC countries tried unsuccessfully to secure a general condemnation of Iran's behaviour in the war. However, they were supported by Egypt, a move which heralded an improvement in relations between Egypt and the more moderate Arab countries. The willingness of the USA to become involved in safeguarding the Strait presented problems for the Gulf countries, since GCC policy countenanced the intervention of either 'superpower' only in a case of urgent need, and the Gulf States retained certain reservations in their otherwise good relations with the USA concerning, for example, US policy in Lebanon. Therefore, Saudi Arabia refused to give the USA access to military facilities on its territory in the event of a major escalation of the war between Iran and Iraq.

Saudi Arabia's concern for the development of its own defences was apparent in 1985, and was reflected particularly in the announcement of the 'Peace Shield' defence programme in February. The project, which was not expected to be complete before the mid-1990s, aimed to provide Saudi Arabia with a

computerized command, control and communications system for all of its air defences, and also involved the establishment of factories producing avionics and telecommunications equipment. Other defence projects under way in 1985 included plans for the formation of a joint strike force involving Saudi Arabia and its allies in the Gulf region, and the construction of the King Khalid military city, which was eventually to accommodate 70,000 people. Arrangements were also being made in 1985 for the introduction of military conscription. This was one of the aims of the country's fourth Development Plan (1985–90), and reflected growing concern over the dependence of Saudi Arabian military forces upon foreign recruits.

In June 1986 a controversial sale of military equipment was agreed between Saudi Arabia and the USA. The deal, which was initially valued at US $3,000m., was reduced to $265m. when plans to supply 800 *Stinger* anti-aircraft missiles and 60 advanced fighter aircraft were cancelled, owing to strong Congressional opposition. Also in June, another controversial agreement was signed between the two countries for the sale of five US-built AWACS aircraft, worth $8,600m. Saudi Arabia's co-operation became essential to the US naval convoys, which began to escort reflagged Kuwaiti tankers through the Persian Gulf in June, following an increase in attacks on shipping in the Gulf by Iran and Iraq during the year. Saudi minesweepers also helped to clear Iranian mines from the shipping lanes in the Gulf in June, when Saudi Arabia agreed to extend the area of operation of its AWACS aircraft, which had been carrying out surveillance operations in the region, monitoring Iranian and Iraqi military movements in the Iran–Iraq War. The escalation of tension in the Gulf, exacerbated by the presence of US and Soviet naval forces, resulted in the adoption of Resolution No. 598 by the UN Security Council on 20 July 1987, which urged an immediate cease-fire. Iraq agreed to observe a cease-fire if Iran would also, but Iran prevaricated, attaching conditions to its acceptance of the Resolution. In November, at an extraordinary meeting of the Arab League in Amman, Jordan, representatives of the member nations, including Saudi Arabia, unanimously condemned Iran for prolonging the war against Iraq, deplored its occupation of Arab (i.e. Iraqi) territory, and urged it to accept Resolution No. 598 without preconditions.

In early 1985, following a visit by the Saudi Minister of Foreign Affairs, Prince Sa'ud al-Faisal, to Teheran, Ali Akbar Velayati, his Iranian counterpart, visited Riyadh in an attempt to improve relations between the two countries. However, in May two bombs exploded in the Sulmaniya district of Riyadh, killing one person and injuring three others. The Iranian-based Islamic Jihad group claimed responsibility and threatened that this was the beginning of a major bombing campaign within the country. Relations between Saudi Arabia and Iran deteriorated further in 1987, following clashes on 31 July between Iranian pilgrims and Saudi security forces during the *Hajj* (the annual pilgrimage of Muslims to the Islamic holy city of Mecca). Saudi Arabia reported that 402 people, of whom 275 were Iranians, were killed in the disturbances. Confusion surrounded exactly what took place in Mecca. Iran alleged that Saudi security forces opened fire on Iranian pilgrims, and accused Saudi Arabia and the USA of planning the incident. Mass demonstrations took place in Teheran, the Saudi embassy was sacked and Iranian leaders vowed to avenge the pilgrims' deaths by overthrowing the Saudi ruling family. Saudi Arabia, on the other hand, denied that any shooting took place, and insisted that the deaths occurred during a stampede caused by Iranian pilgrims, following unlawful political demonstrations in support of Ayatollah Khomeini. The Mecca incident renewed fears in Saudi Arabia, which had first been aroused after the Islamic revolution in Shi'ite Iran in 1979, that the minority Saudi Shi'ite community would rebel against the Sunni majority, to which the Saudi royal family belongs. A more pressing concern was that Saudi Arabia might become directly involved in the war between Iran and Iraq, if Iran carried out its threats of armed retaliation. In March 1988 the Saudi Arabian Government announced its intention of temporarily limiting the number of pilgrims to Mecca from abroad during the *Hajj* season, which was to begin in mid-July. National quotas would be allocated on the basis of 1,000 pilgrims for every million citizens. This formula gave Iran a quota of 45,000. Iran's religious leader, Ayatollah Khomeini, insisted that 150,000 Iranians, the same number as in 1987, would perform the *Hajj*, and that he would not prevent them from staging political protests at Mecca. In the event, Iran decided not to send pilgrims on the *Hajj*, and it passed without incident. Saudi Arabia severed its diplomatic relations with Iran in April 1988.

In October 1986 Sheikh Ahmad Zaki Yamani was dismissed from office by King Fahd, after serving for 24 years as Minister of Petroleum and Mineral Resources. His dismissal was interpreted as a sign of King Fahd's dissatisfaction with the OPEC 'fair share' policy, adopted at the end of 1985, whereby OPEC abandoned its system of official quotas for petroleum production in an attempt to regain its share of the world market. Sheikh Hisham Nazer, the Minister of Planning, was subsequently confirmed by King Fahd as the new Minister of Petroleum and Mineral Resources, and in April 1988 he was appointed as the first Saudi Arabian chairman of Aramco, the largest oil company operating in Saudi Arabia.

In November 1987 Saudi Arabia resumed full diplomatic relations with Egypt, following a decision taken by the Arab League that permitted member states to restore relations with Egypt at their own discretion. Relations had been severed in 1979, following the signing of a peace treaty between Egypt and Israel.

In March 1988 the disclosure that Saudi Arabia had taken delivery of an unspecified number of Chinese medium-range missiles provoked threats by Israel of a pre-emptive strike on the missiles' base at al-Kharj. The USA subsequently warned Israel against taking such action. In April, however, it was reported that King Fahd, in an unprecedented move, had requested the replacement of the US ambassador, following his delivery of an official complaint from the USA concerning Saudi Arabia's purchase of the missiles. In the same month Sino–Saudi relations were further strengthened when the Deputy Minister of Foreign Affairs of the People's Republic of China became the first Chinese leader to undertake an official visit to the kingdom. In May 1988 the US Senate voted to ban sales of military equipment to Saudi Arabia (or to any other nation which had taken delivery of such missiles), unless the President could certify that the country purchasing the missiles had no chemical, biological or nuclear warheads with which to equip them.

Following the refusal of the US Congress to supply military equipment to Saudi Arabia, the kingdom signed an agreement with the United Kingdom, valued at a record $20,000m., for the supply of fighter-bomber aircraft, trainer aircraft, helicopters and minesweepers and the construction of two huge airbases in collaboration with Ballast Nedam of the Netherlands.

In October 1988 four Saudi Arabian Shi'a Muslims, convicted of sabotaging a petrochemical plant and collaborating with Iran, were executed. In an attempt to demonstrate Saudi Arabia's intention of improving relations with Iran, it was decreed that the Saudi official media would halt their campaign of attacks on that country. However, in late 1988 and early 1989 two senior Saudi Arabian intelligence officers, posing as diplomats in an attempt to trace members of the pro-Iranian Shi'a group believed to be responsible for the aforementioned sabotage, were assassinated in Turkey and in Thailand.

In December 1988 the Soviet Deputy Minister of Foreign Affairs visited Saudi Arabia to discuss the conflict in Afghanistan. Saudi Arabia, along with Sudan, recognized the Afghan *mujahidin* Government-in-exile, formed following the Soviet withdrawal, and, at a meeting of the Organization of the Islamic Conference (OIC) in March, it urged other countries to do likewise. However, the exclusion by the Government-in-exile of the eight *mujahidin* opposition groups based in Iran angered the Iranians. Relations between Saudi Arabia and Iran were further strained at the OIC meeting by King Fahd's tolerance on the controversial question of Salman Rushdie's novel, *The Satanic Verses*. Moreover, the issue of compensation for the families of the Iranian pilgrims who died in the July 1987 riots remained unresolved. Iran boycotted the pilgrimage for the second time in July 1989, owing to Saudi Arabia's refusal to abandon the quota system agreed in March 1988 by the OIC. Two explosions, which killed one pilgrim and wounded 16 in Mecca during the *Hajj*, widened the rift between the two countries. Iran blamed the USA and Saudi Arabia for the bombings, while the Saudis accused Iran of promoting terrorism. Saudi Arabia neglected to send condolences upon the death of Aya-

tollah Khomeini, illustrating the deterioration in relations with Iran. Iranian pilgrims boycotted the *Hajj* for the third successive year in 1990, and Iran claimed that the Saudi Arabian Government opposed their participation. However, Saudi Arabian officials said that Iranian pilgrims were welcome on condition that Iran observed the allocated quota.

Relations between Saudi Arabia and other Gulf states improved in 1989. In March King Fahd signed a non-aggression pact with Iraq, a development apparently designed to ease concerns among conservative Arab Gulf states about Iraq's political ambitions following the war between Iran and Iraq. In April Saudi Arabia announced that it would help Iraq to rebuild the nuclear reactor that had been destroyed by Israel, if the installation were used for peaceful purposes. In August documents ratifying the November 1988 agreement concluded by Kuwait and Saudi Arabia, concerning the property of citizens of the two countries in the Neutral Zone, were signed and exchanged at the Kuwaiti Ministry of Foreign Affairs. King Fahd's visit to Egypt in March 1989 was viewed as signifying the end of Egypt's isolation from the Arab world. Saudi Arabia and Egypt agreed to increase co-operation in trade, transport, insurance and cultural relations, but no decision regarding economic aid to Egypt was announced by King Fahd. Both countries declared their support for efforts to create a Palestinian state and denounced Israeli repression of the Palestinians in the occupied West Bank and Gaza Strip.

Defence remained a major concern in Saudi Arabia. In February 1989 the US Department of State announced that the USA was considering the sale of a large volume of military equipment to the Middle East, of which Saudi Arabia would be the main recipient. In March British Aerospace revealed that the value of the defence agreements signed by Saudi Arabia and Britain in 1985 and 1988 (see above) could ultimately reach £150,000m., representing one of the biggest arms contracts in history. In the same month, allegations that bribery was used to secure the contract led to an official investigation in Britain. Saudi Arabia denied the allegations, stating that the sale was agreed by the two Governments without the use of intermediaries.

OPERATION DESERT SHIELD AND ITS IMPLICATIONS

Saudi Arabia's concern about its capacity to defend itself and its fears of Iraqi expansionism were substantiated in August 1990, when Iraq invaded and annexed Kuwait and proceeded to deploy armed forces along the Kuwaiti-Saudi Arabian border. King Fahd decided that he had no option but to invite—in accordance with Article 51 of the UN Charter—multinational armed forces to Saudi Arabia in order to deter an attack on the country by Iraq. Thus 'Operation Desert Shield' was launched (see chapters on Kuwait and Iraq).

King Fahd condemned the Iraqi invasion of Kuwait and offered refuge to the Amir of Kuwait. Kuwait established a Government-in-exile at Ta'if, Saudi Arabia. Meanwhile, Saudi Arabia stressed the role of Egyptian, Moroccan, Pakistani, Bangladeshi, Kuwaiti and Syrian contingents in the multinational force. By so doing, it sought to counter allegations—made by President Saddam Hussain of Iraq principally, but also by the Palestine Liberation Organization (PLO) and all those opposed to the USA's policies in the Middle East—that, by allowing the deployment of US forces in its defence, it had allowed itself to become an instrument of US strategic interests in the Gulf. The perception, in the Arab world, of Saudi Arabia as such an instrument threatened the whole of its diplomacy, by which it set great store, and which was based not only on the country's wealth, its leading role in OPEC and its custodianship of the holy cities, but also on the standing of King Fahd. Saudi Arabia stressed that the presence of the multinational defensive force was temporary.

There was a shift in the pattern of Saudi Arabia's foreign relations after the onset of the Gulf crisis in August 1990. The co-operation of the USSR, within the structures of the UN, was regarded as vital to the defence of Saudi Arabia, and in September Saudi Arabia and the USSR re-established diplomatic relations after a rupture lasting 50 years. Syria, aware of the diplomatic benefits that it could gain, committed forces to the defence of Saudi Arabia.

Meanwhile, Saudi Arabia implemented retaliatory measures against Jordan and Yemen for the equivocal stance that they had adopted towards Iraq's invasion of Kuwait. In late September 1990 Saudi Arabia expelled some diplomats from Iraq, Jordan and Yemen, while emergency supplies of oil to Jordan were terminated. Privileges enjoyed by the estimated 1.5m. Yemeni expatriate workers in Saudi Arabia were withdrawn, which resulted in the return to Yemen of more than 300,000 of the expatriates. In early November discussions on the restoration of diplomatic relations were held between Saudi Arabia and Iran. In the same month President George Bush of the USA visited Saudi Arabia, where he conferred with King Fahd and the exiled Amir of Kuwait.

By early January 1991 some 30 countries had contributed ground troops, aircraft and warships to the multinational force based in Saudi Arabia and the Gulf region, although the USA played the principal logistical role in the operation. The entire Saudi Arabian armed forces (numbering about 67,500 men) were mobilized in defence of the country. Financial contributions to the cost of the multinational force were received from all over the world.

In mid-January 1991, following the failure of international diplomatic efforts to effect Iraq's withdrawal from Kuwait, the US-led multinational force launched a military campaign ('Operation Desert Storm') to liberate Kuwait, as authorized by the UN Security Council's Resolution 678, which had been adopted in late November 1990. As part of its response to the aerial bombardment which began the campaign, Iraq launched 35 *Scud* missiles (not carrying chemical warheads, as had been feared) against mainly urban targets in Saudi Arabia, and made similar attacks against Israel. Most of the missiles were intercepted by advanced air defence systems that had been installed by the USA, although one of those that struck Saudi Arabia demolished a US barracks near Dhahran, killing 28 soldiers, in February. A potentially more damaging retaliatory measure was taken by Iraq in late January, when it released an estimated 4m. barrels of petroleum from Kuwaiti storage tanks into the Gulf, thus causing what was believed to be the largest spillage ever to have occurred. Although the flow of petroleum was contained by US aerial action, the resultant slick caused extensive ecological damage and threatened many Saudi Arabian coastal installations, including desalination plants. However, the long-term effects of the spillage were eventually seen to be less devastating than had been feared. In late January Iraqi forces entered Saudi Arabia, briefly occupying the town of Ras al-Khafji, close to Saudi Arabia's border with Kuwait, before being repelled by US, Saudi Arabian and Qatari units. Other Iraqi incursions in the same region were likewise repelled, and there was no further fighting on Saudi Arabian territory. In early February Iraq formally severed diplomatic relations with Saudi Arabia. By the end of February, when hostilities were suspended, Saudi Arabian casualties included at least 26 men killed and 10 missing.

Following the liberation of Kuwait and the declaration of a cease-fire in late February 1991, the Kuwaiti Prime Minister and other members of his Government returned to Kuwait from Saudi Arabia in early March, followed subsequently by the Amir. Also in early March, Saudi Arabia and seven other Arab states in the anti-Iraq coalition (the remaining members of the GCC, Egypt and Syria) agreed to form an Arab peace-keeping force in the Gulf region, as part of a draft plan on security and economic co-operation. Later in the month the withdrawal of coalition forces from bases in Saudi Arabia began. The return to Iraq of an estimated 62,000 Iraqi prisoners of war, held in camps in Saudi Arabia, also began in March. In April Saudi Arabia announced its decision to give refuge to an estimated 50,000 Iraqis, many of whom had participated in an unsuccessful revolt against Saddam Hussain's regime in the previous month. In early May the GCC member states endorsed US proposals for an increased Western military presence in the Gulf region, as a deterrent to any future military aggression. Meanwhile, diplomatic relations between Saudi Arabia and Iran were re-established in late March 1991, and Iranian pilgrims resumed attendance of the *Hajj*, their numbers regulated in accordance with Saudi Arabia's quota system.

DOMESTIC AND FOREIGN CHALLENGES SINCE 1991

In February and May 1991 two petitions, presented to King Fahd, appealed for more extensive Islamization in areas as diverse as the armed forces, the press and all administrative and educational systems. The first petition bore the signatures of as many as 100 senior Saudi religious dignitaries, including that of Sheikh Abd al-Aziz ibn Baz, the most influential Saudi theologian. Following the second petition, the Government immediately sent security force personnel to visit leading signatories, some of whom were forbidden to travel abroad. In June the Government's Higher Judicial Council issued a statement warning the signatories of the consequences of issuing any further criticism against the King. The creation of the Higher Judicial Council, within the Ministry of Justice, was considered to be an institutional challenge to the judicial powers of the *'ulama* (religious scholars) in Saudi Arabia. Reform of the judicial system was one of the principal aims of the petition, as it stipulated the establishment of a supreme judiciary council with the authority to implement Islamic laws, which would conflict with the powers of the existing Higher Judicial Council. The petitions illustrated the growing assertiveness and restlessness of Islamic conservatives in the domestic debate on the political future of the country, which intensified after the Gulf crisis of 1990–91. On the other hand, the growth of liberal opposition was illustrated in April, when 43 intellectuals and businessmen published an open letter requesting the King to establish national and municipal councils and to curb the excesses of the Islamic religious police, the *mutaween*.

In early September 1991 it was revealed that 37,000 of the 541,000 US troops who had been deployed in Saudi Arabia during the Gulf War remained, in a non-military capacity, in the country. However, resistance to closer military co-operation came from both Islamic fundamentalists within the kingdom, and from pro-Israeli elements in the US Congress. Nevertheless, in September President Bush announced that he was authorizing the sale of 72 F-15 aircraft to Saudi Arabia.

At the end of January 1992 there were widespread reports of repression of fundamentalist dissent. On 29 January it was reported that the Minister of Justice had ordered the deposition of Sheikh Abd al-Ubaykan, the president of Riyadh's main court, who had criticized government policies in his Friday sermons and opposed the deployment of US troops on Saudi Arabian soil and the Middle East peace conference, which had begun in October 1991. At the end of the month it was reported that 20 Muslim clerics had been arrested in recent weeks, and a preacher dismissed and condemned to 80 lashes for criticizing the Saudi women's association. Sheikh ibn Baz exhorted the people of Saudi Arabia to ignore the 'smear campaign' against the Government and praised the implementation of *Shari'a* law in the kingdom. In February 15 Iraqi opposition leaders met in Riyadh in an attempt to form a united front to depose Saddam Hussain. The conference was held amid strict security and indicated that Saudi Arabia was prepared to be more forthright in its opposition to the Iraqi President. In March a royal decree announced the creation of a Consultative Council within six months. Its members were to be selected by the King every four years, but were not to have any legislative powers. Two further decrees provided the framework for the creation of regional authorities and for a 'basic law of government', equivalent to a written constitution. However, in an interview with the Kuwaiti newspaper *As-Seyassa,* King Fahd stated that the 'prevailing democratic system' in the world was unsuited to the Gulf region, and that Islam favoured 'the consultative system and openness between a ruler and his subjects', rather than free elections. In September Sheikh Muhammad al-Jubair, hitherto the Minister of Justice, was appointed Chairman of the Consultative Council.

In November 1992 a major reorganization of the 18-member Council of Ulema was instigated by royal decree. Among 10 new members appointed by the King was the new Minister of Justice, Abdullah ibn Muhammad ash-Sheikh. In a speech in December King Fahd warned the religious community not to use public platforms to discuss secular matters. He also denounced the spread of Islamic fundamentalism, and referred to attempts by 'foreign currents' to destabilize the kingdom. In May 1993 Saudi authorities disbanded the Committee for the Defence of Legitimate Rights (CDLR), established by a group of six prominent Islamic scholars and lawyers, less than two weeks after its formation. The six founders of the committee were also dismissed from their positions, and their spokesman, Muhammad al-Masari, was arrested. In the following month it was reported that an accommodation had been reached between the Saudi authorities and an opposition Shi'a organization, the Reform Movement, whereby members of that organization undertook to cease 'dissident' activities, in return for permission to return to Saudi Arabia and for the release of a number of Shi'a Muslims held in detention there. In April 1994 members of the CDLR, including al-Masari (who had recently been released from custody), relocated their organization to London, United Kingdom.

In August 1993 four royal decrees had defined the membership and administration of the new Consultative Council (Majlis ash-Shoura), and outlined new rules governing the composition and procedure of the Council of Ministers. The Consultative Council was to consist of 60 men selected by King Fahd from the educated and professional classes. It was to meet regularly in full session, and eight committees were to be established to review the activities of Government. The composition of the Council did not lead observers to expect many challenges from it to government policies. In relation to the Council of Ministers, King Fahd set fixed limits for the cabinet's term of office and that of each cabinet member. Many ministers had occupied the same portfolio since the mid-1970s.

In September 1993 a further decree concerned a provincial system of government, the last of the constitutional reforms promised in March 1992. The decree defined the nature of government for the 13 regions, as well as the rights and responsibilities of their governors, and created councils of officials and citizens for each province to monitor development and to advise the government. Each council was to meet four times a year under the chairmanship of its governor, who will be an amir with ministerial rank. By the end of 1993 both the Consultative Council and the provincial councils had been opened.

During 1994 the Saudi Government was the subject of a series of accusations of corruption and malpractice, made by foreign journalists and Saudi citizens residing abroad. In June Muhammad al-Khiweli, a high-ranking diplomat at the Saudi mission to the UN headquarters in New York, sought political asylum in the USA, accusing the Saudi Government of human rights violations, terrorism and corruption. In the same month another Saudi diplomat residing in the USA, Ahmad az-Zahrani, levelled similar accusations against the Government and sought asylum in the United Kingdom. The defections caused embarrassment to the US and British Governments, which appeared averse to jeopardizing commercial and political ties with Saudi Arabia. In August, none the less, al-Khiweli was granted asylum in the USA. Meanwhile, az-Zahrani was denied political asylum in the United Kingdom, and in November the British authorities announced their intention to deport him. During 1995 the British Government sought, unsuccessfully, to deport Muhammad al-Masari, although in January 1996 the British authorities ordered his deportation to the Caribbean island of Dominica. The Saudi Government was reported to have demanded his expulsion, and prominent British defence and aerospace companies were believed to have exerted pressure on the Government to concede to Saudi Arabia's demands in order to secure the continuation of lucrative trade agreements with that country. In March the Chief Immigration Adjudicator in the United Kingdom rejected the deportation order (finding that diplomatic and trade reasons had led to the British Government's attempt to circumvent the UN 1951 Convention on Refugees) and recommended that the Government should reconsider al-Masari's application for political asylum. In April 1996 al-Masari was granted exceptional leave to remain in the United Kingdom for a period of at least four years, although he was not granted asylum. Meanwhile, reports emerged of a split within the CDLR; in April it was announced that al-Masari would continue to lead the reorganized CDLR, while Dr Saad al-Faqih, the former Secretary-General of the CDLR, would lead the rival Islamic Reform Movement.

In September 1994 the CDLR was among organizations to report the arrest of more than 1,000 people, including clerics and academics, most of whom had attended a demonstration in Buraidah, 300 km to the north-west of Riyadh, to protest at the arrest of two religious leaders who had allegedly been agitating for the stricter enforcement of *Shari'a* (Islamic) law. The Govern-

ment subsequently confirmed that 110 arrests had been made, but in mid-October announced that 130 of the 157 people arrested in September had since been released. In early October the King approved the creation of a Higher Council for Islamic Affairs, under the chairmanship of Prince Sultan ibn Abd al-Aziz, the Second Deputy Prime Minister and Minister of Defence and Civil Aviation, in what was widely interpreted as a measure to limit the influence of militant clerics and to diminish the authority of the powerful Council of Ulema.

The Government's plan eventually to replace the expatriate workforce with Saudi nationals was given fresh impetus in late 1994 with the strict enforcement of the kingdom's residency law, which resulted in the expulsion or voluntary repatriation of more than 100,000 illegal immigrants between December 1994 and February 1995. In May 1995 it was reported that expatriate communities in Saudi Arabia had expressed their concern at the closure of dozens of foreign schools which, according to Saudi authorities, were not officially licensed. Consequently some 10,000 non-Saudi children (including 5,000 pupils from the Indian school) were reported to be left without schooling.

In June 1995 Abdullah Abd ar-Rahman al-Hudhaif, an opposition activist, was sentenced to 20 years' imprisonment for his part in an attack on a security officer and for maintaining links with the CDLR in London. In mid-August, however, Abdullah al-Hudhaif was reported to have been executed. No explanation was given for the increase to his sentence, and Western human rights groups alleged that al-Hudhaif had been denied access to lawyers and that his trial had been conducted in secrecy. A further nine opposition activists were reported to have received prison sentences ranging from three to 18 years, and, according to Amnesty International, as many as 200 'political suspects' remained in detention in the kingdom. The increase in the number of executions in Saudi Arabia during 1995—primarily for those convicted of drugs-smuggling or murder—provoked international criticism. Between January and October 1995 a total of 191 people (including six women) received the death penalty, compared with 53 during the whole of 1994, and 85 in 1993.

In August 1995 King Fahd announced the most far-reaching reshuffle of the Council of Ministers for two decades, although no changes were made to the portfolios held by members of the royal family. The key portfolios of finance and national economy and of petroleum and mineral resources were allocated to younger, though highly experienced, officials. Dr Sulaiman Abd al-Aziz as-Sulaim, hitherto Minister of Commerce, replaced Sheikh Muhammad Ali Aba al-Khail (who had managed the kingdom's finances for 20 years) as Minister of Finance and National Economy. Sheikh Hisham Mohi ad-Din Nazer was replaced as Minister of Petroleum and Mineral Resources by Ali ibn Ibrahim an-Nuaimi, hitherto President of the government-controlled oil company, Saudi Aramco. Nevertheless, the portfolio changes were not expected to result in any major alterations to the kingdom's strategic policies. Some observers regarded the appointment of a new, Western-educated, Minister of Information, Dr Fouad ibn Abd as-Salam ibn Muhammad Farsi, as more significant, possibly signalling the imminent liberalization of Saudi Arabia's press regulations. In October the new Minister of Finance and National Economy resigned, citing ill health; he was replaced by an experienced government official, Dr Abd al-Aziz al-Abdullah al-Khuwaiter, hitherto Minister of State and erstwhile Minister of Education, Agriculture and Water, who was, in turn, replaced by Dr Ibrahim Abd al-Aziz al-Assaf (hitherto Minister of State) in January 1996. In early July 1997 King Fahd issued a decree increasing the membership of the Majlis from 60 to 90 when it began its second term later that month. In early November the Islamic Reform Movement reported that a senior military commander had resigned from the Majlis, dissatisfied at the council's lack of political influence. Following the expiry of an amnesty for illegal immigrants in mid-October, the Government announced that more than 500,000 immigrant workers without valid documentation had left the country, while a further 300,000 had obtained the necessary work permits.

In May 1999 Grand Mufti Sheikh Abd al-Aziz ibn Baz, the highest religious authority in Saudi Arabia, died; he was succeeded as Grand Mufti by Sheikh Abd al-Aziz ibn Abdullah ash-Sheikh.

In June 1999 a minor cabinet reorganization was effected in which four new members were appointed to the Council of Ministers; Muhammad ibn Ali al-Fayez was also appointed to the newly-created post of Minister of the Civil Service. In July four new appointments were made to the Majlis to replace those who had joined the Council of Ministers.

In November 1995 a car-bomb exploded outside the offices of the Saudi Arabia National Guard in Riyadh, which was being used temporarily by US civilian contractors to train Saudi personnel. Seven foreign nationals (including five US citizens) were killed as a result of the explosion, and a further 60 were injured. Responsibility for the bomb was claimed by several organizations, including the Islamic Movement for Change, which earlier in the year had warned that it would initiate attacks if non-Muslim Western forces did not withdraw from the Gulf region. (In mid-1995 King Fahd had replaced six of the seven University chancellors and more than one-half of the members of the Council of Ulema, in an attempt to counter the perceived spread of Islamist zealotry.) In April 1996 four Saudi nationals were arrested in connection with the attack; in their confessions they claimed to have been influenced by Islamist groups outside the kingdom. The accused were executed at the end of the following month, despite anonymous threats of retaliation if the sentences were carried out. According to Amnesty International, their trial had been conducted in secret and they had been denied access to lawyers. The reliability of their confessions was also questioned. Amnesty International issued a report in 1997 in which the organization condemned the Saudi justice system as 'blatantly unfair', denouncing a lack of judicial supervision which permitted the widespread use of torture, amputation and execution. The report alleged that many defendants were denied access to defence lawyers, and assessed that appeals procedures were inadequate. Furthermore, the organization considered that the increasing exaction of the death penalty had been facilitated by the 'summary and secretive' nature of trials.

In late November 1995 King Fahd was admitted to hospital in Riyadh. Few details concerning the monarch's health were officially revealed, and, when Crown Prince Abdullah was entrusted with responsibility for the affairs of state on 1 January 1996, many observers expressed doubts as to whether the King would ever resume his duties. However, on 21 February King Fahd officially resumed control of the affairs of state.

In late June 1996 19 US personnel were killed, and as many as 400 others (including 147 Saudi, 118 Bangladeshi and 109 US citizens) were injured, when an explosive device attached to a petroleum tanker was detonated outside a military housing complex in al-Khobar, near Dhahran. Saudi officials pledged increased security measures in the kingdom, and offered a substantial reward for information leading to the arrest and prosecution of those responsible for the explosion (believed to be Islamist militants). Earlier in the year US officials had reportedly been critical of the Saudi authorities' investigation of the November 1995 bomb explosion, and of the swift execution of the alleged perpetrators. It was reported in early November 1996 that some 40 Saudis were being held on suspicion of involvement in the bombing. Scant information regarding the Saudi authorities' investigation into the attack emerged in late 1996, prompting speculation that Saudi Shi'a groups with possible links to Iran were being held responsible for the atrocity, rather than the same Sunni extremist factions that were widely believed to have been responsible for the November 1995 car bomb (see above).

Saudi–US relations had been placed under increasing strain as a result of the bomb attack and subsequent investigation. However, in May 1997 a Canadian court ruled that a Saudi citizen, Hani Abd ar-Rahim as-Sayegh, could be deported to the USA to face charges in connection with the June 1996 bombing; he was deported in mid-June 1997. Suspicions of Iranian involvement in the explosion were repeatedly denied by Iran. In September, however, the USA announced that there was insufficient evidence to secure a conviction, and as-Sayegh would thus not be tried in the USA. Saudi Arabia declared its intention to apply for as-Sayegh's extradition; however, his subsequent application for political asylum in the USA was expected to

delay the process. In May 1998 Saudi Arabia declared that the bombing had been perpetrated by independently-acting Saudi Arabians, although the USA continued to investigate alleged Iranian involvement. There were reports in June that the US investigations into the bombing had collapsed and that the USA had withdrawn the majority of its investigators from Saudi Arabia.

In late 1997, as tensions mounted between the Iraqi authorities and the weapons inspectors of the UN Special Commission (UNSCOM), Saudi Arabia firmly advocated a diplomatic solution. In February 1998 Saudi Arabia stated that it would not allow the USA to use Saudi territory as a base for air strikes against Iraq, and reiterated its desire for a diplomatic solution. As relations deteriorated once again between Iraq and UNSCOM in late 1998 Saudi Arabia again stated that it would not allow its territory to be used as a base for US-led air strikes against Iraq, although it was later claimed that discreet support had been given which included the use of its bases. Iraqi allegations, in February 1999, that Saudi pilots had taken part in bombing raids over Iraq were vehemently denied by the Saudi authorities.

Relations with Afghanistan deteriorated during 1998, and in September Saudi Arabia withdrew its chargé d'affaires from that country and asked the Afghan chargé d'affaires to leave Saudi Arabia. No official reason was given, but it was widely attributed to the presence in Afghanistan of the exiled Saudi dissident, Osama bin Laden, who was held responsible for the bombing of two US embassies in Africa in August. Saudi Arabia had previously enjoyed good relations with Afghanistan, and was one of only three states to have recognized the Taliban Government in that country. In October Saudi Arabia was reported to have requested bin Laden's extradition from Afghanistan, although the request was denied.

In September 1998 the Crown Prince embarked on a seven-nation tour, visiting the United Kingdom, France, the USA, Japan, the People's Republic of China, the Republic of Korea and Pakistan; among issues discussed were the stalled Middle East peace process and bilateral trade; the tour was widely viewed as an effort to raise the profile of the Crown Prince in the West, as the King's health continued to deteriorate. In May 1999 the Crown Prince undertook a further seven-nation tour, visiting South Africa, Italy, Morocco, Libya, Syria, Jordan and Egypt.

In mid-1992 there were signs of a *rapprochement* between Saudi Arabia and Jordan, as well as the PLO; King Fahd sent best wishes to King Hussein for a speedy recovery from an operation in the USA, and the Saudi Arabian Minister of Foreign Affairs received the Palestinian envoy to Riyadh, the first indication of a reconciliation since the outbreak of the Gulf crisis. In January 1994 King Fahd met PLO leader Yasser Arafat for the first time since the Gulf crisis and pledged US \$100m. towards the reconstruction of the Gaza Strip and Jericho, the two sites for Palestinian interim self-rule agreed by Israel and the PLO in their 1993 Declaration of Principles (see Documents on Palestine—p. 120). In January 1995 King Fahd held a meeting in Mecca with Yasser Arafat, and in April Saudi Arabia became the first Arab country to recognize passports issued by the Palestinian National Authority (PNA) for Palestinians in Gaza and Jericho. In June the Council of Ministers approved the import of goods made within the area controlled by the PNA. In July Jordan's Minister of Foreign Affairs met his Saudi counterpart in Riyadh, the first high-level visit made by a Jordanian official since the Gulf crisis. The normalization of relations between the two countries began in November with the appointment of a Saudi ambassador to Jordan. Relations were consolidated in February and August 1996 when King Hussein of Jordan met Crown Prince Abdullah in Saudi Arabia.

In September 1992 the Government sent a memorandum to the Government of Yemen in an attempt to expedite demarcation of the Saudi-Yemeni border. Sporadic negotiations, through the medium of a joint border commission, continued into 1993 but stalled in 1994 as a result of renewed civil war in Yemen. It became apparent that the Saudi Government's allegiance lay with the secessionists and, following their defeat in July 1994, tensions between the two countries increased. Relations deteriorated further in January 1995, when the two countries failed to renew the 1934 Ta'if agreement (renewable every 20 years), which delineated their *de facto* frontier. Following military clashes between the two sides, and intense mediation by Syria, a joint statement was issued in mid-January 1995, in which Saudi Arabia and Yemen undertook to halt all military activity in the border area; it was subsequently agreed to pursue the demarcation of the disputed border area by a joint committee. In late February the Saudi and Yemeni Governments signed a memorandum of understanding that reaffirmed their commitment to the legitimacy of the Ta'if agreement and provided for the establishment of six joint committees to delineate the land and sea borders and to develop economic and commercial ties. In mid-March, shortly after the Saudi Council of Ministers approved the memorandum of understanding, the joint Saudi-Yemeni military committee, also established by the memorandum, held its first meeting in Riyadh. In June President Saleh of Yemen visited the kingdom, accompanied by a high-ranking delegation. This was the first official Yemeni visit since February 1990. In a joint statement, issued at the end of the visit, the two Governments agreed to promote economic, commercial and cultural co-operation between the two countries. In December 1995 both countries denied that there had been further military clashes on the land border. Meetings of the joint committees continued into 1996, and in July the two countries signed a border security agreement. Despite further reported tensions, negotiations on border demarcation continued in 1997. In November, however, armed clashes on the border resulted in the deaths of three Saudis and one Yemeni border guard. In early 1998 both countries expressed their desire to resolve the border issue, and in May Saudi Arabia began issuing visas to Yemeni expatriate workers for the first time since 1990. In that month it was reported that Saudi Arabia had sent a memorandum to the UN stating that it did not recognize the 1992 border agreement between Yemen and Oman, claiming that parts of the area involved were Saudi Arabian territory. The Saudi objection to the agreement was widely believed to be related to its attempts to gain land access to the Arabian Sea, via a corridor between Yemen and Oman, which it had thus far been denied in its negotiations with Yemen. In July Yemen submitted a memorandum to the Arab League refuting the Saudi claim to the land, and stating that the Saudi protests contravened the Ta'if agreement signed by that country. During June and July, however, there were further land and sea clashes around a group of Red Sea islands in the disputed maritime border region. In July it was reported that three armed Yemenis had been killed on the island of Duwaima (area 6 sq km), as a result of an exchange of gunfire with a Saudi border patrol. According to the Saudi authorities, the patrol had acted in self-defence against the men, who were part of a small military presence that Yemen had established on the island during June and early July. The Saudi Government maintained, moreover, that some three-quarters of the island is marked as Saudi territory under the terms of the Ta'if agreement. In late July the Saudi Minister of Foreign Affairs visited his Yemeni counterpart to discuss the escalation of hostilities. A joint military committee meeting was convened in early August, but limited significant progress was made. Further tension was reported in 1999.

At the end of September 1992 Qatar accused a Saudi military force of attacking a border post at al-Khofous, killing two soldiers and capturing a third. In October Qatar suspended the 1965 border agreement with Saudi Arabia, and in the same month it was reported that Qatar was to withdraw its contingent of 200 troops from the GCC 'Peninsula Shield' force, stationed in Kuwait. However, in late December 1992, following mediation by president Hosni Mubarak of Egypt, the Qatari Amir, Sheikh Khalifa, signed an agreement in Medina with King Fahd to establish a committee which was to demarcate the border between the two states by the end of 1994. In late November 1994 Qatar boycotted a GCC ministerial session in Riyadh, in protest at alleged armed incidents on the Saudi-Qatari border earlier in that year; the Saudi Government, however, denied the allegations. In August 1995, following the coup in Qatar, the new Amir, Sheikh Hamad, visited Saudi Arabia to hold talks with King Fahd. Some observers argued that the visit, the Amir's first trip abroad since assuming power, demonstrated Sheikh Hamad's willingness to resume good relations with the kingdom. However, in December relations were again strained

when Qatar boycotted the closing session of the annual GCC summit, in protest at the selection of a Saudi national as the new GCC Secretary-General (in preference to a Qatari candidate). In January 1996, in apparent retaliation, Crown Prince Abdullah received Qatar's deposed Amir in Riyadh. None the less, in March Qatar formally announced its acceptance of the new GCC Secretary-General, and in the following month Qatar and Saudi Arabia agreed to accelerate the completion of their border demarcation (initially scheduled for the end of 1994). In June 1999 officials from Saudi Arabia and Qatar met in Riyadh to sign the final maps demarcating their joint border.

In July 1995 officials from Saudi Arabia and Oman signed documents to demarcate their joint borders. In the same month it was reported that Saudi Arabia and Kuwait had made progress on the demarcation of their mutual sea border.

In September 1994 Saudi Arabia, in common with the other GCC members, agreed to a partial removal of the economic boycott of Israel. Relations with Israel deteriorated in 1997, however, owing to Israeli plans to recommence construction of Jewish settlements in East Jerusalem. At the end of March the Arab League (of which Saudi Arabia is a member) passed a resolution recommending a number of sanctions against Israel. In common with most other Arab League and GCC members, Saudi Arabia did not attend the Middle East and North Africa conference in Doha, Qatar, in November 1997: the boycott was in protest at the presence of a delegation from Israel.

Relations with Iran, which were strained at the beginning of the year owing to allegations of Iranian involvement in the al-Khobar bombing, subsequently improved, and by mid-1997 it was announced that a Saudi–Iranian summit was planned for later in the year. In September Iran Air resumed flights to Saudi Arabia for the first time since the 1979 revolution. The installation of the new Government of President Sayed Muhammad Khatami in Iran, in August 1997, facilitated further *rapprochement*; the new Minister of Foreign Affairs, Kamal Kharrazi, toured Saudi Arabia and other GCC states in November, and Crown Prince Abdullah attended the Conference of Heads of State of the OIC in Teheran in December. There was considerable speculation that the improvement in relations reflected the desire of the two countries, as the region's principal petroleum producers, to co-operate in maintaining petroleum prices and in efforts to curtail over-production by OPEC members. An Iranian delegation, led by former President Ali Akbar Hashemi Rafsanjani, began a 10-day visit to Saudi Arabia in late February 1998. The formation of a joint ministerial committee for bilateral relations was announced at the end of the visit. Some tensions remained, however, notably with regard to Saudi Arabia's insistence that there should be no political rallies as part of the *Hajj*: Iran had urged its pilgrims to protest against the USA and Israel. In May, in what was widely seen as an attempt to maintain good relations with Iran, the Minister of the Interior stated that the Saudi Government was satisfied that the al-Khobar bombing had been carried out by Saudi nationals with no foreign assistance.

In March 1999 Saudi Arabia held talks with Iran in an effort to mediate in its dispute with the United Arab Emirates (UAE) over the Tunb islands. Despite tensions between the GCC and Iran in that month, following a statement by the GCC which condemned both Iran's recent military exercises near the islands and its claim to them and emphasized UAE sovereignty over the islands, bilateral relations continued to improve, and in May the Iranian President made an official visit to Saudi Arabia; he was the first Iranian Head of State to visit Saudi Arabia since the Revolution. Earlier in that month the Second Deputy Prime Minister and Minister of Defence and Civil Aviation, Prince Sultan ibn Abd al-Aziz as-Sa'ud, had made a visit to Iran, during which he had agreed the exchange of military attachés with his Iranian counterpart. Further talks, between the respective Ministers of Foreign Affairs, were held in July.

Relations between Saudi Arabia and the UAE had deteriorated as a result of the *rapprochement* with Iran (although Saudi Arabia insisted that improved relations with Iran would not be achieved at the expense of its relations with any other country) and in March 1999 the UAE boycotted a meeting of GCC ministers responsible for petroleum production in protest at Saudi exploration of an oilfield in disputed territory prior to an agreement being reached.

Economy

Revised for this edition by Kamil Mahdi

The economy of Saudi Arabia is dominated by petroleum, of which the country is by far the largest producer within the Organization of the Petroleum Exporting Countries (OPEC, see p. 272). Saudi Arabia has received massive revenues from petroleum exports (particularly since the dramatic increase in international petroleum prices in 1973–74), which it has used in part to finance an ambitious programme of infrastructural development and modernization, as well as far-reaching programmes for health, social and educational purposes. Substantial budgetary allocations have also been made to the country's armed forces and to the purchase of sophisticated weaponry from abroad. Public sector employment and pay expanded rapidly and heavy consumer and producer subsidies were introduced. The rapid increase in the level of government and private expenditure, to absorb the budget and foreign-exchange surpluses, has led to substantial deficits and increased borrowing since the late 1980s. Nevertheless, both major sectors of the economy and the population's standard of living remain heavily dependent upon government subsidies, and there continues to be a need for reform, which is most strongly advocated during periods of depressed international petroleum prices. Conservative and strictly Islamic in orientation, the Saudi ruling family has consistently favoured a pro-Western, market-orientated economic strategy and has placed great reliance on Western and Japanese expertise for the development of the country's petroleum and other sectors. There remains a substantial expatriate contribution to the management of various economic sectors, although Saudi nationals have come increasingly to the fore, especially in the petroleum and gas industries. Throughout the economy, expatriates form the majority of the workforce. Emphasis has been placed, under recent development plans, on the promotion of 'downstream' oil industries, such as refining and petroleum derivatives, and progress has also been made in developing the country's non-oil industries.

Whereas in the 1970s and early 1980s Saudi Arabia's exports consisted almost entirely of petroleum, by the late 1980s non-oil exports represented more than 10% of total value. A similar pattern was apparent in the structure of gross domestic product (GDP), enhanced by a sharp fall in petroleum production in the mid-1980s. Having achieved an average annual growth rate of 10.6% in the period 1968–80, Saudi Arabia's GDP declined, in real terms, at an average rate of 1.2% per year over the decade 1980–90, largely because petroleum output was reduced from a peak of almost 10m. barrels per day (b/d) in 1980 to 3.6m. b/d in 1985 (see Petroleum, below). Although production rose to more than 5m. b/d in 1988 and 1989, depressed international prices resulted in substantially reduced revenues, with adverse consequences for the current account and national budget, both of which moved into deficit. The situation was transformed by the Gulf crisis of 1990–91, as a result of which Saudi Arabia entered a new period of economic growth. The cost of the conflict to the Saudi Government was substantial, being estimated at between US $50,000m. and $65,000m., with the result that the current account and budget deficits rose sharply in 1990–91. However, partly to compensate for the loss of Iraqi supplies, Saudi Arabia was able to increase its petroleum production to more than 8m. b/d, as international petroleum prices rose sharply because of the crisis. Overall GDP exceeded $100,000m.

in 1990, for the first time since 1983, and stood at $108,640m. in 1991. The growth rate of GDP, in real terms, was estimated to be around 1% in 1992. GDP declined by 0.6% in 1993, but increased again by 0.5% in 1994, compared with 10.8% in 1990 and 9.8% in 1991. GDP increased, in real terms, by an annual average of 1.7% in 1990–97. The Government reactivated a range of major projects under the 1990–95 Five-Year Plan, aiming, in particular, at industrial diversification and import substitution. In 1991, according to World Bank figures, Saudi Arabia's gross national product (GNP) per head was $7,820 (assuming a mid-year population of 15.4m.), having declined at an average annual rate of 3.4%, in real terms over the period 1980–91 (when the population increased by an estimated 4.6% per year). During 1985–95, it was estimated, GNP per head declined, in real terms, at an average rate of 1.9% per year. In the same period the population increased by an annual average of 4.0%. In 1995, according to World Bank estimates, GNP, measured at average 1993–95 prices, was $133,540m., equivalent to $7,040 per head. In 1997 GNP was estimated at $143,400m., equivalent to $7,150 per head. In 1996–97 GNP per head decreased by an annual average of 1.4%.

In 1993 and 1994 the Saudi Government came under increasing pressure to place the public finances on a sounder footing, many years of deficit budgeting having helped to boost the Government's net outstanding domestic debt to an estimated 318,000m. riyals (equivalent to about 76% of annual GDP) in the latter year. An attempt to achieve a balanced budget in 1994 was unsuccessful, despite reductions in planned spending and lengthy delays in payments to contractors. The 1995 budget, introduced at the start of the year, combined further spending cuts with an unprecedented initiative to increase domestic revenues through the imposition of higher charges for a range of state-subsidized goods and services. This tightening of fiscal discipline coincided with favourable external factors in 1995 (notably a year-on-year rise of about 20% in the average oil export price at a time of strong growth in non-oil exports). In the 1996 budget total expenditure was 'frozen' at the 1995 level, while total revenue was expected to fall by nearly 3% if oil export prices declined as forecast. However, oil prices increased in 1996 to their highest average levels since 1990, with the result that total government revenue exceeded the budget forecast by some US $12,100m. (34.6%). Most of the additional revenue was used to fund increased spending, and some $5,900m. of payments arrears to domestic creditors were settled by the Government. Saudi Arabia's estimated GDP in 1996 was $136,000m., and the finance ministry estimated the rate of real GDP growth to be 5% in that year, although IMF estimates were lower, at 2.5%. By 1995 domestic debt had reached 405,000m. riyals (86% of GDP). This figure increased to 434,000m. (85% of GDP) during the year, despite high economic growth and improved budget finances.

Estimated GDP in 1997 was US $145,600m., said by the Government to represent nominal year-on-year growth of about 7% (the IMF estimated that real GDP had grown by only 2%). The official inflation rate for the year was less than 1%. Oil export prices remained relatively strong in 1997, and the Saudi Arabian balance of payments showed a small current-account surplus for the second successive year. Government revenue was significantly above the budget forecast and was estimated to have slightly exceeded total expenditure for the year. In sharp contrast to the two preceding budgets, Saudi Arabia's 1998 budget seriously over-estimated the level of oil export prices, which in the first half of the year suffered their steepest decline since 1986. It was clear in mid-1998 that efforts were being made throughout the public sector to hold capital and recurrent expenditure below the levels originally budgeted. Some large projects were scaled down or postponed, public-sector wages and recruitment were 'frozen', and payments to contractors were withheld for the maximum allowable settlement periods (often 180 days). In 1998 the decline in petroleum revenues resulted in an increase in the budget deficit, to 46,000m. riyals, which was financed primarily by domestic borrowing; domestic debt in that year was estimated to have exceeded 100% of GDP. The 1999 budget forecast another large deficit, of 44,000m. riyals, based on planned expenditure of 165,000m. riyals. This figure included a 13% reduction in government spending during the year and was unlikely to be achieved, as the capital budget had already been seriously curbed in previous years. Nevertheless, public finances seemed likely to improve owing to the sharp increase in petroleum prices and revenues during 1999.

AREA AND POPULATION

The area of Saudi Arabia has been estimated at 2,240,000 sq km (864,869 sq miles), but, since not all of the borders have been defined, it is not possible to arrive at a precise figure. The preliminary results of a census held in September and October 1992 recorded the total population as 16,929,294, of whom 12,304,835 (males 50.5%, females 49.5%) were Saudi Arabian citizens and 4,624,459 (males 70.4%, females 29.6%) were foreign nationals. The census results reflected the country's dependence on foreign contract labour in most areas of employment outside administration, banking and certain state enterprises. By mid-1997 the population was estimated to have increased to 19,494,000. Total civilian employment in Saudi Arabia was estimated at 5,771,800 in 1991 and by 1995 had increased to 5,839,000. It was estimated that more than three-quarters of Saudi Arabia's population resided in urban areas in 1990 (compared with less than one-half at the end of the 1960s).

A comprehensive socio-economic survey of the royal capital, Riyadh, published by the Ar-Riyadh Development Authority (ADA) in 1992, provided detailed examples of recent trends in the composition of the urban population and labour force in Saudi Arabia. Between 1986 and 1991, the survey showed, the area of land under development in Riyadh had almost doubled, while the population had likewise risen by 49%, to 2,073,800, comprising 1,334,800 Saudi nationals and 739,000 non-nationals. Net migration into the city accounted for more than one-third of the total population increase over this period. Some 153,000 Egyptians constituted the largest group of foreign nationals in Riyadh in 1991, a large number of Yemenis having been forced to leave the country after Iraq's invasion of Kuwait in 1990. The next largest group of non-nationals in 1991 comprised Syrians, Jordanians and Iraqis. The survey showed that 60% of Riyadh's 1991 population was aged less than 20 years, and just 2% aged more than 60, and that the average age of the Saudi nationals was 17.1 years. Total employment in the city was 584,779 in 1991, nearly 40% higher than in 1986, with Saudi nationals filling 254,182 jobs in 1991. The employment of women (severely restricted by Islamic custom) nearly doubled to 83,000 (of whom 72,000 were non-nationals) between 1986 and 1991, virtually all of the employed Saudi females in Riyadh being engaged in professional and technical positions. Riyadh's unskilled work-force (accounting for 28% of all jobs in the city) was almost entirely composed of foreign nationals in 1991, whereas Saudi citizens held nearly 50% of professional and technical jobs and about 73% of clerical jobs.

In February 1995 the Saudi Government stated that more than 100,000 illegal immigrants had left the country in the preceding four months, which had seen strict enforcement of the residency laws. Saudi employers were reminded that they could be fined as much as US $13,000 and imprisoned for up to three months for employing illegal workers. In July 1995 the Government announced that its 'strategic goal' was the eventual elimination of expatriate labour, which would entail acceptance by Saudi citizens of employment 'in all kinds of work and at all levels'. In December 1995 the Ministry of the Interior estimated the expatriate population at 6.2m., drawn from 190 different countries. Of these, some 4m. were employees and the remainder were dependants of employees. Expatriate remittances abroad totalled 38,100m. riyals ($10,160m.) in the first nine months of 1995. The Government urged the private sector to create 660,000 new jobs for Saudi citizens by the end of the decade. From the beginning of 1996 the Government began to enforce quotas for the employment of Saudi citizens in various sectors of the economy, including some types of manual and clerical employment. The minimum Saudi element which the affected industries were required to employ varied from 5% to 40% of the company work-force. Local private-sector employers held consultations in 1996 with a view to adopting standard contracts of employment and standard salary ranges for different occupations, the suggested minimum salaries for Saudi citizens being significantly higher than the suggested maximum salaries for expatriates doing similar work. In December 1996

government figures estimated the expatriate population to be 6.5m. Employment sectors targeted for 'Saudiization' in 1997 included the shipping industry (employing 8% of the total labour force) where in 1996 only 2% of the work-force were Saudi citizens. The number of expatriates employed by the Government in that year was 104,000 (including 51,000 in the health sector and 44,000 in education), compared with 119,500 in 1992. A three-month amnesty for illegal foreign residents in mid-1997 led to 500,000 people leaving the kingdom; a further 300,000 obtained the necessary work permits. The issuing of entry visas to Yemeni citizens, suspended since the 1990–91 Gulf crisis, was resumed in 1998, although Yemenis were now required to comply with standard Saudi work permit regulations which had previously been waived. More than 400,000 Yemenis were believed to be working in Saudi Arabia in early 1998. In July 1998 the Saudi Government restricted the duration of public-sector employment contracts for expatriates to a maximum of 10 years in most categories of employment.

DEVELOPMENT PLANS

Since 1970 the development of the Saudi economy has been guided by a series of five-year plans. The first Plan (1970–75) was a relatively modest programme costing 56,223m. riyals, of which 32,762m. riyals was allotted to economic and social development. However, after the rise in petroleum revenues in 1973–74 (see Petroleum, below), the Government found itself in possession of vast financial resources and determined to embark on a massive programme of industrialization and modernization. Hence the second Five-Year Plan (1975–80) provided for expenditure of no less than 498,230m. riyals (about US $142,000m.).

A major feature of the second Plan was a project to increase industrial output, creating two new industrial cities, one at Jubail on the Gulf coast and the other at Yanbu on the Red Sea. Development of the two sites was to take 10 years and cost around US $70,000m. Jubail was to have three petroleum refineries, six petrochemical plants, an aluminium smelter and a steel mill, as well as support industries, an industrial port and large-scale urban development. Yanbu was planned on a slightly smaller scale: two petroleum refineries, a natural gas processing plant, a petrochemical complex, other lighter industries, an industrial port and a new urban area. The Yanbu industries were to be supplied by an oil pipeline and a gas pipeline across the Arabian peninsula from the Eastern Province. There were also plans to expand existing industrial and commercial sites, at Dammam in particular.

Despite the pessimism of most foreign commentators, the Saudi Arabian Government pursued the goals of the second Plan with great determination, and the results were, on the whole, successful. Although the main industrial projects fell behind schedule, infrastructure grew apace, endowing the country with the basic transport and communications facilities which are required by a modern industrial state.

Consequently, the third Five-Year Plan (1980–85) was intended to shift the emphasis from infrastructure projects to the productive sectors, with particular importance accorded to agriculture and the aim of achieving 'food security' by being less dependent on imported foodstuffs. The Plan stressed the need for manpower training, to reduce reliance on foreign labour, and for Saudi private investors to be encouraged to play a more prominent role in the economy. Planned investment for the five-year period was set at 782,000m. riyals (about US $235,000m.), but this total did not include defence spending, the largest item of expenditure under the previous Plan.

The fourth Five-Year Plan (1985–90), published in March 1984, envisaged a total expenditure of 1,000,000m. riyals at current prices, of which 500,000m. riyals were allocated to development projects in the civilian sector. Four essential policy themes underlay the Plan: greater operational efficiency; an emphasis on non-oil revenue-generating activities, particularly industry, agriculture and financial services; a campaign to develop private-sector involvement and initiatives; and the need for further economic and social integration among the countries of the Co-operation Council of the Arab States of the Gulf (Gulf Co-operation Council—GCC, see p. 255). Within the details of the Plan, considerable emphasis was also given to raising desalination capacity, the expansion of irrigation and power facilities, a review of subsidies, the reduction of expatriate labour, the development of new industrial estates, and the expansion of Saudi Arabia's health services.

By mid-1988, the fourth Development Plan was widely considered to have fallen short of its targets, mainly as a result of the steep decline in oil revenues following the collapse in oil prices in 1986. The implementation of many projects, in particular those involving public utilities, had been delayed.

Direct military spending was to receive 312,500m. riyals of the fourth Plan's allocation, sustaining the emphasis already given to defence by the Government. As a consequence of the Iran–Iraq War, large sums of money had already been spent on defence, in particular on the Peace Shield defence system, which was announced in 1985. The programme would provide a computerized command, control and communications system for Saudi Arabia's air defences. In early 1986 another major defence contract, worth about £7,500m., was signed with the British Government for the supply of 48 *Tornado* fighter-bomber aircraft from the European Panavia consortium, 30 *Hawk* trainer aircraft from British Aerospace and 30 *Pilatus* trainers. In July 1988 a new agreement, which more than doubled the value of the orginal contract, was signed. It included a revised £1,000m. offset programme which involved bilateral investments by Saudi and British companies. In addition to aircraft, the agreement envisaged the supply of ships and the construction of two huge airbases. It is expected that the provisions of the agreement will not be fulfilled until the late 1990s.

The fifth Five-Year Development Plan (1990–95) envisaged a total expenditure of 753,000m. riyals. Owing to the crisis in the Gulf following the invasion of Kuwait by Iraq, Saudi Arabia increased military spending, and about 34% (255,000m. riyals) of total expenditure in the fifth Plan was to be allocated to defence, with education receiving 19% and health and social services 12%.

The six major themes of the 1990–95 Plan were: the expansion of government revenue, in particular from non-oil sources; increased reliance on the private sector; further job opportunities and training for the Saudi Arabian labour force; import substitution and the promotion of exports; the diversification of economic activities into non-oil areas; and a balanced development of the regions. Under the Plan, the encouragement of Saudi Arabian industry, notably in the construction sector, was to be reinforced by the '30% rule', according to which at least 30% of the value of government contracts has to be awarded to Saudi Arabian companies.

A development plan for the period 1995–2000, designed to achieve average annual growth of 3.8%, was approved by the Council of Ministers in July 1995. Priority was to be given to measures to balance the national budget by the end of the planning period (including reductions in direct and indirect price subsidies); to the development of a privatization programme; to increasing the proportion of Saudi nationals in the private-sector work-force; and to bringing about greater private-sector participation in infrastructural and other development projects. The planning ministry published a survey in 1996 which forecast average sectoral growth rates during the 1995–2000 planning period of 3.8% per annum for oil and gas and 8.3% per annum for petrochemicals. However, these forecasts and, indeed, the development plan itself were based on overly optimistic petroleum prices and state revenues and assumed the ability to sustain a high rate of growth in government investment. In the event, fluctuating petroleum prices resulted in lower than predicted revenues and consequently disrupted expenditure. Overall GDP growth for the first three years of the plan was recorded at 1.2% annually, with oil and non-oil sector growth of 1.6% and 1.0%, respectively. (The plan had predicted annual oil sector growth of 3.8% and annual non-oil sector growth of 3.9%.) Petroleum prices declined sharply in 1998 causing overall GDP to decrease by some 10.8%.

In mid-1999 the Government announced the creation of the Higher Economic Council, to increase investment, create jobs for Saudi citizens and increase private sector participation in the economy. It was to be chaired by Crown Prince Abdullah and was to report to the cabinet. It was also to comprise a consultative committee of 10 private sector representatives which was to submit economic reports and examine Saudi Arabia's development plans.

AGRICULTURE AND FISHING

Agriculture (including forestry and fishing), contributed only 6.1% of GDP in 1997, although the sector employed an estimated 12.2% of the working population in that year. Its contribution to GDP increased from 3.3% in 1984, mainly as the result of the decline in revenue from petroleum that Saudi Arabia began to experience in the mid-1980s. During the third Five-Year Plan (1980–85), the output of the agricultural sector expanded, in real terms, at an average of 8.7% per year, compared with its projected growth rate of 5.4%. Agricultural production increased by an annual average of 7.4% in 1985–93; however, in 1994 output declined by 11.7%. Cultivation is confined to oases and to irrigated regions, which comprise only 2% of the total land area. About 39% of land is used for low-grade grazing. In 1988 the Ministry of Agriculture and Water reported that, over the previous 10 years, the area of cultivated land in Saudi Arabia had increased to approximately 2.5m. ha, at a time when the agricultural labour force was falling in numbers. A considerable area of this land lies fallow, however, and only about 600,000 ha are under regular cultivation. In mid-1988 a total of 776,111 ha of agricultural land was distributed amongst the kingdom's farmers. In 1993 a noticeable tightening of government agricultural policy—enforced partly through deliberate delays in payments to some cereal farmers—reduced the wheat harvest to 3.6m. tons (down from a record 4.07m. tons in 1992), while increasing the barley harvest to 1.1m. tons (up from 406,000 tons in 1992). In 1993 exports of wheat had totalled nearly 2.2m. tons, while imports of barley (mainly for livestock feed) totalled 3.7m. tons. The Grain Silos and Flour Mills Organization (GSFMO) had announced in August 1993 that it would buy no wheat in 1994 from the six main commercial producers, while imposing quota restrictions on purchases from smaller commercial farmers, who would be entitled to an 'incentive' price of US $400 per ton. The aggregate government subsidy to wheat farmers was estimated to have reached $1,300m. per year before the production cutbacks started. The GSFMO budget for 1994 was 2,697.8m. riyals, compared with 3,336.2m. riyals in 1993. At the end of 1994 the Government announced that its planned levels of wheat purchases from farmers were 2.3m. tons in 1995/96 and 2m. tons in 1996/97, with wheat exports being discontinued in 1996/97. Thereafter, annual wheat production would be maintained in balance with the prevailing level of domestic consumption (expected to be around 1.8m. tons annually in coming years), with a limited margin of surplus production for the country's strategic stockpile of grain. However, the estimated yield of the 1996 wheat harvest was 500,000 tons below the 1.7m. tons forecast demand for that year, partly as a result of reduced plantings by farmers experiencing delays in payment. FAO figures for 1997 showed wheat consumption of 2.2m. tons, while production in that year was only 1.8m. tons. The consequent shortfall was covered by drawing down local stocks. Output of barley also declined sharply in that year, to 400,000 tons; 5m. tons of barley were imported in 1997. Subsidies on both wheat and barley production have been substantially reduced.

Watermelons, tomatoes, dates and grapes are produced in significant numbers. In 1996 the Government embarked on the third phase of a programme to combat red beetle infestation in date palms (which had caused the European Union—EU—to ban the importation of Saudi dates). Some 850,000 trees were to be cut down over a period of four months, bringing the total number felled since the launch of the programme to more than 1m. In 1998 the Government allocated 74.25m. riyals for the purchase of 21,000 tons of locally-grown dates (most of which were to be distributed to the poor).

The importance of developing the agricultural sector as a means of reducing imports has been emphasized by the Government. In 1987 an increase in local output reduced food imports to 65% of total food requirements, compared with 83% in 1980. The cost of imported food declined from US $4,669m. in 1984 to $2,799m. in 1987 and increased to $5,023m. in 1990 and $5,500m. in 1991. By 1994 the cost of food imports had fallen to $3,035m. At the start of 1998 the Government banned imports of specified fruits and vegetables from five countries—Egypt, Jordan, Lebanon, Syria and Turkey—which did not themselves permit the import of Saudi Arabian fruit and vegetables. Syria had been an important supplier of Saudi Arabia's tomato imports (worth $53m. in 1996), while Turkey and Egypt had provided most of Saudi Arabia's onion imports (worth $38m. in 1996). In February 1998 the Government announced new import tariffs on food products to protect local farmers. It subsequently banned the importation of 10 types of vegetable during Saudi Arabia's own harvesting seasons for the crops concerned.

Saudi Arabia is subject to important natural limitations on the development of agriculture, principally the scarcity of water. Agriculture accounts for 85%–90% of water demand in the kingdom, which is met mostly by non-renewable groundwater reserves. The Government has initiated an ambitious programme to increase the country's water supply, including surveys for underground water resources (20 main aquifers had been established by 1983, nine of which were being exploited), construction of dams, irrigation and drainage networks, combined with distribution of fallow land, settlement of bedouin and the introduction of mechanization. The eventual aim of the programme was to raise agricultural production to the level of near self-sufficiency in all foods. Consequently, budgetary allocations for the agricultural sector have increased considerably in recent years. The third Five-Year Plan (1980–85) projected spending on agriculture at 7,975m. riyals, and on water (mainly desalination plants) at no less than 52,979m. riyals, although much of this was to be used for developing urban water supplies. Surveys that were conducted in the 1960s indicated a potential for greatly increasing agricultural output by means of irrigation. Under the 1985–90 Plan, 50,000 ha of land were to be drained or irrigated, and 8,000 ha were to be converted into pasture land.

In 1981, according to FAO estimates, 395,000 ha of land were irrigated. Important projects which have been undertaken by the Government include the al-Hasa irrigation scheme, the Faisal Model Settlement scheme, the Wadi Gizan and Najran dam projects and the Abha dam. The al-Hasa irrigation and drainage scheme, inaugurated in December 1971, was completed over five years at a cost of 260m. riyals. It is the country's largest agricultural scheme and about 50,000 people benefit from it. The Faisal Model Settlement scheme, which cost 100m. riyals, has involved extensive land reclamation and irrigation, and provided permanent farmland and housing for 1,000 bedouin families. The Wadi Gizan dam, inaugurated in March 1971, has a reservoir with a capacity of 71m. cu m of water and was built at a cost of 42m. riyals. A second dam at Wadi Najran, completed in 1980, has added a further 68m. cu m to water storage capacity in the Gizan Najran area. The Abha dam, in the Asir region, was opened in April 1974, with a reservoir capacity of 2.4m. cu m. In all, the kingdom operated a total of 104 dams in 1983.

Apart from lack of water, the major constraint on Saudi agriculture is shortage of labour, as the population is drawn away from rural areas by the attractions of urban development, and most farm workers are expatriates. The Government is countering the drift to the towns by improving rural facilities, but the future of Saudi agriculture must lie in capital-intensive, water efficient farming. A major success has been achieved with dairy farming, using the most modern technical expertise from Sweden, Denmark and Ireland. In 1988 Masstock Saudia, a joint venture established by Ireland and Saudi Arabia in 1976, had 12 farms throughout the kingdom, and a herd of 11,000 cows, yielding an average 7,900 litres of milk per year. The Saudi Arabian Agriculture and Dairy Co (SAADCO) was formed in 1980, and by the end of 1984 had 15,000 cows and a 60 sq km farm at al-Kharj. By 1986 Saudi Arabia was self-sufficient in eggs and broiler chickens, and by 1991 it was self-sufficient in fresh milk and *laban* (a yoghurt drink), milk production being 550m. litres in 1990/91. Subsidized milk powder from the EU constitutes the main competition to local production. By 1997 milk production had increased to 700m. litres, sufficient for some 40% of total domestic requirements. Meat, dairy and other livestock production remains dependent upon various imported inputs.

Government encouragement to farmers is substantial. Interest-free loans are available through the Agricultural Bank, set up in 1963, and a total of 9,209 loans, valued at 1,551m. riyals were disbursed by the bank in 1985/86. Chemical fertilizers, domestic or imported, are distributed at half-price. There are also large subsidies available to local farmers for the purchase

of farm machinery (amounting to 45% of the total cost of the item), irrigation pumps and imported rearing stock. In response to these incentives, the agricultural sector has made rapid progress in recent years, and grew at over 6% per year in the early 1980s. As a result of declining revenue from petroleum in the early 1980s, expenditure on agriculture was reduced. In the 1985/86 financial year the total amount of loans by the Agricultural Bank was 33% lower than in the previous year, and less than one-half the level of four years earlier. Total planned lending under the fifth Development Plan was set at 14,411m. riyals, compared with 61,000m. riyals disbursed during the third Plan.

Criticism of Saudi Arabia's agricultural policy has concentrated on the high depletion rate of the non-renewable fossil aquifers from which farmers draw most of their water supply. It was estimated in 1992 that the water table in Qassim (the principal wheat-growing area) had fallen by 100 m in the previous decade. The export of subsidized wheat has also been criticized, and it has been calculated that dairy farming in Saudi Arabia uses 1,500 litres of water per litre of milk production. In March 1997 the Minister of Agriculture and Water outlined the Government's progress in implementing more responsible policies. Cutbacks in the production of cereal crops (see above) had reduced the extraction of groundwater for irrigation from 6,990m. cu m in 1992 to 1,850m. cu m in 1996, while 500 cattlefeed projects had been phased out because of their high water requirement. In 1998 the authorities were studying the feasibility of installing water meters on artesian wells used by agricultural enterprises. The Ministry of Agriculture and Water planned to spend 1,100m. riyals on water development projects in that year.

The fishing industry has grown in recent years, and by 1996 the total catch had reached 47,709 tons. New projects launched by the Saudi Fisheries Co (SFC) in the early 1990s included a facility to convert fish to fodder, a processing factory and the purchase of shrimping vessels. The SFC reported in June 1992 that stocks of shrimps in the Gulf had been almost destroyed by pollution, caused by the Gulf hostilities. The SFC recorded losses of 18.4m. riyals in 1993. In late 1995 another Saudi company signed a joint-venture agreement with a US aquaculture business to establish an indoor salt-water shrimp farm in the kingdom's Eastern Province. Costing some US $60m., the farm would comprise 22 nursery buildings, each with an annual production capacity of as much as 1,800 tons of prime tiger shrimps. The venture was scheduled to begin operations by early 1997.

PETROLEUM

The most important industry in Saudi Arabia is the production of crude petroleum and petroleum products. Saudi Arabia is the major petroleum-producer in OPEC, accounting for 29.9% of the organization's output in 1998, and is one of the three principal producers in the world, with 12.6% of global oil output in 1998, ahead of the USA (10.5%) and Russia (8.7%). Saudi Arabia's proven reserves of petroleum at the end of 1998 totalled 261,500m. barrels (24.8% of the world total and 32.7% of the OPEC total), sufficient to maintain production at 1998 levels for 80.7 years. Production is from 14 major oilfields, in particular Ghawar, Abqaiq, Safaniya and Berri. Ghawar is generally accepted as the world's largest oilfield, while Safaniya is the world's largest offshore field. The kingdom also enjoys equal rights with Kuwait to the petroleum reserves of the Saudi Arabia-Kuwait Neutral Zone, which totalled 5,000m. barrels at the start of 1993.

In 1933 a concession was granted to Standard Oil Co of California to explore for petroleum in Saudi Arabia. The operating company, the Arabian-American Oil Co (Aramco), began exploration in that year, and discovered petroleum in commercial quantities in 1938. By the end of the Second World War, four oilfields had been discovered, and the necessary facilities had been established to satisfy post-war demands for crude petroleum and refined products. Other US companies gradually acquired shares in Aramco, bringing the ownership structure in 1948 to: Standard Oil 30%, Texaco 30%, Exxon 30% and Mobil 10%.

In November 1962 the Government created the General Petroleum and Mineral Organization (PETROMIN) as the instrument for increasing state participation in the petroleum and gas industries. In accordance with the action of other Arab petroleum-producing states, the Saudi Government acquired a 25% share in Aramco in January 1973. A 100% takeover of the company was agreed in 1980 (for the subsequent creation of Saudi Aramco, see below).

The expansion of Saudi Arabia's petroleum output in the 1960s and 1970s was spectacular. Production increased from about 62m. metric tons (equivalent to 1.3m. b/d) in 1960 to 178m. tons (3.8m. b/d) in 1970, and to 412m. tons (8.5m. b/d) in 1974. This growth in output was accompanied by rising prices for petroleum, culminating in the huge increases of October and December 1973, which almost quadrupled the cost per barrel. The Saudi Government's petroleum revenues increased dramatically, from US $1,214m. in 1970 to $22,573m. in 1974. The price rises reflected OPEC's collective will to exploit a favourable market situation.

After the events of 1973–74, however, Saudi Arabia emerged as a powerful conservative and pro-Western influence in OPEC, using its high potential output to hold down the price of petroleum. In the depressed market of 1975, the country's production of crude petroleum declined to 344m. tons (7.1m. b/d), but in 1977 it rose to a new peak of 455m. tons (9.2m. b/d), with government revenues at US $36,540m. This increase in output resulted from a disagreement within OPEC over pricing. By raising output, Saudi Arabia put pressure on the market to depress prices, because countries charging higher prices would find it difficult to sell their petroleum. A compromise on OPEC pricing policy was reached in July 1977.

For most of 1978, the supply of petroleum was plentiful, prices remained steady, and Saudi Arabia kept its production below 8.5m. b/d. With the outbreak of the Iranian revolution in late 1978, however, the situation was transformed. To compensate for the Iranian shortfall, Saudi Arabia increased production to more than 10m. b/d. The country's total output for 1978 was 410m. tons (8.3m. b/d), with government revenue from petroleum reaching US $32,234m., but 919m. barrels were produced in the last quarter alone. Output was maintained at around 9.5m. b/d for most of 1979, but prices increased sharply, as intense anxiety over petroleum supplies seized the industrialized West. Despite Saudi efforts, the price of the country's petroleum rose rapidly. The price of one grade, Saudi light crude, increased from $13.3 per barrel at the start of 1979 to $28 per barrel in May 1980, the most rapid rise since 1973–74. Since Saudi Arabia's total output for 1979 was 470m. tons (9.5m. b/d) and prices doubled in the course of the year, government revenues from petroleum reached a new peak of $48,435m.

The Saudi Government raised production in the last quarter of 1980 to 10.3m. b/d to compensate for output lost as a consequence of the Iran–Iraq War, giving a record total production for the year of 493m. tons (9.99m. b/d), which remains the peak output level for any one year. Prices continued to drift upwards, Saudi light crude reaching $32 per barrel by the end of 1980, and total government revenues from petroleum in that year were US $84,466m., which represented an increase of 74% over the previous year's figure. During the first nine months of 1981, however, Saudi efforts to hold down prices finally began to have a real effect. Slack demand in the West, combined with the continued high level of Saudi output (maintained at more than 10m. b/d), made it difficult to sell petroleum at the official level and impossible for prices to rise any further. In October 1981, in an attempt to restore a unified price structure, Saudi Arabia induced OPEC to accept a package involving a $2 rise in the market price to $34 per barrel, accompanied by a cut in Saudi output to a ceiling of 8.5m. b/d. Total Saudi output for 1981 fell marginally, to 491m. tons (9.98m. b/d), but government revenues from petroleum reached a record level of about $102,000m.

During 1982 world demand for petroleum continued to fall and, after a further OPEC meeting in March, the Saudi Government declared a new upper limit of 7.5m. b/d for the country's production. In reality, output had already dropped below that figure. Total production for 1982 was 328m. tons, an average of only 6.6m. b/d, and the petroleum sector's output, as a proportion of real GDP, declined by 36.1% during the year 1982/83. Finally, in March 1983, OPEC bowed to market pressure. The member states agreed to reduce the market price by 15%, to US $29 per barrel, and to limit total OPEC output to 17.5m. b/d. Total

Saudi output for 1983 was 256m. tons (5.2m. b/d), and in 1984 production levels fell once again, to 233m. tons (4.8m. b/d), yielding revenues of $46,000m. Since 1984 Saudi Arabia has been involved in barter agreements, whereby petroleum is exchanged for other goods, particularly aircraft and military equipment.

Saudi Arabia's petroleum is mostly exported by tanker from terminals on the Gulf coast. In 1981 PETROMIN completed construction of a Trans-Arabian pipeline to Yanbu on the Red Sea coast. The pipeline, designed to carry some 1.9m. b/d (mainly for export from a Red Sea tanker terminal), shortens the export route to Western Europe and North America by about 3,500 km. A new pipeline, linking the Iraqi oilfields to the Trans-Arabian pipeline, was completed in 1985, allowing Iraq and Saudi Arabia to share the pipeline until 1989, when a direct pipeline, with a capacity of 1.6m. b/d, was planned to link Iraqi oilfields to Yanbu. A former 1,200-km line from the Saudi oilfields to Lebanon and Jordan is no longer in use.

In the 1980s Saudi Arabia acted as a 'swing producer' within OPEC, adjusting its own production levels in order to keep overall production by OPEC member states within the organization's recommended limits. However, the lack of agreement among OPEC members on pricing and production, and the loss of revenue resulting from Saudi Arabia's much lower production levels, culminated in a major change of policy in late 1985. Saudi Arabia abandoned its former role and increased sales, with petroleum exports in the last quarter of 1985 at their highest since the end of 1983. Nevertheless, total production in 1985 was only 173m. tons (3.6m. b/d), yielding revenues of US $27,000m. At the end of 1985 OPEC decided to end its official quota policy and to seek a greater share of the world market, to offset falling prices. As a result of a surge in production, international prices for crude petroleum fell precipitously in 1986, dipping below $10 per barrel in July. Accordingly, although Saudi Arabian output in 1986 rose to 251m. tons (5.2m. b/d), oil revenues fell to $20,000m.

In October 1986 the veteran Minister of Petroleum and Mineral Resources, Sheikh Ahmad Zaki Yamani, was dismissed by King Fahd. He was replaced by Sheikh Hisham Nazer, the former Minister of Planning, and a policy aimed at limiting production and increasing prices was implemented. The policy was proposed by Sheikh Nazer at an OPEC meeting held in December, whereby a target price for crude petroleum of US $18 per barrel was to be supported by an arrangement ensuring strict output quotas, with a production ceiling for the first half of 1987 of 15.8m. b/d, a reduction of 7.25% in each country's quota compared with December. Saudi Arabia, which was allotted a nominal quota of 4,133,000 b/d, was again effectively the 'swing producer'. The new production agreement came into effect on 1 January 1987. In practice, however, production in the first half of 1987 was consistently below the ceiling and prices stabilized at slightly above the reference level of $18 per barrel.

In June 1987 OPEC members agreed to maintain the reference price of US $18 per barrel in the second half of that year, but to increase their collective production by 800,000 b/d, to 16.6m. b/d. Under the revised arrangements, Saudi Arabia was allocated a quota of 4,343,000 b/d, its actual average output in 1987 being close to the quota, at 4.36m. b/d (annual production 212m. tons), yielding revenues of $25,000m. The agreement was extended for further six-month periods at OPEC meetings in December 1987 and May 1988. The ceiling for the other 12 members of OPEC was 15.06m. b/d. However, consistent over-production caused a renewed decline in the price of crude petroleum, which fell below $12 per barrel in September 1988. Total Saudi Arabian production in 1988 rose to 257m. tons (5.26m. b/d), but revenues fell to around $20,000m. In November 1988 OPEC agreed to form a committee, comprising representatives of eight member states, to monitor the production quotas of all members and to supervise adherence to the agreed production levels. At the same meeting OPEC agreed a collective production quota of 18.5m. b/d, of which Saudi Arabia's share was to be 4,524,000 b/d, to take effect from January 1989 and to operate for the first six months of the year. At the mid-1989 OPEC conference the production ceiling was raised to 19.5m. b/d, and in November quotas were redistributed within a new ceiling of 22m. b/d. Total Saudi Arabian output for the year was slightly reduced, at 256m. tons (5.2m. b/d), with revenues at $24,000m.

The OPEC meeting in Geneva in July 1990 was held in an atmosphere of increasing tension, caused by Iraq's threats of military action against those countries—principally the UAE and Kuwait—which it had accused of exceeding their production quotas. At the meeting Iraq sought to raise OPEC's minimum reference price for crude petroleum to US $25 per barrel, but, in the event, OPEC's ministerial council adopted a price of $21 per barrel and fixed a new production ceiling of 22.5m. b/d for the remainder of 1990. Quotas for individual countries remained unchanged (Saudi Arabia's at 5.38m. b/d), except that of the UAE, which was raised to 1.5m. b/d.

Prior to the full OPEC meeting in July 1990, the five principal Gulf petroleum producers had met in Jeddah and agreed to curb over-production, thus facilitating the agreement that was reached in July. Prices had increased by about US $2 per barrel as a result of the Jeddah meeting. Demand for OPEC crude petroleum was forecast at more than 22.5m. b/d for the second half of 1990, and it was hoped that restrained OPEC production would allow surplus supplies to be absorbed. However, by mid-August 1990 'panic buying' of crude petroleum, following Iraq's invasion of Kuwait at the beginning of the month, had caused 'spot' market prices to almost double. On 20 August Saudi Arabia announced that it would increase its production of crude petroleum by 2m. b/d unless OPEC agreed to hold an emergency meeting. Saudi Arabia claimed that the Geneva agreement was now obsolete. Petroleum prices had risen to about $28 per barrel, and OPEC production—since Iraqi and Kuwaiti supplies could no longer be marketed—was some 4m. b/d below the ceiling agreed at the July meeting.

Saudi Arabia was initially concerned that soaring petroleum prices would damage the world economy and, in turn, weaken future demand. While stressing its willingness to achieve an agreement within the framework of OPEC, Saudi Arabia left no doubt that it would act unilaterally if an emergency meeting was not held, and also urged the major Western countries to draw upon their strategic reserves of petroleum in order to stabilize the market. An emergency meeting of OPEC was duly held in August 1990, at which it was agreed to allow members to increase production rates above the quotas fixed in July. Iraq and Libya were absent from the meeting, and Iran refused to endorse the agreement. By early September petroleum prices had risen above US $30 per barrel in London and New York. Saudi Arabia was reported to have increased production to 7.4m. b/d, and to be exporting more than 7m. b/d. Despite OPEC's decision to increase production, the fear of hostilities in the Gulf caused prices to rise above $40 per barrel for the first time in almost a decade. Over 1990 as a whole, Saudi Arabian production averaged 6.4m. b/d (annual production 312m. tons), producing revenues of $31,500m.

OPEC quotas remained in effective suspension throughout 1991, and Saudi Arabia took advantage of the absence of Iraqi and Kuwaiti petroleum to increase its output to an average of 8.2m. b/d (annual production was almost 400m. tons, the highest level since 1981), of which only 1m. b/d was for domestic use. Although international petroleum prices eventually fell, they remained higher than the pre-crisis level, so that Saudi oil revenues rose to US $43,450m. in 1991. In mid-February 1992 Saudi Arabia protested at an OPEC decision to allocate a ceiling of 7,887,000 b/d to the kingdom for the remainder of the year, demanding that it be allotted a minimum quota of 8m. b/d. In the event, Saudi crude oil production remained significantly above 8m. b/d throughout 1992, its final average for the year being 8,377,800 b/d. Saudi Arabia accepted an OPEC ceiling of 8,395,000 b/d for the first quarter of 1993, and 8m. b/d thereafter. Average oil export earnings were estimated at $3,568m. per month for the first half of 1993 and around $3,040m. per month for the remainder of the year, when prices weakened significantly. Saudi Arabia's 1993 crude oil production averaged 8,131,700 b/d, having been cut back to fractionally over 8m. b/d by the last quarter of the year. Output averaged 8,006,700 b/d in 1994 and 8,018,000 b/d in 1995. In 1996 Saudi Arabia's output of crude oil averaged 8,150,000 b/d, while the kingdom's total oil production (including natural gas liquids) averaged 8,920,000 b/d.

Prior to the stimulus to its petroleum industry that the Gulf crisis provided, Saudi Arabia had undertaken a major reorganization of state structures responsible for the sector. This included the conversion of PETROMIN into a holding company and the creation of several affiliated operating companies with responsibilities for exploration, refining, marketing and shipping. The first of these, Petrolube, was established in February 1988, to operate the lubricating oil blending plants in Jeddah, Riyadh and Jubail. The most important of the successor companies was the Saudi Arabian Marketing and Refining Co (SAMAREC), formed in 1989 to manage petroleum refining and distribution for the Saudi domestic market and to handle state exports of refined products.

In April 1989 the Saudi Arabian Oil Co (Saudi Aramco) was formed to take control of the nationalized Aramco assets. It is an independent enterprise with the right to establish companies and initiate projects. In addition, a new Supreme Oil Council was formed to take responsibility for the country's petroleum industry. Chaired by King Fahd, the council's members include private businessmen as well as government ministers: an indication of the Government's determination to involve the private sector in the management of the economy. In June 1993 the Government effectively abolished SAMAREC, and placed its operations, together with other PETROMIN oil interests, under the management of Saudi Aramco.

In June 1989 Saudi Aramco announced that three major development projects would be proceeding as planned: the expansion of the east-west pipeline to carry crude petroleum (Petroline); the upgrading of facilities at the Safaniya and Uthmaniya oilfields; and the development of two wet crude handling and gas-gathering facilities at the onshore Uthmaniya field. The expansion of Petroline's overall capacity from 3.6m. to 4.8m. b/d (completed in mid-1993) was the largest scheme to have been undertaken in the petroleum sector for several years. In the same month it was stated that new oilfields in the al-Hawtah region, south of Riyadh, were commercially viable, and that further exploration would be undertaken; subsequent evaluation indicated a production capacity of up to 170,000 b/d of high-quality crude. In June 1991 a US company, McDermott International, was awarded a contract for work on offshore pipelines at the Zuluf oilfield, as part of the kingdom's plan to raise petroleum production capacity to 10m. b/d by the mid-1990s. By mid-1994 sustainable production capacity had reached the target level, representing a very substantial margin of excess capacity in current market conditions.

Saudi Aramco nevertheless decided in May 1995 to initiate a major development programme in the Shayba oilfield, situated on the border with Abu Dhabi, some 600 km. from the closest gathering facility in the established Saudi oilfields. Discovered in 1968, the Shayba field contained estimated reserves of up to 7,000m. barrels of very light (40°–42° API gravity) crude containing only 0.7% sulphur. Development of the field had first been considered in 1989, since when the pattern of world oil demand had undergone a significant shift towards premium-priced light crudes. Saudi Aramco expected this trend to continue, assuring the company of a relatively rapid recovery of its development costs (estimated at US $2,500m.) when the field was brought into production. Meanwhile, Saudi Aramco's policy of reducing production of heavy crude in favour of lighter grades was facilitated by the inauguration of the al-Hawtah field in late 1994, with a production capacity of 150,000 b/d of 44°–50° API 'super-light' crude. An adjacent 'super-light' field was discovered in early 1995. The Haradh oilfield, containing 34° API crude, was due to begin producing in 1996, with an initial capacity of 300,000 b/d (to be doubled by late 1998).

In 1997 Saudi Arabia's output of crude oil (excluding Neutral Zone output) averaged 8,358,000 b/d, while total Saudi Arabian oil production (including natural gas liquids and the Saudi share of Neutral Zone crude oil output) averaged 9,375,000 b/d. Saudi Arabia's OPEC crude oil production quota, which had stood at 8m. b/d since April 1993, was raised to 8,761,000 b/d at the start of January 1998 in line with an OPEC agreement on 9.5% quota increases for most member states. World oil prices subsequently fell sharply (touching their lowest levels for 12 years in 'spot' trading in March 1998) against a background of depressed demand in key Asian import markets, prompting OPEC members to undertake a fresh review of quotas. Under revised OPEC quota agreements (supported by several non-OPEC exporting countries) Saudi Arabia introduced a reduced crude oil output ceiling of 8,461,000 b/d with effect from the start of April 1998, with a further reduction of 225,000 b/d from the start of July 1998. Estimates of Saudi Arabia's average crude oil production in the second quarter of 1998 gave Saudi Aramco's own-account output as 8,250,000 b/d (including 150,000 b/d of natural gas liquids produced at the well-head); Saudi Aramco's Abu Saafa output (produced for the benefit of Bahrain) as 150,000 b/d; and the Saudi share of Neutral Zone output as 290,000 b/d. Saudi Aramco's own-account production comprises 59% light crude, 16% medium crude, 12% heavy crude, 11% extra-light crude and 2% super-light crude. In June 1998 production began at the Shayba oilfield and reached its target capacity of 500,000 b/d in August. With Saudi Arabia continuing to make full use of its agreed OPEC production ceiling, the proportion of extra-light crude in Saudi Aramco's output was set to rise in the second half of 1998 as output of other grades was cut back to accommodate the Shayba output. Saudi Aramco decided in June 1998 (while prospective contractors were drawing up tenders for the work) to postpone implementation of a project to double the production capacity of the Haradh oilfield. There were no other 'upstream' oil development projects on Saudi Aramco's current planning agenda. Nevertheless, during Crown Prince Abdullah's international tour in September 1998, he held meetings with senior executives of foreign oil companies, generating optimism about the possibility of foreign participation in upstream Saudi oil activities. A number of companies subsequently submitted proposals for investment in the Saudi upstream sector, although Saudi Arabia stated that participation would only be allowed in projects involving non-associated gas, petrochemicals and refining, at that time.

Petroleum prices declined further in late 1998, and in March 1999 Saudi Arabia negotiated further production cuts with OPEC and non-OPEC producers (effective from 1 April). Saudi Arabia reduced production by 585,000 b/d, to 7,438,000 b/d, as part of a total pledged reduction of some 2m. b/d. As a result of this round of production cuts, petroleum prices had increased substantially by mid-1999.

INDUSTRY, GAS AND MINING

Saudi Arabia is making determined efforts to achieve major industrial development, financed mainly by government revenues from petroleum, under the aegis of successive development plans (see Development Plans, above). The cornerstone of the industrialization programme is the construction of refineries and processing industries to exploit the country's huge reserves of petroleum and natural gas (Saudi Arabia had published proven gas reserves of 5,790,000m. cu m at the end of 1998). The major projects are being undertaken as joint ventures between the State and foreign companies.

Following its absorption of SAMAREC in mid-1993, Saudi Aramco took charge of the management of the entire range of state petroleum-refining and product-marketing interests. As well as handling the marketing of products from Saudi Aramco's Ras Tanura plant, SAMAREC had operated refineries at Jeddah, Riyadh and Yanbu and had been responsible for marketing the state share of output from export-oriented refineries at Jubail, Yanbu and Rabigh. Saudi Arabia's installed refinery capacity totalled 1,865,000 b/d in 1992, an increase of 1m. b/d since 1984. At the refineries' aggregate throughput level of about 1.5m. b/d of crude oil in 1992, the volume of refined products available for marketing through state channels was slightly more than 1m. b/d., of which about two-thirds was sold on the home market and the remainder exported. In 1997 Saudi Arabia had an installed refining capacity of 1,720,000 b/d and a domestic demand for refined products of 1,205,000 b/d.

One effect of the reorganization was the deferment of a proposed US $4,000m. programme to upgrade the oil-refining facilities which had fallen within SAMAREC's sphere of influence for planning purposes. A separate $1,000m. upgrading programme for the Ras Tanura refinery received final approval in late 1993 and was under way by mid-1994. In 1995 Saudi Aramco acquired full ownership of the Rabigh export refinery (built in 1985 as a joint venture with a Greek company) and announced plans for a $2,000m. upgrading programme at this

plant. A heavily modified programme (costed at $800m.) was put out to tender in June 1998. As a result of declining petroleum prices and decreasing revenues, however, the Rabigh upgrade was cancelled in October. In mid-1998 the current phase of upgrading work at the Ras Tanura refinery was completed. It now had sufficient gasoline capacity to supply the kingdom's expected domestic demand until 2002. Recent shortfalls in Saudi gasoline production had been covered by imports from one of Saudi Aramco's overseas refining affiliates. The Petromin Lubricating Oil Refining Co (LUBEREF, owned 70% by Mobil and 30% by PETROMIN) announced in 1994 that it was to build a new lubricant basestock refinery at Yanbu. Scheduled for completion in 1997, the Yanbu plant would have an annual capacity of 2m. barrels, compared with 1.8m. barrels at LUBEREF's existing plant at Jeddah, and would aim primarily to supply the domestic market. Contracts were awarded in 1996 for the construction of two 'multi-products' (multiple petroleum products pipelines, one running 380 km from Dhahran to a new bulk-handling plant at Riyadh and the other running 360 km from Riyadh to Saudi Aramco's existing bulk-handling plant in Qassim Province. The new pipelines (scheduled for completion in 1999) would greatly reduce the role of road transport in Saudi Aramco's domestic product distribution system. The pipelines were expected to be linked to Saudi Arabia's strategic oil storage caverns, the first two of which (at Jeddah and Riyadh) were completed in early 1996. Originally administered by the Ministry of Defence and Civil Aviation but later entrusted to Saudi Aramco, the strategic storage programme (financed with the proceeds of 200,000 b/d of the country's crude oil production) provided for the creation of a total of six underground storage facilities for crude oil and refined products, each requiring the excavation of nearly 1m. cu m of rock.

An important element of Saudi Arabia's overall product-marketing strategy for the 1990s is the acquisition by Saudi Aramco of refining interests in petroleum-importing countries. In November 1988 Saudi Aramco entered into a joint venture with Texaco, whereby it gained access to a refining and marketing network spanning 26 states in the southern and eastern USA. In 1991 Saudi Aramco acquired a 35% equity interest in South Korea's largest refining company, Ssangyong Oil, which had 265,000 b/d of installed capacity.

In 1993 Saudi Aramco was actively studying proposals for further joint ventures with established refiners in Asia, Europe and the USA, with a view to raising its effective overseas refining capacity to around 3m. b/d. There was also a complementary programme to acquire oil storage capacity in major overseas importing centres, in furtherance of which Saudi Aramco announced in mid-1993 that it was to buy a 34.35% interest in a 17m.-barrel import terminal at the Dutch port of Rotterdam. In February 1994 Saudi Aramco acquired a 40% shareholding in the Philippine company Petron, which, through its 155,000 b/d Bataan refinery and its associated transportation and retailing network, currently supplied 41% of the Philippine market for refined products. In the following month a Saudi businessman acquired Sweden's largest oil firm, OK Petroleum, which had a refining capacity of 265,000 b/d and which obtained part of its current crude supply from Saudi Aramco. In March 1996 Saudi Aramco acquired a 50% shareholding in a Greek company, Motor Oil Hellas Corinth Refineries, and its marketing affiliate, Avin Oil. The refining company's 100,000 b/d Corinth plant supplied a chain of 700 Avin petrol stations.

A plan to build a refinery and associated facilities in northern India, conceived as a joint venture by Hindustan Petroleum Corpn and Saudi Aramco (which would supply 115,000 b/d of Saudi crude), was approved in principle by the Indian Government in mid-1996. Saudi Aramco was a minority partner in two Chinese joint-venture refineries in 1995. In early 1996 its efforts to acquire a majority share in one of these ventures were blocked by China's state petrochemical company SINOPEC (the existing majority partner), which also rejected Saudi Aramco's proposals for creating a third joint venture. The stumbling-block in the latter case was the Chinese Government's requirement for joint-venture refineries to export at least 70% of their output in order to generate foreign currency earnings. In September 1997 Saudi Aramco cancelled plans to acquire a minority interest in Portugal's state oil company Petrogal. In July 1997 an agreement was reached between Texaco, Shell Oil Co and Saudi Aramco to merge their refining and marketing operations in the eastern and Gulf coast regions of the USA. A new jointly-owned company was to be set up in 1998 to take control of the 820,000 b/d of US refining capacity and the various service-station networks covered by the merger. The merger would entail the dissolution of Star Enterprise (Saudi Aramco's current 50:50 joint venture with Texaco). In mid-1998 the new company, Motiva Enterprises, became fully operational. Saudi Arabia's Minister of Petroleum and Mineral Resources said in June 1997 that the volume of Saudi crude oil supplied to overseas refining affiliates was projected to rise from 3.2m. b/d to 4m. b/d as Saudi Aramco continued to expand its worldwide interests.

The Saudi Basic Industries Corpn (SABIC), founded in 1976, is Saudi Arabia's main non-oil industrial enterprise, including among its holdings many major gas-utilization projects. Chief among them is the petrochemical development at Jubail, Jeddah and Yanbu. In 1983 the Saudi Methanol Co (ar-Razi) plant at Jubail, which cost 900m. riyals and has a capacity of 500,000 tons per year, became the first venture to begin production. It was followed by a further four new projects in 1984: the National Methanol Co (Ibn Sina) plant at Jubail, the Saudi Petrochemical Co (Sadaf) plant at Jubail, producing ethylene, ethylene dichloride, styrene, ethanol and caustic soda; the Al-Jubail Petrochemical Co (Kemya) plant, producing linear low-density polyethylene (LLDPE); and the Saudi Yanbu Petrochemical Co (Yanpet) plant, producing ethylene, ethylene glycol, LLDPE and high-density polyethylene. In 1985 two new plants also came into operation at Jubail: the Arabian Petrochemical Co (Petrokemya) plant, producing ethylene; and the Eastern Petrochemical Co (Sharq) plant, producing LLDPE and ethylene glycol. In March 1989 it was reported that the production of methyl-tertiary-butyl ether (MTBE), a lead substitute for petrol, had been initiated by one of SABIC's joint ventures, the Saudi-European Petrochemical Co (Ibn Zahr), at Jubail. In the same month Petrokemya began the production of plastic resin polystyrene, with the aim of producing 100,000 tons per year, while the annual output of ethylene was scheduled to reach 500,000 tons in 1993, increasing total ethylene capacity to 2.9m. tons per year. In July PVC production capacity at Ibn Hayyan was 100,000 tons per year. SABIC experienced severe problems in selling its products, as major market areas began to impose tariff restrictions in 1985. The company has, however, been able to sell a large volume of products in the Far East and in Europe, despite the tariffs. In 1988 SABIC's profits tripled to a record 3,553m. riyals. In 1989 SABIC's medium-term plans envisaged the expansion of existing ventures, rather than the creation of new affiliates.

In March 1991 SABIC expanded its marketing network when it opened a new ethylene glycol terminal in Livorno, Italy, to improve service to Italian and other southern European clients. In 1991 SABIC owned two European terminals for liquid products (in Italy and in the Netherlands), as well as three storage terminals for plastic resins, situated in Belgium, France and the United Kingdom. In June Ibn Zahr signed contracts for the construction of a polypropylene plant with a capacity of 200,000 tons per year and a new MTBE plant with a capacity of 700,000 tons per year. Ibn Zahr is Saudi Arabia's only producer of MTBE, pending construction of a new plant at Ibn Sina expected to commence production in July 1994. The Italian company Snamprogetti, which built the original plant at Jubail, was awarded part of the US $250m. contract to build the MTBE plant, and the United Kingdom's John Brown Engineers and Constructors was to build the polypropylene plant. Features of SABIC operations in 1991 included the completion of expansion at the National Plastics Co (Ibn Hayyan), to a capacity of 300,000 tons per year, and of the Saudi Methanol Co (ar-Razi), to a capacity of 1.2m. tons per year. Following the start of polypropylene production at Jubail, SABIC was in 1994 manufacturing all five thermoplastics and was inviting joint-venture proposals to produce more than 30 categories of finished product, ranging from cling film to footwear. Saudi Arabia's consumption of plastic resins per caput was forecast to approach European levels by 2000.

In 1995 the Arabian Industrial Fiber Co began production of polyester fibre; future plans included the installation of an aromatics and purified terephthalic acid complex at Yanbu. This and other expansion and diversification projects within the

SABIC group were expected to increase SABIC's annual production capacity to 30m. tons by 2000. Corporate strategy options under active consideration in 1996 included the encouragement of mergers between some subsidiary companies with identical product lines (such restructuring being subject to negotiation with foreign joint-venture partners) and participation by SABIC in overseas petrochemicals ventures (the main focus of SABIC's interest being the south-east Asian region). In 1996 SABIC marketed 17m. tons of products, having increased its total production volume to 23m. tons (including 12.3m. tons of chemicals, more than 2m. tons of plastics, 2.8m. tons of steel and more than 4m. tons of fertilizer). A fall in international prices for many petrochemical products caused SABIC's profits to fall by almost 30% to 4,412m. riyals in 1996.

In 1997 SABIC's total production rose by 3% to 23.7m. tons, while its marketed production rose by 4.5% to 18.39m. tons, comprising 9.2m. tons of petrochemicals, 2.85m. tons of steel, 2.8m. tons of fetilizers, 2.3m. tons of plastics, 1.1m. tons of industrial gases and 140,000 tons of polyester products. Turnover rose by 15.3% to 24,023m. riyals in 1997, while net profits rose by 4.3% to 4,600m. riyals. In 1998, however, net profits declined by some 50%, to 2,020m. riyals. A company spokesman said that SABIC's competitive position had been eroded in 1998 because the decline in world oil prices (which benefited overseas petrochemical manufacturers using oil-derived feedstocks) had occurred at a time when Saudi Arabia's gas-based factories were absorbing a 50% rise in their own feedstock costs. (With effect from January 1998 Saudi Aramco increased its charge to industrial users of ethane and methane.) SABIC's poor performance in 1998 affected the company's ability to proceed with its planned investment. A programme of restructuring, in which a number of separate affiliates were established, was initiated; the affiliates were expected to enter into joint ventures with private national and international companies and were also expected to prove more attractive to project finance. SABIC's declining profits forced the company's affiliates to approach creditor banks in order to reschedule debts from earlier expansion projects. In September 1999 three SABIC affiliates (the Saudi Iron and Steel Co (Hadeed), the Arabian Industrial Fiber Co (Ibn Rushd) and Ibn Zahr) were reported to be engaged in talks to restructure finance totalling some US $2,500m.

A joint venture with Taiwan Fertilizer Co, Saudi Fertilizer Co (Samad), has an annual capacity of 500,000 tons of urea. In August 1983 its production was 167,760 tons, but by the beginning of 1985 it had reached its full capacity. In early 1985 the Saudi Arabian Fertilizer Co (SAFCO) and SABIC formed a company to build a 1,500 tons-per-day ammonia plant at Jubail. In April 1989 SAFCO's annual output was 450,000 tons in Dammam. In 1988 SAFCO produced 176,591 tons of ammonia, 284,994 tons of urea, approximately 91,728 tons of sulphuric acid and 17,839 tons of melamine. In 1991 SAFCO had a net income of 167m. riyals and announced plans for the construction of a new fertilizer complex at Jubail, at an estimated cost of 1,400m. riyals. Saudi Arabia's third fertilizer manufacturer, the National Chemical Fertilizer Co, opened a factory at Jubail in 1987. The aggregate annual capacity of Saudi Arabian fertilizer plants exceeded 3m. tons in 1993 and was targeted to reach 4m. tons before the end of the decade. The producing companies (all affiliates of SABIC) signed a 'services agreement' in January 1994 to consolidate many of their operational and management functions. SAFCO made net profits of 312m. riyals in 1994 and 607m. riyals in 1995. In 1996 SAFCO made a net profit of 613m. riyals on a turnover of 904m. riyals. In 1997 its net profit fell by 29% to 438m. riyals, reflecting (notably) the impact of China's termination of fertilizer imports in the latter part of the year. SAFCO's net profit for the first half of 1998 was 110m. riyals, some 62% lower than the first-half profit in 1997.

The Saudi Iron and Steel Co (Hadeed), based in Jubail, is a joint venture with Germany's Korf-Stahl. In 1991 Hadeed began exporting iron products to Far East and South-East Asian countries. In July a shipment of about 10,000 tons of reinforcing bars and wire rod coils was exported to Japan, and further sales to Singapore, Taiwan and South Korea, in July and August, raised exports to more than 40,000 tons. The Jeddah Steel Rolling Mill (Sulb) has a capacity of 140,000 tons of steel rods and bars per year, and in 1984 sold 317,000 tons of steel billets. In 1985 production of steel was 1.18m. tons, and in 1986 output increased to 1.9m. tons. An expansion programme, for which a seven-year loan of 500m. riyals was signed in August 1991, was intended to increase steel capacity at Hadeed's Jubail plant to 2m. tons per year. In 1991 self-sufficiency was achieved within the Saudi Arabian steel industry, which expanded to satisfy construction requirements within the kingdom and other GCC countries. Steel output from the expanded Hadeed plant reached a record 2.54m. tons in 1996 and was predicted to reach 2.9m. tons in 1997. A contract to build a rolling mill with an annual capacity of 850,000 tons of flat steel products was awarded in 1996 with a view to completion by early 1999, although this deadline was later extended to early 2000. Existing Hadeed facilities undergoing expansion and upgrading in 1997 included a rod mill, a section and bar mill and an electric arc furnace. In September 1999, as a result of cash-flow difficulties, Hadeed sought to restructure loans of 4,725m. riyals. It also postponed further capacity expansion in Jubail and was forced to negotiate with its creditors without the provision of a guarantee from SABIC, its holding company. In mid-1988 the National Industrialization Co (NIC) announced plans to construct a steel foundry at Dammam with a capacity of 10,000 tons per year, at an estimated cost of 117m. riyals. Construction work was expected to reach completion in 1991. NIC is also planning the construction of a steel wire plant at Jubail, with a provisional capacity of about 50,000 tons per year, to produce specialized steel wires and related wire products. In 1990 profits fell from 17m. riyals in 1989 to 14m. riyals. This decline was attributed to the failure of certain companies, in which NIC has shareholdings, to announce dividends. The reduction in profits continued to reflect NIC's poor performance in its delayed implementation of the many industrial projects that it had initiated. In 1994 NIC reported a net profit of 9.4m. riyals (55% less than in 1993).

One of the most interesting developments in SABIC's proposals for joint ventures was agreed in 1983 between SABIC and private Saudi Arabian investors. Called the National Gas Co (Gas), it was expected to produce 146,000 tons of nitrogen and 438,000 tons of oxygen per year by 1985. Further joint ventures, agreed in 1984, included a partnership with Italy and Finland to produce fractionated gases.

The success of these ventures depends, to a large extent, on effective marketing, and all partners are bound to market at least 40% of production in their own countries. The basis for such ambitious heavy industrial schemes is a gas-gathering project, Master Gas System (MGS), which is being implemented by Saudi Aramco. Natural gas will provide the raw material for the petrochemical industry and an energy source for the steel plant. The scheme was initiated in 1975, when it was expected to cost US $5,000m. and to produce 156m. cu m per day (cm/d) (5,500m. cu ft per day—cf/d). By the time of its completion in 1982, however, the first phase of the scheme had cost an estimated $12,000m., with a capacity of 98m. cm/d (3,460m. cf/d). In January 1998 Saudi Aramco increased its charge to industrial users of ethane and methane. The new tariff covered about two-thirds of the estimated replacement cost to Saudi Aramco as operator of the MGS. Three processing plants have been built (at Berri, Shedgum and Uthmaniyah) to separate out natural gas liquids (NGLs) from methane, and two fractionation plants, at Juaymeh on the Gulf coast and at Yanbu on the Red Sea, process the NGLs into ethane, liquefied petroleum gas (LPG) and condensate. Gas is carried to Yanbu through a 1,200-km trans-Arabian pipeline which came into operation in 1981. The Berri, Shedgum and Juaymeh plants had all started production by mid-1980, the Uthmaniyah plant began operating in 1981, and the Yanbu plant started in 1982. Apart from fuelling industrial development, the scheme should make Saudi Arabia one of the world's largest exporters of LPG, with shipments of about 650,000 b/d. In 1991, however, SAMAREC amended its LPG price-indexing mechanism, owing to the exceptional volatility of the LPG market. As a result, SAMAREC introduced an upper limit on the permitted volume of exported LPG, in order to compensate for any rapid change in prices. In June 1992 SAMAREC signed 15 five-year contracts for the supply of a total of 42m. tons of LPG to Japanese, South Korean, British and Saudi Arabian companies. There are also facilities for the recovery of sulphur: three plants, with a combined annual capacity of about 1.3m. barrels, came into operation in 1981, and total sales in 1982 reached 800,000 tons.

Most of the gas which is produced in Saudi Arabia is associated gas (i.e. it is found in conjunction with petroleum), so the decline in petroleum output in the mid-1980s led to shortfalls in the production of gas and its 'downstream' products. Work on the second phase of the MGS scheme is under way, aiming to exploit associated gas from offshore fields and to reduce the problem of gas shortages created by declines in production of petroleum. The installed processing capacity of the MGS in 1993 was estimated at 121.8m. cm/d, based on crude oil output of about 8.2m. b/d. During 1985 a major new gasfield was discovered in the onshore Farhah and Sabha area. Saudi Aramco's refinery at Ras Tanura has been producing NGLs since 1962, and production totalled 155m. barrels in 1982. Recovery of NGLs from associated gases rose by 27%, from 420,946 b/d in 1989, to 533,229 b/d in 1990. Similarly, production of refined products at Ras Tanura increased from 174m. barrels in 1989 to 192m. barrels in 1990, with significant increases in the output of jet fuel and fuel oil. There were plans to exploit unassociated gas, independent of petroleum extraction, by 1986. The Khuff reservoir of unassociated gas in the Ghawar oilfield, estimated to contain more than one-half of Saudi Arabia's natural gas reserves, was scheduled to yield 20m. cm/d (700m. cf/d). Saudi Arabia's marketed output of natural gas in 1997 (excluding gas flared or reinjected into oil wells) totalled 43,900m. cu m. Expansion schemes under way in 1997 (including the development of a major new gathering facility at Hawiya for unassociated gas) were designed to increase the installed processing capacity of the MGS to 195m. cm/d (6,900m. cf/d) by 2001. However, the programme began to fall behind schedule in early 1998 when the bids submitted for the main phases of the installation work were unacceptably high. (The lowest bid for the installation of the key gas treatment plant was, at US $1,000m., some 60% above Saudi Aramco's budgeted figure.) Saudi Aramco subsequently re-examined the project specifications and invited contractors to submit new tenders for the work by mid-September 1998.

The Government is encouraging Saudi private enterprise to develop smaller-scale industries. A total of eight industrial estates offer basic infrastructure and services at minimal charge, credit is available on favourable terms, and selected products are protected by duties on imports. The Saudi Industrial Development Fund (SIDF) was established in 1974 to provide concessionary loans to private investors, and the NIC was established in 1984, by private investors, to develop and control investment by private individuals. By 1991 the SIDF had an authorized capital of 8,000m. riyals and had granted 1,404 loans, amounting to 18,738m. riyals. During 1996 the SIDF approved 109 loans totalling 2,429m. riyals. The building materials sector, and in particular the cement industry, is flourishing, as are electrical equipment manufacturing, the production of chemical rubber and plastics, and food processing and soft drinks. National cement output of 14.1m. tons in 1992 covered 98% of the rapidly rising domestic demand, prompting five of the kingdom's seven publicly-traded cement companies to announce expansion plans, which would increase total cement production capacity by almost one-third, to 18.5m. tons per year. Some 1m. tons of cement and 1.6m. tons of clinker were imported in 1993. Cement imports increased to 2m. tons in 1994. Saudi Arabia's annual demand for all types of cement in 1996 was 17.3m. tons (including 16m. tons of Portland cement). In 1997 Saudi cement production fell by 6% to 15.4m. tons; 14m. tons were consumed locally, 1.3m. tons were exported and the remainder stockpiled. Saudi Arabia's installed cement production capacity rose to 22.7m. tons per year in 1998, following the establishment of an eighth producing company.

Between 1975 and 1978 about 70% of the industrial projects which were authorized were wholly Saudi-owned, the rest being joint ventures, and during 1982 a total of 2,689 new licences for privately-owned enterprises were approved. In 1991 the Ministry of Industry and Electricity approved a licence for the newly-established Saudi Industrial Development Co (SIDC) to build a ceramics plant in the Western Province. The scheme would involve a total investment of 311m. riyals. The output of the new plant and that of the Saudi Ceramics Co, based in Riyadh, was expected to satisfy 80% of the domestic market. As part of its policy to stimulate the Saudi private sector, the Government sold 30% of SABIC's capital in 1984, and aims ultimately to transfer 75% into private control. In 1990 there were 2,255 factories in operation, of which the metal industry accounted for 28.1%, building materials 24.8%, and food and beverages 16%. Total investment in factories for 1990 was 96,900m. riyals, of which the largest amount (52,900m. riyals) was invested in the chemicals industry. A public flotation of shares in the SIDC in mid-1992, intended to raise 250m. riyals, was oversubscribed by more than three times. The SIDC planned to invest in various industrial projects, including a US $64m. pharmaceuticals factory. In June 1994 the Government published figures showing that new factories had recently been opened at an average rate of six per month, representing an average job creation rate of 395 per month and an average capital investment of 90m. riyals per month.

At the end of 1994 the Minister for Industry and Electricity stated that the Saudi manufacturing sector currently had an invested capital of more than US $40,000m., annual production of more than $15,000m. and annual exports of more than $3,000m., although its share of GDP was less than half of the Government's 22% planning target. Nearly $26,000m. was currently invested in chemicals and plastics enterprises; nearly $5,300m. in the manufacture of building materials, ceramics and glass; $3,500m. in production of machine tools and finished metal goods; $2,400m. in food and beverage production; $1,100m. in basic metal industries; $1,100m. in paper and printing; and $533m. in the manufacture of textiles, clothing and leather. In 1997 Saudi Arabia's first sugar refinery, with the capacity to produce 500,000 tons a year from imported raw sugar, began production at Jeddah. Plans for a second refinery at Al-Jouf, to process locally grown sugar beet, were announced in 1997.

Non-oil mineral production includes limestone (for cement manufacture), gypsum, marble, clay and salt. Substantial deposits of bauxite, iron ore and magnesite, as well as copper, gold, lead, zinc, silver and some uranium, are known to exist. A mine at Mahd adh-Dhahab, with 1.2m. tons of ore (including gold), was inaugurated in 1983. At the end of 1984 work started on the construction of a gold-mining town at Mahd adh-Dhahab, and annual output of gold from the mine reached 3.5 tons in 1991, with estimated reserves of 1,123,000 tons. In 1997 the mine's reserves were estimated to be more than 2m. tons and in 1996 157,000 ounces (oz) of gold, 479,000 oz of silver and 900 tons of copper were produced. Production of zinc concentrate, at an annual rate of up to 10,000 tons, was due to begin in 1997. In 1991 there were 495 known sites of gold deposits in Saudi Arabia (and 800 'indications' of gold occurrence), of which 31 were estimated to contain more than 1,000 kg each and a further 99 were estimated to contain at least 100 kg each. In 1986 large quantities of gold were discovered in the Sukhaybarat area, and in 1991 the Saudi Company for Precious Metals (a joint venture between PETROMIN and a Swedish company, Boliden) began gold production, which reached 978 kg by the end of the year. By the end of 1996 cumulative production had reached 13,000 kg of fine gold. Reserves at Sukhaybarat were estimated at 8.4m. tons. The private-sector Arabian Shield Development Co was awarded a 30-year mining lease in 1993 for the Al-Masane area of south-western Saudi Arabia, where substantial deposits of copper, zinc, gold and silver were known to exist. Feasibility studies were in progress in 1994 for a proposed US $50m. mining project and associated plans to create zinc-processing facilities at Yanbu. At the end of 1996 the project was granted an industrial licence after preparing plans which envisaged annual yields of 31,270 tons of zinc, 8,750 tons of copper, 13,100 oz of gold, 550,000 oz of silver and 12 tons of bullion (98% silver and 2% gold). At the end of 1997 the US-owned Arabian Shield Development Co set up the Arabian Shield Company for Mining Industries as a joint venture with the Saudi-owned Al-Mashreq Company for Mining Investments. Financial backers of the Arabian Shield project now included the Saudi Industrial Development Fund, which agreed to provide a $38m. interest-free loan. In 1994 the Government invited applications to develop a recently evaluated iron ore deposit at Wadi Sawawin in north-western Saudi Arabia. It was estimated that an investment of $550m. would be needed to develop an open-pit mine and ore beneficiation facility for the production of pellets at an annual rate of 2.2m. tons for 25 years. During 1984 a large coal field was discovered in central Qassim Province. In early 1989 the
